DEPARTMENT OF AGRICULTURE APPROPRIATIONS, 1970—AMENDMENTS

AMENDMENTS NOS. 53 AND 54

Mr. WILLIAMS of Delaware. Mr. President, I submit two amendments intended to be proposed by me to the Department of Agriculture appropriation bill. The purpose of the first amendment is to restore the language of the House bill, which would place a limit of $20,000 on the payments to any one individual or operator.

The argument has been made by some persons connected with the Department and persons who defend the large payments that if this $20,000 limitation is included in the bill then due to a so-called snap-back provision in the law payments would revert to another program, which could result in equally high cost to the Treasury. I disagree with that reasoning. In my opinion it is only a last minute gasp of those who see this boondoggle program facing defeat. Nevertheless, rather than dispute that point, which can so easily be settled, I submit another amendment, intended to be proposed by me which would merely repeal the snap-back and thereby make certain that all the money saved by the amendment would be returned to the American taxpayers.

The PRESIDING OFFICER. The amendments will be received and printed and will lie on the table.

Mr. WILLIAMS of Delaware. I ask unanimous consent that both amendments be printed in the RECORD.

There being no objection, the amendments were ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 53

On page 23, line 14, insert the following: *"Provided further,* That no part of the funds appropriated by this Act shall be used to formulate or carry out any price support program (other than for sugar) under which payments aggregating more than $20,000 under all such programs are made to any producer on any crop planted in the fiscal year 1970."

AMENDMENT NO. 54

On page 23, at the end of line 19, add a new paragraph as follows:

"Section 103(d)(12) of the Agricultural Act of 1949, as amended, is hereby repealed."

FEDERAL LANDS FOR PARKS AND RECREATION ACT OF 1969

The Senate resumed the consideration of the bill (S. 1708) to amend title 1 of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), and for other purposes.

Mr. JACKSON. Mr. President, when the Senate last considered the pending measure, S. 1708, the distinguished Senator from Wisconsin (Mr. PROXMIRE) desired an opportunity to review the proposed legislation and to consider offering amendments. I understand that the Senator from Wisconsin has two amendments that he will offer at this time.

Mr. PROXMIRE. Mr. President, 2 weeks ago I spoke at some length about S. 1708, a bill which would amend the Land and Water Conservation Fund Act. S. 1708 would make it possible for States or their political subdivisions to acquire surplus Federal property at from zero percent to 50 percent of fair market value where the property is to be used for recreational purposes.

Today I should like to offer to the Senate two amendments to S. 1708 which I believe would strengthen the bill considerably. Both amendments are designed to insure that when property is conveyed under the bill, the interests of the Federal Government will be fully protected.

I send to the desk the first amendment and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 5, line 8, it is proposed to insert the following after Secretary of the Interior: *"Provided, however,* that the determination of the Administrator of the General Services Administration and the recommendation of the Secretary of the Interior shall not become effective until 60 calendar days after the proposed conveyance under this subsection has been submitted to the Senate and the House of Representatives respectively, neither House of Congress having recommended disapproval of the conveyance in the interim."

Mr. PROXMIRE. Mr. President, both amendments are the product of a lengthy discussion with former Senator Wayne Morse, of Oregon, who, as we all know, played such a fine role in the Senate in fighting for the Morse formula throughout the years.

The first amendment would be attached as a proviso to subsection (2) of S. 1708. Subsection (2) provides that surplus Federal property may be acquired by the States and municipalities at 0 percent to 50 percent of fair market value, the percentage to be determined by the Administrator of the General Services Administration in accordance with the recommendations of the Secretary of the Interior. While I have great regard for both of these offices, I believe that some degree of control over the conveyance of surplus Federal property should remain vested in the Congress. After all, up until now, Congress has held 100-percent control over these transfers of property. It seems appropriate, therefore, that in giving GSA and the Secretary of the Interior authority to determine the percentage under subsection (2) that Congress should at least retain a final power of disapproval over the executive decision. Accordingly, I am introducing an amendment to S. 1708 which provides that the GSA determination and the Interior Department's recommendation shall not become operative until 60 days after the proposed conveyance has been submitted to both Houses of Congress, with neither House having disapproved the conveyance in the interim 60 days.

Mr. JACKSON. Mr. President, I have discussed this amendment with the able and distinguished Senator from Wisconsin, and I am in a position to accept it. I think the amendment will be helpful in monitoring the administration of this program. I see no objection to it at this time; however, there may be a constitutional question that will have to be ironed out in conference. I hope it will be acceptable to the executive branch in the present form.

The PRESIDING OFFICER (Mr. GRAVEL in the chair). The question is on agreeing to the amendment offered by the Senator from Wisconsin.

The amendment was agreed to.

Mr. PROXMIRE. Mr. President, I have one other amendment which I send to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 5, line 14, insert the following: *"Provided,* That where the property to be

conveyed includes valuable improvements constructed by the federal government, the improvements shall be appraised separately for their recreational potential."

Mr. PROXMIRE. Mr. President, my second amendment would be attached as a proviso to subsections (1)–(3) of S. 1708. It would require a separate valuation of improvements on Federal surplus property. During the period of Federal ownership, the Federal Government may have put valuable improvements on the land, built roads, dug sewers, and the like. It is entirely reasonable that the costs of these improvements be separately valued, and my second amendment would require just that.

Mr. JACKSON. Mr. President, I think this is a reasonable and helpful amendment. The land should be appraised separately and apart from the improvements. In any event, the Department of Interior will have to make a finding on the suitability of both the land and improvements for recreational and park purpose needs.

I am, therefore, happy and pleased to accept the amendment.

The Senator from Wisconsin has been most cooperative and as always, has conscientiously, gone into this matter. As a result, we have these two amendments today. I wish to compliment him for helping in the passage of the bill.

Mr. PROXMIRE. Mr. President, before final action is taken on the bill I wish to say to the distinguished Senator from Washington that he has done a marvelous job throughout the years in areas of conservation. I believe this bill will help improve substantially in this area. It is an excellent bill and I am delighted that he has been so helpful to me. He is extremely competent in this area and assisted me in drafting the amendments which I think improve the bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Wisconsin.

The amendment was agreed to.

Mr. HART. Mr. President, for some time I have been concerned about the whole problem of our surplus property disposal program. I believe we need a fresh look at the act and an examination of the purposes for which surplus Federal land may be acquired by States and their political subdivisions at discounted prices.

Most importantly, we should analyze in the light of today's world, the purposes for which such land may be acquired at reduced or no cost. Much as we revere historic monuments, my view would be that a no less worthy purpose would be to permit cities to acquire surplus Federal real property for public housing.

For example, Mayor Cavanagh, of Detroit, called my attention to the following situation: after the Detroit riots, the city was authorized to use certain of the old Fort Wayne facility for temporary housing. The Federal Surplus Property Division has now told the city that it must plan to vacate unless it wants to buy or lease the housing. Either purchase or lease would be at full market value, according to GSA.

The mayor suggested, and I agree, that if, in fact, the Federal Surplus Property Act does not include housing as one of the purposes for which a municipality would be eligible to purchase at less than market value, an amendment to the act should be sought which would include public housing.

This housing position strikes me as one that is worthy of prompt exploration and I am presently working on such an amendment.

My preference, if I could choose, would therefore be to vote today on a broader revision of priorities than proposed in S. 1708. Since we are not offered that opportunity today and since I would certainly want to include parks and recreation as an eligible purpose, I will vote for the bill—hoping that we may in this Congress be given the opportunity to examine the larger picture in the light of today's pressing social and economic needs.

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the RECORD a telegram I have received from the Governor of my State, the Honorable Daniel J. Evans.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

OLYMPIA, WASH., *June 12, 1969.*

Hon. WARREN G. MAGNUSON,
Senate Office Building,
Washington, D.C.:

I understand that S. 1708 will be debated on floor tomorrow. Would like to present my views as Governor of Washington in support of bill.

Need and demand for recreation areas and facilities is increasing at alarming rate. Even in State of Washington, where we feel we have recreational opportunities second to none, need for additional areas and facilities is overwhelming. Washington's statewide comprehensive outdoor recreation and open space plan states that estimated two billion dollars expenditure by all agencies, both public and private, involved in providing recreation opportunities is required to meet present needs, and by 1975 additional one-half billion dollars will be needed. Acquisition costs estimated to be 1.3 billion of this total. Last year, over 20 million people visited State parks in State of Washington. Ability of State and local agencies to acquire Federal surplus properties for park and recreational purposes at no cost would greatly enhance their ability to meet increasing demands.

Cannot close without taking opportunity to comment on how act would assist city of Seattle and enhance its opportunity for reacquiring Fort Lawton as much-needed major urban park when it is declared surplus by Federal Government.

With these comments let me reiterate my position by stating that we in State of Washingon strongly favor provisions of Senate Bill 1708 and urge Congress to enact legislation for recreational well being of its citizens.

DANIEL J. EVANS,
Governor of Washington State.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in the nature of a substitute as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, and was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

The bill (S. 1708) was passed, as follows:

S. 1708

An act to amend title I of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Lands for Parks and Recreation Act of 1969".

SEC. 2. Section 2(b) of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), as amended (effective March 31, 1970, section 2(b) becomes section 2(a) pursuant to the provisions of Public Law 90–401, July 15, 1968), is further amended by deleting the last sentence and adding the following new paragraphs:

"*Provided, however,* That, notwithstanding the provisions of the Surplus Property Act of 1944, as amended, and the Federal Property and Administrative Services Act of 1949, as amended, States and their political subdivisions may acquire until June 30, 1973, from the United States for public park and recreation purposes surplus Federal real property together with such improvements, equipment, and related personal property that the Secretary of the Interior has recommended to, the Administrator of the General Services Administration for such acquisition based upon the suitability of the property for park and recreational uses; the accessibility of the property to major population centers; the need for park and recreation facilities in the immediate geographical area, as identified in the comprehensive statewide outdoor recreation plan required under section 5(d) of this Act; and the highest and best use of the property taking into consideration the need of future generations for parks, open spaces, and recreational opportunities. Conveyances of such property for park or recreational purposes shall be in accordance with one of the following methods as determined by the State or political subdivision thereof:

"(1) Where the State or its political subdivision originally donated the property to the United States, the surplus Federal property may be reacquired without the payment of any consideration; or

"(2) Where a State or its political subdivision so elects, the surplus Federal property may be acquired at zero to 50 per centum of the fair market value, as determined by the Administrator of the General Services Administration in accordance with the recommendations of the Secretary of the Interior: *Provided, however,* That the determination of the Administrator of the General Services Administration and the recommendation of the Secretary of the Interior shall not become effective until sixty calendar days after the proposed conveyance under this subsection has been submitted to the Senate and the House of Representatives respectively, neither House of Congress having recommended disapproval of the Conveyance in the interim; or

"(3) Where the United States paid valuable consideration for the property to the State or its political subdivisions, or to any person, the State, or its political subdivision may acquire the surplus Federal property upon the payment of the cost to the United States at the time of such acquisition: *Provided,* That where the property to be conveyed includes valuable improvements constructed by the Federal Government, the improvements shall be appraised separately for their recreational potential.

"Deeds conveying any surplus real property disposed of under this authority shall be issued by the General Services Administration and shall provide that the property shall be used and maintained for the purpose for which it was conveyed, and, in the event that such property ceases to be used or maintained for such purposes, such property shall at the option of the Secretary revert to the

United States. The deeds may also contain such additional terms, reservations, restrictions, and conditions as may be determined by the Administrator to be necessary to safeguard the interest of the United States. The Secretary of the Interior may exercise all of his existing authorities under section 203(k) of the Federal Property and Administrative Services Act of 1949, as amended, as to property transferred under this Act. The State and their political subdivisions shall compensate the United States for the administrative costs of surplus property transfers made pursuant to this Act."

"The Secretary of the Interior is directed to prepare and publish guidelines and regulations for implementing the provisions of this Act.

"Except as provided in this section, nothing in this Act shall affect existing laws or regulations concerning disposal of real or personal surplus Federal property to schools, hospitals, States, and their political subdivisions."

Mr. JACKSON. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. PROXMIRE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

DEPARTMENTS OF THE TREASURY AND POST OFFICE, THE EXECUTIVE OFFICE OF THE PRESIDENT, AND CERTAIN INDEPENDENT AGENCIES APPROPRIATIONS, 1970

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 270, H.R. 11582. I do this so that the bill will become the pending business.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 11582) making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies, for the fiscal year ending June 30, 1970, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

LEGISLATIVE PROGRAM

Mr. MANSFIELD. Mr. President, to clarify the situation, it is anticipated that we will dispose of the appropriation bill for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies on Monday, and that on Monday evening we will lay before the Senate H.R. 11612, an act making appropriations for the Department of Agriculture and related agencies.

It is hoped that also on Monday we will be able to get to some minor bills—that is, minor in comparison with appropriations bills.

It is anticipated that on Tuesday and Wednesday the Senate will be taking up the appropriation bill for the Department of Agriculture; and that no votes will be taken on amendments—and there will be some very important amendments—until the Senate returns on Monday, July 7.

The distinguished Senator from Delaware (Mr. WILLIAMS) has already indicated he intends to offer two amendments having to do primarily with the limitation on payments to farmers for taking land out of production.

I would hope that the Senate would be aware of the importance of the debate which will occur on these two most significant appropriation bills on Monday, Tuesday, and Wednesday. Especially, I would hope that the Senate will be fully aware that on Monday, July 7, after its return from the 1-day recess over the Fourth of July, there will be votes on very important amendments that affect all Members of this body. For the benefit of the Senate, the Senator from Delaware has already had incorporated in the RECORD today two proposals he intends to offer.

Mr. President, I think that covers the situation so far as I can do so at this time.

It is my understanding that the distinguished Senator from Wisconsin (Mr. PROXMIRE), the distinguished Senator from Virginia (Mr. BYRD), and the distinguished Senator from Michigan (Mr. HART) have statements of varying lengths that they wish to make this afternoon.

As far as further legislation is concerned, at this time I am unable to give any clear indication to the Senate that there will be any consideration of such legislation later this afternoon.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR THE SECRETARY OF THE SENATE TO RECEIVE MESSAGES DURING ADJOURNMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that during the adjournment of the Senate until noon on Monday next, the Secretary of the Senate be authorized to receive messages from the President of the United States and the House of Representatives and that they may be appropriately referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR COMMITTEES TO FILE REPORTS DURING ADJOURNMENT

Mr. MANSFIELD. Mr. President, I further ask unanimous consent that during this period all committees may file reports, together with individual, minority, or supplemental views.

The PRESIDING OFFICER. Without objection, it is so ordered.

SALARY INCREASES

Mr. BYRD of Virginia. Mr. President, yesterday the distinguished majority leader indicated that after disposition of the business then pending, the Senate would proceed to the consideration of H.R. 7206, the bill providing salary increases for the Vice President and certain officers of the Senate. I understand now that this legislation will not come up until after the July 4 recess.

In January I opposed the doubling of the President's salary and I opposed the increasing of congressional salaries by 41 percent and judicial salaries by 35 percent to 40 percent. I shall oppose the additional increase for officers of the Congress and the legislation to increase the salary of the Vice President by 45 percent.

At a time when we are experiencing severe inflation, it is particularly inappropriate for the Government to set the bad example of approving large increases in salaries in its own top echelons.

I do not think that we can ask there be restraint in wages and prices in the private sector, while we in Government approve such large salary boosts for top officials.

The proposed legislation now on the calendar concerning the salary of the Vice President of the United States, increasing his salary from $43,000 to $62,500, brings to mind another matter to which I invite the attention of the Senate.

It has come to my attention that officials of certain corporations created by the Department of Defense, or by the military services and supported by Department of Defense funds, are being compensated at extremely high rates without congressional approval.

Let us discuss for a moment the Aerospace Corp., created by the Department of Defense, which has a federally funded budget of more than $70 million.

Of 14 senior executives of the Aerospace Corp., 12 are paid more than $42,500. The president of the corporation receives $97,500. A senior vice president receives $70,000. One vice president and operations general manager receives $65,000. Another receives $58,000. One vice president and associate general manager receives $55,000. Seven other officers of the Aerospace Corp. are paid salaries ranging from $44,000 to $50,500.

In addition to these executives, six professional and technical employees are paid more than $42,500.

In fiscal year 1969, the operating budget of the Aerospace Corp. was $74,272,000. The entire amount came from Department of Defense funds. It seems clear to me that Congress should have a veto power over salaries at Aerospace and similar Government-created corporations.

The board of trustees of the Aerospace Corp. was appointed by the Department of the Air Force and is a self-perpetuating board. It seems to me that those Government-created corporations which derive their funds from the Federal Government, earning salaries in excess of a certain figure, possibly $42,500, the same as congressional salaries, should be submitted to Congress for approval.

Mr. President, on April 30, 1969, in the Committee on Armed Services, I put some questions to Mr. Grant Hansen, Assistant Secretary of the Air Force for Research and Development, and also to Lieutenant General McNickle, Deputy Chief of Staff of Research and Development for the Department of the Air Force, and I

ask unanimous consent that the questions and the answers I received from Mr. Hansen and General McNickle be printed in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Senator BYRD of Virginia. I was interested in the response by the General that the salaries had to be commensurate with private businesses. I am just wondering whether that is a philosophy we need to follow.

We certainly don't follow that philosophy in regard to the Secretary of Defense and the Assistant or Deputy Secretary of Defense, and many of these Cabinet officials, and many of the Air Force generals and many other people could go out into private business and get larger salaries than they make in Government.

I see here the president of Aerospace is paid $90,000, the senior vice president is paid $66,000, and the vice president of the corporate planning is paid $40,000, another vice president $39,600, another vice president at $60,000, another vice president at $53,000, another vice president at $54,000, another vice president at $48,000, another vice president at $45,000, another vice president at $60,000, another vice president at $53,000, another vice president at $50,000, and that is all I guess on this Aerospace. It seems to me this is getting out of line. Who sets salaries for Aerospace executives?

Mr. HANSEN. The board of trustees of Aerospace Corp.

enator BYRD of Virginia. How are they appointed?

Mr. HANSEN. I don't know the answer to that question. Do you, General?

Senator BYRD of Virginia. I think what you will find out is when you get back to it they are set by the Defense Department.

General MCNICKLE. They are approved.

Senator BYRD of Virginia. They are approved, that is the final authority. They are set then.

General MCNICKLE. And a number of them were not recognized for the full recommended salary.

Senator BYRD of Virginia. I am not worried about recommended salaries. I want to know what they are paid.

General MCNICKLE. Yes, sir.

Senator BYRD of Virginia. Now the Defense Department has approved these figures, I assume. If I am wrong about it, I want to be corrected.

General MCNICKLE. That is correct.

Senator BYRD of Virginia. So the final decision is with the Defense Department. It is not with some board. It is not with the board of trustees. It is with the Defense Department?

Mr. HANSEN. Yes, sir.

Senator BYRD of Virginia. There is no doubt about that.

Mr. HANSEN. That is correct.

Senator BYRD of Virginia. I want to get that clear.

Mr. HANSEN. Yes, sir.

Mr. BYRD of Virginia. Mr. President, since that discussion in committee, I have verified that the trustees of the Aerospace Corporation were appointed by the Department of the Air Force and are a self-perpetuating group.

AMERICAN CASUALTIES IN VIETNAM

Mr. GORE. Mr. President, the Defense Department has today released new totals of killed and wounded American soldiers in the Vietnamese war.

There have now been more than 44,000 casualties since the inauguration of President Nixon.

The Defense Department reports that such casualties, as between January 18 through June 21 of this year, have reached the alarming total of 44,922.

Mr. President, this war must be ended.

ORDER OF BUSINESS

Mr. ALLEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

LOOK MAGAZINE ACCEPTS GREEK GOVERNMENT'S CHALLENGE TO INVESTIGATE TORTURE CHARGES

Mr. PELL. Mr. President, on May 12, 1969, I drew to the attention of my colleagues and had inserted in the CONGRESSIONAL RECORD the article by Christopher Wren that appeared in the then current issue of Look magazine.

The thrust of the article is that torture continues to be used in Greece as a means of both intimidating the population from unrest and extracting information from political prisoners.

I am very glad indeed that the Greek Embassy responded by issuing a press release in which Look magazine was invited to send a representative over to Greece to investigate the truth of the article.

I am glad to say, too, that just on June 19 Look magazine has accepted the invitation of the Greek Government and has designated their senior editor, Christopher Wren, who originally wrote the article, to make the trip. He will be accompanied by Thomas R. Koeniges, a photographer; Congressman DON EDWARDS, and James Becket, an American attorney and investigator for Amnesty International.

I look forward with very real interest to reading the report of Mr. Wren on his return from Greece.

I trust, too, that, since the Greek Government has invited him, every effort will be made by Greek officials to let Mr. Wren travel and visit where he wishes.

I ask unanimous consent to have printed in the RECORD the press release of the Greek Embassy dated June 9, 1969, a letter from Look magazine to the Greek Embassy dated June 16, 1969, and a press release of Look magazine dated June 19, 1969.

There being no objection, the press releases and letter were ordered to be printed in the RECORD, as follows:

ROYAL GREEK EMBASSY PRESS & INFORMATION SERVICE,
Washington, D.C., June 9, 1969.

With regard to an article published in the issue of May 27th of Look magazine under the title: "Greece: Government by Torture", the Greek Embassy wishes to put into record a statement made by the Prime Minister of Greece at a press conference held in Athens on June 7th, 1969 for Greek and foreign correspondents.

The official position of the Prime Minister of Greece gives a clear answer to all those who seek the truth, bare from any political motivation:

"I would like to make some comments on an article published recently by Look magazine. People should know that only through the respect for truth we can survive in peace and freedom. How could we consider ourselves part of a civilized society when we accept the most imaginary and malignant accusations produced by a mentally deranged person, who has been an inmate to asylum for disturbed persons; and how could we reproduce those accusations for the use of tens of million of readers throughout the World?

I have an obligation toward the history of the Greek people as well as the respect for a truth. I believe that neither the publishers nor any other person in charge of the Look can be held responsible for the fact that such an article was published in their magazine. *I invite them to send over to Greece a duly authorized representative with the purpose of investigating the truth. He could be accompanied by the person who supplied the writer with the false accusations and whose freedom, safe conduct and expenses will be fully covered by the Greek Government.*

I further declare that should the truth of the acts mentioned in the article be established, I will not hesitate to order the execution of those found responsible right here in Constitution Square, and I shall assume full responsibility for it".

TEXT OF LETTER SENT BY LOOK MAGAZINE EDITOR WILLIAM B. ARTHUR TO THE GREEK EMBASSY IN WASHINGTON, D.C.

JUNE 16, 1969.

Mr. MICHAEL MAZARAKIS,
Charge d'Affairs Office, Royal Greek Embassy, Washington, D.C.

DEAR MR. MAZARAKIS: The Royal Greek Embassy Press and Information Service has issued a press release dated June 9, 1969, which states that the Prime Minister of Greece has invited an authorized representative of Look to Greece to establish whether torture of political prisoners has taken place as reported in the article, "Greece: Government by Torture" in the May 27, 1969, issue of Look. This invitation has never been conveyed directly to us. If the press release is accurate, Look welcomes the Prime Minister's stated "obligation toward the history of the Greek people as well as the respect for truth," and accepts the invitation as long as safe and productive conditions can be fully guaranteed by the Prime Minister.

I have designated as Look's representative Senior Editor Christopher S. Wren, who wrote the May 27th article. Staff photographer Thomas Koeniges will accompany him since Look feels that the Prime Minister will welcome photographic documentation of what Mr. Wren discloses. I also designate Mr. Wren and Mr. Koeniges to interview the Prime Minister during their stay in Greece, accepting your government's specific offer in a letter dated May 29, 1969, from the Consul General of Greece in New York.

In the press release, the Prime Minister also invited "the person who supplied the writer with false accusations." Look states again that it reported the facts, but is pleased that the Prime Minister is anxious to examine them. The information for the article came not from one person, but from many people, most of whom live in Greece. Inasmuch as Look has reason to fear reprisals against them, we cannot of course reveal their identities.

Instead, Look is sure that the Prime Minister will welcome the inclusion of two other individuals in the party as representative of those who are concerned about the problem. James Becket, Esq., an American attorney and investigator for Amnesty International, has followed developments in Greece since the military coup of April, 1967, and will be of valuable assistance in bringing documentation to the Prime Minister's attention.

Congressmen Don Edwards, Member of the Judiciary Committee of the U.S. House of Representatives, has expressed an interest in the matter and will join the group as an observer.

I decline the Prime Minister's kind offer to underwrite expenses; I feel it proper for Look to assume that responsibility. We will also be happy to provide our own interpreter. I assume that the Prime Minister's pledge of freedom and safe conduct in the press release of June 9, 1969, offers immunity from criminal or civil prosecution under Greek law for Messrs. Wren, Koeniges, Becket and Look's interpreter and would appreciate acknowledgment of this so that I know this group will be accepted in Greece and enabled to carry out its work in freedom.

I ask assurance that the above group will not be subjected to any prepared itinerary, and that it will be able to move and interview freely anywhere in Greece, including inside government detention facilities, without interference or harassment. Such working conditions are essential to produce the documentation that the Prime Minister is anxious to have. I further ask assurance that the group will be free to investigate on its own, unencumbered by either officials or other press. I also ask that they have the right to talk to anyone, including those in government custody, without the presence and out of the hearing of any official.

It would be essential to have a written guarantee that anyone with whom the Look party talks will not be subjected to any retaliation.

I expect that any written and photographic documentation gathered by the group will not be liable to either scrutiny or confiscation and that the group will be free to leave with such documentation.

If it is proven to the Prime Minister that some of his subordinates have condoned or engaged in torture, Look prefers that the Prime Minister not carry out his promise in the press release of June 9 to order their public execution in Constitution Square, but instead publicly try such offenders in accordance with traditional Greek jurisprudence.

I assume in this reply that the Prime Minister's invitation, conveyed in the press release, was accurate and in good faith. As Look's representatives prepare for their visit to Greece, I await the Prime Minister's direct response to each of my requests, in the knowledge that the Prime Minister will find the investigation a mutually fruitful and enlightening one.

Sincerely,

WILLIAM B. ARTHUR.

LOOK MAGAZINE ACCEPTS GREEK GOVERNMENT'S CHALLENGE TO INVESTIGATE TORTURE CHARGES MADE IN ARTICLE

NEW YORK.—Look magazine announced today that it has accepted the Greek government's challenge to send representatives to Greece in a dispute over Look's published charges that political prisoners in Greece have been brutally tortured.

The announcement came in answer to a statement made by Prime Minister George Papadopoulos of Greece, inviting an "authorized representative" of Look to visit Greece "with the purpose of investigating the truth" concerning reports of torture published in an article, "Greece: Government By Torture," in the magazine's May 27 issue.

The Greek Prime Minister's offer, while never conveyed directly to Look, was made at a press conference held in Athens on June 7. At this conference Papadopoulos denied Look's charges.

Look's acceptance of the Greek government's invitation was made by William B. Arthur, Editor of Look, in a letter dated June 16 to the Greek Embassy in Washington.

In the letter, Arthur designated Look senior editor Christopher S. Wren, who wrote the May 27 article, and photographer Thomas R. Koeniges to make the trip. He stipulated that they be accompanied by James Becket, an American attorney and an investigator for Amnesty International, and Congressman Donald Edwards (D-San Jose, Calif.), member of the Judiciary Committee of the U.S. House of Representatives.

Arthur also stipulated that Look's investigative team be granted full freedom in providing further support for the claims made in Wren's article.

Arthur said that he conditioned his acceptance upon the Prime Minister's pledge of freedom and safe conduct for the Look party, including a guarantee of immunity from harassment and criminal or civil prosecution under Greek law. He asked that they be allowed inside government detention facilities without interference or harassment. Furthermore, Arthur called for a written guarantee that anyone interviewed by the Look team would not be subject to retaliation.

In his press conference, the Greek Prime Minister stated that if Look proved to him that torture had taken place and supplied names, those responsible would be publicly executed in Athens' Constitution Square.

In his reply, Arthur suggested that those responsible should instead be tried in accordance with "traditional Greek jurisprudence."

Mr. LONG. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. LONG. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

SPECIAL TAX TREATMENT FOR OIL INDUSTRY INJURES NATION'S SECURITY

Mr. PROXMIRE. Mr. President, I am very grateful to the distinguished Senator from Louisiana for lifting the quorum call. It is most appropriate that he should be the man who should do it, because I am going to speak on oil this afternoon. I expected to make a fairly short speech, and perhaps it will be short.

Mr. LONG. Mr. President, will the Senator yield?

Mr. PROXMIRE. Yes, indeed.

Mr. LONG. If my friend the Senator from Wisconsin can tell me something I do not know about oil, I am very anxious to hear it.

Mr. PROXMIRE. Mr. President, I doubt whether anybody can tell the Senator from Louisiana anything he does not know about oil; he is very expert in this area, as he has demonstrated time and again on this floor, especially when he enlightens this Senator.

Mr. President, the time has come for Congress to take dead aim at the notorious depletion allowance, which too long has served as an obstacle to tax reform. The Senator from Louisiana (Mr. LONG) has invited any interested Senator to submit amendments to his committee, and when the tax bill comes to the Senate, I intend to take him up on his offer when the matter is before his committee.

Mr. LONG. Mr. President, will the Senator yield?

Mr. PROXMIRE. Yes, indeed.

Mr. LONG. The Senator is going to get a better chance than that. He is going to get a chance to vote against every businessman in America. We will give the Senator a broad opportunity.

Mr. PROXMIRE. I am sure the Senator from Louisiana will give me every opportunity that I desire to vote on tax legislation, and I certainly do not intend to vote against every businessman in America. I intend to vote against the surtax when it comes up.

Mr. LONG. Will the Senator yield further?

Mr. PROXMIRE. Yes, indeed.

Mr. LONG. Does the Senator know what the biggest loophole is in the tax law? What is the biggest tax loophole?

Mr. PROXMIRE. I would like to know the opinion of the Senator from Louisiana.

Mr. LONG. Capital gains. What is the Senator's opinion on that one?

Mr. PROXMIRE. I think the capital gains law, as presently drafted, could be construed, perhaps, as a loophole. However, I would not want to, although I am sure some Senators would, repeal it outright, because I think there is some merit to it.

Mr. LONG. Will the Senator yield further?

Mr. PROXMIRE. I yield.

Mr. LONG. The Democratic policy committee invited Mr. Stanley Surrey, whom they regarded, I assume, as the best tax reformer there is in America, to come down and explain his views on taxes for them, and he did not even mention depletion among the major items. He said capital gains is the biggest loophole there is. Is the Senator prepared to vote to do something about capital gains?

Mr. PROXMIRE. Mr. President, the difficulty with discussing this whole subject is that it is a matter of value judgments. I am shocked and surprised that Mr. Surrey did not mention oil depletion, because I have great respect for Mr. Surrey, and I think this is certainly something that ought to be discussed by as expert a man as he certainly is.

Nevertheless, I will not defer in my judgment as to where reform should come to Mr. Surrey or anyone else. It is not strictly a matter of expertise; it is a matter of where I think there is more need for reform. I think there is more need in the area of oil depletion than in most other areas. Furthermore, I am sure it is the most notorious loophole.

Mr. LONG. Mr. President, I am sure the Senator from Wisconsin is getting ready to respond to my speech, in which I showed with charts and tables that the oil industry pays more taxes than anyone else.

Mr. PROXMIRE. I am sure they pay less than anybody.

Mr. LONG. It took the Senator from Wisconsin almost a month to prepare that speech. I am sure he is now going to argue that they pay more taxes than somebody.

Mr. PROXMIRE. I intend to show that they pay less taxes than almost everybody.

Mr. LONG. The point is that the biggest loophole in the tax law is capital gains, and if you had any advice, the people advising you would tell you the best loophole is real estate, but moneywise, there is more money in capital

gains. So it just depends on whether you are talking about quality or quantity. Qualitywise, real estate; quantitywise, capital gains. It just depends on what you have in mind, whether you are talking about volume or whether you are talking about percentage points.

Does the Senator know, aside from those two, what is the next biggest steal?

Mr. PROXMIRE. May I say to the Senator from Louisiana, he can talk about quality and quantity all he wants to, but what I am saying is we could reduce the oil depletion allowance and could increase revenues to the Treasury with, I think, a fairly modest reduction, by about $600 million. I realize that there are other areas where the return to the Treasury might be greater. You might consider those loopholes. The Senator has properly pointed out two of them which would raise more money, obviously, than if we would remove the oil depletion allowance entirely, and I have not proposed that, nor does any Senator that I know of. I am proposing to reduce it, at most, to 15 percent for the large producers, and not at all for the small ones.

Mr. LONG. Mr. President, I am going to give the Senator an opportunity to vote on the depletion allowance, as I promised him. Is he willing to do something about capital gains?

Mr. PROXMIRE. I will take a long, hard look at it. I shall not vote for any amendment until I find out what it is. It depends on a number of things.

Mr. LONG. You see, Senator, you can afford, in your position from Wisconsin, to tax the oil people, just like I can afford to tax the dairy farmers. We do not have a great many dairy cows in Louisiana. We run some old, catch-as-catch-can beef cows, but in dairy farming as such we are an importer. So I guess I could afford to put a real heavy tax on the dairy farmers.

Mr. PROXMIRE. We just want to be treated like everyone else.

Mr. LONG. The people of the Senator's State are being treated better than most people, if I do say it, even those in the dairy farming business. The Senator's people get the benefit of this capital gains advantage, and so do mine. If the Senator wants a reform in the tax laws, I would like some indication from the Senator from Wisconsin that he would be willing to vote to do something about capital gains, which is the big one in terms of dollars.

Mr. PROXMIRE. Let me say to the Senator from Louisiana that I will be very much interested in his capital gains amendment. I am sure it will be an amendment that will have a great deal of merit; and if I were to guess at this point, I would guess that I would probably support it. But I think that the Senator would certainly expect any Senator to want to take a look at the amendment, and listen to the argument of the Senator from Louisiana, before he makes up his mind.

Mr. LONG. That is fair. Now, qualitywise, the biggest advantage there is in any business seems to be in real estate. Would the Senator be willing to vote to do something about the tax advantages that exist in the real estate business?

Mr. PROXMIRE. I make the same answer as on the other area, as to real estate capital gains. I think it is just a matter of taking a good look at the amendment, and seeing what the very able staff the Senator has been using suggests, what their arguments are, and what the committee report says, and then make up my mind. I just do not know. Again, I think there is a good possibility I would vote for that.

Mr. LONG. If the Senator is interested in comprehensive tax reform, he ought to be interested in the situation of the people who just do not pay anything, just zero.

There is old Mrs. Gotrocks; she inherited stock in the Houdini Co. let us say. The stock is now worth 10,000 times what it was worth, and it looks as though she is going to owe a 77-percent tax on a million dollars of income that she has spent.

So she takes a million dollars worth of her stock, and puts that over into the Mrs. Gotrocks Foundation. Mind you, she has paid no tax on the enhanced value. When she inherited the stock, it was worth only 1 cent a share, and now it is worth $1,000 a share. But she transfers the stock from Mrs. Gotrocks to the Mrs. Gotrocks Foundation, and as a result of transferring $200,000 worth of stock from her own personal account to her foundation account—which she still controls, and votes the stock—and does not invest a penny of it in charity, mind you, she thereby avoids paying any taxes.

It is not well to do something about that? That is a complete fraud and fake, based on a law that was passed to let a nun who had taken a vow of poverty contribute her money to charity.

Is the Senator willing to confine it to the case of that Philadelphia nun, so Mrs. Gotrocks cannot contribute to the Gotrocks Foundation, and get away with deducting $200,000 in taxes?

Mr. PROXMIRE. I believe I would be very willing to support the Senator's amendment. The Senator has made a very able argument in favor of it.

Once again, I would like to take a look at the whole amendment before listening to the argument and making a final commitment. It sounds as if the Senator is making a strong case.

Mr. LONG. Mr. President, not all of the people in the oil business are successful. I know a lot of them who have lost everything that they put in it.

The successful ones pay roughly one-third of their gross income in Federal income taxes. That is Federal taxes and does not count the fact that they pay many other local taxes. For example, they pay 10 percent of their gross income in my State before getting anything. Actually they pay about 43 percent of their gross in taxes.

Is the Senator all that confident that taxpayers who are paying on that basis are favored taxpayers?

Mr. PROXMIRE. Mr. President, at this point I inquire if I have the floor.

The PRESIDING OFFICER. The Senator from Wisconsin has the floor.

Mr. PROXMIRE. I say to my friend the Senator from Louisiana that I will continue to answer him on that subject in some detail. However, I think it would be much more orderly and useful to the Senator from Louisiana and me if I might proceed for another 15 or 20 minutes before replying further to the Senator from Louisiana.

Mr. LONG. Would the Senator answer one more simple question, yes or no?

Mr. PROXMIRE. I will not agree to answer anything until I know what the question is. I will be happy to listen to the question.

Mr. LONG. Will the Senator yield for one question?

Mr. PROXMIRE. I yield for one question.

Mr. LONG. The best I remember, the last time we debated the matter, I took the floor and the Senator left the floor rather than listen to me. Would the Senator be willing to stay around this time?

Mr. PROXMIRE. All Senators have to leave the floor at times. I had been on the floor for a long time on that occasion. I came back later.

The Senator implied that he had driven me off the floor. I suppose that in some ways the senatorial winds can do all kinds of things.

I did have to leave the floor. It is one of those things that we cannot avoid. However, I did come back before the Senator finished.

Mr. LONG. On the last occasion, the Senator refused to yield for a question. I said that if I knew as little as the Senator did, I would not yield. The Senator did not yield, and when I took the floor, he left.

Mr. PROXMIRE. I listened to the Senator for a long time.

Mr. LONG. The Senator did not listen for long.

Mr. PROXMIRE. I will give the Senator a copy of my speech. If he wishes to, he may follow it, and I will be delighted to answer questions later.

Mr. LONG. I make the same promise. When the Senator gets through, I will consider it here today or on some future day. I will give the Senator a response. I enjoy the running debate.

Coming from a State that produces no oil, the Senator is anxious that we pay all the taxes. If I came from a State that produced no oil, I would be eager for oil producers to pay all the taxes.

I daresay the dairy farmers are not paying as much as the oil people.

The running debate will not come to an end.

Mr. PROXMIRE. I am sure the running debate will not come to an end. However, I am convinced that the dairy farmers of Wisconsin want to pay the same taxes as people elsewhere. They want to be treated the same. We do not want to impose any unfair or discriminatory taxes on people who produce oil in Louisiana or elsewhere.

I strongly favor some depletion allowance which would be favorable to them. I favor repealing other taxes. If we give in on the surtax and do not insist and fight for tax reform, we will never get ahead.

Mr. President, I have always felt that the oil industry pays too little in taxes any way you look at it. My distinguished colleague, the Senator from Louisiana (Mr. LONG), disagrees and on May 16 made a speech on the floor of the Senate defending his position.

POINTS TO BE MADE

Because the subject of the oil industry's privileged tax position is so complex, as a guide to my remarks, I would like to list the points I will make.

First. Both the Senator from Louisiana and I agree that the oil industry pays less in Federal taxes than other industries. The Senator from Louisiana indicated that the oil industry pays 24 percent of its net income in Federal taxes, compared to about 40 percent for all industries. Based on his data, my analysis indicates the disparity is even greater: 22.2 percent for the oil industry versus 44.2 for other industries.

Mr. LONG. Mr. President, will the Senator yield?

Mr. PROXMIRE. I will be happy to yield to the Senator from Louisiana after I have finished. I realize that the Senator disagrees with the statement I have just made. I will be delighted to go over it point by point later on.

Mr. LONG. Will the Senator yield for one simple question?

Mr. PROXMIRE. I yield for one simple question.

Mr. LONG. Mr. President, both the Senator and I agree that the oil people pay less in Federal income taxes. If the Senator wants to use the words "all taxes," then I shall prove that they pay more than anyone else.

Mr. PROXMIRE. I am including everything when I say that.

Based on this data, my analysis indicates the disparity is even greater: 22.2 percent for the oil industry versus 44.2 percent for other industries. However, if book pretax net earnings derived from SEC reports, the figures which are used to determine dividends, are used as the measure, the oil refining industry only pays 11 percent of its net income in Federal taxes, compared to 40.8 percent for all manufacturing concerns.

Second. Even if we add all State, local, and foreign taxes, including severance, property, and production taxes, to the Federal taxes paid by the oil industry, its total tax burden is still lower than just the Federal tax burden on other industries.

Third. Our tax policy should not interfere with the forces of the market economy, unless there is a compelling national need to do so. A nonneutral tax policy adopted without adequate justification causes misallocation and waste of our scarce domestic resources and, thus, injures our national security.

Fourth. Even if we accept the thesis that the oil industry needs special incentives to explore for oil, the present tax structure is an inefficient, inconsistent, wasteful, and unfair way of achieving this goal. Let me go over each of those adjectives because I mean each of them. It is inefficient because it costs the American taxpayer over $10 in lost tax revenue for every $1 in additional reserves. It is inconsistent because it gives greater tax incentives to explore for oil abroad than here at home. Foreign royalty payments disguised as taxes are written off dollar for dollar against U.S. taxes owed, whereas such payments here are only deductible from income. It is wasteful because it encourages overcapitalization in the oil industry to such an extent that it takes $2 worth of capital in the oil industry to produce what $1 worth of capital will produce in other industries. Finally, it is unfair because it allows big income taxpayers to hide large amounts of income from taxation thereby shifting the tax burden onto those less able to pay.

Mr. LONG. Will the Senator yield?

Mr. PROXMIRE. I wish the Senator would wait until I finish my remarks so that we may have an orderly debate and have some continuity in my remarks.

Mr. LONG. I have been reading the remarks of the Senator. The Senator has mentioned my name time after time. The Senator has declined to yield to me.

I will read the speech and I will ask one simple question and leave. It is this simple. Is the oil industry the only industry receiving benefits on foreign income, or does everybody get such benefits?

Mr. PROXMIRE. There is not any question——

Mr. LONG. The answer is yes, is it not?

Mr. PROXMIRE. Comprehensively, the answer is yes.

Mr. LONG. So, the Senator did not know what he was talking about. He said that everybody gets it.

There is a man whispering to the Senator. He is supposed to know something about taxes. Where did he come from?

Mr. PROXMIRE. This is Mr. Martin Lobel, a very able man who has done some very fine work.

It seems to anger the Senator that Mr. Lobel has whispered to me. He is one of the most efficient men I have known on the Hill. If the Senator wants to attack him, I am sure it will not bother Mr. Lobel.

Mr. LONG. What bothers me is that the last time he whispered something in the Senator's ear, the Senator did not say anything.

I ask the Senator what he said this time?

Mr. PROXMIRE. Some of the advantages of having staff members on the floor is that one can listen to what they say. One does not have to do what people whisper in one's ear, whether it be the Senator from Louisiana or Mr. Lobel.

I am sure there have been things that the Senator from Louisiana has whispered in my ear that he would not want me to say audibly on the floor and that there are things I have whispered in his ear that I would not want him to say audibly on the floor.

Mr. LONG. That is a fair proposition. The Senator may make his speech and I will not interrupt him any more.

Mr. PROXMIRE. Fifth. Congress must take immediate steps to cure this cancer in our economy. Congress must develop a much more rational and less expensive means of achieving the supposed objective of our present system—a secure source of oil during emergencies.

TAX FACTS

On the basic issue, Senator LONG and I agree. The oil companies do pay a much lower proportion of their earnings to the Federal Government in taxes than do other industries.

Senator LONG's figures show that the oil industry pays about 24 percent of its net income in Federal taxes, while the average manufacturing company pays 42 percent of its net income in Federal taxes.

However, these figures overstate the actual tax burden on the oil industry because net income as defined for tax purposes does not include substantial amounts that have been deducted through the use of tax loopholes. Net income for tax purposes or taxable income, if you wish, is usually lower than actual income or in the accountant's term, pretax book net income and the smaller the basis against which tax burden is measured the greater the apparent tax burden.

The taxable income of the oil industry is approximately half of its actual income. According to the Statistics of Income for 1965, published by the Internal Revenue Service, only 44 to 51 percent of the oil industry's actual income—depending on how one treats the tax credit—is considered to be taxable income, whereas 97 percent of the actual income of all manufacturing concerns, excluding the refining industry, is considered to be taxable income. Thus, any attempt to compare tax burdens on the basis of taxable income is going to greatly overstate the true tax burden on the oil industry, even if, as my good friend Senator LONG has done, we add to the taxable income the amounts excluded on account of the depletion allowance. The depletion allowance is only one of many tax loopholes enjoyed by the oil industry. The oil industry also enjoys many other tax loopholes such as intangible expensing which allows the oil industry to write off in 1 year expenses that other industries must capitalize over a number of years. Still another privilege which it enjoys is the ability to write off royalty payments disguised as tax payments to foreign governments dollar for dollar against U.S. taxes owed.

A much more accurate comparison of the tax burden on the oil industry as compared with other industries can be obtained from the actual income figures of the various industries published by the Securities and Exchange Commission and the Federal Trade Commission. These figures I want to emphasize represent the actual income of the industries; these figures are the ones used by the companies themselves when reporting their income to their stockholders. Based on these figures, all manufacturing corporations paid 40.8 percent of their pretax earnings in Federal taxes in 1968, whereas in 1968 the petroleum refining industry paid only 11 percent of its pretax earnings in Federal taxes.

Mr. LONG. Mr. President, will the Senator from Wisconsin graciously yield one more time?

Mr. PROXMIRE. Very well; I yield.

Mr. LONG. Would the Senator mind correcting his remarks and say "income tax"? It is Federal income taxes on which these people receive a break. In terms of overall taxes they pay more than anybody else does. As to one particular tax, the petroleum industry does get a break. It is the only way they can operate, considering that they are the most heavily taxed of all taxpayers in America.

So when the Senator says "Federal tax," would he be willing to say "Federal

corporate income tax" or "Federal personal income tax," as the case may be?

Mr. PROXMIRE. I shall talk about the total tax burden in a minute. I do exclude, it is true, the Federal excise tax. My assumption is that that is a tax paid by the user of gasoline. When the Senator from Louisiana and I go to a gasoline station and buy gas, we pay taxes. The dealer indicates the amounts of Federal excise tax and State tax.

My computation, according to the way I have figured the tax, is of the amount borne by the user, not by the industry.

Mr. LONG. The Senator is excluding State taxes?

Mr. PROXMIRE. That is correct. I am speaking only of Federal taxes.

Mr. LONG. Would the Senator mind explaining who pays more money to friendly foreign governments than anybody else on earth, so far as industry is concerned? I am speaking about friendly foreign governments. Who pays more taxes to them than anybody else? The Senator can say it in one word. Can he say what industry it is?

Mr. PROXMIRE. That depends on the kind of taxes the Senator is talking about. Is he referring to income taxes? If he wants to construe royalty payments as taxes, as the petroleum industry is able to construe them, so far as the Internal Revenue Service is concerned, it is true that the petroleum industry does make higher payments; that is true. I do not have any figures to verify that. If the Senator tells me that that is the fact, I will agree that it is.

Mr. LONG. One of the representatives of the biggest overseas oil company in America—I think it is the biggest oil company in America—is a friend of mine who has the same name as mine, although we are no relation. He is a Texan; I am from Louisiana. I spoke with him about reducing the depletion allowance for overseas oil.

He said, "Senator, you can reduce it all you want to; but after the foreign governments get through 'putting it to us,' we have so many excess tax credits to carry over we will not owe any money here. Cut our foreign depletion all you want to and we still would owe you nothing. The same, however, would not be true of some smaller companies." And what does the other fellow pay to foreign governments? All other countries tax the foreign operations of their companies on a more generous basis than we tax ours—or in some cases do not tax them at all. I think the Senator from Wisconsin knows that, does he not? If he does not, he ought to find it out. Let the Senator's assistant whisper it in his ear.

Mr. PROXMIRE. I will ask Mr. Lobel to take a seat on the couch.

The PRESIDING OFFICER (Mr. SAXBE in the chair). The Senator from Wisconsin has the floor. Does he yield to the Senator from Louisiana?

Mr. PROXMIRE. No; I shall continue with my speech.

Mr. LONG. Does the Senator mean that he is not going to answer my question?

Mr. PROXMIRE. No; I shall not yield further until I have finished my speech, which will be in a relatively few minutes if I am not interrupted.

As a matter of fact, even if we use Senator LONG's figures, the disparity between the tax burden on the oil industry and other industries is greater than he has indicated. An accurate comparison of relative tax burdens requires that we exclude the oil industry from the figures for all industries, otherwise the low tax burden on the oil industry which has such a large percentage of all industries' profits will drag down the average tax burden on all industries. Likeswise, I have added back into the figures for the oil industry the approximate amount of tax revenue lost because of intangible expensing. On this basis, using Senator LONG's own figures, we find that the Federal tax burden on all industries, exclusive of the oil industry, amounted to 44.2 percent of their income, while the tax burden on the oil industry, which is admittedly overstated, amounted to only 22.2 percent.

TOTAL TAX BURDEN

I now come to the subject of the total tax burden. The Senator from Louisiana has just raised the point about taxes by foreign governments.

Even if we include State and local and foreign taxes to the Federal income taxes paid by the oil industry, the oil industry pays less in taxes than most industries pay in Federal taxes alone.

Senator LONG inserted a table beginning on page 12807 in the May 16 CONGRESSIONAL RECORD showing the total tax burden, including State, local, foreign, and Federal taxes of some of the major refiners. These figures include severance, production, and property taxes which, as Senator LONG quite correctly pointed out, my previous figures did not include.

Because I have a small staff, I could not go through all the figures as Senator LONG's Finance Committee staff did. However, because the amount of taxes paid by Atlantic Richfield seems to be a bone of contention, I did examine those figures in detail. My analysis indicates that Senator LONG inadvertently overstated the total tax burden on Atlantic Richfield and, I would assume, on the other oil companies reported.

For example, according to Senator LONG's table, Atlantic Richfield paid no Federal taxes on a net pretax income of $145,259,000 in 1967. It supposedly paid 10.5 percent of its income, or $15,254,000, in foreign and State taxes. It also supposedly paid 22.6 percent, or $32,991,000, of its income in severance, production, and property taxes. However, even if we assume that the foreign taxes are really taxes and not disguised royalty payments, these percentages greatly overstate the tax burden on Atlantic Richfield.

In order to find out what percentage of its net income Atlantic Richfield paid in taxes we have to find out what its net income was before taxes. This is done by taking the aftertax net income and adding back the amount of taxes paid by Atlantic Richfield.

I can understand how the Senator from Louisiana (Mr. LONG) became confused. According to Atlantic Richfield's annual report for 1967, its pretax income was the figure quoted by the Senator from Louisiana, $145,259,000. However, it also stated that its aftertax income was $130,005,000. This means that Atlantic Richfield only added back the foreign and State taxes. It did not add back the severance, production and property taxes which the Senator from Louisiana (Mr. LONG) has included in his chart. If we add back all the taxes paid by Atlantic Richfield to its aftertax income, we find that its total tax burden is much lower than indicated.

Atlantic Richfield paid the following percentages of its total pretax income in taxes in 1967:

Federal taxes	0
State and foreign taxes	8.6
Severance, production, and property taxes	18.5

This means that Atlantic Richfield paid a grand total of 27.1 percent of its income in all taxes, Federal, State, local, and foreign. Compare this with just the Federal tax burden borne by the average manufacturing company of 40-plus percent. And they, too, must pay State and local taxes as does the oil industry, probably at a higher rate because of their greater payroll taxes, and so forth.

TAX POLICY GOALS

Although the analysis of Senator LONG's figures shows conclusively that the oil industry does not pay anywhere near the amount of taxes, Federal, State, local, or foreign, paid by other industries, we ought not to become lost in figures. We ought to look behind the figures. We ought to examine the tax policies which allow the oil industry to escape taxes paid by other industries, what the consequences are, and whether they can be justified.

The Federal income tax is perhaps the best measure for comparing relative tax burdens in various industries since it is by far the most important tax on return to invested capital. As such it should be as neutral as possible; that is, the return to capital invested in one use should not be taxed more heavily than capital invested in another use—unless there is an overwhelming national need.

In the United States, our economic policy has been to rely upon the market forces to allocate scarce economic resources and to intrude upon the market forces only when there is a compelling need to do so. Unequal tax treatment is a clear intrusion upon market forces. If Federal taxes treat income from a certain industry more favorably than other industries, over time under competitive conditions, capital will flow into the favored industry until the return on capital in that industry is equal to the return from capital invested in less favored industries. This leads to a misallocation of scarce capital, inflationary pressures, and waste.

If I may quote from Professor of Economics Walter J. Mead's, testimony before the Senate Antitrust and Monopoly Subcommittee:

> The effect of favored tax treatment is to reduce tax costs for oil companies relative to firms in other industries. These measures taken together substantially raise the expected after-tax profit rates on oil industry exploration and development rates in what would otherwise be submarginal uses of scarce capital. Investment in petroleum exploration and development is indeed expanded to the point where the after-tax return is approximately equal to that which

may be obtained on alternative uses of capital . . . .

Oil industry spokesmen have defended their various subsidies with the question "If we receive all the subsidies which our critics allege, why is our rate of return on invested capital not substantially higher than other nonsubsidized industries?" The answer to this question is that a subsidy will raise the profit rate at the point in time at which it is conferred.

Its effects, however, are eroded away with time as producers react to their more profitable situation by expanding into otherwise submarginal areas. This expansion leads to a decline in the rate of return toward a normal yield and to resource misallocation as well.

Mr. President, what I am saying is that the subsidy to the oil industry does not result in higher profits. It results in misallocation of resources as more capital enters the oil industry, to take advantage of the tax privileges which the industry enjoys.

NATIONAL SECURITY AND OIL TAXES

The supposed justification for the special treatment enjoyed by the oil industry is national security, although the recent attack on the Treasury Department commissioned study of the oil depletion allowance by the Mid-Continent Oil and Gas Association seemed to be based on the premise that if we change the depletion allowance the price of gasoline will go up.

The catechism chanted so long by the oil industry that they actually believe it is that if the oil industry does not have all these special tax breaks and other governmental intrusions into the market on behalf of oil then our country would be in dire straits—we would become utterly dependent for oil upon those rascals in the Middle East who are just waiting for that to happen so they can shut us off.

First, a few facts about the domestic oil industry ought to be established. It is a very healthy and powerful industry by any criteria. In 1968 the combined net profits of the 12 largest U.S. oil companies was just a fraction under $5 billion. Each of those 12 companies, moreover, has set new profit records in each of the last 4 years. Just 4 years ago, the profits of these 12 companies totaled $3.7 billion. During that short span of time, they have, thus, increased their profits by just under $1.3 billion—a 33.5-percent increase.

According to a survey by the First National City Bank of New York published in its April 1969 Monthly Economic Newsletter, a total of 2,250 manufacturing companies showed a net income of $26 billion in 1968. Of the 2,250 companies, the 99 oil companies had a total net income of $6.1 billion or almost 25 percent of the aftertax earnings of the entire list. And, according to the same survey, the oil companies as a group enjoyed the second highest return on sales of 9 percent, almost twice the average return for all companies surveyed. Although the oil industry's return on invested capital was 12.8 percent, just under the 13.1-percent average for the entire 2,250 companies, this is the result of our tax policy as was indicated in Professor Mead's testimony. What happens is that capital comes into the hands of industry to achieve that purpose.

Even if we accept the thesis that our national security requires special incentives to encourage domestic exploration for oil, the present tax incentives are inefficient, inconsistent, wasteful and unfair ways of achieving this goal. I will not touch upon the other governmental intrusions into the marketplace on behalf of oil which accentuate the waste of scarce capital such as the mandatory oil import program and State market proration laws which guarantee high oil prices, because I have spoken about them before. However, I do not think we ought to forget that the oil industry is the beneficiary of many governmental favors in addition to all those tax breaks.

No one, least of all myself, would deny that national security should be our prime consideration. However, all the governmental distortions of the free marketplace to benefit the oil industry have actually been impairing our national security. Our national security requires that we have a strong economy which in turn requires that we do not waste our resources. Here we have governmental policies which affirmatively encourage waste of scarce capital and, I might add, depletion of our natural resources all, irony of ironies, in the name of national security.

INEFFICIENT

Almost all the tax benefits enjoyed by the oil industry are tax credits. These are general policy tools which benefit any activity that qualifies under the particular tax provision. Direct appropriations or expenditures, on the other hand, can be as selective or as broad as Congress wishes.

The tax policies we have now are supposed to encourage the exploration for domestic sources of oil, yet they are so general the oil industry receives tax benefits for activities they would have undertaken even without the tax breaks. In other words, although tax credits are supposed to subsidize the exploration for oil they also subsidize all the other activities of the oil companies which they would have undertaken even without the tax subsidy.

The oil depletion allowance and intangible expensing in 1968 cost the American taxpayers $2.25 billion in lost tax revenue according to the Treasury Department's Tax Reform Studies and Proposals submitted to the Finance Committee. However, in order to be fair to the oil industry, I think I ought to use the estimated long-range revenue loss of $1.6 billion a year. This $1.6 billion was spent just as if Congress had appropriated it with one big difference: Congress had no say in how it was spent. The big problem with such "back door spending" is that it is seldom reviewed by either Congress or the executive branch, accurate data on its costs and benefits are often difficult to obtain, and too frequently it is wasted on activities which would have been undertaken without it.

This point may be seen easily when we compare the congressional scrutiny devoted to the money spent because of the depletion allowance and the money directly expended for other projects costing far less. The $1.6 billion in back door spending on the oil depletion allowance and intangible expensing is three times what was budgeted during fiscal 1969 for Federal law enforcement, 15 times as much as the cost of running our Federal judicial system, three times the budgeted amount for school lunch and food stamp programs, five times as much as is budgeted for low-rent public housing, and four times the allotment for the Alliance for Progress.

The percentage depletion allowance is an extraordinary tax benefit because it permits the tax-free recovery of an average of 19 times the original investment in an oil well. For this reason, the percentage depletion deduction is a subsidy, not merely a mechanism for the recovery of capital investment. In addition, that portion of the percentage depletion deduction which represents ordinary tax-free recovery of capital investment costs is usually recovered more rapidly than would be allowed by the usual depreciation methods which other industries are required to use. Thus, percentage depletion confers two benefits: deductions about 19 times in excess of actual costs, and accelerated deductions of initial costs.

It is also remarkably inefficient. The Treasury Department estimated in its study:

The Federal Government is paying, in tax benefits, about $1.6 billion for resources which the market values at $0.15 billion.

In effect, we are paying over $10 for every $1 in additional oil reserves.

But, says the oil industry:

If we eliminate the depletion allowance our reserves will disappear and we will become dependent upon those who control middle eastern oil.

The Treasury Department analysis indicates that this is just not true. If the depletion allowance were completely eliminated, the Treasury Department report estimates that instead of a 12-year oil reserve we would only have an 11-year reserve. Surely, this is enough time to compensate for any conceivable interruption of our oil supply.

Finally, I might add, the depletion allowance feeds the fires of inflation. We saw, just a few months ago, how the oil companies raised their prices for crude oil in order to get a larger depletion allowance and thus hide more of their income from taxation.

The intangible expensing provisions of the tax code are also extraordinary because they permit the immediate tax-free recovery of most of the costs of exploring and drilling for oil. Other industries can only recover their capital investments over the approximate life of the capital equipment. For example, a farmer in Wisconsin who buys a tractor can only recover his capital investment in it over a period of years as the tractor wears out. If, however, he had enough money to invest in oil exploration and drilling, he could recover his capital investment in 1 year.

As a matter of fact, the American consumer does not even get the benefit of the lower oil prices that he should from these tax subsidies. Theoretically, the oil depletion allowance, intangible expensing, and all the other tax loopholes benefiting the oil industry, are subsidies paid for by the American taxpayer in increased taxes and should result in lower oil prices. Yet, the anachronistic State market proration laws—laws which forbid the oil companies in Texas or Louisiana to pump at more than 50 percent of capacity, and, as a matter of fact, Texas just cut their allowable pro-

duction of 400,000 barrels for July, because that is all the oil companies wanted to buy—keep the price of oil at artificially high levels and thus deprive the taxpaying consumers of the lower prices they should be getting.

I can think of no better way to sum up the deficiencies of these tax provisions than by quoting from the Treasury Department's tax study which I mentioned before:

Percentage depletion is a relatively inefficient method of encouraging exploration and the resultant discovery of new domestic reserves of liquid petroleum. This is in part due to the low sensitivity of desired reserve levels to the price subsidy represented by percentage depletion, and in part to the inefficiency of the allowance for this purpose, since over 40% of it paid for foreign production and non-operating interests in domestic production.

The report went on to note, and I think this is very significant, because the report is the first impartial analysis of the cost of oil's special tax privileges to the American taxpayers—

The investigations reviewed during the course of the study were in substantial agreement that the current situation was one of economic inefficiency, and that *any changes were almost certain to be beneficial to the economy in the long run.*

Let me repeat that:

Any changes were almost certain to be beneficial to the economy in the long run.

There are so many changes, Mr. President, downward in which the depletion allowance would be reduced.

INCONSISTENT

Although the supposed justification for all of oil's tax loopholes is the alleged need for more incentives to explore for domestic sources of oil, our tax policy is contrary to such a goal, because it gives greater incentives to explore in foreign countries than here at home. This seems unbelievable, but it is true.

Royalty payments which are disguised as taxes to foreign countries, particularly in the Middle East, the area which is most likely to cut off our supplies of foreign oil, are credited against U.S. taxes owed. This means that every dollar paid by the oil companies to these foreign countries in disguised royalty payments is $1 less they owe to the U.S. Government. Yet, such payments here in the United States are only deductible from ordinary income, not from the amount of taxes owed by the companies.

The American consumer and taxpayer is being taken both ways. Not only is he bearing a great part of the oil industry's fair share of the tax burden, because of these great tax incentives to explore abroad, but he is also prevented from benefiting from all this inexpensive foreign oil, because the oil import program limits the amount of the inexpensive foreign oil that can enter the U.S. market. All this is done in the name of "national security."

Surely, this type of thinking could not pass the muster of any rational man. The only reason that the over $1.6 billion in taxes is being spent this way is that Congress has not really reviewed the oil tax situation since 1926, when the depletion allowance was set at its present level. This is the great fault of tax credits. They are not subject to continuing scrutiny and justification. They grow and imbed themselves in our economy until any connection with their original rationale is purely coincidental.

Surely, Congress can devise some much cheaper way to provide for a secure source of oil during emergencies. Between the oil import program and all of oil's tax loopholes, the American consumer and taxpayer is being forced to subsidize the oil industry by over $7 billion a year. It is unbelievable that we cannot devise a much cheaper and more effective way of protecting ourselves from emergency interruptions of our oil supplies.

WASTEFUL

Because all these special tax privileges have riddled the economic fabric of our country, gigantic sums of scarce capital have fallen through these loopholes and been wasted. I have already touched upon this point before and do not wish to belabor it, but I do wish to point out the findings of one of our leading tax experts, Arnold Harberger. Writing for the Joint Economic Committee in its study entitled "Federal Tax Policy for Economic Growth and Stability," he indicated that it takes about $2 worth of capital investment in oil exploration to produce as much product as $1 of capital invested in other industries. This, in effect, confirms Professor Mead's statement about the uneconomic conditions in the oil industry because of the oil loopholes. As a matter of fact, Professor Adelman of MIT estimates that if these economic inefficiencies which are encouraged by our tax laws could be eliminated, the price of oil could drop by as much as $1 a barrel. Professor Steele of the University of Houston went even further. He indicated that about 95 percent of our present output would still be produced if the price of oil dropped from its present level of about $3.50 a barrel to $2 a barrel.

How can we encourage these uneconomic conditions in the name of "national security"?

UNFAIR

Our tax policy is supposed to be fair. Fairness in taxation means two things: First, taxpayers with similar incomes should pay similar taxes, and second, persons with higher incomes should be taxed more heavily than persons with lower incomes.

Our tax policy so far as oil is concerned is not fair to the American taxpayer. Those taxpayers who derive their income from oil pay lower taxes, if any, than those who get their income from other sources. This is not fair. The source of the income should not make any difference as to the amount of taxes paid. Why should a person whose income is from wages or salary have to pay more in taxes than someone who gets his income from oil?

Second, all the oil tax loopholes allow many high-income taxpayers to escape from paying taxes or from paying their fair share of taxes. This was pointed out dramatically by former Secretary of the Treasury, Joseph W. Barr, in testimony before the Joint Economic Committee. One hundred and fifty-five individuals with adjusted gross incomes exceeding $200,000 in 1967 paid no Federal income tax.

Now, I do not claim that all these 155 individuals with incomes over $200,000 who did not pay any Federal taxes relied exclusively on the oil tax loopholes to escape taxation; but I do say the oil tax provisions are one of the most important loopholes through which this income escaped taxation.

I think that we in Congress should also pay close attention to the statement of Henry H. Fowler, Mr. Barr's predecessor as Secretary of the Treasury:

Under present law, 2.2 million families with incomes below the poverty level are required to pay Federal income taxes. . . . On the other hand, there are a sizable number of individuals with very high incomes who pay little or no income tax. Indeed, although the Federal income tax is designed and understood to be progressive, the fact is that many persons with incomes of $1 million or more actually pay the same effective rate of tax as do persons with incomes only 1/50th as large.

How can we in Congress allow a system to continue which taxes 2.2 million families with incomes below the poverty level, yet allows people with incomes over $200,000 a year to escape paying any taxes at all? Why should those below the poverty level be forced to pay the taxes that should be paid by the oil barons?

WE MUST DO BETTER

If I may quote from the Department of the Interior's study, "U.S. Petroleum Through 1980":

(Government) has sought to encourage discovery of oil and gas by favorable tax treatment, by limiting imports, by making public lands available for mineral leasing, and by regulating production to provide order and stability while avoiding the physical Waste of resources. In doing so it has involved itself in matters of both supply and price.

We have achieved the goal stated by the Interior Department's report; we have encouraged the discovery of oil and gas. But at what cost?

The cost to the American consumer and taxpayer for just the oil import program and some of the tax loopholes is in excess of $7 billion a year.

The justifications for such excessive costs are unconvincing.

I ask unanimous consent that articles by Patrick Young of the National Observer and Spencer Rich of the Washington Post be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit I.)

Mr. PROXMIRE. Mr. President, both of these reporters are fine, hardnosed newspapermen beholden to no one and both of these reporters reached the conclusion that the oil industry's defense of its favored position has not been persuasive.

I cannot believe there is not a more efficient and less expensive way of providing for a secure supply of oil during emergencies than the present system. The cost of the present system has run away because its costs have not been visible. I can assure you that if Congress had to make a direct appropriation for such a program the costs would not be anywhere near $7 billion a year. Certainly we need oil for our national security, but we need lots of other things

for our national security, too. One of these is a strong economy which does not waste its resources.

I think quite clearly that the oil industry should be placed on an even footing with other industries. The oil tax loopholes should be closed. This would go far toward quelching the impending "taxpayers revolt" by putting fairness back into the tax system.

To conclude, I think then we ought to find out, as the Shultz study of the oil import program seems to be doing, what are our actual needs for oil during emergencies. We should then ascertain what is the most efficient, inexpensive way of assuring that supply. It might be a grant to develop the technology needed to produce oil from oil shale economically or it might be cheaper to discover oil pools on Federal land and then keep that oil in reserve until needed.

Whatever solution we decide upon, one thing is clear: The present privileged position of the oil industry must go.

EXHIBIT I

[From the National Observer, May 26, 1969]

THE UNIQUE STATUS OF AN INDUSTRY: HOW TAX BREAKS HAVE NOURISHED THE OIL BUSINESS

(NOTE.—This is the last of a series of articles that explore firsthand and in depth the oil industry's singular position and prerogatives in America today. The articles were prepared by staff writers August Gribbin, Michael Malloy, and Patrick Young and senior editor Edwin A. Roberts, Jr.)

In the late Nineteenth Century, the amassing of great wealth from oil was enhanced by the easy ethics of the age. In more recent times, many new oil fortunes have arisen and swelled, and they have swelled in fair measure because the industry enjoys an assortment of tax breaks that no other business can match.

Consider:

Atlantic Richfield Co. reported income before taxes of $377,942,000 in the years 1965 through 1967, but the company paid no Federal income taxes.

Standard Oil of California reported income before taxes in 1967 of $513,067,000 and paid $6,000,000 in Federal corporate income taxes, or 1.2 per cent.

How can this be done? How is it possible to earn so much and pay little or no Federal income taxes? The answer is that the Federal tax structure provides a host of unusual tax sanctuaries for the oil industry.

These tax sanctuaries are related to the controversial Machiasport plan, by which Occidental Petroleum Corp. hopes to erect a huge refinery in the tiny town of Machiasport at the northeastern tip of Maine. The plan represents a sophisticated attempt to hurdle the Federal import quota system for oil. It is the import quota system, which was explained in detail in The National Observer of May 5, as well as restrictions on domestic production, which were examined in The National Observer of May 12, that combine with petroleum's special tax breaks to give the U.S. oil industry a unique status in the economy—and to force the American consumer to pay artificially high prices for many oil products.

It is this unique status that the battle over Machiasport has placed in the spotlight, and the industry is preparing to meet assaults from any direction.

CASH FOR CHANCY PROJECTS

Uncommon tax advantages provide the industry with an uncommonly large cash flow, which the industry argues is required for its gigantic and often chancy operations. What are these tax advantages?

Take a look at the more important ones:

Percentage depletion

Oil and natural gas well operators may deduct 27.5 percent of the gross revenues of each property before paying taxes, unless this figure totals more than 50 percent of the net income of the property before deducting the depletion allowance. Thus, if gross revenues on a property total $100,000, the producer may take $27,500, before figuring his taxes, so long as the net income of the property after expenses is $55,000 or more. If however, the net income was, say, $50,000, the producer would be limited to 50 per cent of that, or $25,000.

Intangible drilling costs

These include such costs of developing a producing well as wages, fuel, repairs, hauling supplies, and other expenses that do not have a salvage value. These "intangibles" may be deducted from gross revenues the first year. Similar expenses incurred by other manufacturers must be capitalized and written off over a number of years.

Foreign tax credits

U.S. companies operating abroad may claim credit for taxes paid to foreign governments on nearly a dollar-for-dollar basis. Thus if a company owed $75,000 to Uncle Sam on its profits earned in, say, Saudi Arabia and had paid $80,000 in taxes to the Saudi Arabian government, the foreign-tax credit would eliminate the taxes on that operation due the U.S. Treasury. Critics, however, say that taxes paid Middle East governments by U.S. oil companies are based on artificial prices, and that some of these taxes should be treated as expenses of doing business and should not be allowed to fully wipe out the companies' U.S. tax debt.

Western Hemisphere trade deduction

This provision allows U.S.-owned companies doing 95 per cent of their business outside the United States but within the Western Hemisphere to a special deduction in figuring their Federal taxes. In effect, it reduces the tax rate by 14 points, currently from 52.8 per cent to 38.8 per cent. This is done before any foreign tax credits or depletion allowances are taken. It is a provision that mostly favors companies in the business of extracting minerals. Like oil.

These sanctuaries are used in combination with still other advantages. An example will indicate what a resourceful accountant might do for his oilman client.

Assume the oilman drills a well that costs $100,000 and produces gross revenues of $100,000 in its first year. Between 75 and 90 per cent of his expenses will be intangible drilling costs, which can be written off in the first year. These include rental of a drilling rig and the salaries of crewmen. Assume intangible costs of $80,000 and production costs of $5,000. The gross income of $100,000 minus $85,000 in intangibles and production costs would leave an income of $15,000.

But he would not pay income taxes on $15,000; he would pay them on $7,500.

Here's why: The depletion allowance for oil and gas is 27.5 per cent of the gross income, but this may not exceed 50 per cent of the net income of the property. In this example, the depletion allowance equals $27,500. But the oilman, because of the 50 per cent limit, could claim only $7,500 in depletion. If he chose this method, therefore, the oilman would have a taxable income of $7,500.

The next year, however, assuming again a gross revenue of $100,000 and production costs of $5,000, the oilman could take his full percentage depletion allowance of $27,500 and his taxable income would be $67,500.

But a technique known as "carved-out production payments" would save the operator many tax dollars. In his first year of operation, the oilman's intangible costs limited the amount of depletion he could claim to $7,500. But if he sold his second year's production in advance—that is, during his first year of operation—he would have a first-year gross income of $200,000. And a gross income of $200,000 minus intangibles and production costs of $85,000 would result in a first-year net income of $115,000.

The percentage depletion allowance would equal $55,000 (27.5 per cent of $200,000) and the oilman would not have reached the limit of 50 per cent of net income, or $57,500. Thus, although his gross income for the first year was $200,000, he would have a taxable income of only $60,000.

There is yet another aspect of this device. Since the oilman has already received payment for the oil he produces in his second year of operation, he will have no income at all in his second year. But he will have production costs of $5,000, which he can then report as an operating loss. And so, he will be able to claim a tax refund from the Government on this "loss" by carrying it to earlier years without affecting his depletion allowance, or by applying the "loss" to income from other sources.

The net effect of this maneuver is that the oilman would have taxable income—after selling the production payment—of $60,000 in the first year and minus $5,000 in the second year. Without the sale of the production payment, his taxable income would be $7,500 in the first year and $67,500 in the second year. The sale of the production payment thus reduces his taxable income for the two years by $12,500.

There is another form of production payment called the "ABC deal." It does not lend itself to simple explanation, but perhaps a sample offered in a U.S. Treasury Department report makes the effect sufficiently clear.

"In a recent ABC transaction," reports the Treasury Department, "a major oil company purchased all the coal properties of another corporation, subject to a reserved production payment of $460,000,000 payable out of a large percentage of the net profits to be derived from the operation of the coal properties by the buyer. Under present rules, the buyer excludes from income the $460,000,000 of profits derived from its operation of the coal properties and paid over to the holder of the production payment.

"This feature alone represents a Federal income tax saving to the oil company of approximately $175,000,000 over the payout period, or an annual tax saving of between $10,000,000 and $18,000,000 per year depending on the actual length of the payout period. (It was estimated that it would take 7 to 16 years to discharge the production payment out of profits derived from the operation of coal properties.)

"In addition, all of the costs of mining the coal used to discharge the production payment were deducted by the buyer even though it capitalized those costs on its books as a cost of acquiring the coal properties."

The Treasury says that in 1966, ABC transactions totaled $1.85 billion (for all extractive industries) and resulted in a loss of revenue to the Federal Government of $85,000,000. Carved-out production payments totaled $540,000,000 in 1966—up from $214,000,000 in 1965—and cost the Federal Government $70,000,000 in revenue.

FROM THE JOHNSON YEARS

These figures are taken from reports issued by the Treasury Department during the Johnson Administration; the reports included a long list of tax-reform proposals. They make up four volumes titled *Tax Reform Studies and Proposals U.S. Treasury Department*. The first three volumes are Treasury Department studies. The fourth is an examination of tax provisions affecting the oil and gas industry, prepared for the Treasury by the CONSAD Research Corp. of Pittsburgh.

Neither the Johnson nor Nixon administrations has endorsed the far-ranging reforms sought by Treasury specialists. But

the reports were sent to Capitol Hill and released jointly by the House Ways and Means Committee and the Senate Finance Committee.

Included in the Treasury's reports is this comment:

"In effect, the price of crude oil in the United States is being underwritten by import controls, by state controls on production, and by favorable tax provisions. . . ."

The oil industry's tax advantages affect not only its less privileged competitors but the whole national economy as well.

The CONSAD report states: The oil and gas producing industry accounts for about 1.5 per cent of the Gross National Product. [Reckoned at an annual rate of $93.4 billion in the first quarter of 1969.] By most conventional standards it is not a highly concentrated industry, but with so enormous an output, each of the largest firms is a giant in the economy. The five top domestic producers together account for 20 per cent of the output, the top 20 for 50 per cent.

According to the U.S. Bureau of Mines, the value of crude oil at the wellhead in 1967 was $9.4 billion, and the value of natural gas was $2.9 billion. The value of natural gas liquids, liquid fuels extracted from natural gas, was $1.2 billion. The value of products shipped from U.S. refineries in 1967—the latest year for which figures are available—was $20 billion.

The oil industry concedes that it is very big and very important. Indeed, its size and essentiality are often cited by industry spokesmen to defend its preferential treatment by the tax laws, just as they are cited to defend the import quota system and state-enforced controls on domestic production. What the industry prefers not to emphasize are industry profits.

Consider some statistics contained in the "Monthly Economic Letter" for April of this year, published by the First National City Bank of New York City. A survey of 2,250 manufacturing companies, divided into 41 categories, showed a net income in 1968 of $26 billion. Ninety-nine oil producing and refining companies had a total net income last year of $6.1 billion, or almost 25 per cent of the after-tax earnings of the entire list of 2,250 companies.

Significant, too, is the percentage of return on sales, also calculated in the First National City Bank study. Fifty-five aircraft and space companies had a return of 2.8 per cent. Eleven auto and truck manufacturers had 5.8 per cent. Ninety-two printing and publishing firms recorded a return on sales of 6.2 per cent.

The 99 petroleum companies? They enjoyed a return on sales of 9.0 per cent. Only the drug industry scored higher, with 42 drug makers reporting a return on sales of 9.5 per cent.

The oil industry, however, does not place as much importance on these figures as it does on those that reflect its rate of return on investment. And, indeed, the First National City Bank reports that the average rate of return on net worth for the 2,250 companies surveyed was 13.1 per cent in 1968, up from 12.6 per cent in 1967. The 99 oil companies, however, had a return on net worth in 1968 of 12.9 per cent, compared with 12.8 per cent in 1968. So in terms of return on investment, the oil industry is slightly below the national average.

Some oilmen, moreover, say the difference is greater than it seems because the figures do not reflect what it actually costs to replace extracted oil.

"If oil companies figured in what it is costing them to replace their oil, it could cut their return on investment by one-half," declares Minor Jameson, Jr., executive vice president of the Independent Petroleum Association of America.

It is at this point that the debate over preferential tax treatment for the oil industry approaches the heart of the matter. Most independent economists have a ready answer for Mr. Jameson.

Prof. Walter J. Mead, professor of economics at the University of California, Santa Barbara, told the Senate subcommittee in March of this year:

"The effect of favored tax treatment is to reduce tax costs for oil companies relative to firms in other industries. These measures taken together substantially raise the expected after-tax profit rates on oil industry exploration and development investments in what would otherwise be submarginal uses of scarce capital. Investment in petroleum exploration and development is indeed expanded to the point where the after-tax return is approximately equal to that which may be obtained on alternative uses of capital. . . .

"Oil industry spokesmen have defended their various subsidies with the question, 'If we receive all the subsidies which our critics allege, why is our rate of return on invested capital not substantially higher than other nonsubsidized industries?' The answer to this question is that a subsidy will raise the profit rate at the point in time at which it is conferred.

"Its effects, however, are eroded away with time as producers react to their more profitable situation by expanding into otherwise submarginal areas. This expansion leads to a decline in the rate of return toward a normal yield and to resource misallocation as well."

And here Professor Mead adds an interesting observation in the light of the industry's particularly visible troubles earlier this year.

"The oil spillage case in the Santa Barbara Channel is directly related to the subsidy system. Leases were purchased and drilling occurred in the California offshore area because such operations were made profitable by the subsidy legislation. Under free market conditions, oil prices would be substantially lower, tax costs subsantially higher in the oil industry, and the profit inducement to buy leases in the Channel would probably be lacking.

"To develop oil from such sources is to use up more economic value than is produced. In addition to this probable waste of resources, we have the external cost (aptly called 'spillover costs' even before this oil spillage case) of environmental pollution."

Oil industry spokesmen speak frequently about domestic taxes paid as a percentage of gross revenue. The Petroleum Industry Research Foundation, for example, recently published a report showing that the industry paid 5.1 cents on each dollar of gross revenue in 1964 and 1965. This includes Federal, state, and local taxes, but *excludes* state and Federal product taxes. The study showed all business corporations paid an average of 4.5 cents on each dollar of gross revenue.

THE ACCENT ON GROSS

So, set forth in these terms, the oil industry pays six-tenths of a cent per gross-revenue dollar more than the average of all industries.

But the comparison is in gross revenue, and does not take into consideration the cost of doing business. Thus if a company doing $10 billion a year volume had business costs of $9 billion, it would probably pay less in taxes than a $10 billion-a-year business with costs of $5 billion. The oil industry's ratio of expenses to gross revenue is lower than that of many other industries.

The oil industry contends that in 1966 it was responsible for $10.5 billion in taxes. Testifying before the House Ways and Means Committee, M. A. Wright, chairman of Humble Oil, a subsidiary of Jersey Standard, declared:

"Aggregate tax payments on oil industry operations in 1966 were $10.5 billion, including $8 billion of excise and sales taxes on oil products. These payments provided 5 per cent of all receipts of the Federal, state, and local governments."

But that $8 billion Mr. Wright refers to was not paid by the oil companies. It was paid by, among other customers, the motorists who buy gasoline at the industry's thousands of filling stations.

Now consider data from the Treasury's tax-reform study, which shows "estimates of the effective tax rates actually paid by corporations, as a group and for several industries." Here are the 1965 figures on "actual (Federal) tax on total net income:"

[In percent]

All industries	37.5
Petroleum	21.1
Other mineral industries	24.3
Lumber	29.5
Commercial banks	24.4
Other manufacturing	43.3

Only mutual savings banks (5.3 per cent) and savings and loan associations (14.5 per cent), among the categories considered, had lower effective tax rates than the oil industry.

Oilmen contend the price of gasoline has been remarkably stable in a period of general inflation. But, according to the Oil and Gas Journal of April 14, 1969, the average price of regular gasoline—excluding taxes—has increased 7.4 per cent since April 1968, and 5.9 per cent since the last week in December 1968.

Its many tax privileges give the oil industry tremendous cash flows and thus very great financial leverage. Some critics argue that this gives oil an unfair advantage over competing industries. But the industry insists the nature of its business requires that heavy cash flow.

"It is essential because so much of our investment is such high risk that it isn't bankable," says John J. Scott, general counsel of Mobil Oil. Mr. Scott cited as an example Mobil's operations in Venezuela. Prior to and during World War II, Mobil invested between $45,000,000 and $50,000,000 in that country before getting any return on its investment. "If we did not have the cash flow, we could not have done it," Mr. Scott says.

What would happen to the industry's oil reserves if the depletion allowance and deductions for intangibles were eliminated?

Frank N. Ikard, president of the American Petroleum Institute, offers this reply:

"I can tell you one thing that is spectacular: The size of the investment in exploration and development the industry is going to have to make to meet the needs of the American people over the next 15 years. As a rough estimate, domestic oil exploration and development outlays will have to be increased about 50 per cent. This means going from a little less than $4.5 billion annually up to somewhere around $6 or $7 billion. An industry that has to make such a big boost in its spending has to make profits to do its job."

Some industry sources say oil needs more tax breaks, not less. Harold M. McClure, Jr., president of the Independent Petroleum Association of America, cited figures before the House Ways and Means Committee that showed a 40 per cent reduction in the number of wildcat test wells drilled in 1968 compared with the number drilled in 1956.

"It should be recognized," said Mr. McClure, "that part of these decreases can be attributed to wider well spacing and increased efficiencies in all phases of drilling and producing operations."

It's interesting that Mr. McClure should use the year 1956 as a comparative figure for 1968 drilling operations. Says the CONSAD report: "The number of wells being drilled reached a peak in 1955–56, but has since declined steadily back to its 1949 level, over 30 per cent below the peak."

Mr. McClure told the senators further: "To re-emphasize the degree of risk, only

2 out of every 100 new field wildcats drilled are likely to find a field large enough to be profitable. . . . To sum up the situation as to incentives for petroleum exploration and development in the United States, there is an obvious need for more—not less—economic stimuli." A wildcat is an experimental or exploratory well.

Mr. McClure uses the term "economic stimuli." In the oil business there are stimuli within stimuli. It is not only the major tax privileges themselves that benefit the industry; it is also the accounting involutions that they make possible. A good example of such an involution can be found in the uses to which the depletion allowance is put.

Simply stated, oil companies shift expenses, for tax purposes, to the wellhead, where depletion may be claimed, from refinery or transportation costs that do not qualify for this deduction.

In a Senate speech recently, Sen. William Proxmire, Wisconsin Democrat and critic of oil-industry privileges, described the answers he received from the Interior Department to questions he had posed:

"Apparently," said Senator Proxmire, "Interior had made an analysis which demonstrates that integrated companies shift income from refining and marketing to oil production in order to minimize tax liabilities by maximizing percentage depletion. This analysis is correct as was shown by Texaco's recent action in increasing the price it would pay for crude oil by 20 cents a barrel.

"Since Texaco produces most of the crude oil it refines, the increased cost on the 11,000 net barrels a day it buys from outsiders will be more than offset by the larger depletion allowances it will claim on the oil which it sells to itself. Apparently, Texaco felt the 1.9 per cent of its income paid in Federal income taxes in 1967 was too high."

While Senator Proxmire singled out Texaco as an example, that company is hardly alone in taking advantage of the tax laws as they are on the books.

One of the laws on the books permits oil companies to deduct from their U.S. tax obligation the income taxes they pay to foreign governments. To get as much revenue as possible from the oil companies, oil nations in the Middle East and elsewhere base their tax schedule on "posted prices," which are set arbitrarily and are almost always higher than the actual price the companies get for their oil.

The result is that American companies must pay foreign governments more in taxes than they would if the taxes were figured on the true price for which oil can be sold. Thus, a portion of the foreign tax is considered by many critics as not a tax but a royalty. Therefore, so the argument goes, U.S. companies should be permitted to deduct from their U.S. taxes only that part of foreign taxes that are truly taxes. The other part, which would be considered as royalties, would then be figured as just another business expense.

The oil companies, who are being overcharged by foreign governments, don't like the system of posted prices any more than the U.S. Treasury Department does, but they say there's nothing they can do about it.

The House Ways and Means Committee has about two dozen bills of various sorts that deal with reforming the tax structure as it affects oil. One House bill would eliminate entirely the depletion allowance as it relates to foreign wells; Maine's Edmund Muskie has introduced a similar bill.

Rep. Henry Reuss, Wisconsin Democrat, has introduced a major tax reform package, one section of which would drop oil and gas depletion allowances, presently 27.5 per cent, and allowances for 41 other minerals, presently at 23 per cent, down to 15 per cent.

In introducing his bill on Jan. 29 of this year, Mr. Reuss told the House: "Ideally, percentage depletion should be replaced with cost depletion. But since we are not living in an ideal world, this title provides only that the oil depletion allowance be reduced by less than one-half, from 27.5 per cent to 15 per cent, the percentage now applicable to over 40 other minerals."

Mr. Reuss and his supporters are not overly optimistic about changing oil's depletion allowance, especially now that President Nixon has reiterated his support of the allowance as it stands.

Nevertheless, says Mr. Reuss, "There is a general sentiment among taxpayers that they are getting a little depleted too."

In the American system of making law, it is far easier to establish prerogatives than to abolish or reduce them. To the beneficiary, preferential treatment becomes first a comfort, then a custom, and finally a necessity. And the progression can be carried still one step further. What of the nation's best interests? The late Sam Rayburn wasn't the only friend of oil to know when to turn solemnly and face the American flag.

THE DEPLETION ALLOWANCE

The 27.5 per cent depletion allowance for oil and natural gas is probably the best known of all business tax exemptions. Here's how it came to be:

The Sixteenth Amendment, which became effective on March 1, 1913, made it legal for Congress to assess income taxes. The Revenue Act passed on Oct. 3, 1913, provided that in computing income subject to taxation, producers of ores and all other natural deposits could claim a depletion deduction not to exceed 5 per cent of the gross value of the output at the mine or well.

In 1916 the law was changed, removing the limitation, but specifying that the total depletion allowable over the life of the property could not exceed the capital originally invested, or, if the purchase of the property was made before March 1, 1913, the fair market value as of that date.

A second provision was introduced in 1918 allowing "discovery value depletion." The estimated discovery value was substituted as the value to be amortized for all wells found after March 1, 1913. It wasn't until 1926 that discovery value depletion was replaced by today's system of percentage depletion for oil and natural gas.

Under the 1926 law, any oil or gas producer, or anyone with a financial interest in a well, can deduct 27.5 per cent of his gross income realized from the sale of oil or gas, but this must not exceed 50 per cent of the net income of the property.

Why 27.5 per cent? Because the House of Representatives wanted the figure to be 25 per cent and Senate wanted 30 per cent. The 27.5 per cent figure for oil and gas is the highest depletion allowance; other minerals receive smaller allowances. Metals, for instance, qualify for 15 per cent.

The U.S. Treasury Department reports that, on an average, petroleum producers recover 19 times the cost of their producing wells through percentage depletion.

THE TAXES COMPANIES PAY—FEDERAL CORPORATE INCOME-TAX PAYMENTS FOR 1967 OF THE NATION'S 15 LARGEST OIL REFINERS

Name	Net income before tax	Federal tax	Percent	Earnings after all taxes

OIL INDUSTRY LASHES BACK AT CRITICS

(By Spencer Rich)

The oil industry, under sharp attack by economists before a Senate subcommittee for a system of subsidies that may cost the public anywhere from $2.7 billion to $7 billion a year, got in some whacks of its own at hearings over recent weeks.

But the industry failed to answer several of the most damaging charges leveled by earlier witnesses. Its case for continuation of at least some lush benefits must be rated as plausible but not yet quite convincing.

The basic outlines of the dispute are well known by now. The industry enjoys a number of tax benefits—including a depletion allowance and the overseas tax credit—that are available in equal measure to no other industry.

The net benefit to the industry in taxes saved as a result of these special provisions may be as much as $2 billion a year.

In addition, an import quota system started in 1959 limits total annual imports to about one-fifth of the 5 billion barrels of oil consumed in this country annually.

More important, it keeps low-cost Middle Eastern crude oil, which could be sold at $2 a barrel delivered to the Eastern Seaboard, out of the country except in quota amounts.

Together with production limitations imposed by the states of Texas and Louisiana, which produce three-quarters of U.S. oil, the import system keeps the domestic price of oil delivered to the East Coast at nearly $3.50 a barrel—or about $1.50 more a barrel than the potential price of imported oil.

Economists estimated that as a result of this differential, the public pays anywhere from $2.7 billion to $7.2 billion more for its oil than would be the case if the world price of oil were in effect in the U.S.

Industry witnesses—including Harold McClure of the Independent Petroleum Assn., which represents smaller domestic operators, M. A. Wright of Humble Oil (Standard of New Jersey's operating subsidiary in this country) and Robert Dunlap of Sun Oil—justified this system as necessary to maintain U.S. national security.

Without the financial incentives provided by tax breaks and import barriers, they said, U.S. discovery and development of new domestic oil reserves would fall off and the U.S. would soon be dependent upon foreign nations for an unacceptably large portion of its supplies. This would make it vulnerable to diplomatic blackmail, they contended.

Wright of Humble estimated that with continued import barriers, relaxed slightly to

allow more foreign oil in as U.S. needs increased this Nation would be able to supply 82 per cent of its needs from domestic sources by 1985. With import controls removed, he said, the figure would drop to 46 per cent, which he said was too low for national security.

Sen. Philip A. Hart (D–Mich.), who presided over the hearings as chairman of the Senate Antitrust Subcommittee, kept digging into this argument at different vulnerable spots, as did some of his staff members. By the time the latest innings were over, he had succeeded in considerably reducing its cogency.

For example, Hart kept going back to the potential of the nation's huge known reserves of oil shale, which contain at least 600 billion barrels of potentially recoverable oil—over 100 years' supply. The shale, located mainly in Colorado, cannot now be converted into oil at a commercial price and for this reason industry spokesmen pooh-poohed it as a possible national security reserve.

But they did not really answer the point Hart seemed to be making: the shale is there and if we knew how to convert it we could save a substantial amount of spending on new exploration for well oil. Why not allow much more imported oil into the country, save a few billion dollars a year and devote a portion of that to cracking the problem of making the shale convertible into oil at a competitive price?

Interior Secretary Walter J. Hickel has estimated it would cost $1 billion to achieve a research and development breakthrough on shale. But even if it cost five times that figure, it would still be equal to only a single year's added costs resulting from oil import barriers. The same argument goes for efforts to convert the Nation's massive coal reserves to oil and gas. The Interior Department is spending only $13 million this year on research on shale and coal liquefaction and gasification.

Hale and his chief economist, Dr. John Blair, also kept bringing up the problem of tax incentives to domestic exploration, and the industry never answered.

If the purpose of the whole system of tax breaks and import barriers is to provide U.S. companies with incentives to devote money to exploring for oil here, then why keep in existence tax benefits that encourage money to be diverted into overseas discovery?

About 25 per cent of depletion allowances claimed by U.S. companies covers overseas holdings. In addition, U.S. law permits oil companies to subtract—dollar for dollar—from their U.S. taxes any taxes paid to foreign governments.

Royalties can only be deducted from taxable income, but taxes can be taken directly off the tax bill in the full amount paid.

One apparent result is that a very high proportion of total charges to U.S. companies by foreign governments are classified as "taxes" by those governments, while a much smaller portion are called royalties.

Another unanswered question is just how much security the U.S. is actually buying. Nobody seemed to have any hard figures—worked out on a gallons a day basis for various activities—on how much oil the U.S. really needs to protect its welfare. Must it really be 80 per cent? Or could it be less?

Industry witnesses conceded that at present rates of discovery and increasing demand, the U.S. will be increasing its imports over the next generation anyhow. The inference of industry critics was obvious—why not increase them a little faster and save all that money by getting a bit more low cost foreign crude now?

The exact character of the national security problem was also a little vague. Wright of Humble appeared to concede at one point that it was not really possible to insist that domestic production remain high in order to plan for nuclear war.

That kind of situation would alter conditions so radically that normal calculations of oil need would probably be meaningless.

But then, Sen. Edward M. Kennedy (D-Mass.) indicated, it would be a whole new ball game. In anything short of an all-out war, he argued, at least some U.S. supplies from abroad would be available: from Canada, Venezuela and Caribbean nations, which now supply the U.S. with nearly all its imports; or from one of the many new producers whose desperate race for markets is flooding the world with oil and causing what appears to be a long-term downtrend in oil prices everywhere but in the United States.

The Hart hearings are now recessed and the dispute is moving to a new arena. In about a week and half, the Cabinet Committee on Oil Imports, headed by Labor Secretary George P. Schultz, will begin receiving documents arguing for and against the present import program. It is to come up with recommendations on the future of the program in six months.

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will the call the roll.

The assistant legislative clerk pro- will call the roll.

Mr. BURDICK. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2501—INTRODUCTION OF A BILL TO PROVIDE 50-CENT-PER-BUSHEL WHEAT EXPORT MARKETING CERTIFICATES

Mr. BURDICK. Mr. President, the parity price of wheat is now $2.76 a bushel, yet as an average, farmers received only $1.28 a bushel for cash wheat they sold last week.

In the past year prices paid by farmers for production supplies, interest, and taxes have gone up sharply. Yet wheat prices are lower than a year ago.

Clearly grain producers are suffering a severe cost-price squeeze. And it is getting worse, rather than better. It is for this reason that I am today introducing a bill to provide a 50-cent-per-bushel export certificate for the 1969 and 1970 crops of wheat.

Mr. President, cooperating wheat producers received a blend price for their 1968 wheat of approximately $1.80 a bushel—taking into account the domestic marketing certificate payments and market prices received. This is only 65 percent of parity—two-thirds of a fair price for wheat today with the cost of everything a farmer buys skyrocketing.

We should export 500 to 600 million bushels of wheat annually for the next several years. A 50-cent-a-bushel export marketing certificate would increase wheat producers' incomes $250 to $300 million at no additional administrative cost to the Government.

If such a wheat export marketing certificate were added to the present domestic wheat marketing certificates, producers should receive a blend price of about $2.20 a bushel for their 1969 and 1970 crops of wheat. Several years ago a blend price of $2.20 a bushel would have been considered a good price for wheat. However, farmers' costs have increased so rapidly in recent years that a blend price of $2.20 a bushel represents only 80 percent of parity for the 1969 and 1970 crops of wheat. Surely this is a very minimum price goal for the producers of this essential food.

Mr. President, North Dakota farmers harvested 213,867,000 bushels of wheat in 1968.

Assuming that 1969 and 1970 wheat crops in North Dakota approximate the average production of 1967 and 1968, we should obtain a crop of around 200 million bushels. If we assume that exports continue at approximately the same level as in the 1968–69 season, this would mean that about one-third or more of our production would qualify for the export certificate payment. Hence, the total additional income to North Dakota farmers would be something like $30 to $35 million, or even more if the export market improved.

Mr. President, grain farmers this year continue to be faced with the lowest returns in years, and the outlook for improvement is bleak. I believe Senators who are familiar with the conditions of our wheat producers will agree with me that they must have relief.

I ask unanimous consent that the text of the bill be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, as requested by the Senator from North Dakota.

The bill (S. 2501) to provide for a 50-cent-per-bushel export marketing certificate on wheat for the 1969 and 1970 crops of wheat introduced by Mr. BURDICK, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

S. 2501

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 379c (a) of the Agricultural Act of 1938, as amended, is amended by striking out the fifth and sixth sentences and inserting in lieu thereof the following: "The Secretary shall also provide for the issuance of export marketing certificates to eligible producers for the portion of the wheat marketing allocation used for commercial exports, including exports under title I of the Agricultural Trade Development and Assistance Act of 1954."

SEC. 2. Section 379c (c) of such Act is amended by adding at the end thereof a new sentence as follows: "The face value per bushel of export marketing certificates issued to eligible producers shall be 50 cents per bushel."

SEC. 3. Section 107 of the Agricultural Act of 1949, as amended by Section 506 of the Food and Agriculture Act of 1965, is amended by adding at the end of paragraph (2) thereof a new sentence as follows: "The 50-cent-per-bushel export marketing certificate provided for under section 379 (c) of the Agricultural Adjustment Act of 1938, as amended, shall be in addition to any price support otherwise provided and shall be made available only to cooperators."

SEC. 4. The amendments made by this Act shall be effective with respect to the 1969 and 1970 crops of wheat.

ADJOURNMENT UNTIL MONDAY, JUNE 30, 1969

Mr. PROXMIRE. Mr. President, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock noon on Monday.

The motion was agreed to; and (at 3 o'clock and 40 minutes p.m.) the Senate adjourned until Monday, June 30, 1969, at 12 o'clock noon.

NOMINATIONS

Executive nominations received by the Senate June 26, 1969:

DIPLOMATIC AND FOREIGN SERVICE

Joseph A. Greenwald, of Illinois, a Foreign Service officer of class 1, to be the Representative of the United States of America to the Organization for Economic Cooperation and Development.

U.S. CIRCUIT JUDGE

Ozell M. Trask, of Arizona, to be U.S. circuit judge, ninth circuit, vice a new position created under Public Law 90-347, approved June 18, 1968.

IN THE ARMY

The following-named officers for promotion in the Regular Army of the United States, under the provisions of title 10, United States Code, sections 3284 and 3299:

To be captain

Abate, Claude W., O97226.
Abbott, Reginald S., OF109050.
Abrams, Creighton W., OF102394.

IN THE MARINE CORPS

The following-named officers of the Marine Corps for permanent appointment to the grade of captain:

Hugh E. Loftin	George C. Romano
Lee R. Overstreet	James A. Wessell

The following-named officers of the Marine Corps for permanent appointment to the grade of first lieutenant:

Robert J. Arboleda	Gerald B. McDowell
Victor V. Ashford	James J. McKnight
Clarence B. Cheatham	Nicholas J. Outrakis
Ronald E. Crane	James H. Packer
Terrence R. Dake	John A. Panneton
Robert C. Douglass	Frank M. Platt III
David J. Ellison	Alexander W. Powell
David R. Fagerstrom	John M. Sconyers
Paul S. Hamilton	Dennis D. Shockley
David F. Herr	Gerald T. Smith
Phillip G. Higgins	Monty J. Tennes III
Frank Libutti	Jack S. Warner
Robert A. Longhouser	James M. Watson
Daniel J. McCormick	

The following-named officers of the Marine Corps for temporary appointment to the grade of first lieutenant:

Larry G. Adkins	Phillip N. Huth, II
John E. Allanson	Albert C. James
Steve N. Allen	Michael C. Jochum
Peter T. Bahry, Jr.	Stephen T. Kuykendall
George W. Ball	Charles R. Lane
Charles J. Barnhart	Gary W. Letson
Michael E. Barnhart	Theodore T. Long
William W. Baumann	Kendall A. Madaras
Bruce R. Belrose	Sidney E. McLaughlin
Thomas F. Brunk	Harvey R. Norton
Bruce B. Byrum	Willie J. Oler
John T. Caselli	Leslie B. Petty
Robert A. Cheever	William R. Purdy
William A. Clark	Robert W. Reid
Charles D. Cross	John E. Rice
James L. Dawson	Larry S. Roadman
Albert A. Desantis	Sands A. Robnick
Larry W. Dudley	Loren H. Shellabarger
John W. Gerwig	Serge B. Simmons
Earl B. Hailston	Gary G. Todd
George E. Halloran	John R. Todd
James H. Haney	Robert A. Tretsch
Jerry B. Hatfield	Richard W. Vaughn
Mathew J. Heck	Wayne M. Wynkoop
Dale W. Howard	

CONFIRMATIONS

Executive nominations confirmed by the Senate June 26, 1969:

DEPARTMENT OF THE INTERIOR

Charles H. Meacham, of Alaska, to be Commissioner of Fish and Wildlife, Department of the Interior.

DEPARTMENT OF JUSTICE

Keith S. Snyder, of North Carolina, to be U.S. attorney for the western district of North Carolina for the term of 4 years.

William R. Burkett, of Oklahoma, to be U.S. attorney for the western district of Oklahoma for the term of 4 years.

William L. Osteen, of North Carolina, to be U.S. attorney for the middle district of North Carolina for the term of 4 years.

John P. Milanowski, of Michigan, to be U.S. attorney for the western district of Michigan for the term of 4 years.

Fred C. Sink, of North Carolina, to be U.S. marshal for the middle district of North Carolina for the term of 4 years.

James W. Norton, Jr., of North Carolina, to be U.S. marshal for the eastern district of North Carolina for the term of 4 years.

Doyle W. James, of Colorado, to be U.S. marshal for the district of Colorado for the term of 4 years.

EXTENSIONS OF REMARKS

GENERAL CHAPMAN'S REMARKS AT THE ANNUAL CONFERENCE OF THE MARINE CORPS RESERVE OFFICERS' ASSOCIATION

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. FASCELL. Mr. Speaker, 18 months ago, former President Johnson selected an outstanding Floridian, Gen. Leonard Chapman, to assume the important responsibilities of the 24th Commandant of the U.S. Marine Corps.

At that time I commended the President on his choice. General Chapman had a distinguished record in the Pacific during World War II and received the Legion of Merit and the Bronze Star. His subsequent service in Washington as the Chief of Staff of Marine Headquarters and then as Assistant Commandant of the Marine Corps was marked by the general's particular flair for organization and management.

Recently Col. William McCahill of the U.S. Marine Corps Reserve called my attention to a speech delivered last month by General Chapman on the occasion of the annual military conference of the Marine Corps Reserve Officers' Association in Detroit.

General Chapman's remarks concerned the nature of our fighting men in Vietnam, and I commend the speech to the attention of our colleagues:

REMARKS BY GENERAL CHAPMAN

Thank you, General Weinstein, Fellow Marines:

I would like to extend my personal well-done to you, Leland, for the leadership you have displayed in guiding this association over the past year.

And to you, General McMath, my congratulations upon your assumption of the presidency this evening. I would like to add my confidence to the vote of this fine organization. I know that your executive leadership will continue the tradition of excellence established by your predecessors.

I am especially pleased to be with you again, this year. I feel the pleasure of being with comrades—the warmth of communication without the need for too many words.

But I do have some words for you.

First, I want to state that the efforts of the Marine Corps Reserve over this past year have continued to be outstanding. As I stated before the Senate Committee on Armed Services earlier this year: "In terms of training, organization, and preparations for mobilization, our ground reserve is at the highest state of readiness in history."

I would like to add that we have kept material readiness abreast of training readiness. Equipment for the 4th Marine Division and the units supporting the 4th Division/Wing Team is on hand or identified for priority procurement.

The status of the 4th Marine Aircraft Wing is a different story. Not because of any lack of effort on the part of the Marines of that unit; but due to continued equipment deficiencies in the capabilities, obsolescence, and number of its jet aircraft and helicopters. To alleviate these shortages, we are assigning UH–34 helicopters to the 4th Wing as they become available from the active wings, and both the UH–1E and CH–53 helicopters will be introduced later.

Aside from these limitations, the IV Marine Expeditionary Force is ready, and I have the fullest confidence in its ability to take its place next to active Marine units if the need should arise.

In Vietnam, active duty Marines continue to be employed on the ground and in the air throughout the vast expanse of the I Corps tactical zone; and operating from ships of the 7th Fleet as special landing forces.

The Marine Corps has consistently advocated the principle that the war in South Vietnam can be conclusively won only through convincing the South Vietnamese people in the villages and hamlets that their hope lies with freedom, not with Communism. Under the present conditions of cessation of bombardment of North Vietnam and the search for negotiated settlement, this becomes even more important. Marine units in Vietnam have increased their efforts in three decisive areas:

Blocking the incursions by North Vietnamese army units in the DMZ area.

Assisting Republic of Vietnam Armed Forces in the destruction of the Viet Cong infrastructure.

And, the continuance of the Marine Corps Civic Action Program, encouraging and assisting the Vietnamese civilians in their efforts of self-help.

Last year, when I had the pleasure of being with you in Washington, I gave you a similar report on Marine operations in Vietnam. I wanted to make the report as comprehensive as possible, so I centered it around the single most important part of our Corps today: the young marine.

I knew that you would be most interested in that young marine and how he approaches his duty, so I based my remarks on his spirit. I compared his spirit with the spirit of the marines of World War II, and of those who fought the war in Korea. Perhaps it was an unfair comparison.

The young men who chose to serve as marines from the beginning of World War II right up to and including the Cuban countdown of 1962–63, chose to do so under an entirely different set of circumstances. Those young men—and I am speaking of you, marines—all came to the Corps for different personal reasons, but you all shared a feeling of the duty-of-citizenship to serve. So do the young marines of today. But I think you will all agree that duty-of-citizenship was an inviolable virtue in those days. Being a marine in the United States automatically put a man on a pedestal. Being an officer of marines raised that pedestal even higher.

You deserved that elevated position. You came to a small, elite corps of professionals, rich in the traditions of courage and sacrifice in its service to its country. In two wars you filled out its strength, matched its professionalism, and raised it to new heights. In less than a quarter of a century your generation earned more honors in battle than your predecessors had in the previous 165 years.

When we teach today's recruits of the exploits of Marines at Tripoli, in the Boxer Rebellion, and even in the fields of France—they are impressed, they regard these traditions as high and holy things—but they don't actually relate themselves to those men. Tell them of Guadalcanal, Tarawa, Iwo Jima, Inchon, the Chosin Reservoir, and even the early days of the perimeter around Guantanamo Bay, and they will react. These traditions they understand. By choice, it is your footsteps in which they follow.

There is a myth afloat, that the Marine Corps builds men. You know this is not true. The Marine Corps offers the workshop, the tools, and some interested guidance, but the man who wears the uniform of a Marine is self-made. And you also know that to do this he must have a sturdy inner-structure upon which to build.

The young Marine of today is physically bigger, stronger, and has more endurance than his father and uncles of World War II and Korea. Because of his education and the improved field of communications, he is better informed, more alert, and less impressed by strange places, people, and situations. But these are physical facts. I think the most significant quality of today's Marine is his individualism.

From the very beginning of his service, this young man has made a decision, individually, without the intimidation of screaming, hate-filled crowds, or an inner compulsion to conform. His character is marked with self-discipline, leadership, and courage. The qualities of dedication and love of country cannot be questioned. They have been proven—they are being proven—in training and in combat.

The young man joining the Marine Corps today is not simply fulfilling a duty of citizenship as you did. He does not enter the service of his country with the unqualified support and admiration of the community. Bombarded by anti-military dialogue, and presented daily examples of evasion of obligation, his enlistment or induction is not a popular act of conformity. It is an act of faith. An act of faith, ladies and gentlemen, in you and me, and all the other generations of Marines who have gone before him.

He certainly harbors no illusions. He has a ringside seat at the contest of polemics. He hears the virtues of patriotism, duty, service to country, honor among fellowmen, and courage in the face of danger rendered suspect as to value, and modified in meaning by a generous application of turnabout statistics and reasoning. He hears the Armed Forces of the United States termed "the cult of the gun," and sees these forces painted as tools of aggression, oppression, and expansion of self-seeking opportunists. And some of this is presented to him from very strange quarters, quarters built on a foundation of credibility and respect.

He further observes a nation, a free nation, now tiring of war and its expense, question all forms of preparedness and defense. On one hand he hears men of other nations make clear statements of intent to meet us in nuclear war, and on the other hand he listens to our internal debate as to the need for a safeguard ABM system.

And there is no question about what he will do as a Marine. He knows that almost one third of our active duty Marine Corps is in Vietnam. He knows where he is needed.

For a young American who offers his abilities and leadership as a Marine officer, the road is even tougher. I know you are aware of the problems faced by the Marine Corps in officer recruitment. You know how most of you came into the Marine Corps. For years we have depended upon recruiting on college campuses to provide nearly 85 percent of all new Marine officers. This gave our corps a valuable cross section of educated young Americans. Young leaders from every part of this nation brought fresh skills, and fresh ideas to our corps. Their influence was important not only to the young Marines they commanded, but to us, the senior career officers who commanded them.

Now, the anti-military activities at some colleges have gained such recognition by school officials, the Marine Corps has had to seriously curtail on-campus recruiting. At some colleges, the anti-military efforts have taken the form of physical obstruction of legitimate Marine officer selection teams. On other campuses, college administrators have displayed a lack of cooperation, failing

to make available adequate time and central locations to Marine recruiters.

Because of this continuing difficulty we have opened a program to offer the opportunity of officer candidate school to a number of young men who have completed two years of college. We are primarily aiming this program to those who have completed a junior college program.

Now I know that a great many of you received your commissions under a similar program. But during World War II and the war in Korea, there was a definite shortage of men who had completed four years of college. This is not the case today.

But let me assure you we have not lowered any of the basic standards for service as a Marine officer. We still require the same qualities of intelligence and leadership that we have always demanded in commissioned Marine leaders. But such a program does mean that young officers commissioned with less than a full degree, and who later apply and are selected for retention, will have to be given the opportunity to complete their education.

All of this hasn't meant an end to college graduates continuing to seek service as Marine officers. Like the young men who willingly take their places in the ranks as enlisted Marines; these young men continue to offer their education, skills, and leadership.

This situation has created something of a new relationship between the young marine officers and their men. Not only do they share the corps, and the hardships of combat in Vietnam, they share a very rugged brand of self-sufficient individualism. They are of a quality that will not be intimidated. And joined together, they have performed magnificently.

I did not intend to stand here tonight and recite numbers. The young marine's performance is too important to be reduced to a percentile. But I will ask you to permit me two very graphic statistics. They are significant to the individual marine's attitude as a participating citizen.

First: Of all marines eligible, 74.5 per cent cast their ballots in the last national election.

And although there are no figures which specifically represent the civilian community, Gallup reports that only 60.5 per cent of all eligible U.S. citizens voted last November.

I think these figures are an indicator of how highly the young marine of today values his citizenship.

Second: Since June of 1966, when the first marines into Vietnam became eligible for rotation back to the United States, a total of 33,350 marines—officers and enlisted—have extended their Vietnam tours an additional six months.

This is what the young marine thinks of the American effort in Vietnam.

I think this last statistic deserves some discussion. A great deal has been said about this war and the fact that it is being fought by professionals. Now, you and I know that all marines are professionals, and the young marine's performance in Vietnam bears this out. But to the unindoctrinated, the term "professional" implies career-regulars. Very few of the career-regular marines extend their tours in Vietnam. They don't have to. They know they will be back in normal rotation. In fact, a great many of them are now serving a second time, and some have begun their third tours. The greatest majority of marines who ask to stay in Vietnam an additional six months, are the young privates and corporals, and the lieutenants.

What is the quality of the performance of these young Americans—these marines? It is outstanding.

And why do these young marines perform so well in Vietnam? Why do so many ask to stay? Well, it's the same reason you performed so well. Above everything else, they are marines. That, reinforced by what they find in that country.

I think they find their inspiration in the gentle people who have fled the terror of the Viet Cong to resettle in new areas, build new homes, farm new lands. I think they find it in the courage and determination of the Vietnamese soldiers fighting beside them, who won't quit after long years of bitter struggle.

The Marine Corps holds precious its history of service to the people of the United States. Our flag carries the streamers of all the major wars in which Americans have fought. With great pride, we review the record of courage and sacrifice of marines who earned those battle honors. Our flag bears the streamer of the war in Vietnam, too. That streamer, like the others, was earned by the courage and sacrifice of marines today. Americans of this generation have earned this honor. And these marines have added a new battlefield virtue to those of courage and sacrifice. They have added the virtue of compassion.

I could present examples of what our young marines are doing in Vietnam by reading some of the many citations which have accompanied decorations awarded in this war. I could point out the courage and stubborn faith of Khe-sanh. And to prove compassion, I could recite endless deeds of marines building schools, adopting entire orphanages, and the fantastic medical care given Vietnamese civilians by our Navy doctors and corpsmen. But I think these many acts of courage, sacrifice, and compassion loom so large that the individual marine is sometimes lost. It is not the large acts that count so much as the day-to-day application of these qualities.

Second Lieutenant Dodson arrived in Vietnam early last year. He did not come to the Marine Corps from a college campus. He had graduated from college two years before he decided to quit his job and do something about the war in Vietnam—personally.

Upon reporting to his battalion, Lieutenant Dodson was assigned to a company and placed in command of a marine rifle platoon. When he led his platoon out on patrols and in operations, he always made sure of two things:

Each marine's rifle was spotless and in perfect working order, and—

Each marine was well instructed as to the civilian situation in the area of operations.

There were strict rules about behavior toward the Vietnamese civilian. And Lieutenant Dodson was no tougher about enforcing the rules than any other member of that platoon. Children were greeted with a smile, and old people with great respect. The platoon knew at least enough Vietnamese to inquire as to health, how the rice was doing, and to wish a good day.

This was a rifle platoon. They had no civic action responsibility other than the normal requirement to get along, and assist if assistance was needed and it didn't interfere with the basic mission.

Lieutenant Dodson and his platoon got to know the people of Vietnam, and their concern and respect grew. Following the enemy Tet offensive of last year, civilian food distribution hit a snag. One village in Lieutenant Dodson's area was particularly short of food. The platoon located some surplus cornmeal and it was distributed to the villagers. But what could the Vietnamese do with cornmeal? Simple, with a little American know-how and some graphic instruction, the Vietnamese could make hushpuppies. And they did, and they were delighted with them.

Today, Lieutenant Dodson insists that there are only two places in the world where really good hushpuppies are made. His own hometown, in Georgia; and the village of Thon-An-Bang, in Vietnam.

Corporal Degraff did come to us directly from a college campus, and he was married.

Before that young man became a corporal, or even a marine, he was in his junior year at a large university.

He liked college, even though it was tight financially. But with his wife working full time, and his own part time job, they were able to make it. And he was getting good grades.

He first watched the war and the draft with an outsider's eye, it hardly affected him. With good grades, his deferment was a thing of certainty.

Then, the demonstrations started.

Unless you were specifically interested, the demonstrations were easy to avoid. You just walked around them. But one day, as he walked around, someone handed him a tract, he read it. The words disturbed him and now he had to think. The next time he ran into a group gathered around one of the known speakers, he stopped and listened. That bothered him even more. He asked some questions, and before he knew it, he was debating. That night he and his wife talked it over, and they made a decision.

Degraff left school and enlisted. He did well in recruit training, and when he graduated from boot camp, an officer spoke to him about the possibility of officer candidate school. He explained to the officer that he just didn't have time. He wanted to fulfill his obligation and get back to college.

In Vietnam, he joined a squad as a rifleman. When he left the squad he was a corporal, and had commanded it through countless patrols and engagements. While he was in Vietnam, he was wounded twice and decorated once.

Corporal Degraff came back to the United States a few months ago. He'll be discharged soon.

But they don't all come back, these young Americans who have chosen service. Sacrifice joins compassion and courage as a grim reality. No one knows better than the Marines who have served in Vietnam that the casualty figures match names and faces—no one except the parents, wives, and loved ones who have lost Marines.

Recently I wrote the parents of a young Marine killed in Vietnam. As little as it was, I offered my condolences. The parents answered my letter. I would like to read parts of it to you.

It is dated April 2, 1969, and it reads:

"DEAR GENERAL CHAPMAN: We wish to thank you for your thoughtful letter. Michael was proud to be a Marine, and proud too, to fight for the country he truly loved. We, his parents are proud too.

"Long before the end of his senior year, Michael planned to become a Marine. One afternoon after class, he and two friends went downtown where they witnessed a fire and a draft card-burning. All three went immediately to the Marine office and signed up. That night we parents had to give our consent.

"In the corps, Michael became a man—one we were proud of. It is the fashion of the day to criticize the United States, to refuse the military burden, to comfort the enemy. None of this was true of Michael. We do not close our eyes to obvious faults of the United States, but we think there are many more virtues.

"So we gave Mike, and we are prepared to give our other sons, and daughters, too. At the same time we pray for peace.

"So, too, General, our entire family keeps you and all servicemen in their nightly prayers."

These are the young Americans who are the present day Marines.

These are the Marines who are bearing our burden—preserving our freedom—containing an enemy on a far-off shore.

These are the Marines whose courage, sacrifice and compassion serve our Nation.

These are the Marines who have earned our unqualified and wholehearted support.

REACHING FOR THE STARS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. TEAGUE of Texas. Mr. Speaker, the Evening Star of May 24, 1969, cites the comments of Dr. Thomas O. Paine, Administrator of NASA, in comparing the recent flights of Venus 5 and 6 and the Apollo 10 flight as comparable to the time when the first amphibians came from the sea onto land. Only time will tell the significance of this anology. Yet it causes all Americans who are interested in the future and the direction of our national space program to be concerned that adequate support is provided to assure the scientific and technological progress of our Nation:

The editorial follows:

REACHING FOR THE STARS

Venus, after the sun and moon, is the brightest object in our heavens. Yet it has made itself a mystery of sorts by hiding behind a tremendous vastness of dense clouds that never go away. Now, however, this nearest of our planetary neighbors, has become a little less mysterious because of the latest Soviet probes of its atmosphere.

These probes, carried out by the Venus 5 and Venus 6 spacecraft after a four-month journey of 217 million miles, resulted in findings not yet made public. But American, British and other scientists have no doubt that their Russian conferees are right in saying that the new data will add significantly to what was learned in 1967 when Venus 4 and our US Mariner 5 approached the planet.

Tass has quoted Soviet scientists as declaring that the new voyages have made one thing absolutely sure: Neither Cosmonauts nor Astronauts will ever set foot on Venus because it "is not fit for man's life." This comes as no surprise, of course. After all, the Venusian atmosphere has a temperature of over 500 degrees Fahrenheit, and the planet's surface is an estimated 800 degrees. Nevertheless, inhospitable though it is, the place is likely to continue to be visited by unmanned Soviet and American vehicles, and some of these may be able to land there for long periods to transmit to earth a great volume of information.

To many of us, such information may seem too impractical, too unrelated to our everyday lives, to warrant the dispatch of costly spacecraft. But this is an oversimple and narrow view. As scientists effectively argue, and as has been proven time and again, the more man learns about his environment, here on the ground and among the stars, the more he enriches his mind in a way that can have an immensely beneficial impact on both himself and his world.

Apropos of all this NASA Administrator Dr. Thomas O. Paine made a particularly striking point on NBC's Meet the Press last Sunday. Having in mind not just Apollo 10, but also undertakings like the Venus probes, he declared that all such ventures constitute an "enormous new phase of evolution where, for the first time, man, and indeed terrestrial life, is moving from the surface of this planet out into the solar system. Many people feel that this is as significant as when the first amphibian came from the sea up onto land to conquer a new domain for life."

An exaggeration? A fantasy? Who can be sure? We are living in an epoch when what seems impossible today may be commonplace a century—or even a half century—from now.

WILLIAM O. DOUGLAS—TWO DOWN, ONE TO GO

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. RARICK. Mr. Speaker, now that Earl Warren has left the U.S. Supreme Court, four members of that Court have announced that they will limit their nonjudicial activities, which we can hope is intended to mean that they will not become involved in matters which may come before their Court.

But aging and erratic Justice William O. Douglas is not prepared to accept voluntary limits on his nonjudicial activities. Even retired Chief Justice Earl Warren, whose own extrajudicial activities are not above reproach, moments after leaving the Bench, attributed public loss of confidence in the Court to Abe Fortas and Justice Douglas in equal parts.

An interesting biography of Justice Douglas which may well help explain his animosity toward the American people is contained in the Herald of Freedom for June 27, published by Frank A. Capbell, Zarephath, N.J.

A recent news clipping and the Herald of Freedom article follow:

[From the Washington (D.C.) Evening Star, June 23, 1969]

FOUR JUSTICES TO RESTRICT OUTSIDE ROLES

Four justices of the Supreme Court now intend to give up outside compensation for non-court activities, retiring Chief Justice Earl Warren announced today.

In an unusual statement designed to explain his earlier disclosure about the question of justices' ethics, Warren said four of the men who will continue on the court are prepared to limit their non-judicial activity.

He listed them as Justices William J. Brennan Jr., Potter Stewart, Byron R. White and Thurgood Marshall.

This suggests that three members of the high court—Hugo L. Black, William O. Douglas and John M. Harlan—are not prepared to accept formal court-imposed limits on their activity.

Warren last Tuesday issued a statement which indicated he had been rebuffed by the court in his desire to get the justices to commit themselves to the same restrictions that had been imposed June 10 on lower federal court judges.

The U.S. Judicial Conference, which is the policy-making body for the federal judiciary below the level of the Supreme Court, has imposed a flat ban on compensation from outside activities for judges of the district and appeals courts, and has ordered them to report annually on their income.

"Justices Brennan, Stewart, White and Marshall individually indicated their agreement in principle with the standards of conduct adopted by the Judicial Conference and their intention to act accordingly."

Previously, Marshall had been the only member of the court who had publicly indicated he was prepared to go along with the new restrictions.

The justice said, however, that he would submit his annual financial statements to his colleagues at the high court, rather than to the agency that will be receiving such statements from lower court judges, the Administrative Office of U.S. Courts.

Brennan had previously announced that he was giving up all outside activity, but had said nothing about abiding by any reporting requirements.

[From the Washington Daily News, June 24, 1969]

ASSIST BAR, JUDICIAL CONFERENCE—WARREN TO HELP DRAFT RULES

(By Dan Thomasson)

Retired Chief Justice Earl Warren will assist the American Bar Association (ABA), and the Judicial Conference in moulding a new set of ethical standards for Federal jurists, congressional sources said today.

Within moments after the swearing-in ceremony for his successor, Warren T. Burger, yesterday, Mr. Warren expressed to friends his continuing concern over the loss of public confidence in the judicial system—an erosion attributable largely to the outside activities of former Associate Justice Abe Fortas and Justice William O. Douglas.

The Judicial Conference—under prodding from Mr. Warren—adopted new standards of conduct for all Federal judges except members of the Supreme Court. But it still must work out the machinery to put the code into operation and Mr. Warren is expected to help.

ASSIST ABA

Mr. Warren also will help the ABA in revising its canons of judicial ethics this fall. The ABA's house of delegates, which will meet in August, is expected to appoint a committee to overhaul the judicial canons much as a special ABA committee is already revising the canons which apply to practicing attorneys.

Mr. Warren also has informed some congressional friends that he is interested in discussing with them proposed legislation to force the entire judiciary to disclose outside income.

[From the Herald of Freedom, June 27, 1969]

HON. WILLIAM O. DOUGLAS

To worry that "the honor of the Supreme Court is at stake" at this point could be compared to worrying about the loss of virginity of a seasoned prostitute. It has been nonexistent for a long time. While most of the blame must fall on Warren, he could not have ruined the reputation of the court alone; he had to have help from those of like persuasion on the court. Conservatives have been attacking the court for its pro-Communist, pro-criminal decisions, which might be called "sticking to the issues" rather than "indulging in personal attacks." Warren has been subject to attack for his actions as Chief Justice but not because of his personal background.

Recently, however, the personal conduct of two Associate Justices of the Supreme Court has come under scrutiny and been exposed as being less than "ethical." The liberals threw one of them to the wolves, abandoning completely Abe Fortas, the man who only a year ago they were trying to push up to the top post on the Court, but they are going all-out to protect William O. Douglas whose personal conduct has been notorious for many years and who now has been exposed as dealing in "questionable" financial activities. A possible reason for this could be that Fortas failed to "deliver" for Wolfson while Douglas has not let his buddies down.

While Fortas was forced to resign from the Supreme Court by disclosure of his accepting a large amount of money from the Wolfson Family Foundation for reasons which he could not explain satisfactorily, Douglas's connection with the Parvin Foundation has been known publicly for nearly three years and he has been able to "sit it out" and at this writing plans to continue to do so. He has been forced to resign as president of the foundation, giving up his $12,000.00 per year income from it, but he

has stated he has no intention of resigning from the Supreme Court. Only impeachment can remove him in that case and such action is long overdue.

The background and activities of the Parvin Foundation have been disclosed in the Congressional Record and, as president, Douglas must be held accountable for them. Links to gangsters and gamblers are disclosed in the source of the foundation's income which has been dispensed for pro-Communist purposes. Douglas is not a babe in the woods when it comes to financial manipulation since he made it his business to become an expert in it, presumably from the side of the law.

William O. Douglas was born in Maine, Minnesota on October 16, 1898, the son of William Douglas and the former Julia Bickford Fiske. His father was a Presbyterian home missionary from Nova Scotia, Canada, who died in 1904. After his death the family, which consisted of William and one brother (Arthur F.) and one sister (Martha) and his mother, settled in Yakima, Washington, where the mother had relatives. William helped to contribute to the family income, at one time working as an itinerant laborer in the fields. He was able to go to college, obtaining his B.A. degree from Whitman College in Walla Walla in 1920. After teaching English and Latin in Yakima High for two years, Douglas departed for New York to study law at Columbia University. While a student there, he married a fellow high school teacher at Yakima H.S., Miss Mildred Riddle, on August 16, 1923.

At law school Douglas was particularly interested in the study of the relation between law and business and, so, when he graduated he joined the Wall Street firm of Cravath, DeGersdorff, Swaine and Wood to "study the facts of law and life among the natives." He lectured at Columbia Law School while holding this position, and in 1927 left Wall Street to become assistant professor of law at Columbia. He remained at Columbia only a year and then, through Robert Maynard Hutchins, then dean of law at Yale University, became an assistant professor at Yale University. He moved up rapidly at Yale, becoming associate professor within a year, a full professor by 1931, and in 1932 was appointed to the chair of Sterling Professor of Law. Douglas did more than just teach others, however; he went out of his way to learn a great deal himself.

He was an expert on bankruptcy and was a special adviser in a New York City bankruptcy investigation and for four years carried on, in association with the U.S. Department of Commerce, bankruptcy studies for the Yale Institute of Human Relations. He was also secretary of a committee studying business of the Federal courts and in 1934 directed a study of protective committees by the Securities and Exchange Commission. For the next two years he held hearings, examined records and investigated those committees which are formed when businesses fail. In 1936 Douglas was appointed a member of the S.E.C. and in 1937 became its chairman. He conducted conferences and studies which led to a reorganization of the Stock Exchange.

In March 1939 President Roosevelt nominated Douglas for the position of Associate Justice of the Supreme Court and he was confirmed by the Senate and took his seat April 17, 1939, replacing Louis D. Brandeis who was extremely happy with his successor, and who reportedly stated to Douglas, "I wanted you here in my place." The Democrats eyed Douglas for high government jobs, even President and Vice-President, but he seemed content to remain on the Supreme Court. His contribution to the disrepute in which the Court now finds itself is by no means small. In 100 decisions, involving Communists, his voting was pro-Communist in 97 of the cases.

Douglas was an endorser for the Communist-front, The American Investors Union, Inc., which had been set up to obtain proxies to harass the management of corporations. His radical pro-Red record is long. Being an ardent "One-Worlder," he became Vice President of the United World Federalists in 1950, in which year he also received the Morris Morgenstern Award of Yeshiva University. In 1952 he was given an honorary degree by the New School for Social Research, a Marxist-oriented school in New York City. In 1962 Douglas helped promote the anniversary celebration of the leftist Women's International League for Peace and Freedom. On April 12, 1963 he sent greetings to the Communist-controlled N.Y. Teachers Union on the occasion of their 27th Conference held at the Hotel Americana in New York City.

The now 70-year-old Douglas raised eyebrows by his penchant for an "off-with-the-old-and-on-with-the-new" approach to marriage, now being involved in Marriage #4. His first marriage lasted thirty years and produced two children, Mildred Riddle (now Mrs. Frank Welles, Jr.) and William. After his divorce in 1953, Douglas married Wife #2, Mrs. Mercedes Hester Davidson, on December 15, 1954. They were divorced in 1963 and Wife #3 was 23-year-old Joan C. Martin as of August 1963. Freed again by divorce in 1966, Douglas married another 23-year-old, Cathleen Curran Heffernan, on July 15, 1966. His alimony payments have been cited as an excuse for his extra-curricular financial activities.

Douglas's price runs high on the lecture circuit but he accepted a mere $350 for an article published in convicted pornographer, Ralph Ginzburg's magazine, "Avant Garde" (March 1969 issue). This was at a time when Ginzburg still had a conviction appeal pending before the Supreme Court.

Douglas's main financial and ideological indiscretion, however, would seem to be his interlocking connections with the Parvin Foundation, the Center for the Study of Democratic Institutions and the Inter-American Center for Economic and Social Studies.

Although Douglas's resignation as president of the Parvin Foundation was announced May 23, 1969, he had been associated with it for ten years, seven years as a paid employee. As of the time he resigned the other directors were Robert F. Goheen, president of Princeton University; Dr. Robert M. Hutchins, president of the Center for the Study of Democratic Institutions in Santa Barbara, Calif.; Harvey Silbert, a Los Angeles lawyer and an old friend of Albert Parvin; and Sidney Davis, a New York lawyer. The new president and a director of the foundation is Fred Warner Neal, a professor of international relations and government at the Claremont Graduate School in Claremont, Calif. Professor Neal is a former consultant for the Center for the Study of Democratic Institutions, and a consultant in Russian affairs to the State Department. Douglas is also a vice president and consultant for the Center for the Study of Democratic Institutions which the Parvin Foundation has helped to finance.

The operations of the Parvin Foundation were explained by Douglas in a letter dated October 31, 1966 to Chief Justice Warren. This was at the time his connection with the foundation had first been questioned and exposed. The letter stated in part:

"The formation of the Foundation goes back to the Walter E. Edge Lectures which I delivered at Princeton in 1960. They were published by the Princeton University Press in a book entitled 'America Challenged.' Albert Parvin of Los Angeles read the book, and it apparently put together in his mind some ideas he had had for combatting the forces of communism at a world level. He decided to form a Foundation directed to that end. . . . .

"The first project we undertook was at Princeton, where originally ten Parvin Fellowships were established. Men between the ages of 25 and 35 were brought in from Africa, the Middle East, and Asia for a year's study at the Woodrow Wilson School. . . . . Many of them have already moved into important positions in their native countries, and we are confident that over the years we will produce many Prime Ministers, many Secretaries of State, many journalists, many professors, all dedicated to the democratic cause.

"The project at Princeton was so successful that we decided to launch a similar one at UCLA. There we decided to take only men and women between 25 and 35 from Latin America. Those who speak English in Latin America usually come from the 'upper-crust.' We were anxious to reach lower down into the strata where the communists seem to operate most effectively. So we decided to take only those who did not speak English. We bring them to UCLA and give them an intensive English language course first, followed by a year of study in the operations and institutions of the free society. . . .

"The Parvin Foundation developed, with the assistance of the National Association of Broadcasters, of which Governor LeRoy Collins was the head, some 80 TV films for use in the Dominican Republic. . . .

"We of the Parvin Foundation have been very proud of these educational ventures. As I said before, they have already produced some rich dividends. And if they are continued into the future, as I hope they will be, they will drastically influence the shape of things to come in the underdeveloped nations. . . . .

"Our foreign aid has often done good. But if the tides of communism are to be turned back, these underdeveloped nations need primarily dedicated leaders on the democratic front; and it is to that end that the Foundation has directed itself."

How sincerely the Parvin Foundation and its head, Douglas, were trying to "turn back the tides of communism" is well demonstrated by its activities in the Dominican Republic. Sen. Strom Thurmond stated on the floor of the U.S. Senate on June 9, 1969:

"Today I would like to point out how certain of his (Douglas's) activities in the past in connection with the Parvin Foundation have led to international repercussions. Justice Douglas has taken an active part in the so-called Inter-American Center for Economic and Social Studies, an organization financed by the Parvin Foundation and the Kaplan Foundation, and ultimately, the Central Intelligence Agency. . . . .

"The organization to which I refer went out of existence 2 or 3 years ago, but not before its activities at least indirectly had helped to foment the revolutionary situation in the Dominican Republic in 1963, and which necessitated the intervention of the U.S. Marines to save that country from Communist takeover.

"Justice Douglas became a board member of the Inter-American Center for Economic and Social Studies because of his office as president of the Parvin Foundation. The history of this Inter-American Center is most curious. It began under the name of the Institute of International Labor Research, whose chairman was the notorious Socialist, Norman Thomas.

"This institute originally began in Costa Rica as a training school for leftwing radicals under the tutelage of such leftist Latin politicians as Juan Bosch and Jose Figueres.

"The institute was organized by one Sacha Volman, a naturalized U.S. citizen from Rumania, with a long history of radical organizing activities. Shortly after 1960, the CIA began to channel nearly $1 million into this institute. . . .

"Shortly after this period, the institute moved to the Dominican Republic, when

Juan Bosch came into power, and changed its name to the Inter-American Center of Economic and Social Studies. . . . the Inter-American Center then joined with the Parvin Foundation and the National Association of Broadcasters in a program to fight illiteracy in the Dominican Republic."

Juan Bosch not only did not "turn back the tides of communism," he opened the doors for the return of Communists. After seven months of Bosch's placing of notorious Communists in important posts in his government, the Dominican Army, led by General Wessin y Wessin, staged a bloodless revolt on Sept. 25, 1963 and expelled Bosch from the country. Sacha Volman had to hide out for several days before he was able to escape from the country. Gen. Wessin y Wessin testified before the Senate Internal Security Subcommittee concerning the Inter-American Center for Economic and Social Studies (CIDES):

"Mr. SOURWINE. Now, you spoke of 40 Communist indoctrination centers operating in the Dominican Republic under Juan Bosch. Did these centers operate openly as a Communist operation?

"General WESSIN. Openly.

"Mr. SOURWINE. Did they display Communist banners or signs?

"General WESSIN. One of these schools located on Caracas Street No. 54 displayed the Soviet flag. . . . It was the red flag with the hammer and sickle.

"Mr. SOURWINE. Now, do you know where these centers were operated? You name the location of one. Can you tell us where others were?

"General WESSIN. In the school Padre Villini Calle-Mercedes. This building, in spite of the fact that it belonged to the Government, was turned over to the Communist Dato Pagan Perdomo to install a school of political science.

"There was another one, which went under the initials of CIDES located in the farm, or Finca Jaina Moza. In this school, the teachers were, among the others, Juan Bosch, Angel Miolan, and Sacha Volman."

An article placed in the Congressional Record by Hon. John M. Ashbrook indicates that the Internal Revenue Service also doubts the stated purpose of the Parvin Foundation and believes "that in fact the Albert Parvin Foundation might possibly be a screen for vast money-manipulation and influence-peddling in the high places." The article states further:

"Skolnick in his suit described Albert Parvin as an 'unsavory' character, who had what Skolnick described as a 'criminal record' in Chicago. He documented four cases involving Parvin and members of the Parvin family ranging from 1925 through 1959, in which Albert, Jack and Bernard Parvin were charged with being receivers of stolen property. . . . They were never convicted. . . .

"He listed 'among the hoodlums connected with the (Parvin) foundation:'

"(1) Marcus Lipsky, a 'gangster and specialist in multiple murders. He masterminded the Capone mob's post-war invasion of the $18 million dollar-a-year Dallas, Texas rackets.'

"(2) Edward Levinson, 'who has a contract with Parvin Dohrmann Company, interlocked company connected with Parvin Foundation, and who is connected with (3) John (Jack) Pullman, crime syndicate "banker." '

"And, (4) Harry A. Goldmann . . ."

Levinson, according to an article placed in the Congressional Record by Rep. Durward G. Hall, is the key figure who has been involved in the Parvin-Dohrmann Corp., activities, as well as the notorious Bobby Baker case. In 1966, when Parvin-Dohrmann acquired the Fremont Hotel and Casino in Las Vegas, Levinson was given a five-year contract to manage it at a salary of $100,000 per year. The article by Clark Mollenhoff states:

"Senator Curtis has called attention to as early as 1967 magazine reports that identified Levinson, Benjamin Sigelbaum, and Edward Torres, all Las Vegas gambling figures, have been serving as 'fronts' for the Cosa Nostra mobsters in Las Vegas and have been delivering millions of dollars to Meyer Lansky, the man who handles Cosa Nostra financial matters in Miami.

"Reports made to Congress in the last week allege that Albert Parvin, the 69-years-old originator of the Parvin Foundation, has been a long-time associate of such syndicate gambling figures as Frank Costello, Meyer Lansky, and the late Benjamin (Bugsy) Siegel."

In its article on the Mob (Cosa Nostra or Mafia), Life magazine states:

"The true bonanza the Mob has struck in legitimate business is 'skimming'—diverting a portion of cash receipts off the top to avoid taxes. . . . The biggest skim yet discovered took place in the legalized gambling casinos of Las Vegas from 1960 to 1965. . . . Some $12 million a year was skimmed for gangsters in just six Las Vegas casinos: the Fremont, the Sands, the Flamingo, the Horseshoe, the Desert Inn and the Stardust."

The "skim" is carried in cash by couriers to the man who handles the finances of the Mafia, Meyer Lansky, in Miami, who diverts it for political and other pay-offs and "bonuses" as well as to numbered accounts in Swiss banks. According to the Life article Communism as well as crime is involved:

"(Sylvain) Ferdmann took over both the transcontinental and transatlantic bag routes for most of the next two years. His contacts in this country were bizarre including functionaries and members of the Communist party in New York and a man who had big financial dealings with the Czech delegation to the United Nations. The conclusion drawn by investigators—from Ferdmann's contacts, from the fact that the International Credit Bank has strong ties with Communist countries and from the fact that his bag was stuffed with money both going and coming—was that there was a flow of Communist money coming back through the skimming conduit."

Ed Levinson was a director of one of the banks through which the Mob's money moved to Switzerland as well as operator of one of its chief "skimming" operations, the Fremont, now owned by Parvin-Dohrmann, but still operated by Levinson. Meyer Lansky, the Mob's "financial genius," was born in Poland in 1902 and came to New York with his parents from Poland in 1911. His family had formerly lived in Czarist Russia and were reported to have been Bolsheviks who fled from Russia to avoid prosecution. Lansky's real name is Maier Suchowljansky. The post he holds with the Mafia was formerly held by Arnold Rothstein who was murdered in 1928.

This is quite a sordid backdrop for the Parvin Foundation of whose activities Associate Justice Douglas seems to be so proud. Douglas is flirting with impeachment now and has done so in the past. One of his most notorious acts was the granting of a stay of execution for convicted atom spies, Julius and Ethel Rosenberg. Douglas did this on his own after the court had adjourned, and a special session of the court had to be called to overturn the stay. As head of the Parvin Foundation Douglas employed a Soviet economist, N. N. Inozemtsev, as his consultant. The Supreme Court would take a giant step toward rehabilitation if it could rid itself of Douglas.

POSTAL DIVORCE

HON. JOE SKUBITZ

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. SKUBITZ. Mr. Speaker, one of the outstanding editorial writers in the midwest is Clyde M. Reed of Parsons, Kansas. Of course there are times when we do not see eye-to-eye on all subjects—particularly when Mr. Reed takes the Congressman from the Fifth District to task.

Several recent editorials by Mr. Reed in the Parsons Sun have shown great insight into some of the important issues and occurrences of our times. I feel that these editorials offer valuable, constructive criticisms and I would like to share them with my colleagues.

I therefore insert these editorials into the RECORD at this point:

[From the Parsons Sun (Kans.), June 9, 1969]

POSTAL DIVORCE

A former Chicago postmaster has advanced a suggestion on the nation's postal dilemma that appears to make a great deal of sense.

The real problem in postal delays and deficits, said Harry H. Semrow, is what he politely terms "industrial mail." Others view it with less reverence and call it junk mail.

"The letter carrier has become a walking general store," Semrow asserted, "delivering soap, cereal, tooth paste, razor blades and other things."

On the way to the carrier, the mail has become burdened by industry's "heavy outpouring of parcels, advertising gimmicks, magazines, catalogs and so forth." As a result, the postal system has been "crushed" and the letter carrier's back "virtually broken."

Accordingly, Semrow would limit the postal system to the delivery of first class, air, special delivery and registered mail, newspapers, and Western Union telegrams.

A private shipping corporation, organized along the lines suggested by President Nixon for the entire system, would handle the bulk deliveries on a separate and independent basis. Time is not a critical element, since a great deal of the junk mail winds up in the wastebasket anyway.

This is perhaps the best idea yet. The postoffice—and the nation—should be saved from the junk mail boys. Divorcement would not automatically end all postoffice problems, but would provide an opportunity to work them out free of crisis created largely by the flood of useless mail turned loose on homes and businesses alike.

[From the Parsons (Kans.) Sun, Jan. 17, 1969]

LAST HURRAH

It's almost as if the Warren court wanted one last hurrah before the chief justice goes into retirement to prove its critics correct.

So it deliberately, it seems, picked out a highly controversial issue which gets into the separation of powers, fundamental in American government, over a relatively minor case.

For when the United States Supreme Court Monday decided that the House had no power to deny Adam Clayton Powell his seat in March, 1967, it ruled on a point which no longer was in contention. The Harlem congressman was re-elected last year and is back in Congress, duly seated, now.

Only one member of the court, Justice Potter Stewart, had the good sense to dissent from the majority opinion and point out that the court should refrain "from deciding the novel, difficult and delicate constitutional questions which the case presented at its inception."

While the court headed by Chief Justice Earl Warren has been lambasted for going far afield on social issues, history may record it was doing only what sluggish legislative bodies had not done.

In other words, the retrospective view of school desegregation, equal rights in public transportation and other far-reaching issues decided by the Warren court is one tempered by time.

Even its excursion into state legislative reapportionment can be defended upon the grounds that the legislatures themselves long had ignored their own state constitutions by failing to keep abreast of crucial population movements.

And the court's more recent preoccupation with the rights of individuals has its merits, although it has tended to go too far in ignoring the rights of society at large in comparison to those of the criminal as an individual.

But why, one must rise to ask, should the court go out of its way to raise thorny issues, stir the animals in Congress and generally arouse sleeping dogs in a case which, to all intents and purposes, already had been settled?

Judicial mischief, even in the cloistered chambers of the highest court, must have been at work. Earl Warren, controversial man that he has been, certainly could have chosen a more fitting farewell for himself.

NOTHING CHANGED

President Nixon knows better than anyone else what Gov. Nelson A. Rockefeller has been going through in South America, because the chief executive had the same experiences when he visited the area as vice president during the Eisenhower years.

Nothing has changed, and it is futile to blame the trouble on the Communists, Castro or related influences. They are only taking advantage of conditions made to order for them.

What is wrong in South America is what was wrong a decade and more ago. Corrupt, oppressive governments still are in power, for the most part military juntas which have little concern for the masses. The continent's high birth rate is outdistancing the ability of its primitive economy to feed, clothe and house the oncoming millions. Exploitation and inflation are rife.

North American attempts to help have been misdirected, with aid falling into the wrong hands. Washington's efforts are largely beamed to preventing revolution in nations where revolution is essential if the lot of the people in general is to be improved.

It is no surprise therefore that Rockefeller, more of a symbol of Yankee imperialism than Mr. Nixon was as vice president because of his family's long connection with Standard Oil, has been greeted with far more jeers than cheers and radical elements have capitalized on widespread misery to spearhead violent protests.

The same may be true for still other visitors from the North as long as the basic factors remain as they are, and there is nothing in sight to indicate Washington has the answers any more than it has had them for two decades or more.

POOR PROPHET

The secretary of the Treasury, Mr. Kennedy, says he doesn't think another increase in the prime interest rate is in the works.

New York banks hiked the rate to a record 8.5 per cent last week, increasing the price of money to nearly all borrowers.

But the secretary doesn't qualify as an expert on the subjects, although he should be.

The prime rate went to 7.5 per cent in March, and Kennedy said then he thought there would be no more increases.

If he cared to do so, of course, Kennedy could do something about interest rates because a secretary of the Treasury is not without clout should he choose to use it.

Merely to forecast the trend of interest rates, and be wrong at that, is hardly enough for an official in his shoes, but the nation apparently is stuck with that narrow concept from a man who may prove to be one of Mr. Nixon's least glittering cabinet choices.

WATER POLLUTION

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. DERWINSKI. Mr. Speaker, the Honorable Carl L. Klein, Assistant Secretary of the Interior for Water Quality and Research, was the subject of an article in the New York Times of May 17, 1969. The article was syndicated in newspapers across the country. It was inserted into the CONGRESSIONAL RECORD of May 26, 1969, by the gentleman from the 14th District of California.

The article suffers from a serious deficiency in that it clearly implies Mr. Klein does not intend to use all legal remedies at his disposal to abate water pollution. This is not the case; in fact, Mr. Klein's position is far different, as he expressed clearly to that newspaper in a letter of May 21, 1969.

The text of his letter follows:

MAY 21, 1969.

DEAR MR. OAKES: I noted with interest your article in the May 18 issue and an editorial of May 21, 1969, in regard to my efforts to augment the conference program by using personal contact in attempting to settle pollution problems and get results.

In the first instance, I have not abandoned the formal enforcement conference. You should have received notice on the Hudson River Enforcement Conference on June 18 and 19, in New York City by the time this letter reaches you. You will undoubtedly shortly hear of the reconvening of the Merrimack River and Lake Erie Conferences. The future udoubtedly holds a number of such other conferences.

But, in order to expedite and get results as soon as possible, I am personally giving a helping hand to the enforcement division of the Federal Water Pollution Control Administration in cooperation with the Commissioner, David Dominick, and the Assistant Commissioner for Enforcement, Mr. Murray Stein. The results have been apparent immediately: A statement of anti-pollution policy from United States Steel Company several weeks ago culminated long negotiations and will undoubtedly be a help in the fight for industrial waste pollution abatement; the State of Missouri has agreed to hold its own conferences to update the 1982 date accepted by my predecessor for secondary treatment on the Mississippi and Missouri Rivers and has scheduled the first hearing for June 13; discussions on the Memphis situation with local authorities resulted in plans for early construction of a primary sewage treatment plant; informal talks with St. Charles, Missouri have led to implementation for both primary and secondary treatment plants where the issue was stalled before.

I realize that not all situations can be resolved by this type of negotiation. I shall, however, use negotiation tactics as an augmentation feature of our drive for water pollution abatement. However, whenever and wherever the facts warrant it, enforcement proceedings will be had as provided by statute. I wish to state to you that all present enforcement conferences will be continued until they result in successful conclusions.

I would appreciate the help of this great newspaper and all other news media in achieving the final results for the successful water pollution abatement campaign.

Sincerely yours,

CARL L. KLEIN,
Assistant Secretary, Water Quality and Research.

QUESTIONNAIRE RESULTS, 1969, 23D DISTRICT, NEW YORK

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. BINGHAM. Mr. Speaker, I am pleased to provide for the RECORD the results of the opinion survey I recently conducted among my constituents by mail questionnaire. Questionnaires were sent to more than 90,000 families with registered voting members in the 23d District of New York, which I represent. I invite readers of the RECORD to draw their own conclusions and impressions from these results. I do want, however, to observe that this profile of public views has been highly informative and useful to me, and that I greatly appreciate the time and thought invested by the thousands of my constituents who completed and returned questionnaires.

Results of the questionnaire follow:

QUESTIONNAIRE RESULTS, 1969, 23D DISTRICT, NEW YORK

[Answers in percent]

Vietnam: Do you believe the Vietnam conflict can and should be brought to a satisfactory conclusion by—

Military victory	22.6
Negotiated settlement	58.5
Unilateral American withdrawal	27.4

(Results total more than 100 percent because some respondents checked more than one alternative.)

2. Unsolicited credit cards: Many banks and companies send out credit cards to people who have not asked for them. Do you feel this practice should be stopped?

Yes	83.3
No	7.9
Undecided or no response	8.8

3. Racial equality: Do you feel government efforts to assure full racial equality should be—

Increased	45.9
Decreased	13.7
Kept about the same	33.1
No response	7.4

4. Consumer protection: Do you feel government efforts to provide protection for consumers should be—

Increased	87.6
Decreased	.8
Kept about the same	8.9
No response	2.7

5. National priorities: If the Vietnam war is ended, what should be given greatest added priority?

Crime	29.9
Antipoverty programs	20.3
Tax cuts	15.6
Education	11.5
Pollution control	11.4
Defense	3.3
Urban mass transportation	.7
Space exploration	.7
No response	6.7

6. ABM missile system: How much, if any, of our national resources would you be willing to see devoted to an anti-ballistic-missile system?

No ABM system	41.0
Thin ABM system—$5 to $10 billion	20.0
Thick ABM system—$50 billion or more	11.1
Undecided or no response	28.0

7. Anti-poverty: Everyone seems to agree that our welfare programs are not working properly, and need reform. What do you feel should be done to improve the welfare situation?

More job training programs	69.7
Provide birth control help to welfare recipients who want it	64.4
Provide more free food and food stamps for the hungry	61.8
Institute a negative income tax system	43.0
Decrease welfare benefits under current programs	22.2
Provide child allowances for all families	13.9
Increase welfare benefits under current programs	7.0

(Results total more than 100 percent because respondents were invited to check more than one alternative.)

8. USS *Pueblo:* Considering the facts revealed in recent investigations of the capture of the USS *Pueblo* by North Korea, do you feel Captain Bucher and his crew should or should not be blamed for violating the military code of conduct?

Should be blamed	6.9
Should not be blamed	84.3
Undecided or no response	8.8

AMERICA THE BEAUTIFUL AND WHY I LOVE IT

HON. MARTIN B. McKNEALLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. McKNEALLY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the following essay by Miss Beth Robinson, a fifth grade student at the Evans Park School in Pearl River, N.Y. Miss Robinson is 11 years of age, and her essay is entitled, "America the Beautiful and Why I Love It." It is encouraging to note that the flame of patriotism has not been completely extinguished and that it still exists in the hearts of some of our young people. Miss Robinson eloquently expresses her love of country.

The essay follows:

AMERICA THE BEAUTIFUL AND WHY I LOVE IT

(By Miss Beth Robinson)

I love America because of the people. People who help you whenever you need help. Did you ever think that people depend on each other? In America, we wouldn't have electricity, unless men built power plants together. We wouldn't have meat, unless there were cowboys that worked together. We wouldn't even have schools, unless there were teachers willing to give their time. No one person can live alone, because everyone in the country, in the world, depends on everyone else.

My country is beautiful. Honestly, I could not say it is the most beautiful country, because I've never been to a different one! Have you ever been on a farm at sunset, seeing cows grazing in the field, and purple mountains in the distance? That sight is prettier than any picture.

Do you know who made America like this? People who wanted to see America progress. All credit should go to the people of the past. I'm proud of this country because it is mine and I appreciate the freedom it gives me.

I hereby pledge my word of honor that the thoughts expressed in this essay are my own and written by myself.

I am 11 years old and in the 5th grade in Evans Park School.

SAN FRANCISCO BAY POLLUTION THREAT

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. EDWARDS of California. Mr. Speaker, the continuing problems of San Francisco Bay pollution were underscored recently by two events which pointed out the seriousness of the bay's pollution. One of these events was the breakdown of the San Francisco sewage treatment plant and the second was a report from the State water resources control board that DDT has appeared in all municipal waste water plant effluent tested.

The problems were well described in an editorial in the Thursday, June 19, 1969, Argus of Hayward, Calif. I include that editorial in the RECORD for the information of Congressmen, as follows:

THE BAY POLLUTION THREAT

Two specific demonstrations of what serious damage water pollution means in this Bay Area have appeared in just these past few days. One demonstration was the second breakdown in San Francisco's sewage treatment system, which allowed raw sewage again to flood into the Bay.

Since an earlier break in the sewage disposal line led to contamination of beaches and tidewater areas of the Bay, more than 200 million gallons of untreated human, industrial and hospital wastes have spewed into Islais Creek slough, according to the San Francisco Regional Water Quality Control Board. Meanwhile, the contamination of San Francisco Bay-Delta by "non-degradable pesticides," such as DDT, has continued unabated.

Only a few days prior to the first San Francisco sewage disposal breakdown, the State Water Resources Control Board issued a statement in Sacramento pointing out that "agriculture is not the only source of pesticides" contaminating the state's water resources. A study by the state agency of municipal and industrial waste discharges in the 12-county Bay-Delta area showed these non-agricultural discharges "contribute an amount equal to roughly one-half the agricultural pesticide input to Central Valley rivers."

As a matter of chilling fact, the state study showed that "pesticides appeared in all municipal waste water plant effluent sampled and the heaviest concentrations appeared in the systems serving industries producing or distributing pesticides." This fact led to the State Water Resources Control Board's recommendation of a flat ban on DDT.

"There is no regulatory control of the industrial sources of pesticides to discourage either accidental spillage or wastage to sewers due to routine operating practices" the state water agency pointed out. "The number of pesticide processing facilities is not large, and inspection work could be assigned to the state's regional water quality control boards," the report suggested.

But over the long haul, the water board observed, what is needed is not policing of such industrial activities, but "a program to appraise alternative materials to be used in place of DDT and to insure that their use would not have adverse environmental effects."

So massive has the impact of even a simple breakdown in sewage disposal become in the Bay Area, that such episodes, as well as the steady contamination of water resources with deadly poisons, have become a first-rank problem. Time was when there were fewer people to create the problems and fewer people to be affected by them, so the old-fashioned methods of improvising, or waiting until the problem arose and became serious, would still get us through a critical period.

This is no longer true. Today we must come up with advance information that will tell the public exactly what the consequences of each of its actions will be long before that action creates a problem. This means greater care, greater preparation, and study of long-range considerations whenever mankind takes a major step to do anything.

It is the price we pay for our massive population explosion, and unless we learn to control and clean up our own environment, man's normal living activities and not the "bomb" may become the greatest threat of all to human survival.

The question today is actually that of how much has to happen before the American people realize what massive threats air and water pollution alone already have become.

SACRED HEART REHABILITATION HOSPITAL, 75TH ANNIVERSARY

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. ZABLOCKI. Mr. Speaker, it was my privilege recently to participate in ceremonies marking the 75th anniversary of the Sacred Heart Rehabilitation Hospital in my home district of Milwaukee.

In a time when we too often take for granted the dedicated public service of hospitals throughout our Nation it was especially appropriate to be reminded of their importance in our lives.

In the words of the hospital chaplain, the Reverend Ray Wawiorka:

Hospitals were once looked upon as places for patients whose chances of recovery had all but slipped away. Now, people go to hospitals to live. They have become centers of hope where professional skills, medicines, diagnostic aids and equipment are concentrated to increase and hasten chances of recovery.

The truth of those words is demonstrated most effectively by the Franciscan Sisters who founded this outstanding hospital three-quarters of a century ago and who have staffed it since. They and the entire lay staff deserve the praise and thanks of Milwaukee's citizens. Worthy

of special recognition, however, is Sister Marie Albert, O.S.F., major superior, and Sister Frances Ackeret, O.S.F., administrator.

It is, in fact, the tested performance of hospitals such as Sacred Heart and the ever-growing demands made on them in our urban population centers which reaffirms me in my position regarding the need for a recording of funds distributed under the Hill-Burton Act.

All of these considerations were emphasized by the speakers during the ceremonies at Sacred Heart, including the Very Reverend William E. Cousins, archbishop of Milwaukee. Particularly inspiring and enlightening in this regard was the main address of the evening by Dr. Roman E. Galasinski, a member of the hospital's medical advisory council and one of Milwaukee's most distinguished physicians.

Because of its pertinence I would like to share Dr. Galasinski's address with my colleagues and insert it in the RECORD at this point:

SEVENTY-FIVE YEARS, IMAGE AND CHANGE

(Dr. Roman E. Galasinski)

Anniversaries are like birthdays! Spontaneously nostalgic memories of the times are usually associated with the births of institutions like those of individuals. Often, then, one hears the expression—"Remember when?" Well—75 years—is quite a while ago, so I inquired of some who lived that long ago. In researching the memories of my 90 year old father and an 80 year old friend I am told that there was a building at the present site which was at the intersection of Railroad Street and Layton Boulevard. The area had wild fields around it. West of Layton Boulevard were gravel pits and to the south were vast celery fields. In the vicinity to the east was a horse race track and a fairgrounds and the first Milwaukee Zoo. Those were the days when transportation was most elegantly provided by mule-drawn cars with only two long seats. I am told that in the winter time there was straw on the floor to keep the feet warm. Because sidewalks were wooden there were jokes about taking them in for the night. It was in an era of this atmosphere that the Sisters of St. Francis completed the first building which housed 13 patients on December 23, 1893.

It is further reported that the cost of this building was $130,000 and it was a three story structure. Within less than one year it housed 80 patients. From these figures we can calculate that the per bed hospital cost in 1893 was approximately $1,600. Contrast this cost of $1,600 per bed with today's cost of approximately $45,000 per hospital bed in the construction of a new hospital. This is quite a change!

Surviving financial difficulties and a smallpox epidemic which forced temporary closure, the Sanitarium was re-opened in 1900. It slowly developed into a multi-purpose health center which gradually acquired a national reputation for excellence in the care and treatment of illnesses including heart, stomach and nervous disorders.

Gradually the care of mentally ill patients was also provided as psychology and psychiatry developed in the treatment of these illnesses. Thus, with the expansion and advance of knowledge in mental and nervous disorders, a hospital which primarily developed on concept of hydrotherapy with a spa like atmosphere and reputation, Sacred Heart transformed into a hospital for mental and nervous disorders by 1912.

In 1915, the Sisters of Sacred Heart instituted one of the early schools of nursing which lead to the present Alverno College with its excellent school of nursing.

Time marches on and with it come more changes. Scientific knowledge and new drugs also radically changed the therapy and the care of the mentally ill by reducing the requirements for inpatient hospital stay. Again the Sisters of St. Francis and the directors of Sacred Heart Sanitarium recognized that there was need for a change. In 1965, a consultation was had with the Hospital Area Planning Committee on the community need for hospital specializing in total rehabilitation.

By October, 1965, Sacred Heart Rehabilitation Center was incorporated.

By July, 1967, the remodeling of the entire plant and equipment was instituted. This was completed in June, 1968, and the facility was completely reorganized by October, 1968, under the able direction of Administrator Sister Frances Ackert and a medical staff headed by Dr. Preston Thomas. Thus, we have a third functional change of the same institution.

Now a favorable corporate image is more than just bricks and mortar and even a pretty face at a reception desk. The image of hospitals, particularly, has changed dramatically. Two score and fifteen years ago hospitals were considered the places of last refuge and sometimes even the institutions associated with death. Today, the hospital image is completely different. It is now the home of hope, recovery, reconstitution and rehabilitation.

Sacred Heart Sanitarium certainly must be credited with the remarkable adaptation. During these 75 years it has changed function three ways and yet has at all times enjoyed a remarkable image. An image that has been one of prestige—not only in the local community but an image of excellent national reputation. Now reputations of institutions like those of individuals have to be built. Such reputations must be built on conservatism and prudence and yet with a progessive adaptation to the ecology of the times and the growth of years. An image such as entertained by Sacred Heart must also be based on reputation for know-how, on the ability to give efficient, friendly and excellent service. Furthermore, such a reputation can only be obtained by a personnel both administrative and medical which excels in the service they render and, therefore, at this moment I wish to personally extend my deepest appreciation and congratulations to the Sisters of Sacred Heart of this institution who through generations of sacrifice and dedication to service through man and to God have rightfully established an image which has shown brightly through all these years. It is also a credit to them to have surrounded themselves with medical staffs who because of their excellence have been able to provide the specific services for which a hospital is created.

An indispensable ingredient in creating the new image of Sacred Heart Rehabilitation Hospital would be an appraisal of its future place and growth in its new field. Permit me, therefore, to dwell upon what we mean by rehabilitation and where and how rehabilitation will fit into our program of therapy as of today.

As you know, a study of rehabilitation facilities and needs was made in the four county area of Milwaukee, Ozaukee, Waukesha, and Washington Counties. This study took almost two years and was completed in 1968.

The facilities selected for the study were the twenty-five short term general hospitals in the area and also the following six additional facilities: Curative Workshop, DePaul Rehabilitation Hospital, Goodwill Industries, Jewish Vocational Services, Milwaukee County Rehabilitation Hospital, Unit II, and Sacred Heart Rehabilitation Hospital.

The Joint UCS–HAPC Study Committee had the following basic purposes:

1. To recommend to both of the respective boards guidelines for the orderly development to 1975 of rehabilitation facilities and services for the physically disabled.
2. To coordinate the factfinding of UCS and HAPC during the study.
3. To develop a working relationship with the proper groups to implement the guidelines.

For our study, the technical advisory committee, composed primarily of professionals experienced in rehabilitation services, was established with the following duties:

1. Professional advice on the scope of the study and details of the study plan.
2. To assist in interpreting the study to appropriate professional groups.
3. To bring professional viewpoints into consideration and interpretation of the factual material.

As a guideline to our study, the definition of rehabilitation which was used was the one taken from the U.S. Public Health Service, and is as follows: "Rehabilitation is the process of restoring the disabled to optimum physical, mental, social, vocational and economic usefulness. The process provides services for the handicap beyond those available from his own resources. Rehabilitation calls for a long range planning in action utilizing a broad spectrum of medical, psychological, vocational and educational services coordinated and integrated into specific programs designed to meet individual needs." In the vernacular this means restoring a disabled individual to the fulfillment of such capacities and usefulness to himself and to his community as his disability will permit because of limited functions or in another sense, restore to an individual his dignity and his feeling of usefulness to himself, his family and his community.

Now rehabilitation through the years has gone through an evolutionary and almost revolutionary process in many respects. It has broadened in scope the many refinements in terms of the disciplines it embraces, and in terms of the volume and kinds of people it might serve. This revolutionary process will undoubtedly continue as many areas of controversy are resolved; particularly, controversy involving differences of professional opinion on the philosophy and techniques of rehabilitation, on the organization of services and on the nature of the services themselves.

In the course of our two years study it became reasonably clear that the *way in which services are organized* may be at least as important as the services themselves from the standpoint of the *individual patient*, the *institution providing* the services and the *community* as a whole. Although there is not general agreement on the specific definitions or terms that should be used to identify each element in the spectrum, it is reasonably clear that planning for a comprehensive rehabilitation program for the physically disabled should include consideration of at least the following elements:

1. Medical examination, diagnosis, prescription, treatment and followup, including medical supervision and medical direction of para-medical services.
2. Comprehensive rehabilitation evaluation and counselling for each patient and assessment of each individual's total situation initiated soon after medical diagnosis and aimed at the development of a program plan for treatment and rehabilitation services for the individual that is designed to meet his total needs.

This element should include assignment of responsibility for implementation and coordination on the program for each patient.

3. In-patient rehabilitation—nursing care.
4. Physical therapy.
5. Occupational therapy.
6. Speech services.
7. Hearing services.
8. Vision services.

9. Psychological services, including testing and interpretation therapy and counselling.

10. Social service, including casework, counselling and therapy.

11. Vocational evaluation, the specific determination of an individual's potential for work for useful endeavor or vocation training and helpful placement.

12. Vocational training, such as, teaching of the skills required for a vocation, perhaps, including academic preparation.

13. Vocational placement, such as, providing employment opportunity.

14. Sheltered employment—remunerative employment for individuals as a part of training prior to placement and/or for those disabled persons unable to compete in the open labor market.

It is most important to remember that rehabilitation is only a part of the larger concept of total health and should be viewed in terms of its relationship to that concept rather than as an entity unto itself.

At the conclusion of our study, we made the following recommendations relative to community organization:

"By 1975, a total of not less than two or more than four community rehabilitation centers should be developed to provide comprehensive rehabilitation projects to the physically disabled in Milwaukee, Ozaukee, Washington, and Waukesha Counties. Furthermore, each community rehabilitation center should include in its orbit at least the following:

1. One general hospital that operates an inpatient rehabilitation nursing unit and that provides for comprehensive evaluation and counselling services.

2. One facility (which may be the hospital in No. 1 proceeding) that accepts responsibility for co-ordinating the total community rehabilitation center.

3. All of the other short term general hospitals serving substantially the same population group as that served by the community rehabilitation center.

4. One or more facilities providing each type of rehabilitation service for inpatient and for out-patient to substantially the same population group.

5. One coordinated home care program.

6. An organized education program for professional and non-professional manpower.

7. An organized research and demonstration program."

Our study also made this recommendation: "to the extent that incorporation of the entire range of rehabilitation services in a single facility or on a single site is not feasible, we recommend:

1. The number of different facilities on different sites providing rehabilitation services for each community rehabilitation center should be kept to a necessary minimum.

2. Each facility of the center should be readily accessible to the population to be served and to every other facility of that center.

3. Services within a single facility should be grouped with careful consideration of the common needs of many patients—the degree of interaction of personnel working in diverse services and the relationship of the rehabilitation program to other health programs in the area.

As to the distribution of the facilities we made the following recommendations:

1. Community rehabilitation centers should be developed for each geographic segment of the total metropolitan area that it is likely to have a broad enough patient load to support a broad rehabilitation program.

2. The coordination unit of the community rehabilitation center and as many of the other units as possible should be developed as close to the center of the population they are intended to serve.

3. Planning for the development of community rehabilitation centers should take into account a natural geographic barrier, adequacy of public and private transportation, ease of ingress and egress, other environmental factors and social as well as physical accessibility to the population to be served.

It may seem that I have burdened you with unnecessary details of our study. However, these are the guidelines set up for our community. Because I look forward to Sacred Heart Rehabilitation Hospital to serve a key role in this program I take the courage to admonish you to refer to the report as your "Bible." Within this report are answers to almost every question that may arise in your immediate and long-range planning. In such planning, I have found, you must be introspective, objective, and rejective. Reality must prevail over idealistic inclination almost to the point of brutality in your analytical programming for the future. The planning must be positive! And you at Sacred Heart will have to develop this new concept and character for your institution.

But, after all, you have had 75 years experience. You have demonstrated how to maintain a growing, wonderful image in spite of changing your function three times, within this almost three scores. I take this privilege to encourage you to continue with the excellent service you have rendered in the past and also to remind you that as a Rehabilitation Hospital you are only one year old! As community awareness develops and rehabilitation becomes more and more a part of total health care—you will again grow in another pioneer field of health.

We salute you for success on your 75th anniversary and pray your wonderful image will continue to glow in the future as Sacred Heart Rehabilitation Hospital.

THE PUBLIC SHOULD BEWARE OF HIGHLY FINANCED ANTI-ABM PROPAGANDA

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. O'KONSKI. Mr. Speaker, I am deeply disturbed at the huge amount of money that is being spent on the anti-ABM propaganda.

Congress has a responsibilty to investigate the source of the funds that are financing one of the costliest propaganda campaigns in the history of our Nation.

The Press Ethics Committee issued a very significant statement on Friday, June 20, which should be read by every American.

Mr. Speaker, I include this statement by the Press Ethics Committee as a part of my remarks:

PRESS ETHICS COMMITTEE STATEMENT, JUNE 20, 1969

News reporting against the ABM defense missile system for the U.S.A. has been so one-sided that the right of 200 million Americans to be defended has been largely ignored.

Typical of the extreme media attacks against minimal U.S. defense from the new Soviet 25 megaton war-heads is the following from the Washington Post of April 15, 1969:

"It is still far too small to knock out more than one (U.S.) ICBM site.

"It is instead a large war-head designed to destroy large 'soft' targets—such as cities—in other words a second strike weapon, and that is all."

On the Huntley-Brinkley TV-show, where the proposed anti-missile defense has been attacked very frequently, the ABM system was even assailed in the newscast on President Eisenhower's death. TV quiz programs and TV shows are loaded with ABM opponents. One of the favorite gadgets in what seems to be leading toward a TV "blitz" against defensive missiles is to emphasize their cost and follow this immediately with the need for funds for domestic poverty programs.

This cacophony has reached such a pitch that in Foreign Affairs magazine D. A. Brennan has spoken of lopsided reporting which causes lopsided thinking. Columnist William S. White has not criticized the Press but has charged that the anti-ABM lobby is operating "one of the most richly financed propaganda campaigns in recent history."

News reporting on the new "Safeguard" missiles has almost entirely by-passed the simple fact that—at the very worst—they are better than no defense missiles at all.

The Press Ethics Committee, on the basis of a volume of press reports and TV-casts, warns the public that its safety seems endangered by the increasingly one-sided and virulent reporting against a missile defense from the new Soviet aggressive rockets.

We urge each American to be alert to this dangerous propaganda barrage and to ponder any favorable, as well as adverse, reports respecting the proposed anti-Soviet rocket defense system.

Americans should keep in mind that—on the basis of full information—the present Republican President and his predecessor, a Democratic President, have both recommended a missile defense against new offensive missiles in the hands of Communist regimes.

HOOVER ACCEPTS CHALLENGE

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. GROSS. Mr. Speaker, the recent revelation that the Federal Bureau of Investigation had a wiretap on the telephones of Dr. Martin Luther King, Jr., resulted in predictable and pious bleats of horror from the liberal establishment, coupled with demands for the resignation of FBI Director J. Edgar Hoover.

Those who have attempted to pillory this faithful and courageous public servant belatedly discovered that it was not Mr. Hoover but the late Attorney General Robert F. Kennedy who authorized this wiretap.

Try as they might, these critics can no longer ignore either this fact or the reason for this surveillance. It has created an interesting situation and one which, in my opinion, is set forth clearly in an article by Clark Mollenhoff in the Des Moines Register of June 23.

I include the article at this point for insertion in the RECORD:

HOOVER ACCEPTS CHALLENGE

(By Clark Mollenhoff)

WASHINGTON, D.C.—A bitter dispute over FBI wiretapping has marred the image of the late Dr. Martin Luther King, and is moving in a direction that could seriously damage the Kennedy charisma with militant minority groups.

The dispute also brought the first direct challenge to FBI Director J. Edgar Hoover by two former attorneys general, Nicholas Katzenbach and Ramsey Clark.

Katzenbach declared that a Hoover version of the wiretapping chronology was false.

Ramsey Clark denied any knowledge of the wiretapping of Dr. King and declared that Hoover should retire as director of the FBI.

This controversy has set the stage for Hoover to release more information to congress on the wiretap, to defend his own position.

The whole flap started less than two weeks ago with the testimony of an FBI agent in Houston, Tex., admitting a wiretap on the telephone of the assassinated Nobel Prize winner, Dr. King.

The conversation that was overheard was an innocuous bit of discussion between Dr. King and former heavyweight champion Muhammad Ali (Cassius Clay), who has been indicted and convicted on a charge of failing to report for the draft term.

SHOWED RECORDS

The Justice Department was required to make available all records of eavesdropping on Ali to demonstrate in the federal court that none of these taps had resulted in information that led to the indictment of Clay on the draft evasion charge.

But, before the week was out the eavesdropping on Dr. King had resulted in a bitter confrontation between Hoover and the friends and political heirs of the late Senator Robert F. Kennedy.

There was still debate about whether the FBI or the then Atty. Gen. Kennedy initiated the wiretap on Dr. King in October, 1963. Among the chief contentions were:

1. Dr. King was engaged in a continued association with a New York lawyer and a Negro leader who were regarded by Hoover and the Justice Department as Communist Party members or tools of the Communist Party.

2. This association continued into 1963, and was a source of great concern to Kennedy, Hoover, and other officials of the federal government.

3. A decision was made by Kennedy that this represented such a potential threat to the internal security of the United States that he should authorize the FBI to engage in direct electronic surveillance of Dr. King.

4. The FBI continued electronic surveillance of Dr. King up to his assassination in April, 1968, under a Johnson administration that had stated publicly that all wire-tapping had been stopped in 1965 except those cases the administration believed essential in the interests of national security.

Senator Edward M. Kennedy (Dem., Mass.), the heir to the Kennedy political fortunes, has remained silent throughout the entire controversy over whether his brother did or did not initiate the surveillance. Senator Edward Kennedy, with his political eye set on 1972, was avoiding any clash with Hoover, whose public image has been stronger than the Kennedy image and over a much longer period of time.

The defense of Robert Kennedy was left to Katzenbach, who was deputy attorney general and attorney general, during much of the period when Dr. King's telephone was being tapped.

KNEW NOTHING

The first time he was asked about the FBI statement that Dr. King's telephone was tapped, Katzenbach said he know nothing at all about it.

A day later, Katzenbach told the Washington Post that there was such a wire-tap on Dr. King "personally authorized" by Kennedy. He added: "But to say or imply that this tap was the original conception of Robert Kennedy . . . is false."

The Post stated that Katzenbach and other Kennedy team members at Justice contend that the attorney general approved the tap on King only after the FBI had urged him to "over and over and over again" because the FBI believed Dr. King was either a Communist or a tool of the Communist Party.

President Nixon told his press conference last week that he has examined the evidence from the FBI files and the statements of the FBI director, and that Hoover enjoys his "complete confidence."

President Nixon says he has had no discussions about the possibility of naming a successor to Hoover, and he has put his stamp of approval on using legal wiretapping as provided in the omnibus crime bill of 1968 in a "sparing" but "effective" manner.

The whole flurry over the wire-tapping was touched off by Carl R. Rowan, a Negro columnist, who last Sunday had expressed his outrage at the fact that Hoover had permitted eavesdropping on the telephone conversations of Dr. King.

Rowan quoted former Atty. Gen. Clark as saying that he knew of no authority to wiretap or bug Dr. King, and he noted that Clark has said that "The implication that people thought Dr. King was a security threat is outrageous."

Rowan indicated that he too believed it was outrageous to raise questions of "national security" in connection with Dr. King's activity, and he declared that "Hoover ought to be replaced as FBI director—immediately."

That Rowan column irritated Clyde A. Tolson, associate FBI director and a former Cedar Rapids, Ia., man. Although Tolson, 69, has usually stayed out of the spotlight in his 41 years in the FBI, he wrote an angry letter to Rowan and the Washington Star calling Rowan's column a "malicious article."

ADVANCE APPROVAL

"For your information, the wiretap on Martin Luther King, jr., was specifically approved in advance in writing by the late Atty. Gen. Robert F. Kennedy. This device was strictly in the field of internal security, and, therefore, was within the provisions laid down by the then President of the United States."

That short paragraph was the first official verification that "national security" was the official reason for the surveillance of King, and it was the first written verification that Kennedy had given written approval.

A day later, Hoover, in an interview with a Washington Star reporter, went into more detail, and made the assertion that Kennedy had not only approved the wiretap on Dr. King, but had initiated it.

The signature of "Robert F. Kennedy" was on the approval, Hoover said. A memorandum from Courtney Evans, a close friend of Kennedy and the justice department liaison to the FBI, showed Kennedy initiated the King wiretap.

Although the contents of the memos have not been made public, they were made available to Jeremiah O'Leary, the Washington Star reporter. He was not permitted to quote directly from the documents, but was allowed to verify that they contained the information Hoover said they did.

With the political heat on the subject, it is regarded as inevitable that the Nixon administration will make these documents available to members of the Senate or House or at least to some committees that would have jurisdiction to examine the wiretapping practices.

The actual contents of the wiretapping logs kept on the years of Dr. King's surveillance are still secret, but it is possible that all or parts of those records will become available to the public in various trials and hearings as the government is required to show that they are not related to indictments or convictions.

As each of these records becomes available, the public will be able to put together more of the pieces of the life and activities of Dr. King, and make its own determination as to whether there was justification for the "national security" surveillance.

As that picture emerges, the public will also be permitted to examine the posture of a number of public figures—the late President John F. Kennedy, Senator Kennedy, former President Lyndon B. Johnson—to determine the extent of the personal knowledge of Dr. King's activities as well as their public postures with regard to Dr. King as a political force in the period from 1961 until his tragic death in April, 1968.

"SOUNDS OF SUMMER"—AN OUTSTANDING PROGRAM FEATURING BOSTON POPS ORCHESTRA AND MRS. JOAN KENNEDY

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. MACDONALD of Massachusetts. Mr. Speaker, last week the Subcommittee on Communications and Power of the Interstate and Foreign Commerce Committee, of which I have the privilege to be chairman, heard testimony from officials from the Corporation for Public Broadcasting in support of passage of H.R. 4212 and H.R. 7737, which I introduced.

In his testimony Mr. John Macy, president of the corporation, outlined the present record of this nonprofit entity established by Congress, and mentioned a current series of programs called "Sounds of Summer." Under a grant from the corporation, this series of eighteen 2-hour programs is broadcast simultaneously to public television stations throughout the country. Produced by National Educational Television—NET—with production grants from the corporation and the Ford Foundation, the series brings regional musical and cultural festivals to the attention of Americans who would not otherwise have an opportunity to see and hear them.

One of the best examples of the effectiveness of this type of television program was the "Sounds of Summer" performance last Sunday which featured the Boston Pops Orchestra, conducted by Mr. Arthur Fiedler.

A highlight of this program was the performance of "Peter and the Wolf," with narration by Mrs. Joan Kennedy, the wife of the senior Senator from the Commonwealth of Massachusetts. Critics have applauded Mrs. Kennedy's narration and have commended her grasp of the mood of the piece and how well her words meshed with the music.

Mr. Speaker, I insert at this point in the RECORD an article from the New York Times of June 24, 1969, by Jack Gould, commenting on the "Sounds of Summer" program last Sunday:

TV: NET'S "SOUNDS OF SUMMER" OFFERS DIVERSITY

(By Jack Gould)

In "The Sounds of Summer," which is being shown from 8 to 10 o'clock on Sunday evenings over National Educational Television on Channel 13, the Corporation for Public

Broadcasting and the Ford Foundation are presenting a most distinctively refreshing show of the vacation period.

The two organizations are tapping the availability of a diversity of musical attractions that normally would not find their way to network television and making the ensuing pleasures available to the larger TV audience.

Surely, one of the continuing communications functions of public broadcasting is to overcome the geographical barriers to an appreciation of the cultural resources that are in our midst but so often may be confined to only a single city.

Sunday night's two-hour presentation was a specially happy example of the rewards. Admittedly, public broadcasting could not miss with the first part of the program. It offered a delayed tape of Old Timers Night at the Boston Pops, with the ageless Arthur Fiedler, the conductor, showing his heels to the likes of Leonard Bernstein and Lawrence Welk when it comes to making a concert a fun occasion.

The opening selection had Mrs. Joan Kennedy, the wife of Senator Edward M. Kennedy of Massachusetts, acquitting herself handsomely as narrator of "Peter and the Wolf." She had an intuitive grasp of the feeling of her lines, was lovely to look at and she flawlessly meshed her words with the ensemble.

The Boston Pops has been so long and justly praised that postscripts at this late date can only qualify as redundancy. But this does not detract from renewed admiration for Mr. Fiedler's zest in using the Boston ensemble to achieve an entente of gaiety between the orchestra and the audience.

Characteristically, he made "The Little Brown Jug" sound like practically a new number and had the audience singing to "Margie," "Pal of My Heart," "Shine on Harvest Moon," "When Irish Eyes Are Smiling" and "After the Ball is Over."

The spirit of the Boston Pops is wholly contagious, and why Mr. Fiedler has not been a TV fixture defies understanding. In hearing the depths and resonance that an accomplished orchestra has to bring to even the most familiar tunes is in itself exciting musical education, one that could be carried forward to more demanding classical works. The Boston Pops easily could be a bridge between the symphony world and the mass of videoland; and why not?

The second portion of Sunday night's "Sounds of Summer" was altogether different, a tape of the May premiere of Peter Mennin's cantata "Pied Piper of Hamelin" with the Cincinnati Symphony Orchestra under the direction of Max Rudolf, a huge children's chorus and Cyril Ritchard as narrator.

Mr. Mennin's interpretation of the legend was musically always interesting and Mr. Ritchard's narration admirably suited to the occasion. Let the musicologists assess the cantata per se; for the downtrodden video addict it was pure elixir, a magnificient antidote to the likes of "Hee Haw."

"Sounds of Summer," modestly narrated by Steve Allen, has not always been so lucky. Its maiden program on New Orleans jazz often seemed cold and, except for the sequence with Count Basie, appeared to be a patch-work job of editing. A week ago it covered the folk festival of the Smokeys, taped at Gatlinburg, Tenn. The insight into the mountain heritage of folk music had value but the quality of performing, while probably accurate in its authenticity, came through raspy over a TV set loudspeaker.

But no matter, N.E.T., the corporation and the Ford Foundation are on the prowl for samplings of different kinds of music to flourish in summer, and theirs is an admirable goal.

LEARNING DISABILITIES—PART 3: CHILDREN WITH MINIMAL BRAIN DYSFUNCTION

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. PUCINSKI. Mr. Speaker, it has been estimated that there are more than 5 million children with learning disabilities in our schools throughout the Nation. These are children who are not otherwise classified as handicapped. But, for varying reasons, they are unable to learn as other children do.

The means of determining children with learning disabilities and distinguishing them from children who are handicapped is a perplexing and difficult assignment for teachers and parents.

Following is an article written by Dr. Eugene Schwalb for the Journal of Learning Disabilities of April 1969 on the subject of detecting learning disabilities in children from their earliest stages of development:

CHILD WITH BRAIN DYSFUNCTION

Criteria and tests used on which to base the diagnosis of Brain Dysfunction are considered. This diagnosis has neurodevelopmental and educational aspects which are related to specific classroom procedures. The practice and theory of new education and not remediation are discussed.

PART I—DIAGNOSIS

Brain dysfunction, or minimal brain damage (MBD), or minimal brain dysfunction, refers to children who primarily have behavior and learning problems. We are not here dealing with structural abnormalities such as are found in brain tumors or in cerebral vascular anomalies. In fact, children with the latter disorders usually do not have brain dysfunction. An MBD diagnosis has both a medical and an educational aspect in that the findings must be related to specific classroom procedures.

The MBD diagnosis is based on a behavioral symptom complex consisting of hyperactivity, impulsivity, short attention span, perseveration, and five other major characteristics:

(1) near normal, normal or above normal IQ

(2) specific learning problems such as visual perceptual problems, poor auditory discrimination, etc.

(3) memory problems; basically, these children cannot carry out a sequence of commands

(4) mixed laterality and/or right-left disorientation

(5) coordination problems, particularly in tasks requiring fine and rapid motor coordination

When such children are referred for the neurological examination, a modification of the traditional format is required. We perform a developmental analysis because asymmetries of function or seeking the level of the central nervous system affected by disease are not at issue. Brain injury, if it has occurred early in development, has a good deal of time to repair. Then how do we identify these children? Combinations of impairment in perception, conceptualization, language memory, attention and impulse control are tip-offs in the identification of the MBD child. The history may also be of value. Developmental lags in the motor, language and behavior areas are clues as to the child's functioning. History of pre-maturity, ante- and neonatal factors, poor suck, colic, etc., all may supply the clue for directing our attention to brain dysfunction. For specific data our evaluation may then be directed to the following areas:

(I) Performance and Intelligence: A scorable development and intelligence analysis such as the Gesell Scale is of value. Scale (1) is of value.

(II) Language Evaluation: Delayed language development is usually noted in the history. In addition, if the examiner must ask the child to repeat himself in order to understand the patient's speech, an evaluation has to be made using any available articulation and auditory discrimination scale or a speech diagnostic evaluation.

Language also may be evaluated by parts of the Illinois Test of Psycholinguistic Abilities (2) in children from age 3 to 8. We note deficiencies in auditory sequencing skills or in recalling placement of visual objects in sequence. Receptive language difficulties may be picked up by the vocal encoding section and other sections as well of the ITPA.

For older children, it is important to note both expressive and receptive speech problems in addition to articulation difficulties. Among those things to be noted are word discrimination, sound blending, sound meaning and word meaning. We find it most useful to employ an oral reading test such as the Gilmore or any other reading tests. We listen to the child read aloud and record errors such as the following:

(a) phonetic or unphonetic sounding out of unfamiliar words

(b) errors involving directional confusion, particularly reversals, as was-saw, big-dig

(c) substituting words with similar meaning in a story

(d) perserverating on certain words, particularly at the end of sentences and before the start of the next sentence

(e) holding the paper at a 90 degree angle, or upside down

(f) difficulty staying on the line

Reading or language retardation is present when a school child is reading two grades below his mental age. This is the general school cut-off point for retention in class.

(III) R-L Orientation: The child's ability to organize his spatial environment is measured by a series of objective and subjective tests, crossing over commands, sleep positions, nail polishing, preferred direction of lateral gaze, etc. (2)

(IV) Soft Motor Signs: Our examination searches for the soft neurological signs which correspond to major cerebral palsy abnormalities, a soft neurological scale has been published (2). The following are most common:

(a) Coordination. Poor coordination is delineated by the child's manipulation of his pencil—for this requires fine motor skills. Tests such as Part One of the Frostig (3) are suitable in scoring the child's difficulties. These are the children who have difficulty in tying shoe laces, in placing straws in narrow neck bottles, etc.

(b) Choreiform movements: Abrupt, short muscle jerks noted when the child is asked to outstretch his hand, are also frequently helpful signs. These short muscle jerks may explain the high incidence of muscle artifact on the electro-encephalogram noted in these children.

(c) Neonatal Automatism: Persistence is thought to be a measure of the disorganization and the disintegration of the central nervous system. Despite the fact that the range of normalcy is wide, automatic instability in the MBD child of six and seven and above also gives us the following pertinent soft signs: reflex carry-over and motor impersistence-shown by the inability to perform such sustained motor activity as sticking out the tongue. (2)

(V) "Soft signs": In the sensory areas these are checked with tests for finger and

tactile agnosia, tactile figure writing, position sense testing, two-point discrimination test, optikinetic nystagmus, auditory tune-out test (involves ringing a bell and simultaneously touching the child's hands or legs; this test depends on the child's ability or inability to tune out irrelevant stimuli), and the face-hand-test are useful in measuring "sensory integration." (2)

The electroencephalogram: The EEG has not been a particularly useful tool in diagnosing brain dysfunction. Electroencephalographic soft signs (excessive random slowing, prolonged response to hyperventilation, occipital spiking and 6–14 positive spiking) are found in increasing frequencies but their significance is unclear. They may represent subliminal discharges and often clear with motor maturity. A better way to discern a subliminal spike is being sought. Electroencephalographic computer averaging of auditory click helped Barnett, et al (4) uncover deafness in congenital rubella in the first week of life. This technique may prove to be the best diagnostic test, since the MBD discharge may require the additive effect of a computer to become visible.

(VI) Perception: Our next objective is to describe the strengths and weaknesses of "perception." A perceptual profile is obtained. These skills are maturational in character and are attained by the normal child in predictable sequence. The senses (eyes, ears, skin, etc.) receive impressions which are fed to the brain. Normally, an orderly sorting process takes place. Sensations are organized and remembered so that perception (visual-auditory, tactile, kinesthetic) can take place. It is an inability to sort and screen out stimuli which is the prime difficulty in the child with brain dysfunction. Tests for visual perception and visual motor coordination are the Winterhaven (5), the Frostig (3) and the Bender-Gestalt. We use only those parts that are pertinent to each child's problems.

The Frostig test evaluates eye-motor coordination, figure background, shape constancy, position in space and spatial relationships. The test is easily scorable and norms are available. Auditory perception or discrimination of similiar sounds may be evaluated by parts of the Wepman Test (6) of auditory discrimination or the Pronovost-Dumbleton Test (7), which is a picture type speech-sound discrimination test. Tests for tactile and kinesthetic perception involve objective recognition by touch of texture, weight and size, and board recognition of geometric shapes. A careful differential diagnosis is required because of the possibility of confusing minimal brain dysfunction with the following:

(1) Primary adjustment reaction of childhood, where the etiology is family dysfunction and anxiety seems to be the primary symptom, is most difficult to differentiate from the MBD child since behavioral aberrations are common to both.

(2) Developmental dyslexia refers to children who have difficulties in integrating auditory and visual stimuli despite the fact that they may perceive them correctly. They also have mixed dominance and right-left disorientation but little motor or speech difficulties.

(3) Environmental deprivation syndrome involves children with behavioral symptoms in school not unlike those earlier detailed. A strict maternally dominated home and passive or absent fathers, normal performance and low normal verbal intelligence quotient, normal visual perception and no motor deficits are usually found.

(4) Developmental aphasia involves children with brain dysfunction and with receptive as well as expressive difficulty. They also seem to have difficulty in auditory discrimination and differentiation.

Variations and combinations of the above are often seen. It is the examiner's objective to demarcate and delineate the problem.

In conclusion, it must be noted again that diagnosis is not a sufficient end-product. Our examination is also designed to assess the child's abilities and handicaps in order to provide the educator with information regarding the child's strengths and weaknesses so that he may design an appropriate modified curriculum with the help of such optimal modifications as may be achieved medically and to identify children who are functioning below their age capacity level in order to prevent emotional sequelae.

On the basis of the descriptive diagnosis provided, the teacher should be able to conceptualize and implement a technique for teaching each child based on the characteristics of the abnormal condition found. To accomplish this end, medico-psychological-educational interdisciplinary evaluation, consultation and therapy interweaving are mandatory.

PART II—REMEDIATION

A recent publication on learning disabilities tells a story about a college class in experimental psychology that was required to train rats in maze running. Naturally, some of the rats failed to learn as well as others. Not one of the students, however, nor their instructor presumably, hypothesized anything like brain injury or aphasia or even dyslexia as a cause. They "all assumed that something had been wrong with their technique." (8) This invaluable bit of educational lore obviously should not be confined to rats. Essentially, it is another way of saying that not all units of a population—any population—learn alike; the problem is to find out how to meet the special needs of those that differ.

The child with "minimal brain dysfunction," so far as the educator is concerned, falls into the category of the disabled learner or the child who is different. The special needs of this child seem to be fourfold:

(a) remedial techniques and materials oriented toward some bomvination of the visual, auditory, kinesthetic and a tactile modalities.

(b) medication where necessary.

(c) the judicious/scaling down of demands to a point where success is possible.

(d) material presented in such small increments as to make success habitual.

This paper will deal with procedures and materials pertaining to the first item.

Since disabled learners with very few exceptions have at least learned to speak, it seems possible that much more can be done with the auditory modality than has hitherto been considered possible. There is never any hesitation with the legally blind. Material is prepared to be read to them. Tests are read to them and their replies are recorded and evaluated with due regard for their special handicap, and correctly so, of course. Contrast this with the customary treatment of the word-blind or dyslexic child, however. Only in rare cases are similar procedures utlized and one would be hard put to explain why.

It is also important to note that reading to the blind is not remedial; it is a means of learning. It adapts material to the only other suitable modality, the auditory modality, and a careful distinction must be made at this point between learning and remedial work. Like the blind child, the child with a learning disability must still learn but because of the special nature of his problem, the fulfillment of this need has been if not evaded, at least postponed until conventional or near-conventional reading-learning skills have been establishd. Even special schools tend to fixate too rigidly on books, or at least printed material, as the individual's chief source of information and intellectual stimulation. This is no longer true of society at large and should be even less true.

To put this theory of modality-adapted learning in its simplest terms, one would imagine that if a child is, for any reason "blind" to print, a way would be found to read it to him. There is no evidence that this is being done except in an extremely sporadic fashion. Yet, current technology offers a great deal that can be brought to bear on the problem. There is, of course, the tape recording with associated text so that some incidental visual learning may take place. And there are the other media, such as films, recordings, and "speaking" film strips. Fully applied, this procedure would quite reverse the customary learning process so that it would be the multi-media or audio-visual materials on which the main line of curricular development would depend, with books as supplementary material. This is in contrast to the traditional pattern in which the various media are supplements to books. We would, therefore, expect to present Dr. Seuss on tapes, subject area information via tapes, even philosophy via tapes. Only in this way, however, would the school genuinely achieve its basic function, which is to teach—to be a channel for the effective imparting of knowledge in whatever way the child can best absorb it.

Returning now to the discussion of the remedial needs of the disabled learner, material and techniques are available in abundance, almost bewilderingly so, in fact. Dr. Ray Barsch's remark in reference to motor training at the 1968 CEC (Council for Exceptional Children) Convention in Boston to the effect that "this elephant can be grabbed by almost any feet" is true for other aspects of work with these youngsters today. It should be noted that all items referred to in the following paragraphs are either the only ones available or are those that happen simply to lie within the writer's competence.

It should be noted that selection of material must be based on what we know about the child and where we want to go with him, as well as special alertness to what we may find out. Flexibility helps and it helps to forget what doesn't work. Carefully observed, the child will himself sometimes suggest the technique that does. If a child closes his eyes, for example, it may be his way of describing how he learns best at that moment.

To expand slightly on the diagnostic-remedial bond which is much tighter than ever before, it is interesting to note that in some long-gone primordial era, two decades ago perhaps, it was sufficient to check simple acuity of vision and of hearing. Today's refinements include the ITPA (Illinois Test of Psycholinguistic Abilities) (1) which provides a profile of auditory-linguistic and visual-linguistic strengths and weaknesses. Of its twelve subtests, two are closely related to reading and can give valuable and almost instant insights into the deficit areas of the non-reading child, and even some adults, and to suggest some of the remedial work that may be necessary. These are the Auditory-Vocal-Sequencing sub-test for auditory memory and the Visual-Motor-Sequencing sub-test for visual memory.

The latter usually correlates closely with the Form Constancy or visual memory section of the Frostig Test of Visual Perception (3) which, as a whole, differentiates the various problem areas in visual perception and thus is an excellent back-up test for the ITPA. (1)

An equally "primitive" notion had it that persistent non-reading indicated a need for psychotherapy. This resulted often in rather well adjusted non-readers.

Diagnosticians, including psychologists, are increasingly concerned with motor skills which are, currently, for the educator as well as the medical practitioner, an important phase in the diagnosis of learning disabilities. Here, the Purdue Perceptual Motor

Survey (10) is an important tool. It helps to identify potentially poor achievers and to uncover problem areas such as confused directionality, mixed laterality, confusion about body parts, and so on. Its scoring system is not as clear or as specific as might be desired, but it is excellent as a survey of a child's motor skills and his training needs. It points the way to remedial procedures as found in the work of Kephart, one of the authors of the survey, G. N. Getman (11), Frostig and Barsch (12).

As previously indicated, success is most closely related to the selection of appropriate goals and the proper sequencing of steps leading to them. The perceptually handicapped non-learner may score his first success in tracing the outline of a triangle. The motor-handicapped non-learner may score his first success on a walking-beam or balance board. For the sequence of "small increments" that might "make success habitual" in this area, techniques and games suggested by Cratty (13), and Avery and Higgins (14) should prove helpful.

With respect to reading itself, diagnostic instruments have not changed very much. They tend to be fairly elaborate but tell the diagnostician only a little more than he already knows, namely that a reading problem exists and that certain sounds and sound combinations are possibly somewhat more of a problem than others but not whether they are the crucial problems.

In the same category are oral reading tests which provide a somewhat more limited but still helpful profile of sound and word recognition anomalies. The Gray Oral Reading Paragraphs is the best known. Not as widely used as it should be is the Gilmore (15). Available in two forms, soon to be four, it gives a measure not only of word recognition but of comprehension as well. Since the examiner can help out with word recognition up to a certain point, a measure of reading potential is thus provided. The comprehension score then may be taken as an indication of how well the child could comprehend if at least his word recognition were better.

Basic, certainly, for the younger child's remedial work is auditory discrimination training. This is now available in many forms. One kit, Sight and Sound, for example, prepared under the auspices of the Department of Health, Education and Welfare for deaf children gives valuable training in discrimination among the sounds characteristic of the city, the farm and so forth.

Visual perceptual training is equally vital for these youngsters. The Frostig training materials, the Michigan Visual, Symbol and Word Tracking Books (16), Parquetry Blocks, puzzles and other games, commercial or teacher developed, can be used.

Much of all this may be termed "undercutting." It takes the child back from the ordinary level of learning letters, sounds and words to more basic processes. It comes as a great surprise to some teachers to realize that these children do not learn and remember a word such as "the," for instance, after simply seeing it (using the visual modality) and hearing it (using the auditory modality). They must also write the word (kinesthetic modality) and feel (tactile modality) the letters, whether made of clay, sandpaper or whatever, before mastery is achieved, VAKT in other words.

However, illustrative of the increasing subtlety of work in this field is the fact that a variant on this process called "non-VAKT" in which the visual modality is blocked, the eyes blindfolded, or at least closed in certain stages of the remedial process, has begun to secure a hearing.

Word recognition, phonics, spelling, vocabulary building—it would be impossible even to begin to cover the variety of texts and programs that are available at a given moment. Usually, they are designed for general use. What would make them suitable for the child with a learning disability, especially the non-reader, from the point of view of this paper, is their existence in taped form or the possibility of adapting them for taping. This qualification cuts the field down considerably, but the following should be taken only as examples of what is available, or, again, known to the author.

For the beginning reader, the Michigan Word Attack and Comprehension Program is worth scrutiny and can be taped easily. The Sullivan Programmed Series (17) presents a limited number of sounds in a colorful and repetitive fashion spread over twenty-one books. It can be taped in whole or part to suit an individual clinic's special needs or a child's. Already taped is the Charles Merill Skilltapes for remedial work on almost any level. For older children and adults an interesting pair of workbooks, Educators Publishers Programmed Phonics presents almost the entire phonic system needed for reading spelling, including syllable identification techniques. A patient and skillful compilation, the taped version is reported available for purchase. Harcourt, Brace & World's, Sound and Sense in Spelling, Grades 2-8, is not programmed but on records with texts and work.

Vocabulary building exercises are also available in abundance, but only a programmed series can be taped to good effect. It should be noted that the key word is "programmed." Material that has been programmed has been reduced to the careful, step-by-step sequence that is required for repeated experience with success. Word Cues, from Educational Development Laboratories, is a good illustration of this type of resource for the older student.

Comprehension materials are not always as important as one would think for most of these children since mastery of words and word-attack skills usually opens the door to reading for them. Brief exercises tend to be best for obvious reasons such as convenience, easy incorporation within the usually brief instructional periods, but also because they can be quickly taped. Teachers College's, Gates-Peardon and McCall-Crabbs series are all effective for the elementary grades and for remedial work in general, as are the various "laboratory" sets. The results of taping them for repetitive listening before the comprehension questions are answered will prove, for those to whom this method is new, extremely interesting.

In conclusion, each of the techniques discussed here should be seen as part of the process whereby educators have gained access to one segment or another of the originally undifferentiated groups of children known as non-learners. It has been a long process and the end is certainly not yet in sight, but we are probably closer, at least in concept, to the day when the organization of appropriate material will be accompanied by a prescription to insure mastery by the learner in terms of his special capacities.

HEARING HIGHLIGHTS

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. BUSH. Mr. Speaker, the House Republican Research and Planning Committee Task Force on Earth Resources and Population has been holding hearings on present programs and planning of the administration in areas of interest to the task force. Last week we submitted for the RECORD a report of our first hearings. I would now like to bring the Members of the House up to date on our most recent ones.

Dr. R. T. Ravenholt, Director of the Population Service for AID, appeared before the group on June 17. Dr. Martin Forman, Director of the Nutrition and Child Feeding Service, and Mr. George Parman, Director of the Food From the Sea Service, also from AID, appeared June 19. A summary of their testimony appears below.

The task force will continue to place reports of our activities in the RECORD for the benefit of any Member of the House with an interest in the long-range planning being done by the executive branch in regard to our expanding population and its relation to hunger and our natural resources. Today's insertions follow:

HEARING HIGHLIGHTS

TUESDAY, JUNE 17, 1969

Dr. R. T. Ravenholt, Director of the Population Service.

Members Present: Bush, McCloskey, Pettis, Reid, Hammerschmidt.

Staff From: Taft, Mosher, Vander Jagt, McClory.

"It has been argued that enlargement of human freedom by extension of family planning programs will fail to adequately curb the population increase and, therefore, other and even coercive social measures of population control are needed. This argument is largely based upon a narrow concept of what constitutes a family planning program. Some regard it simply as the provision of clinical and contraceptive services; others consider the many relevant actions contributory to greater use of available services and improved practice of family planning as an integral part of an effective family planning program. Viewed from this latter perspective, such actions as provided information and education, raising the marriage age, rescission of pronatalist laws and incentives, and repeal or liberalization of abortion laws are considered integral parts of a comprehensive family planning program.

On the other hand, population planning and control programs are distinctive from family planning programs to the extent they plan or control population dynamics by means other than fertility control, that is, by manipulation of mortality or migration or both. In AID, to avoid confusion, we usually speak of the population and family planning program.

A key judgment often heard is that the full implementation of family planning programs and the full exercise of fertility control by women and couples everywhere will fall far short of the goal of zero population growth because attitude studies have shown that women want too many children. But this judgment appears to be based upon the simple assumption that the composite response of women of all reproductive ages and experience to survey questions such as "What do you consider the ideal number of children?" bears a close and reliable relationship to the number of children women would have if they reproduced only if and when they wished, each month from menarche to menopause. This assumption is not supported by logic or definitive study.

Bearing and rearing children is hard work. and few women have unlimited enthusiasm for the task. If given the choice, each month, of whether they wish to be pregnant that month, many considerations other than ultimate family size guide their reproductive behavior; and for many women postponement of pregnancy means reduction in completed family size.

The current large excess of births over deaths in many developing countries has caused some pessimism concerning the collective wisdom of people individually exercising freedom of choice; but, on the other hand, there appears to be a sound basis for optimism: where in the world is there a country wherein people truly have the freedom and ability to control their fertility and where there is a continuing large excess use of their reproductive powers? The pattern seems clear that in those countries where women need not reproduce except if and when they choose (meaning they have access to hindsight (abortion) as well as foresight (contraceptive) methods of fertility control), the situation is encouraging. In Japan and several countries of Eastern Europe the net reproduction rate has fallen below 1, and social concern has shifted from the problem of too-great reproduction to concern for the possibly too-low reproductive rate. Certainly the high rates of abortion, even where illegal, as in the developed areas of Europe and the United States, and also throughout the developing world, bear witness to the determination of women in all cultures to limit their reproduction. Many women, whose foresight, knowledge, and means prove inadequate to prevent conception, will pay whatever they can and risk their lives to terminate pregnancies which they deem undesirable for reasons best known to them.

Because the extent of availability of family planning information and means is now usually a dominant determinant in the complex of forces influencing reproductive behavior, no definitive studies nor final judgments of additional measures which may *ultimately* be needed to achieve a desired rate of population growth can be made *in advance* of the full extension of family planning services. But as family planning information and services are made appropriately available, key impediments to optimal utilization of such services can be identified. Thereupon research studies should be performed as needed to overcome recognized obstacles and for advancement of the program. Naturally, many nonclinical actions, such as rational alteration of legal and fiscal codes, should be taken concurrently with clinical actions to enhance the effectiveness of the population and family planning program.

Regardless of what special social measures may ultimately be needed for optimal regulation of fertility, it is clear that the main element initially in any population planning and control program should be the extension of family planning information and means to all elements of the population. It seems reasonable to believe that when women throughout the world need reproduce only if and when they choose, then the many intense family and social problems generated by unplanned, unwanted, and poorly cared for children will be greatly ameliorated and the now acute problem of too rapid population growth will be reduced to manageable proportions.

HEARING HIGHLIGHTS

THURSDAY, JUNE 19, 1969

Dr. Martin Forman, Director, Nutrition and Child Feeding Service.

Mr. George Parman, Director, Food from the Sea Service.

Members present: Bush, Keith, Pettis, Henry Smith, Wold.

Staff from: Taft, Fulton, Vander Jagt.

Dr. Forman stated that the target group of the AID Department of Nutrition and Child Feeding is pre-school children, those up to the age of five. Malnutrition at this age usually results in the irreversible retardation of the child's brain and growth.

The short-term programs now attacking the malnutrition problem are Food for Peace, Care, and other international agencies such as Red Cross. In dealing with the PL 480 surpluses, there is an emphasis on improving the nutritional content of the food. For example, CSM (corn soy meal), WSB (wheat soy blend), and various vitamin additives.

Dr. Forman explained AID's interest in working with products which do not require the creation of new markets. Cereals are being enriched to a protein level equivalent to that of fish or meat; and a new rice-like granule contains enough nutrients to supply a meal with adequate protein fortification. These projects are currently instituted in both Peru and Thailand.

From a budget of 2 million dollars, twelve AID grants have been given private corporations in an effort to secure their assistance in long-run research.

Mr. George Parman elaborated on the sea's vast food potential and explained that 60 million tons of fish were caught last year, a far cry from the estimated potential of 244 million tons.

A new product known as FPC (Fish Protein Concentrate), a type of flour made from processed fish, provides as much protein as fresh fish but requires none of the expensive refrigeration. FPC would enable countries like India, where 250,000 tons of sardines dried up on beaches last year, to process those fish into an equally nutritious and more stable product. FPC is now being tested successfully in Chile, and a report will soon be published aimed at attracting private investment to this newly-created FPC market.

As an example of successful FPC processes, it is being produced in Pakistan from sharks. The skin is removed for leather, the teeth are sold as souvenirs, and the FPC return on the boneless fish is 95%.

Mr. Parman pointed out that some of the private sector of the U.S. is currently making overseas investments in the shrimp industry. This activity is adding to the trade of the foreign countries as well as giving their fishing industry some of the expertise necessary to operate new and technical fishing equipment.

Mr. Parman explained that sub-sea farming was economically feasible with oysters and certain plants. However, to use plankton and algae as human food sources is not as realistic economically as concentrating on the fish which feed on the plankton.

TRIBUTE TO DR. W. LAURENS WALKER

HON. JAMES R. MANN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. MANN. Mr. Speaker, this Nation owes a debt of gratitude to the many fine dedicated people who devote their time and talents to the education of the physically handicapped.

One such person is Dr. W. Laurens Walker who, after 38 years of service, will retire on June 30 as superintendent of the South Carolina School for the Deaf and Blind, Cedar Spring, Spartanburg County, S.C.

The history of the Cedar Spring School and the Walker family are deeply intertwined. Dr. Walker is a direct descendent of Rev. Newton Pinckney Walker who, as a young Baptist minister, founded the school in 1849 in response to the needs of five deaf children.

Under the careful and capable supervision of the Walker family, the school has grown to a present enrollment of 550 students, a complex of over 15 buildings and a staff of 236 employees. Thanks to four generations of Walkers, and in particular to Dr. W. Laurens Walker, Cedar Spring is now considered to be one of the most outstanding schools in its field.

Spartanburg County is justifiably proud of Dr. Walker. He is a person of many dimensions—an outstanding educator, administrator, and philanthropist, who has worked unselfishly and tirelessly for the betterment of mankind.

We acknowledge with humble gratitude his 38 years of service to the education and welfare of the deaf and blind of South Carolina, as well as his many contributions to the spiritual, cultural, and economic growth and development of Spartanburg County.

AMERICAN LIVES LOST IN VIETNAM

HON. JOSEPH P. VIGORITO

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. VIGORITO. Mr. Speaker, the Vietnam conflict touches every American in one way or other.

But those who are touched most intimately and most tragically are those families who have lost a dear son, brother or husband. As in other wars, these families have made the supreme sacrifice.

On Memorial Day we paid tribute throughout the land to all Americans lost in all wars from the Revolution to the present. It was a fitting tribute. But I wish today to pay more specific tribute to those young men from my 24th Congressional District of Pennsylvania who have lost their lives in Vietnam. In the full bloom of their manhood they went to a foreign land, fought and died. We miss them dearly.

Mr. Speaker, I am including in the RECORD the name of those soldiers whose death in Vietnam has been brought to my attention since I first came to Congress in 1965:

VIETNAM WAR DEAD

1. Allessie, Joseph, North East.
2. Bailey, Larry J., Spartansburg.
3. Baun, David E., Mercer.
4. Beebe, Larry, North East.
5. Bennett, Joseph, Titusville.
6. Billings, David, Lake City.
7. Bronakoski, James, Erie.
8. Brophy, Patrick, Erie.
9. Brown, Roger, Farrell.
10. Bowers, James D., Edinboro.
11. Byers, James, Meadville.
12. Byham, Dan, Guys Mills.
13. Callaghan, David, Erie.
14. Carr, Gerald, North East.
15. Cartney, Patrick, Titusville.
16. Chase, Raymond, Meadville.
17. Christy, Albert, Mercer.
18. Coon, Jesse, Sharon.
19. DeBow, Edward, Linesville.
20. Dufford, Paul, West Middlesex.
21. Edwards, Joseph, Erie.
22. Figueroa, Michael, Springfield.
23. Fladry, Leroy, Union City.
24. Flanders, Danny, Erie.

25. Forrester, Carl, Mercer.
26. Funelli, Richard, Farrell.
27. George, Michael, Erie.
28. Good, Paul, Sharpsville.
29. Harmon, Robert, Erie.
30. Hedglin, Miles, Grove City.
31. Henry, Leonard, Erie.
32. Higgins, Merle, Jamestown.
33. Hill, David, Erie.
34. Hymers, Charles, Erie.
35. Jarzenski, James, Cochranton.
35a. Julius, William, Erie.
36. Kahler, Charles, Meadville.
37. Kaspaul, Alfred, Fairview.
38. Kelly, Gregory, North East.
39. Kennedy, Thomas, Erie.
40. Klaric, Terrence, Farrell.
41. Kranonczyk, Richard, Erie.
42. Krupinski, Raymond, Erie.
43. Logue, John, Franklin.
44. Martin, Ronald, Erie.
45. McNeish, Richard, Mercer.
46. Millison, Dennis, Sharon.
47. Mitchell, David, Erie.
48. Neidrick, Jack, Erie.
49. Nelson, John, Erie.
50. Nichols, Colin, Spartansburg.
51. Niemann, David, Conneautville.
52. Norman, Gary, Erie.
53. Parobek, Silas, Albion.
54. Phillis, Donald, Titusville.
55. Powers, William, Erie.
56. Probst, Delmar, Erie.
57. Rahn, Donald, Erie.
58. Rauber, William, Wheatland.
59. Reagle, John, Titusville.
60. Reynolds, Jack, Erie.
61. Reynolds, John, Linesville.
62. Rudd, James, Meadville.
63. Russo, Augustine, New Castle.
64. Santone, Joseph, Erie.
65. Shaffer, William, Erie.
66. Shields, Robert, Erie.
67. Smith, Olen, Erie.
68. Snell, Marc, Erie.
69. Stearns, Allan, Girard.
70. Suvara, Frank, Erie.
71. Szoszorek, Gerald, Erie.
72. Tinko, Donald, Corry.
73. Trypus, Frank, Meadville.
74. Walter, Clifton, Erie.
75. Westfall, Robert, Meadville.
76. Vandervort, William, Erie.
77. Vaughn, John, Erie.
78. Yeast, John, Edinboro.

THE ROLE OF GOLD IN CONTRIBUTING TO INTERNATIONAL MONETARY STABILITY

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. KEITH. Mr. Speaker, the past few years have seen a deterioration of confidence in the international monetary system. Compounding this problem, inflationary pressures have eroded the position of the dollar, the cornerstone of world currency stability.

Concerned with this serious situation, Mr. Charles Sevigny, of West Hanover, Mass., has written me a series of articulate and thoughtful letters on the role of gold in contributing to international monetary stability. For the benefit of my colleagues in their deliberations on this issue, I include Mr. Sevigny's latest letter here under unanimous consent:

JUNE 16, 1969.

HON. HASTINGS KEITH,
House Office Building,
Washington, D.C.

DEAR HASTINGS: This morning I received a notice from the South Shore National Bank announcing that they are increasing our interest rate to 11¾%. This reminded me abruptly of our previous discussion concerning economics in this country.

You mentioned in your last letter that since you are now several years out of college you do not have a clear or sharp recollection of your course in Economics. I am sure that if you look back, or if you were to ask any college sophomore, that you would find that it has been a well established fact that no economy can survive without gold behind its currency or government as a stabilizing factor. The history of world government has proven this and it has been taught in all the schools and colleges.

We have two great basic problems in this country. I am not now talking about the social problems and all the racial and college upheavals but rather about basic problems. These two problems are shortage of manpower and unstable currency because it is not properly backed by gold and because we are unrealistically trying to buy gold in 1969 at 1935 prices.

Just for a moment let's talk about manpower. I am sure that you feel the pinch as well as we do, since the last time I talked to you you asked me if I knew where you could get some people to join your staff. The same applies everywhere no one has enough help, no one can get enough help. Every company that I know of, and I am sure you realize that I know a great many, are being forced to curtail their operations because they cannot get enough help to expand into the new fields that are opening up. In the meantime we are exporting our manpower at a rate that is beyond belief. We have over 100,000 civilians working in Vietnam and from all reports that I hear they are just in the way of everyone over there and adding to the troubles of that already unhappy country. The State Department employs at least an equal number of people around the world within most offices about three people doing one persons work. We have military men spread everywhere you can think of. We are supporting the military effort of former enemies that we defeated 25 years ago and are now well able to take care of themselves. In the meantime we are dying for help at home. Essential services like getting your roof fixed, having someone repair your oil burner, shoveling snow, painting your house, you cannot hire a plumber or an electrician all these things and thousands of others are going undone because we do not have the people and those people that we do have are not learning manual skills. We have a huge gap between college trained people and unskilled labor that is not being filled by trained people simply because there are no people to train for these positions. In the meantime all of this employment of Americans in foreign countries is contributing to our deficit of payments by the money that they spend overseas which is usually equal to just about their pay.

Add to the above the fact that we are not realistically facing the gold problem and you will find a combination of effects and side effects that can easily draw us into a very bad serious situation at home while we are busy trying to run the affairs of the rest of the world. This does not mean that I am an isolationist because I am not. It is however my experience that governments, like people, like to lead their own lives in their own way and they do not like to be helped until they ask for help. Then and only then should we offer our help and in such an instance it should be offered on a very limited scale. In this way other nations become self-sufficient not rather than dependent upon us.

I like to use the expression "increase the price of gold" rather than the negative term of "devalue the dollar". In my opinion the Republican Party, and in fact everyone in government, should use the positive expression rather than the negative. In connection with this I have some very definite ideas. As you know any fool can criticize, however, I think that before one should criticize they should have a workable plan as an alternative ready to suggest. My suggestion would be that: Congress should pass a new Law governing the price of gold. This law should tie the price of gold to the world market value which is the true value of the metal. The Treasury should be authorized to buy gold only from domestic producers as long as it is available. In other words they should not be permitted to buy foreign gold until the domestic supply is exhausted unless or until some specific situation arises which would make the need for additional gold important to us. We should pay world gold prices for domestic gold and about $1.00 an ounce less for foreign gold landed here.

I believe that I told you in my previous letter that Goldfield Corporation, one of the largest owners of gold producing property in this country, tried within the past two or three years to produce gold at the Treasury price of $35.00 an ounce using the most modern possible methods. It was found that it was impossible to do so and they therefore shut down their operation. I hope you realize that I have no axe to grind in this other than good government. I do not own stock in Goldfields or any other mining company nor do I own a gold mine of any kind myself. I do think however that we are being very unrealistic trying to buy gold in 1969 at 1935 prices which were too low even for 1935.

The Republicans in Congress should get behind the increase in the price of gold in order to bring about a stable currency and therefore a stable government. This going off the gold standard was one of the great frauds imposed on the American public by the New Deal. We have only had one or two opportunities since the days of the New Deal where a Republican president could reverse this serious mistake. To me it is the only way that we will get enough solid valuable currency into circulation to meet the demands of a greatly expanding economy. If we do not take such a step as this the only alternative will be to print money with no backing and contribute seriously to the inflationary spiral that we are now in since the money will be nothing but paper. By using the method I recommend every dollar will then be backed by hard money at Fort Knox.

These two problems are tightly coupled together. The one on one hand drains our manpower reserves and creates tremendous deficit in our balance of payments thus contributing to the inflationary spiral and the other effects that I stated above.

I would be extremely grateful if you would give these facts your serious attention and do whatever is possible to spread the gospel.

Yours very truly,

SEVIGNY'S CANDY, INC.,
CHARLES P. SEVIGNY, *President.*

U.S.S. "PUEBLO" SEIZURE CALLED SOVIET SCHEME

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. RARICK. Mr. Speaker, the current issue of the Reader's Digest publishes the story of Communist Gen. Jan Sejna of Czechoslovakia, one of the highest ranking officers ever to defect to the West, regarding the participation of the Soviet Union in the hijacking of the U.S.S. *Pueblo*, and the value to the enemy of the intelligence obtained in that venture.

The accurate assessment of our spineless response is a matter to which we

should give our serious attention. Perhaps our total incompetence to defend the U.S.S. *Liberty*, a similar ship, against Israeli attack in the Mediterranean suggested to the enemy the feasibility of the second operation. The obvious implication is that it is open season on Americans. This cannot be tolerated.

I include the article, together with a news clipping from the Washington Daily News, following my remarks:

[From the Washington Daily News, June 23, 1969]

CZECH DEFECTOR BARES DETAILS—"PUEBLO" CALLED SOVIET PLOT

(By Mike Miller)

A former Czechoslovakian general who defected to the United States said today that Russia planned the seizure of the U.S. intelligence ship Pueblo and collaborated with North Korea in carrying it out.

Gen. Jan Sejna, writing in Reader's Digest, said Soviet Defense Minister Marshal Andrei Grechko told him eight months prior to the incident that Russia was going to "humiliate" the United States by grabbing one of its spy ships.

The defector said the Russian also indicated the seizure would take place somewhere in the Pacific in collaboration with the North Koreans.

Gen. Sejna was the Czech Communist Party's senior secretary assigned to the Ministry of National Defense prior to his defection in February, 1968, the month after the Pueblo was seized.

INFORMATION GAINED

He said Russian generals also told Czech officers following the incident that "immensely valuable information" was obtained from the ship, including a detailed analysis of the deployment of U.S. Naval forces in the Pacific. Codes obtained from the spy ship also were enabling the Russians to read previously indecipherable U.S. messages which they had recorded on tape, he wrote.

The defector quoted Gen. Grechko as saying:

"It is absolutely insolent the way the Americans sail their damn ships around as if they owned the water.

"Their espionage ships come right up to our shores to spy on our communications. But I can tell you this: We have decided to humble the Americans. Just as we humiliated them in the air by shooting down the U–2, we are going to humiliate them at sea by grabbing one of those ships.

Asked about the danger of a U.S. reaction, Gen. Grechko replied: "Don't worry about that. The Americans haven't dared to blockade Haiphong (North Vietnamese port) because they know that our ships would shoot their way thru. They won't do anything about an incident like this, either. We are not afraid of them, and that is what the whole world will see."

Gen. Sejna wrote that Gen. Grechko said the Soviets had ruled out a seizure in waters where the incident might provoke a confrontation between the Warsaw Pact countries and NATO. The Black Sea was eliminated because it was regarded as a "Russian lake," but the Pacific was chosen because it was considered an "American preserve," the Czech said.

On Jan. 24, 1968, the morning after the Pueblo was seized, he quoted Soviet Colonel General Aleksandr Kushchev, senior Warsaw Pact representative in Prague, as telling a gathering of officers:

"During the night we learned that, with the collaboration of our Korean comrades, we have achieved a great success. The entire operation went off smoothly—incredibly smoothly. The Pueblo crew, to a man, capitulated. They did not fire a shot.

"We've all heard what a great communications and command system the Americans have.

"Well, yesterday it took Washington literally hours to pull itself together and even begin to react. This is a precise example of how the most advanced military technology cannot compensate for a lack of will and leadership."

A COMMUNIST GENERAL'S STARTLING CHARGE: RUSSIA PLOTTED THE "PUEBLO" AFFAIR

(By Gen. Jan Sejna)

(NOTE.—General Jan Sejna is one of the highest-ranking communists ever to defect to the West. Until February 1968 he was the Czechoslovak Communist Party senior secretary assigned to the Ministry of National Defense, charged with political control of the Czechoslovak Ministry and General Staff. As such, he dealt almost daily with the Soviet marshals, generals and agents who rule Eastern Europe as a Soviet colony, and was privy to many military and political secrets of the Warsaw Pact nations.

During 1967 and early 1968, in the struggle for control of the Czechoslovak Communist Party, he was accused of siding with the forces of arch-Stalinist Antonin Novotny. The general contends that he represented a group of politicians and young officers opposed to hard-line military men seeking their own gain in the political intrigue that has characterized the turmoil in Prague. Nevertheless, when Novotny lost, Sejna fled to the United States—bringing with him a perspective of the communist world rarely before available to the West.

(The following article, the first he has released since his flight, is excerpted from Sejna's forthcoming book. Much of what he reports here cannot be confirmed because of the rarefied circles in which he moved. But he has been interviewed at length by Digest editors, and specific references that could be cross-checked have been painstakingly investigated. No contradictions have been discovered.)

I first learned in May 1967 that the Russians were planning to capture an American intelligence ship—eight months before the USS *Pueblo* was seized off Korea. Some dozen Czechoslovak and Russian generals had gathered at the state guest villa in Prague for a luncheon honoring the Soviet defense minister, Marshal Andrei Grechko. I remember that the meal of delicate Czechoslovak fish, beef soup with liver dumplings, veal roulade, cream tarts and fruit was especially excellent. Our three-hour conversation was fueled by Italian aperitifs, Russian vodka, red and white Bulgarian wines, and some truly fine French cognac which we had liberated from the Germans.

Marshal Grechko, whom I had often encountered at Warsaw Pact conferences and during private visits in Prague, is taciturn to the point of rudeness when sober. But when he consumes too much vodka and Cinzano, he becomes a belligerent, loose-tongued braggart. Drinking heavily that afternoon, he embarked on his favorite subject—the invincibility of the Soviet armed forces—with emphasis this time on the multiplying might of Russian sea power.

He admitted that the Soviet Union had been powerless to intervene during the Cuban and Middle East crises because of the supremacy of American naval forces. The refusal of Nikita Khrushchev to allot enough money to develop a powerful Soviet fleet was a primary reason why the Russian military supported his ouster. But now Soviet naval strength was growing and would soon challenge the Americans on all the oceans of the world.

"It is absolutely insolent the way the Americans sail their damn ships around as if they owned the water," Grechko declared. "Their espionage ships come right up to our shores to spy on our communications. But I can tell you this: we have decided to humble the Americans. Just as we humiliated them in the air by shooting down the U–2, we are going to humiliate them at sea by grabbing one of these ships."

Marshal Grechko did not specify when, where or how the Russians expected to commandeer a U.S. ship. But he indicated that the seizure would be accomplished somewhere in the Pacific, in collaboration with the North Koreans. The Russians, he said, did not want to stage an incident in waters which might involve the Warsaw Pact in a confrontation with NATO. The Black Sea also had been ruled out because the world looked upon it as "a Russian lake"; loss of an American ship there would not be sufficiently "sensational." The Pacific had been chosen because it was considered an American preserve.

As I listened to Grechko talk, it became apparent that the Russians were almost as intent upon hurting the Chinese as upon hurting the Americans. "Our Korean comrades, of course, are not capable of carrying this off without us," Grechko said. "But we will guide and protect them. This will again show them that it is we, not the Chinese, upon whom they can depend. They will see that we *act* while the Chinese simply bray and posture."

General Josef Vosahlo, deputy minister in charge of the Czech air force, asked, "Is there not a danger that the American reaction could cause serious complications?"

"Don't worry about that," Grechko replied. "The Americans haven't dared to blockade Haiphong, because they know that our ships would shoot their way through. They won't do anything about an incident like this, either. We are not afraid of them, and that is what the whole world will see."

Grechko's arrogance made me privately want to doubt anything he said that day. Still, I wondered. I had disbelieved Khrushchev in 1961 when he secretly let us know that within a few months a wall would be erected to seal off West Berlin. I now also recalled a conversation I had had in March 1966 with Grechko's predecessor, Marshal Rodion Malinovsky, a much more prudent man. He had confided that the Russians suspected American ships of being extremely effective in ferreting out Soviet secrets. "Mark my word," he had vowed, "we are going to do something about those ships."

In the months following the Grechko luncheon, nothing related to his boasts came to my attention, and I almost forgot about them. Then, on the morning of January 24, 1968, I received a call from the secretariat of the National Defense Minister, informing me that "an unusually important announcement" would be made at the morning briefing. In the ministry council chamber, Soviet Colonel General Aleksandr Kushchev, the principal Warsaw Pact representative in Prague, rose.

"During the night we learned that, with the collaboration of our Korean comrades, we have achieved a great success," he began. We all were stunned as he announced that the *Pueblo* had been hijacked and was at the moment in communist custody.

"The entire operation went off smoothly—incredibly smoothly," Kushchev reported. "The *Pueblo* crew, to a man, capitulated. They did not fire a shot. Frankly, we thought it would be much more complicated. The Americans were so bewildered that they failed to destroy thousands of documents. It will take our experts quite a while to analyze them. We may have a gold mine.

"We've all heard about what a great communications and command system the Americans have," Kushchev went on. "How they use computers, how they can respond instantly to an attack. Well, yesterday it took Washington literally hours to pull itself together and even begin to react. This is a

precise example of how the most advanced military technology cannot compensate for a lack of will and leadership."

Kushchev bragged on about the propaganda triumph. "On the one hand, it is a humiliation for the United States: we have made clear that the Americans do not rule the seas anymore. On the other, this is a disgrace for China. It proves to the entire socialist camp that the Soviet Union helped North Korea gain stature, while the loudmouthed Chinese could do absolutely nothing."

No one in the room doubted that capture of the *Pueblo* was a great coup. However, I and some of my fellow officers could not quite accept Kushchev's account of it. Accustomed as we were to Soviet propaganda exaggerations, we simply could not believe that the crew had not attempted some resistance to prevent the capture of thousands of valuable documents.

In the next few days, though other Soviet officers confirmed Kushchev's version. Also, I began to see indications that the intelligence information the Russians were extracting from the *Pueblo* was immensely valuable.

At the weekly general staff briefing on February 23, we heard an extraordinarily detailed analysis of the deployment and operations of American naval forces in the Pacific. The source was identified as the *Pueblo*. Furthermore, we were told that, by using codes found aboard the ship, the Russians now were able to reach previously indecipherable American messages that they had been recording on tape.

I derive no pleasure in recounting this American defeat and Soviet victory. I report these details now because I think they carry with them a message of importance to the people of the United States and the West:

The Soviet Union today is increasingly dominated by a militaristic clique of marshals who, with few exceptions, are perilously ignorant of the West. These narrow-minded hard-liners understand and react only to the prospect of superior force. Signs of weakness tempt them to risk ever more irresponsible adventures.

Unless they are convinced that the American government and the American people are prepared to resist future aggression, then more aggression is inevitable. On the basis of my personal experiences with these men, I know that each time one of their military gambles pays off, they edge closer to the brink. And by recklessness and miscalculation, they are likely to plunge the world into war that ordinary men everywhere desperately want to avert.

(NOTE.—General Sejna's assertions were made available to The Reader's Digest last April 13, just two days before North Korean MIGs shot down a U.S. Navy EC–121 reconnaissance plane in the Sea of Japan. No evidence exists at this writing that the Soviet Union had a hand in this second act of piracy perpetrated by the North Koreans within 15 months.)

DR. ROMAN SMAL-STOCKI: DEDICATED AMERICAN PATRIOT OF UKRAINIAN ANCESTRY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. DERWINSKI. Mr. Speaker, as many Members know an American of unusual stature and background passed away recently. I refer to Dr. Roman Smal-Stocki, who died in the Georgetown University Hospital at the end of April. He left us a legacy of literary works and experiences which, I have no doubt, we will greatly profit by as the aggressive forces in Moscow determine the next round of conflict with us.

Those who knew him personally esteemed him for his rich past of diversified experience as scholar, diplomat, and freedom activist. His roots were in Eastern Europe, and he was one of the first to witness the imperialistic onslaughts of the Soviet Russians into his beloved Ukraine. But his principles and dedication to a life in the cause of world freedom, and primarily for the sustained freedom of his adopted country, led him to the United States, for which, since the end of World War II to the day of his death, he defended with all his heart and mind as the last bastion against the forces of Soviet Russian imperio-colonialism.

As other Members have, I pay lasting tribute to this truly great man and dear, personal friend. His wit, his insights, and his wisdom we shall sorely miss. However, his truths and convictions have been transmitted by generations of students who today are working in diverse fields in the spirit of their venerable teacher. In my tribute, I include the following in the RECORD as a humble expression of his traits and works: First, a brief eulogy by Dr. Lev E. Dobriansky of Georgetown University, titled "The Great Loss of a Patriot, Christian, Scholar"; second, the obituaries in the Evening Star of April 29, "Roman S. Smal-Stocki, Ukrainian Scholar, Dies," in the Washington Post of April 29, "R. S. Smal-Stocki, Slavic Expert at CU" and the New York Times of April 29, "Dr. Roman Smal-Stocki Dies; Ukrainian Educator was 76"; third, a complete release on the man by the Shevchenko Scientific Society, of which he was president; fourth, a memorial in the Ukrainian Weekly, Svoboda, dated May 17, by Dr. Clarence A. Manning, professor emeritus, Columbia University, titled "The Stream of History"; and fifth, the speech of Representative MARTIN B. MCKNEALLY, of New York, who was the last to appear before the Ukrainian Studies Center in Washington, D.C., which the late Professor Smal-Stocki directed and at which I and others had the privilege and pleasure to address in the past:

THE GRAVE LOSS OF A PATRIOT, CHRISTIAN, SCHOLAR

(By Lev E. Dobriansky, Georgetown University)

In the evening of Sunday, April 27, Dr. Roman Smal-Stocki died at Georgetown University Hospital in Washington, D.C. He passed away quietly. The last to visit him and to receive his courageous "thanks" and "good-by" were the Very Rev. Constantine Berdar, Rev. M. Makukh, Rev. Maletius Wojnar, Dr. Bohdan Skaskiw, and the UCCA President. With extraordinary strength of mind and moral fortitude to the last, one of Ukraine's greatest sons extended his arms to clasp the hand of each, then faintly uttered his final expression of friendship, and lapsed into a coma preceding his death.

These final moments typified the genuine greatness and towering stature of the man. For Ukrainians in particular, but for all free men in general, the death of Dr. Smal-Stocki is a grave loss to the ceaseless cause of freedom. It is truly the grave loss of a patriot, Christian, and scholar. Selflessly and with unparalleled devotion, he dedicated his entire and long adult life to the cause of a free and independent Ukraine and later, through it to the preservation of the freedom and security of his America. Personal glory, money, even the advantages of a marital existence were alien considerations to his unique and priceless dedication. Through all the stages of his rich and varied life—as a student, an ambassador, a professor, an author, an intellectual leader, and a staunch defender of the Faith—he was wedded to the vital and promising cause of a free Ukraine.

As an internationally renowned scholar, the good and ever-witty Doctor has left the world an invaluable legacy of books and writings not as a monument to himself but to the life-giving cause that he served so brilliantly and incomparably. The interminable fears and anathema expressed by Moscow and its totalitarian offshoots toward his works are in themselves a measure of their power of ideas and spiritual force. As the President of the world-esteemed Shevchenko Scientific Society, he excelled all others in his writings to defend the erection of the Shevchenko Memorial in our Nation's capital. His warm humanism, his breadth of knowledge and understanding, and his Christian humility are immortally imprinted in this legacy.

Only relatively few might understand fully, but this tragedy is an irreparable loss to the freedom of all the captive nations in the USSR, and thus a heavy loss to man's struggle for freedom.

In tribute to the lasting memory of one of Ukraine's greatest servants, The UCCA president will initiate at the coming UCCA executive meeting the dedication of the 10th Congress of Americans of Ukraine Descent to the immortal spirit, works, and contributions of our departed intellectual leader. Also, this proposal will extend to the autumn issue of *The Ukrainian Quarterly*.

As he would have us remember—Three Cheers, our dearly beloved friend. Erue, Domine, animam ejus, Requiescat in pace.

[From the Washington (D.C.) Evening Star, Apr. 29, 1969]

ROMAN S. SMAL-STOCKI, UKRAINIAN SCHOLAR, DIES

Roman S. Smal-Stocki, 76, director of the Ukrainian Studies Center at Catholic University, died Sunday of cancer at Georgetown University Hospital. He lived at 201 Taylor St. NE.

Born in 1893 in Czernowitz, Bukovina, now a part of the Soviet Ukraine, Mr. Smal-Stocki studied at the universities of Vienna, Leipzig, and Munich. In 1917 he lectured at the Oriental Academy, a foreign service school in Berlin.

In the early 1920s he was associate professor of Slavistics at the Ukrainian Massaryk University in Prague and later was a guest professor in English Universities.

He taught Slavistics at the University of Warsaw in Poland from 1925 to 1939, and then was a prisoner of the Nazis during World War II.

Coming to the United States after the war, he was professor of Slavic history at Marquette University from 1947 and director of its Slavic Institute from 1949 until becoming professor emeritus. He had been a visiting professor at Catholic University since 1965.

Mr. Smal-Stocki was a leader in the fund-raising campaign to erect a statue of the Ukrainian poet-hero Taras Shevchenko in Washington. The statue, dedicated several years ago, is at 22nd and P Streets NW.

He was also curator and a director of the Byzantine Slavic Arts Foundation here. From 1915 through 1960 Mr. Smal-Stocki published 11 books—in Ukrainian, German and Russian. He also had written more than 70 scholarly articles.

Outside his literary career, Mr. Smal-Stocki served as an envoy and minister of the Ukrainian Democratic Republic in Germany and Great Britain in the early 1920s, and was deputy premier and foreign minister of the Ukrainian National government in exile from 1937 to 1940.

He was active in several societies devoted to the works of Shevchenko, as well as historical and other arts and sciences associations.

Prayers will be offered at 7 o'clock tonight at the Ukrainian Catholic Seminary, 201 Taylor St. NE.

A mass will be offered tomorrow in Philadelphia at the Cathedral of the Immaculate Conception, the mother church of the Ukrainian Catholic Metropolitan Province in the United States.

It is requested that expressions of sympathy be in the form of contributions to the Smal-Stocki Memorial Fund at the Ukrainian Catholic Seminary.

[From the Washington (D.C.) Post, Apr. 29, 1969]

R. S. SMAL-STOCKI, SLAVIC EXPERT AT CU

Roman S. Smal-Stocki, 76, a Ukrainian-born Catholic University professor who escaped death sentences in both Hitler's Germany and Soviet Russia, died of cancer Sunday at Georgetown University Hospital.

He was condemned to death in absentia in the 1920s by a Russian tribunal for his activities in the Ukrainian independence movement, but he had fled to Poland.

From there he went to Prague, Czechoslovakia, where he was arrested by Nazi troops after Germany's occupation of that country. Ukranian guerrilla fighters freed him, however, and he escaped a Nazi death warrant by taking refuge in a monastery.

Mr. Smal-Stocki was born in Czernowitz, now in the Soviet Ukraine, the son of a Ukrainian count. He studied at the Universities of Vienna, Leipzig, and Munich, receiving his doctorate from the last in 1914.

After World War I, his native Ukraine won a brief interval of independence and Mr. Smal-Stocki become envoy to Great Britain for the short-lived Ukrainian Democratic Republic from 1920 to 1922.

When the Russian armies retook the Ukraine he fled. He taught at universities in both countries before being arrested by the Germans.

After World War II, with the help of several high American officials who were acquainted with his career, including then Secretary of State Edward R. Stettinius Jr., he came to the United States. From 1947 to 1965 he taught Slavic history at Marquette University, before coming to Catholic University. Mr. Smal-Stocki authored 15 books and many articles, most of them on Slavic history, his specialty.

In Washington Mr. Smal-Stocki was a leader in the effort to bring to this city the statue of Ukrainian hero Taras Shevchenko that now stands at 22d and P Streets nw.

During his life he had known closely Winston Churchill, Georges Clemenceau, Thomas Masaryk, and other world leaders.

He was a member of the American Historical Society, American Catholic Historical Society, and numerous other professional groups, many of which he served as an officer. He was curator of the Byzantine Slavic Arts Foundation in Washington.

[From the New York Times, Apr. 29, 1969]

DR. ROMAN SMAL-STOCKI DIES; UKRAINIAN EDUCATOR WAS 76

Dr. Roman Smal-Stocki, philologist, educator and author, died Sunday at Georgetown University Hospital in Washington. He was 76 years old and was a former leader of the Ukrainian National Republic, an independent state from 1917 to 1920.

Dr. Smal-Stocki, who was born under Austro-Hungarian rule, received a Ph.D. degree, summa cum laude, from the University of Munich in 1914. He was active in the establishment of the independent Ukrainian state and was the councilor of its legation in Berlin. Later he was Minister of its Government-in-Exile in Berlin and London. He was also formerly deputy premier of the exiled government.

Between the two world wars Dr. Smal-Stocki was associate professor of the history, language and culture of the Slavic peoples at the Ukrainian Masaryk University in Prague and at the University of Warsaw.

After the conquest of Poland he was arrested by the Germans and interned in Prague until the end of the war.

He came to the United States in 1947 and was associate professor of Slavic history at Marquette University and later directed Marquette's Slavic Institute.

At his death Dr. Smal-Stocki was a visiting professor of the history, language and culture of the Slavic peoples and the history of the Soviet Union at the Catholic University of America and the head of the Ukrainian Studies Center at the Ukrainian Catholic Seminary of St. Joshaphat, both in Washington.

He was president of the American Shevchenko Scientific Society, with headquarters in New York. The society is named for Taras Shevchenko, Ukrainian poet.

Surviving are a brother, Dr. Nestor Smal-Stocki, and a sister, Mrs. Irene Luckyj.

PROF. ROMAN SMAL-STOCKI, UKRAINIAN SCHOLAR, EDUCATOR AND STATESMAN, DIES IN WASHINGTON

WASHINGTON, D.C.—Prof. Roman Smal-Stocki, outstanding Ukrainian scholar, educator and statesman-diplomat, died on April 27, 1969 at Georgetown University Hospital, after a short illness, at the age of 76.

He was a Visiting Professor at the Catholic University of America for the past few years, and resided at the Ukrainian Catholic Seminary, 201 Taylor Street, N.E., Washington, D.C.

Prof. Smal-Stocki was born on January 9, 1893 in Chernivtsi (Czernowitz), Bukovina, then under Austria-Hungary (now part of the Ukrainian SSR). He came from a prominent and distinguished Ukrainian family, holding the nobility title of von Rawicz, bestowed upon the family in 1685. His father, Dr. Stephan Smal-Stocki, a professor at the University of Chernivtsi, was an outstanding Ukrainian philologist, member of the Provincial Diet of Bukovina, and a leader of the Ukrainian national rebirth in Bukovina; his mother, Emilia, nee Zarevych, was born into a Ukrainian priestly family.

Upon his graduation from a *gymnasium*, Prof. Roman Smal-Stocki studied at the Universities of Vienna, Leipzig and Munich, where he specialized in Slavic studies under such prominent scholars as W. Wondrak, E. Bernecker and A. Laskin, in comparative Indo-European philology and philosophy under A. Kulpe and W. Wundt. In 1914 he received *summa cum laude* his Ph.D. degree at the University of Munich.

SCHOLASTIC CAREER

Dr. Smal-Stocki began his academic career in 1917 when he became a lecturer at the *Orientalische Akademie* (German Foreign Service School) in Berlin. From 1921 to 1923 he was Associate Professor at the Ukrainian Masaryk University in Prague, and in 1924–25 he was a guest professor at King's College of London University, the School of Economics, and Pembroke College of Cambridge University. Subsequently, from 1925–1939 he was Professor of Slavistics at the University of Warsaw, Poland, where he was also very active in Ukrainian cultural and political life. With the outbreak of World War II, he was arrested by the Gestapo and was detained as a civilian internee for the duration.

In 1947 he emigrated to the United States and joined the staff of Marquette University in Milwaukee, Wisc., where he taught Slavic history until his retirement in 1965; he was also Director of Marquette's Slavic Institute since 1949. From 1965 until his death he was a Visiting Professor at Catholic University of America and Director of the Ukrainian Studies Center at the Ukrainian Catholic Seminary, both in Washington, D.C.

PROLIFIC AUTHOR, DEDICATED EDUCATOR

Prof. Smal-Stocki's contributions to the studies of Ukrainian and Slavic linguistics are enormous. Early in his scholastic career he published *New Educational Trends* (4 volumes, 1917–1919, together with Prof. W. Simovych), *Studies on Ukrainian Linguistics* (together with Prof. I. Ohienko) and *Travaux de l'Institut Scientifique Ukrainien* (6 volumes). In 1929, with the establishment of the Ukrainian Scientific Institute in Warsaw, Prof. Smal-Stocki became its secretary and editor; under his direction, 40 volumes of Ukrainian studies had been published. He also participated in the publication of a complete edition of works of Taras Shevchenko, and was editor of its 15th volume in Warsaw.

In the United States, under his direction there appeared 6 volumes of the *Marquette University Studies* and 18 volumes of *Marquette University Slavic Institute Papers* (edited jointly with Prof. Alfred Sokolnicki).

Prof. Smal-Stocki wrote many books in Ukrainian, German and English, among them: *Outline of Word-Building of Ukrainian Adjectives* (1921), *Significance of Ukrainian Adjectives* (1926), *Primitive Word-Building* (1929), *Ukrainian Language in Soviet Ukraine* (1935), *Shevchenko in Foreign Languages* (1936)—all in Ukrainian; *Abriss der Ukrainischen Substantivbildung* (1915) and *Germanisch-Deutsche Kulturinfluesse in Spiegel der Ukrainischen Sprache* (1938)—in German; and *Slavs and Teutons: The Oldest Germanic-Slavic Relations* (1950), *The Nationality Problem of the Soviet Union and Russian Communist Imperialism* (1952), *The Captive Nations* (1959), and *The History of Modern Bulgarian Literature* (1960, with Prof. Clarence A. Manning). In addition, over 78 scholarly articles and papers were written by Prof. Smal-Stocki in Ukrainian, Polish, Bulgarian, German and English.

As president of the American Shevchenko Scientific Society (since 1951) and president of the Supreme Council of Shevchenko Scientific Societies (Europe, Canada, Australia and the United States), Prof. Smal-Stocki contributed greatly toward the prolific activities and expansion of the Shevchenko Scientific Society in the United States, which in fact is a free Ukrainian Academy of Sciences.

Under his presidency, the Society organized two World Congresses of Ukrainian Free Science and hundreds of scientific conferences and lectures, dedicated to Ukrainian history, language, culture and science. The American section of the Society under his direction issued 18 volumes of *Proceedings*, 18 volumes of *Ukrainian Studies*, 31 volumes of lectures, 21 volumes of monographs, 9 volumes of *Proceedings* of various sections of the Society, 3 volumes of *Ukrainian Archives*, and 2 volumes of *Ukrainian Literary Library*, and several non-serial publications. He was the founder in 1956 and president of the Committee of American Slavic Learned Societies in New York and served as its president since that time.

POLITICAL LEADER, STATESMAN AND DIPLOMAT

Prof. Smal-Stocki was one of the great and outstanding Ukrainian political leaders, statesmen and diplomats who took an active part in the establishment of a free and independent Ukrainian state in 1917–1920. His political career began in 1915 when he joined the "Union for the Liberation of Ukraine."

on behalf of which he worked among Ukrainian POW's of the Russian armies in several prisoner-of-war camps in Germany, notably in Wezlar, his work resulting in the organization of two Ukrainian infantry divisions which were sent to Ukraine to take part in the struggle against Communist Russia. In 1918 he was appointed diplomatic representative of the Western Ukrainian National Republic in Berlin; after the Union of the two Ukrainian Republics on January 22, 1919, Prof. Smal-Stocki became counsellor of the Ukrainian Legation, and after the resignation of M. Porsh, he served as Minister Plenipotentiary and Envoy Extraordinary of the Ukrainian National Republic in Berlin, 1921–23. In 1924–1925 he was Minister of the Ukrainian government in England. As a member of the Ukrainian government-in-exile, headed first by Simon Petlura and later by Andrew Livytsky, Prof. Smal-Stocki held various important political and diplomatic posts: Minister to the Polish government in Warsaw; Deputy Minister of Culture and Deputy Minister for Foreign Affairs, and following the resignation of Minister Alexander Shulhyn, he became Foreign Minister; after the death of Premier Vyacheslav Prokopovych, he was named Deputy Premier of the Ukrainian government-in-exile. Prof. Smal-Stocki was also a member of the Ukrainian delegation (along with Minister A. Shulhyn) to the League of Nations, and was vice president of the Ukrainian Association for the League of Nations, 1929–1939.

In 1936 Prof. Smal-Stocki was elected president of the Linguistic Congress of the Nations Enslaved by Communist Russia, which was held in Warsaw; he was president of the "Promethean League of the Enslaved Nations" from 1927 to 1940, and in that connection gave lectures in Bulgaria, Rumania, Finland, Poland, Latvia, France and England.

HEADED STATUE MOVEMENT IN UNITED STATES

In the United States, Prof. Smal-Stocki was also very active in the political field. He was a member of the executive board of the Ukrainian Congress Committee of America and on its behalf appeared before several Congressional committees in Washington with his testimonies at hearings dealing with Soviet Russian genocide, religious persecution and Russification of Ukraine and other captive non-Russian nations in the USSR.

One of his most outstanding accomplishments in this country was his chairmanship of the Shevchenko Memorial Committee of America, from 1960 to present day, which Committee established the Shevchenko Monument on public grounds in Washington, D.C. Over $450,000 was collected by Americans of Ukrainian descent for that purpose, and at the unveiling of the monument on June 27, 1964 over 100,000 persons heard the late President Dwight D. Eisenhower laud the 19th century Ukrainian poet-laureate Taras Shevchenko for his dedication to freedom and justice for men everywhere. He was a recipient of the "Shevchenko Freedom Award" for his singular service in this project.

Prof. Smal-Stocki had been a frequent target of the Communist press in Ukraine and in Russia for his unswerving dedication to the principles of freedom for the Ukrainian and other captive nations.

Essentially, Prof. Smal-Stocki was a philologist. He made analyses of the Ukrainian language, its structure and semantics, and provided historical researches on its development. At the same time he wrote books and essays on Ukrainian history, culture and political developments. Altogether, he wrote over 160 scientific publications from the field of linguistics, literary criticism and Soviet studies in many languages. He also wrote monographs and memoirs on noted Ukrainian men of science and politics. He knew and was closely associated with many great Ukrainian political figures of the 20th century: Hrushevsky, Petlura, Vynnychenko, Skoropadsky, Livytsky, Doroshenko, Mazepa, Shulhyn, Yakovliv, Generals Salsky, Udovychenko, Pavlenko and Sinkler, and many other Ukrainian leaders who led the Ukrainian national revolution in 1917–20.

Prof. Smal-Stocki, in addition to being president of the Shevchenko Scientific Society and the Shevchenko Memorial Committee of America, was also Curator of the Byzantine Slavic Arts Foundation in Washington. He was a member of the Ukrainian Institute of America; the Ukrainian Academy of Arts and Sciences in the U.S.A.; the American Historical Association; the American Catholic Historical Association, the American Association of Teachers of Slavic and East European Languages; "Academie Internationale Libre des Sciences et des Lettres," Paris; Polish Institute of Arts and Sciences; Pilsudski Historical Institute and the Czechoslovak Society of Arts and Sciences in America. He was also president of the Ukrainian Studies Center at the Ukrainian Catholic Seminary in Washington, a member of the executive board of the Ukrainian Congress Committee of America and a member of the Editorial Advisory Board of *The Ukrainian Quarterly*. Last summer he led three delegations of the Shevchenko Scientific Society in welcoming His Eminence Joseph Cardinal Slipy, Ukrainian Cardinal, on his visits to Philadelphia, New York and Washington.

With his passing, the world-wide Ukrainian movement for freedom loses a great and indomitable fighter, inspirer and leader.

A bachelor all his life, Prof. Smal-Stocki is survived by a brother, Dr. Nestor Smal-Stocki, who resides in Lima, Peru, and a sister, Mrs. Irene Luckyj of Toronto, Ont., Canada.

A Requiem Mass will be held on Wednesday, April 30, 1969, at 10:00 A.M. at the Ukrainian Catholic Cathedral of the Immaculate Conception, 830 No. Franklin Street, Philadelphia, Pa. Burial will be at Our Lady of Sorrows Ukrainian Catholic Cemetery, Langhorne, Pa.

[From Svoboda, the Ukrainian Weekly, May 17, 1969]

THE STREAM OF HISTORY: IN MEMORY OF ROMAN SMAL-STOCKI

(By Clarence A. Manning)

At the present time all of those people who understand on a broad scale the meaning of freedom for peoples and for individuals realize the loss to the Ukrainian struggle for liberation and recognition of Roman Smal-Stocki. If there is any one who in the past ten years has looked at that movement, they must have seen the name and understood that he was a giant and a stalwart in the cause. He truly devoted his entire life to the movement and without depreciating the efforts of his co-workers and his rivals and competitors, he had made for himself a unique position.

IDEAL DREAM

In a sense, he had the opportunities for his work, but he knew how to seize them and to use his native and inherited position to the working out of his ideal dream, of seeing once again a free Ukraine on the map of Europe, and of its taking that place to which its geographical position entitled it and its population as the largest of the submerged and outraged populations of that prison of nations, the Russian Empire—the Union of Soviet Socialist Republics.

He was the son of the distinguished professor, Stephen Smal-Stocki, who was almost a permanent member of the Herrenhaus of the joint government of Austria-Hungary under the Hapsburgs. It was a position in the lay world of officialdom comparable to that of the outstanding cleric of the day, the Archbishop of the Ukrainian Catholic Church and Metropolitan of Halych and Lviv, a post long filled with distinction by Metropolitan Andrew Sheptytsky for the half century before his death with the return of Communism to Lviv in the latter part of World War II.

At the time of his death, Prof. Roman Smal-Stocki had just passed his seventy sixth birthday, for he was born in January, 1893. He received a good education and when the first timid steps were taken in 1914 to revive the old Ukrainian state, he was a young man of twenty one, already trained not only in philology and literature, but with enough contacts with the old regime to accord him the facility for exercising his talents under favorable conditions.

ONE OF THE LEADERS

From that time on, we may almost say that he was never far from the actual seat of power first in Western Ukraine, in the joint state that arose in 1920 and in the disastrous events of the next years, when he was one of the leaders in the attempts to salvage the wreckage and prepare for the future. It would be too long to describe all of his activities. In fact we may well believe that we still do not and may not know at any time all in which he was concerned, but at least the published record is a list of honors that may well be unparalleled, culminating in his work as the President of the Shevchenko Societies in the outside world.

He has seen many of his older and younger colleagues vanish from the scene, for it is now fifty five years since he first became active and the roll of honor of the Ukrainian patriots, heroes and martyrs is already long.

RECALLS FATHER

The present writer has vague memories of hearing Professor Stephen Smal-Stocki speak at the First Congress of Slavic Geographers and Ethnographers in Prague in 1924, when the participants heard him read the minutes of the Slav Congress of 1849 and approved them. Every effort was made by the committee of arrangements to link that meeting with the older gathering of the Slavs in the Hapsburg lands and that fact may offer us some hints, perhaps idealized, of the duration and standing of the Ukrainian cause.

Let us assume that Roman Smal-Stocki, when he was five years old had met an aged man or woman of the age of 95, who still remembered many of the circumstances of his or her youth. That person would have been born in 1802 before the attempt of Napoleon to seize Moscow and might have been able at least to remember. We know that Taras Shevchenko, who was born in 1814 still remembered his grandfather who had fought in the Koliivshchyna in the late 1760's and could have known the last of the Hetmans of Ukraine, Rozumovsky, the grandfather of that Princess Repnin, whom Shevchenko knew as still a young woman before his arrest and exile.

If that hypothetical meeting had been repeated in a preceding generation, it would not have been fantastic or impossible for that second source to have known in his early youth the survivors of the debacle at Poltava. It gives us a shock to realize how a few long-lived individuals can span the centuries. It would imply that two lives could have carried the personal experiences of the young Roman back to the age of Mazepa and a third would have extended the tradition to the early days of the Kozaks and the Zaporozhian Sich.

PREPARE FOR FUTURE

To many of the young men and women in the Ukrainian cause this seems intolerable speculation. Yet there are many of the arrivals in America after World War II, who were so sure that they would be here but a short time that they were hesitant to prepare for anything but their return. Today they are quietly settling down with their dreams to build up a reality and to prepare for the

future. Most of those who arrived after World War I, have already passed away. The passage of time reminds us that Charles deGaulle in retirement is almost the last major figure of World War II. General Dwight Eisenhower, barely three years older, has already vanished and there are few left veterans of World War I. There may be a few here and there, but most of those are enjoying or suffering a more or less forced retirement and Roman Smal-Stocki was happy in that he could continue his work until almost the very eve of his departure and encourage his younger colleagues to continue the work and to work as he did without losing faith in the possibility of fulfilling his ideal.

We remember and mourn Roman Smal-Stocki, but at the same time we must welcome his life and see it as part of that great stream of history that has stretched on from century to century, to century, from generation to generation, which is slowly but surely working out what has been set by nature and by all the conditions of human life. May he, his lost colleagues and his older inspirers all rest in peace and may light perpetual shine upon them!

SPEECH OF REPRESENTATIVE MARTIN B. MCKNEALLY

I am delighted to participate in this series of lectures on current persecution of religions in countries now dominated by Communist totalitarianism. As a Congressman, I am honored to be numbered among my distinguished colleagues who have spoken here. As a man, I am glad to add my word of caution and perhaps alarm to my fellow citizens lest they conclude that Communist governments are hesitating in their doctrine of atheism and their materialistic explanation for man's existence and his value.

There are many among us, some in very high places, who are celebrating the change and insisting that we celebrate it with them, in the attitude of Communist governments toward religion, or the acknowledgement that God exists and warrants our worship. So naive are they that they do not pause long enough to realize that they are merely buying a line, swallowing an attractive and tasty morsel, mainly for the reason that it is attractive and tasty. They believe what they want to believe. Need I remind you that the best definition of a sane man is a man who sees what is there—not what he wishes were there.

It is futile and misleading (and God knows we know those two words by sad experience in this country) to suppose that Communist Russia is changing in a very quintessential way. Why should it? The Communists have wealth, control, imperialistic sway, the obeisance of the free world—they have the ultimate weapon. Why should they suddenly reassert the enduring truths of religion, when they have with such success and deference denied them?

Here, we have a report of a loosening up on the Jews, there a simple expression denoting God's existence, at another time we hear of a liberalizing of the absolute denial of the right to worship. But these I submit to you rather are changes in tactics, than in doctrine. The visits of docile Iron Curtain religious leaders to the West, complete with ready and rehearsed answers to obvious questions is unconvincing to say the least.

I suppose man's real Achilles heel is his failure vividly to remember. How many of us remember to interpret Russia's foreign policy in the light of its startling and shocking activities in Hungary or more recently in Czechoslovakia? The final riddance of the last vestige of the Dubcek regime in the last couple of days, once more exposes to all who will look and see, that the leadership has not changed, that it will not willingly change—that it will not relinquish its command over men's bodies—or souls.

I suppose the hardest thing to stand, the most loathsome sight to afflict the vision, is the picture of men and women, civilized, religious, homeloving, patriotic, yearning, reaching out for freedom and being turned back from it by the superior might of military force.

Czechoslovakia today is Communism in action today. Propaganda, glib assurances, well turned phrases are maneuvers merely. I ask you to explain to me, if otherwise, those pathetic busloads of Evangelical Baptists who showed up at the American Embassy in Moscow. How else, if not a maneuver, do you fit into the picture the printed complaint in the Soviet Union that Communist party members are secretly baptizing their children . . . and observing religious holidays.

How else can one explain the arrest three months ago of the Unite Bishop of the Ukraine. He made so bold as to slip out of the Soviet Union on a tourist visa and repair to Yugoslavia for his consecration. His fate is unknown. Some stories have it that the KGB agent posing as a Belgian Priest compromised the Bishop. Certainly this is true, uncover a Communist and you rediscover Stalin, no matter where you find him.

The other day talking to an expert on Cuba in the company of an expert on Eastern Europe, I was touched by the sight of the European, as he listened to the tale of Castro's campaign against religion and said, "Oh, it all sounds so familiar."

Castro started after religion with a vengeance shortly after the Bay of Pigs debacle in 1961. The clergy in the churches of Cuba, as you doubtless know, were largely from other countries. Most of the Catholic priests were from Spain. Most of the Protestant ministers were from the United States. This fact led Castro to whoop, in one of his endless whoops, the old rallying cry—foreign intervention—foreign agents, etc. From 1961 to 1963, hundreds of priests and many Protestant ministers were expelled. Only one Catholic seminary was allowed to stay open. No one could carry religious literature in public. A few churches were allowed to remain open. But even so, the government stages conflicting events on Sundays and holidays, such as athletic competitions. And where, mind you, do they hold them? Why in no less remote a place but right in front of the churches. It is illegal in Cuba to hold religious services in private homes or even in halls that form part of a dwelling. The years of Communist practice has paid off well. They do not miss or overlook much.

Atheism is the official doctrine of Cuba. It has been declared to be so. Oh, the government goes on claiming that there is religious freedom . . . but the churches are playing in a rather low key. The Papal Nuncio in Cuba, Monsignor Zacchi, tries to stay on friendly terms with Castro. It is said, as a matter of fact, that Castro will attend receptions given by Monsignor Zacchi but he will not observe similar courtesy for even the Russian Embassy. Because of this and certain conciliatory moves made by the nuncio, he has been severely criticized by some Catholics as being overfriendly with the Communists.

Castro appears to have written off the part of his population over 40 years of age. He concentrates—as do most—on the youth of his country. Atheism is pursued in school. Children are told to pray to God for candy. When nothing happens, they are told to pray to Fidel. If, by some miracle, a young man arrives at a sturdy desire to follow a vocation to the priesthood, he is more than likely to wind up in the army or the sugar cane fields, than in his country's only seminary. Oh, when the kids pray to Fidel for candy—they get it.

Cuba does present one difference from most other Communist dominated countries today—the government there is pretty much wrapped up in one man—CASTRO. He is somewhat mystical, I suppose, and rather odd. His physician is reported to be a practitioner of voodoo. A man as mercurial, as flambuoyant, as unpredictable, could conceivably walk away from the rigors of Communism, they say. I regard such an event as unlikely. Men are captive frequently of their own actions. A lie convinces no one, as much as the one who uses it to convince others.

Poland offers the one situation that the Free World and Captive Nations can all cheer about. Even with a Communist regime, it remains in the eyes of some analysts the most religious country in the world. The so-called liberals for years denounced Cardinal Wyszynski as a man preventing a modus vivendi with the Communists. He stood across the pathway toward the future. He prevented progress . . . they said. Only now, are people beginning to acknowledge him as a brilliant tactician. The Communists are beginning to come to him with their hats in their hands. He still speaks out against the regime. Last year he condemned the country's anti-Semitic campaign. The Polish hierarchy under the Cardinal condemned police reprisals against student demonstrations. But the Communist leadership and the mass communications media remained silent. Attacks against the Cardinal were not included in the theses for the Fifth Party Congress. The church problem was mentioned only in one sentence in a congress resolution.

On the other hand, Cardinal Wyszynski is proceeding cautiously in the face of the new Communist approach. He and the rest of the Polish hierarchy doubtless have few illusions after 25 years under the Communists. It could well be that the Communists hope a softening of their attitudes will break down the cohesion of the Catholic Church. They need only look to the West to see what the sweet winds of renewal can accomplish in a permissive atmosphere. Thankfully, however, there are still men of position in the Catholic Chuch throughout the world who are pragmatic as well as men of God. They know time is on their side. This is what they are playing for.

How different the situation that America finds itself in today. We have pounded time and again into our minds that time is on the side of the Communists in Viet Nam. Why is that so? Because the American people have lost faith, their motivation.

The pressures have started mounting on President Nixon for an end to the Viet Nam war. Some of the pressure comes from people genuinely heartsick at the bloodshed. Some of the pressure comes from people who seek personal publicity or even baser rewards. One need only review their demands to gauge their motives. Whoever in the history of man has put a six-month limit on a negotiating session—especially with an enemy who says openly that time is on his side? I visited Ambassador Lodge and his capable staff in Paris earlier this month. Their main problem will not be the Communists. It will be the question of whether the American people will support their own negotiating team. We must support them. It is all very well to demand an immediate withdrawal. But such a course is not the way a nation with worldwide responsibilities, as well as a responsibility to itself, can conduct its affairs. Every sane man wants peace. Every mother grows heartsick when her son is summoned away to war. But while the world is split as it is America cannot shrink from its confrontation with totalitarian forces—without grave consequences to itself and to the world.

The Captive Nations live a life of abject misery. But if we don't get the United States straightened out, we will be looking to them for help. We can already look to them for inspiration.

We here have a heavy burden to bear. We must provide the hope of all those who are

captive within the walls of totalitarian Communism—we must pray aloud for the church which is condemned by its persecutors to pray in silence.

Everyone knows how Communism rots the soul of a nation—makes it abject in peace and abominable in war—everyone knows that Communism stands ready to spring into situations softened by disinterest—by affluence and by lack of faith. It thrives in darkling places, its great men are traitors and betrayers—its saints are murderers. The doctinaire scholar who regards man as nothing much more than a collection of substances—with no purpose, no will and no soul is Communism's advocate. Against this powerful array of men and women stand tonight the people of Eastern Europe—the people of South Vietnam and North, the charming people of Cuba who still believe, who silently pray for their deliverance, who work to break open from their cells.

In the days of yore, a superb prayer was recited at the end of the Mass. It was added in order to beseech God for the deliverance of Russia. In it were some forgotten lines, indeed some forgotten theology. They are as follows: "And do thou, Oh, Prince of the Heavenly Host by the Divine Power, protect us against the wiles and the wickedness of the Devil who roams through the world seeking the ruin of souls." The Devil, I submit to you and to all, is on the loose—destroying and abasing the finest works and achievements of men. He shall not conquer while men gather together to praise God, to exalt His goodness. He shall not conquer while men are still willing to pray, to labor, to fight and to die, for the truths of revealed religion. He shall not conquer while men are willing to fight and die for their faith.

THE TRANSPORTATION CRISIS AS VIEWED BY SECRETARY VOLPE

HON. ROBERT P. GRIFFIN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, June 26, 1969

Mr. GRIFFIN. Mr. President, on June 20, 1969, Secretary of Transportation John Volpe addressed the annual meeting of the Automobile Manufacturers' Association in Detroit, Mich. In his remarks, Secretary Volpe outlined several of the critical transportation problems facing our Nation.

Mr. President, because of the widespread interest in this subject, I ask unanimous consent that the distinguished Secretary's remarks be printed at this point in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF SECRETARY OF TRANSPORTATION JOHN A. VOLPE BEFORE THE ANNUAL MEETING OF THE AUTOMOBILE MANUFACTURERS' ASSOCIATION

It is a pleasure and an honor to have been invited to address this most distinguished group. I am proud to be here with the men who keep America "on the move." But I hope you realize what happens when you invite a Washington official to come to dinner in Detroit.

What with 500-mile-an-hour jet planes, and the 1 hour time difference between here and Washington, the Secretary of Transportation had the pleasure of driving through rush-hour traffic in both cities!

Of course the traffic jams these days are not only on our streets and highways—we have plenty of them in the airways too. A few weeks ago I was flying out of LaGuardia at about 5:30 in the evening—in an official Government plane—and we were eighteenth in line for takeoff.

I asked the pilot if our FAA boys up in the tower knew that the Secretary of Transportation was aboard. And they said, "Yes, sir, and we're *still* eighteenth in line!"

So let me make it clear at the outset that if I say anything to you fellows tonight about congestion, I'm not referring *only* to highways and automobiles; we have problems in a few other areas as well.

Gentlemen, despite what some of your critics have said (especially in letters to the Department of Transportation!) the automobile industry has contributed more to American progress, by far, than it has taken away.

Your industry—since World War I—has reshaped modern society. I suspect it's safe to say that the automobile has brought about more social changes than any other invention in the past fifty years.

We all acknowledge Detroit's massive contribution to the National economy. An astonishing $14 billion—16 percent of our estimated gross national product this year—will be produced directly or indirectly by the automotive industry.

It's no wonder that so many people with outstanding managerial skills find their way to the motor city. Indeed, the country is fortunate to have your resources of intellect and imagination to draw upon at such a crucial juncture in our history.

I referred—a few minutes ago—to transportation congestion in a rather light vein. But gentlemen, let there be no misunderstanding. We are in the midst of a transportation crisis in America right now, it's *not* funny, and it's getting worse.

The crisis has been several years in the building, but I have found that it doesn't do much good to complain about what hasn't been done in the past.

President Nixon has ranked transportation and its problems on his top ten priority list. He has directed me to develop an overall National transportation plan within six to nine months and we in the Department of Transportation are going to do it. We must do it! Usage of every mode of transportation is increasing. Ten years from now airline passenger travel is expected to be up 300 percent. The number of aircraft utilized by general aviation, including private flying, will expand from 114,000 today to at least 214,000 within the next ten years.

In the same period trucks will haul not 400 billion ton miles of freight, but 600 billion. Rail traffic will rise a respectable 25 percent in 9 years.

This growth causes problems, and we are out to help solve those problems.

This past Monday, President Nixon asked Congress to approve a $5 billion program to improve the nation's air transportation facilities. As I stated before the Senate Commerce Committee on Tuesday, this program is one that *can* solve the problems to which it is addressed.

Our recommendations take into consideration the total impact of aviation growth. They include provisions for modernization of the airways systems, airport development, and *even for the highway feeder systems* which serve air facilities. A part of the program will be underwritten by airways users. They will be assured through the creation of a "designated account" into which their taxes will be paid, that their contributions will not be diverted to non-aviation purposes.

But, I did not come here to talk only about air travel. We have not fastened our attention on the noisy holding pattern above at the expense of the traffic congestion below. With the demand for automobiles being what it is—our ground transportation system must be made fast and efficient. Today 86 million cars use our highways; by 1975 there will be 100 million, plus 20 million trucks and buses.

If we continue at such a pace, there simply will not be enough space in our cities to accommodate all those who would—ideally—like to drive. More and more it becomes plain that the automobile must be *supplemented*—and I didn't say "replace," I said "supplemented"—in the urban areas by other kinds of transport services.

Each mode in the system must be planned to complement—not obstruct or rival—the others.

As I am sure you know, the Federal government presently spends as much on highway construction in 6 weeks as it has put into urban transit in the last 6 years. Unless we intend to pave the entire surface of the country—and no one wants that—we have to stop this trend. We already have one linear mile of highway for every square mile of land area in the U.S.A.

To give people the mobility they increasingly demand and require in the next few years, our metropolitan area shall have to invest heavily in modern forms of public transportation, and the Federal government is going to have to help.

We intend to help. As you are no doubt aware—the Department of Transportation will be sending to the White House, for submission to the Congress, a public transportation bill in the very near future. We are hoping to get the bill in the hopper soon—once we've been able to get past the Bureau of the Budget, the Treasury Department, and the other arms of the Executive branch that have to clear this type of thing.

The public transportation program would be patterned, largely, after the fabulously successful highway trust fund.

The highway trust fund, of course, is financed through monies that are directly attributable to highway users—and this is as it should be.

In public transportation, however, we are faced with a different set of problems. It doesn't take an economist to figure out that user fees—additional taxes on present transit riders—won't solve our problems. In the case of public transportation, the funds must be derived from some other source.

As you probably know, we are looking into the possibility of using a portion of the automobile excise tax as part of our source of revenue.

This can be justified on several counts. First of all, it is to the motorist's advantage to underwrite part of public transportation if he wants to drive on uncongested highways.

Second, it is to the automobile industry's advantage. There's not much point in perfecting a 300 horsepower vehicle that crawls from interchange to interchange, nor is there much hope of expanding your sales if the average motorist looks upon driving as a chore rather than an efficient, pleasant means of transportation.

And let me be perfectly honest with you. If the Federal automobile excise tax is reduced or eliminated, how long do you think it would be before the states or even the cities jumped in with excise taxes of their own? And with the cost of government being what it is, who's to say that the Congress will allow this present source of revenue to disappear altogether?

We are looking for other revenue sources, too. In Massachusetts we added a two-cents-per-pack tax on cigarettes to expand our Massachusetts Bay Transportation Authority. Perhaps we could utilize a portion of the tax on alcoholic beverages.

In this connection I might point out that we received considerable support from an unexpected quarter. The Jenney Refining Company, a regional chain of service stations, spent thousands of dollars on full-page ads in the Boston papers urging support of rapid transit.

Bill Jenney maintained that he would never be able to sell oil and gasoline to cars

that weren't going anywhere, and he was instrumental in convincing our electorate and our legislature that public transportation is absolutely essential if we are to meet the urban challenges four-square.

Gentlemen, I solicit your support for our public transportation legislation, and I submit with great sincerity that such legislation *is*, truly, in your best interests.

We look forward to working closely with all of you toward helping solve a problem that most definitely needs solving.

Let's talk for just a few moments about automobiles themselves.

I am well aware that you men—and the companies you represent—are looking toward a new generation of automobiles that are easier to drive, cheaper to repair and insure, and above all else, safer.

Let's face the fact that people can—and sometimes do—drive dangerously. But they must be protected from the consequences of those mistakes.

Let me re-cap for you, briefly, what our National Highway Safety Bureau has been attempting to do in the recent past:

First, highways. It is an unappreciated fact that safety starts from the road up. For every 5 miles of new interstate highway we build, we save one life per year every year. If there were no other reasons for completing the interstate system, this would be reason enough.

However, it is obvious that you can't rebuild the entire highway system of the country overnight according to modern standards. Spot improvements at the most dangerous sites along the roads have to be made. Over the past 5 years we have made some 18,000 spot improvements at a cost of $1.2 billion. And this effort is paying off in safer passage for American drivers and their families everywhere.

Second, vehicles. With the intention of reducing crash injuries and fatalities we are investigating a series of new devices. I recently saw a film presentation of the air-bag system and was most impressed.

We are well aware that the automotive industry is taking a serious and a sincere look at a wide array of devices and improvements that will enhance the safety of the motoring public, and we applaud you for the worthwhile efforts you are making.

You have our wholehearted support as you continue safety research programs, and we stand ready to help you in any way we can. As far as the actual mechanics of the vehicle are concerned, I see a tremendous validity to what Ed Cole said in a speech in West Virginia just a week ago tonight. He pointed out "the industry has everything to lose and nothing to gain when we deliver products of substandard quality to our customers or fail to provide satisfactory service."

Ed went on to say: "we pay a high penalty for defects in terms of costs for recall campaigns and warranty expenses. But we pay even more dearly in customer dissatisfaction and loss in owner loyalty which have detrimental effects on repeat sales and public reputation."

Gentlemen, we appreciate the efforts you are making; we urge you to continue; we know that a nation that can build a vehicle safe enough to take three men around the moon can build a station wagon safe enough for our wives and children.

In the months ahead, we in the Department of Transportation are putting new emphasis on structural design, braking, lighting, handling, and anti-skid devices. We will upgrade present standards for tire performance. Our support for such research is justified by the decrease in fatalities which has resulted, for example, from impact absorbing steering columns. We know, as you do, that there are gains to be made and lives to be saved when we apply the technical know-how that is the hallmark of the American automobile industry.

The third phase of automotive safety is, of course, people.

We have issued a number of highway safety standards in the area of better law enforcement; for instance we provide funds to develop more effective traffic court systems, to achieve uniform traffic regulations, and to improve police traffic services.

It pays off. Right here in Michigan—and I pointed this out at the Sloan Safety Awards Luncheon in New York two weeks ago—89 percent of traffic fatalities involved violations of the law. We can make a major cutback in fatalities on our highways if we can emphasize—and re-emphasize—that laws were made to be obeyed, not broken.

And this brings us to the greatest of all human failings when it comes to death at the wheel—and I'm talking of course about drinking and driving. There is no place whatsoever on any highway, anywhere, for that fatal mixture of alcohol and gasoline.

The National Highway Safety Bureau is financing numerous state projects involving the training of personnel in blood-alcohol testing, and in the procurement of the necessary testing equipment. Since the passage of the Highway Safety Act some fifteen states have adopted statutes permitting tests of drivers suspected of being drunk, or have improved existing laws, and some twenty states have adopted implied consent statutes.

Drunken driving is one of America's worst enemies, and we at the Department of Transportation fully intend to do all we possibly can to bring a halt to this most insidious killer.

In a recent speech, Tom Mann—your most capable association president—outlined an excellent eight point program to cut the death toll on our highways. He called for a coordinated attack centered on vehicle safety, highway design, roadside hazards, drunken driving law enforcement, vehicle maintenance, emergency medical service, pedestrians, motorcycles and railroad crossings.

I thoroughly agree with Tom's statement that all of these potential hazards must be treated as part of an interlocking system for automotive safety. It would be ridiculous to focus the bulk of our attention on only one or a few of these areas. We have to attack on all fronts simultaneously. We want to work with you. We want you to work with us.

With your continuing leadership and our assistance, this Nation can achieve substantial gains in automotive safety. You have it within your power to make safety as fashionable as speed, comfort, and beauty. The opportunity to do so will be seized by leaders possessed of a vision beyond today's production schedules and profit margins.

I urge you to join with the President and me in creating this future. I am confident that you will do so, and that together in the next years we shall perfect a system of transportation that is fully responsive to the needs of the American people.

Again, let me thank you for inviting me here this evening. I deeply appreciate the opportunity to meet with such an outstanding group, and look forward to working closely with all of you in the months and years ahead.

CREDIT UNIONS CONTINUE TO FOSTER INTERNATIONAL UNDERSTANDING

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. PATMAN. Mr. Speaker, one of the outstanding aspects of our foreign assistance program has been the involvement of credit unions in providing self-help assistance to our overseas friends. Recently, credit unions in the United States, working through the Agency for International Development, have begun a program of credit union to credit union loans in order to assist credit unions in South and Central America. The first of these loans, for $7,000, was made by an Arizona credit union to a credit union in Ecuador whose members are made up mostly of small farmers. The loan will enable the credit union members in Ecuador to purchase farm implements and other supplies.

The April 30 issue of Front Lines, a publication of the Agency for International Development, published a story about the credit union loan program from the United States to South and Central America. I am including a copy of the article in my remarks since it so dramatically portrays the role of credit unions in our foreign assistance program:

"MINI" LOAN IS INITIATED TO HELP ECUADOR FARMERS

Something new in international finance, a "mini" loan from members of a U.S. credit union to a small credit union in Ecuador, was made possible recently through AID's guaranty extended risk program.

The $7,000 loan with repayment guaranteed by AID, sets the stage for other similar small loans on a people-to-people basis.

The Credit Union National Association's overseas organization, CUNA International, working with the Agency, is now proceeding to execute nine loans for $300,000 from U.S. credit unions. They involve credit unions or their federations in El Salvador, Dominican Republic, Colombia and Bolivia.

FIRST LOAN BY ARIZONA CREDIT UNION

The first "mini" loan was made by the Arizona Central Credit Union of Phoenix, Arizona, to the La Guaranda Credit Union of Guaranda, Ecuador, whose members are mostly small farmers. It is a six percent loan maturing in five years. Individual borrowers are expected to pay 12 percent per annum or less, a low rate in that South American country.

U.S. credit unions—with some $2 billion of their members' savings not directly employed in member loans—have long been interested in making person-to-person international credit union loans. Congress encouraged the idea by authorizing extended risk guaranties for up to $1 million in overseas credit union loans in a 1967 amendment to the Foreign Assistance Act.

The credit union international loans present a departure in the use of extended risk guarantees, which have been applied in selected cases since 1962 to secure private U.S. loans from banks or other financial institutions such as insurance companies for private business projects in developing countries, or to insure U.S. private equity investments in such projects.

AID/CUNA EFFORT

An agreement between the Agency and CUNA International was signed February 15, whereby this program would be managed by CUNA under AID surveillance.

There are currently 2,651 credit unions in South and Central America, whose savings total $57 million. Loans made by these credit unions in the six-year period of the CUNA/AID program total over $209 million.

An agricultural production credit program to help farmer-members was started in Ecuador in 1965, with help of AID and serves as a model for similar efforts in other countries. It requires a supply of borrowed money to augment the members' savings. This has led

to the further use of AID's resources through the guaranty of investments by U.S. credit unions in loans to credit unions and federations in the developing countries.

CHRISTIAN MORALITY

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, June 26, 1969

Mr. FANNIN. Mr. President, the Wall Street Journal on June 20 published an excellent editorial entitled "The Limits of Politics." It sets forth the quandry in which modern day "rationalists" find themselves when they have cut off all recourse to the principles of Christian morality.

The Journal states:

Rationalism leaves scant allowance for original sin. If man's condition is not perfect, the problem is merely that rational doctrines have not been implemented. Thus all power must be put at the disposal of these doctrines; any resistance to them is heretical.

We now come to the historical perspective of this philosophy:

The destination of this drift is totalitarianism. Indeed, a fascination with various totalitarian ideologies was fashionable among European intellectuals until it was chilled by the ferocious reality of the Third Reich. The chill is now abating, and in any event members of the Students for a Democratic Society are too young to recall where the path led the last time.

This seems to me to be a most important observation.

Quoting Presidential adviser Daniel P. Moynihan, the editorial says:

What is it government cannot provide? It cannot provide values to persons who have none, or who have lost those they had. It cannot provide a meaning to life. It cannot provide an inner peace. . . . The limits of politics must be perceived, and the province of moral philosophy greatly expanded.

The editorial writer points out that we are in our present embroglio over issues which are not, at bottom, political—they are, in essence, religious. Man has a private and personal side which can never be satisfied by the state.

Modern man may reject the majesty of the church—

Says the editorial—

but he will not find his substitute in the majesty of the state.

Each of us must have his private faith or philosophy that cannot be imparted by a government or a bureaucracy. While America has always adhered to the principle that church and state should be separated, that must not be construed to mean that the State can supplant the church—or that mankind's spiritual needs can be ministered to by the State. The two should be separate—except where they join in the individual—but each is essential.

The great tragedy of our modern day, as I see it, is that spirituality has been deadened by the infusion of politics, and political life suffers from a lack of spirituality.

Nowhere are we more deceived than when we believe that all the inner problems that beset America can be cured with another "study" and a sufficient dollop of dollars. There are limits to political solutions, and I am happy to see such an influential and respected paper as the Wall Street Journal giving recognition to these limits.

The concluding sentences say:

Modern man has turned too often and too easily to the State for answers to all his problems. He needs to recognize that there are answers he must seek, if not in his soul, at least in his innermost self.

To that I say "Amen."

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LIMITS OF POLITICS

"The principal issues of the moment are not political. They are seen as such: That is the essential clue to their nature. But the crisis of the time is not political, it is in essence religious. It is a religious crisis of large numbers of intensely moral, even Godly, people who no longer hope for God. Hence, the quest for divinity assumes a secular form, but with an intensity of conviction that is genuinely new to our politics."

The philosophical tones are those of Daniel P. Moynihan, addressing the graduates of the University of Notre Dame. The urban sociologist and Presidential adviser muses on the crisis of values sweeping our civilization, manifesting itself most obtrusively in student rebellion. Mr. Moynihan's insights help to show that the attitudes of the rebellious students merely reflect the intellectual currents of our times.

These tricky currents, he suggests, have sources as remote and as elemental as the great Enlightenment itself. Though Christianity still lives for many people, growth of rationalism since the Eighteenth Century has involved a rejection of much of the older Christian doctrine. But rational modern man has not rejected Christian morality; instead he has secularized it. Rationalism, also, has not abolished man't thirst for something transcendental, and the great modern temptation is to turn to politics in a vain attempt to quench the thirst.

The rationalizing and secularizing of morality has robbed the mystery from contemplation of good and evil. Christian tradition carried a touch of the Stoic. Man should combat evil in this world, but if it resists his best efforts, perhaps it is God's will. In contrast, if man is a rational creature and if society is his handiwork, there is no excuse for bearing any blotch upon it.

From this arises a great moral fervor. Modern man demands that society conform to Christian morality, but without the traditions Christianity had evolved to temper its fervor. Rationalism leaves scant allowance for original sin. If man's condition is not perfect, the problem is merely that rational doctrines have not been implemented. Thus all power must be put at the disposal of these doctrines; any resistance to them is heretical.

The destination of this drift is totalitarianism. Indeed, a fascination with various totalitarian ideologies was fashionable among European intellectuals until it was chilled by the ferocious reality of the Third Reich. The chill is now abating, and in any event members of the Students for a Democratic Society are too young to recall where the path led the last time.

These intellectual currents are bound to work themselves out no matter what anyone does, and they bode no easy time ahead. But Mr. Moynihan pinpoints the antidote—a recognition that man has a private and personal side, a side once fulfilled through religion. Whatever modern man thinks of religion, he cannot stop seeking the kind of fulfillment it has traditionally offered.

Many of course continue to seek private fulfillment by constancy to religion, and conceivably more could return. The non-religious can perhaps find personal meaning in personal values or rationalistic philosophy. But they will not find it in the easy answer of politics and government. Modern man may reject the majesty of the church, but he will not find his substitute in the majesty of the state.

"What is it government cannot provide? It cannot provide values to persons who have none, or who have lost those they had. It cannot provide a meaning to life. It cannot provide inner peace. It can provide outlets for moral energies, but it cannot create those energies. In particular, government cannot cope with the crisis in values which is sweeping the Western world."

This last is a warning not only to students seeking moral fulfillment in revolution, but also to those who seek to use politics to suppress the ideas the students represent, and above all to those who would use politics to satisfy the sincere longings the students' political activities express. Government can do none of these things; "the limits of politics must be perceived, and the province of moral philosophy greatly expanded."

Precisely so. Modern man has turned too often and too easily to the State for answers to all his problems. He needs to recognize that there are answers he must seek, if not in his soul, at least in his innermost self.

TWO THOUSANDTH GARY CORPSMAN EARNS HIGH SCHOOL EQUIVALENCY

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. PICKLE. Mr. Speaker, although the Job Corps program continues to come under fire, they are still rendering a great service to the underprivileged youth of our Nation. In this hour of attack, I am especially proud to include in the RECORD an example of what can be done.

The Gary Job Corps Center in San Marcos, Tex., recently approved the 2,000th young man for a high school equivalency certificate. Think of the impact—2,000 young men who would have been, in all probability, high school dropouts. Instead of becoming a drain upon society, these 2,000 now have adequate tools to cope with an educated world. They have tools that would have been denied them had it not been for the dedicated work of Job Corps instructors.

I include the following article from the June 19 San Marcos Record at this point in the CONGRESSIONAL RECORD for the benefit of all of my colleagues interested in Job Corps—friend and critics alike:

TWO THOUSANDTH CORPSMAN EARNS HIGH SCHOOL EQUIVALENCY

Robert D. Smith, son of Mr. and Mrs. S. H. Smith of 2305 Arabella, Houston, became the 2,000th Gary Job Corpsman to earn a high school equivalency certificate. He scored "above average" in all categories tested.

Smith has been enrolled in Job Corps for four and a half months and is training to become an auto partsman. He dropped out of school after completing the seventh grade because, "I wasn't making any progress and I got disgusted." Even though entry test scores showed a reading level of eighth grade and math computation at slightly less than sixth grade, he soon qualified to enter the General Educational Development (GED) program and was able to progress to the point of a high school equivalency.

"I became interested in Job Corps by accident. A friend got a letter from the Texas Employment Commission asking him to report for a Job Corps interview. He asked me to go with him and I did. We both signed up and came to Gary," Smith stated. He added, "Job Corps is a great place for someone who really wants to learn and better themselves. I now plan to work my way through college as an auto partsman and, someday, become an accountant."

Gary is the largest Job Corps Center in the Nation with an average enrollment of 3,000 young men between the ages of 16 through 21 and offers a program of basic education and job skill training in 34 vocational areas. The GED program is a part of basic education and is designed to enhance the corpsman's employability.

Joe Pitts, Director of Education and Training, stated, "We place a great deal of importance in the GED program. Experience has taught us that a great number of our graduates were somewhat restricted in opportunities without a high school education or its equivalency. We feel that a young man is much better equipped to compete for gainful employment if he has an equivalency certificate to supplement his job skill training."

APARTMENTS OVER FEDERAL BUILDINGS

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. KOCH. Mr. Speaker, I am introducing a bill today with 14 of my New York City colleagues to enable the General Services Administrator to transfer, at no cost, air rights over Federal buildings to nonprofit low- and middle-income housing sponsors and public housing authorities. Under present law, airspace in excess of Government needs can be rented or sold, but at fair market value.

In our Nation's cities, where space is at such a premium, many Federal buildings, and particularly post offices, lie low between their towering neighbors. The airspace above these Federal buildings is unoccupied. In the Borough of Manhattan alone, there are over 30 postal facilities which rise four stories or less.

This waste of space continues while land prices soar and while apartment vacancy rates plumet. In New York City the vacancy rate is now less than 1 percent.

In addition, low- and moderate-income housing construction in New York City has declined dramatically. Total construction of multiple dwelling units in 1968 numbered 10,228 as compared to 43,043 in 1964.

The decline has come even though sponsorship for low- and moderate-income housing is readily available from religious groups and unions. It is due in great part to high property values and high labor and construction costs. The total of all these expenses make it near to impossible for a sponsor to hold project costs within the limits established by the Federal Government for assistance eligibility. I know that these problems confront other cities, too.

The bill I am introducing today would help urban areas across the country to eliminate this cost pinch, for it would provide space over Federal buildings at no cost for the construction of low- and moderate-income housing. Thus a major hurdle blocking the construction of such housing would be eliminated.

Multiple purpose construction is not a unique concept. Indeed, most city apartments house stores on the street level. And, in New York City a special education construction fund has been established for the construction of combined school and apartment house buildings. This combination has proved to be most successful.

An immediate opportunity to construct a post office/apartment building lies in mid-Manhattan. The Post Office Department is currently planning to build a four story postal facility on the Murray Hill site. The airspace over the post office, occupying a full city block, could—and I believe should—be used for an apartment building.

During the past 6 months, Secretary George Romney has talked a lot about experimental housing and "breakthrough" programs. Here is an opportunity for the Department of Housing and Urban Development Secretary to open a new housing resource. I am urging Secretary Romney to work with Postmaster General Winton Blount in developing a multiple-purpose building which would provide a national example of how airspace over Federal buildings can be utilized for housing some of our country's people so desperately in need of better shelter.

The following is my bill which is being referred to the Public Works Committee:

H.R. 12462

A bill to authorize the Administrator of General Services to transfer certain airspace for use for housing purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever the Administrator of General Services determines that the airspace over any public building of the United States is not needed to carry out a governmental function, he is authorized to transfer such airspace without consideration to any person for the construction within such airspace (1) of low- and moderate-income housing covered by a mortgage insured under section 221(d)(3) of the National Housing Act which receives the benefits of the below-market interest rate provided for in the proviso in section 221(d)(5) of such Act or (2) of low-rent housing assisted under the U.S. Housing Act of 1937. Such transfer shall be on such terms and conditions as the Administrator of General Services deems necessary to protect the interests of the United States and to insure that if such property ever ceases to be used for such low- and moderate-income housing or such low-rent housing, it shall revert to the United States, or the United States will be paid adequate compensation for such airspace.

U.S. YARDS GEARING UP FOR NIXON MARITIME PROGRAM

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. PELLY. Mr. Speaker, President Nixon's campaign pledge last fall setting forth his intention to restore the United States as a first-rate maritime power could portend the beginning of a bright new era in American maritime history. This was the position taken in a speech delivered by Edwin Hood, president of the Shipbuilders Council of America, in a maritime day address before Seattle business and maritime leaders on May 23.

Mr. Hood's message has great meaning to all of us interested in strengthening our "4th arm of defense," our merchant marine, and because of its timeliness and its importance, I insert the text of the speech at this point in the RECORD:

U.S. YARDS GEARING UP FOR NIXON MARITIME PROGRAM

This is somewhat of a return engagement for me, and I must say I feel highly honored. Many of you may recall that I spoke here on Maritime Day five years ago.

To paraphrase an old proverb, much water has passed through Puget Sound in the meantime. But, the other day, as I re-read that 1964 speech, I was struck by the fact that little has changed with respect to the American merchant marine.

Maritime Day was intended—then as now and always—as a day of commemoration and celebration, but as one views the present state of our nation's shipping resources, there is little cause for celebration and not much more to commemorate.

There have of course been some noteworthy developments in both our shipping and shipbuilding enterprises in the past several years—in the past decade for that matter.

Our ship operators have sponsored new concepts for water transportation. Our shipyards have produced the most sophisticated merchant ships ever designed by man. With typical American ingenuity and inventiveness, the technology of both shipping and shipbuilding has advanced substantially in our country under what can only be described as less than optimum circumstances. With the same versatility, the logistics of supplying our servicemen in Southeast Asia—and elsewhere around the world—have been accomplished largely with ships of increasing antiquity and diminishing numbers.

For these accomplishments, we have every reason to celebrate.

But, our rejoicing can only be muffled by awesome realities on the other side of the ledger.

The American-flag merchant marine has carried a steadily decreasing volume of our own trade and commerce: the figure today is approximately 5 percent. Ships 20 years of age and older compose nearly 80 percent of our maritime fleet: only minimal attention has been given to the replacement of these war-built vessels.

There has been a widening gap between the demand for American ships and the supply of American ships. There has been no national commitment to the coordinated development of an adequate, suitable and reliable shipping fleet: as a consequence, national maritime policy has been in a sad state of disarray. In the absence of specific goals and adequate support, various segments of the maritime community have been buffeted by confusion, dissension, uncertainty, false promises and endless hope.

Meanwhile, the Soviet Union has emerged as a maritime power of impressive strength and quality. In about two years, the Russian maritime fleet will surpass the American merchant marine in both tonnage and numbers of ships. This remarkable maritime growth has been accomplished in the relatively short span of the past decade. While we have been withering and drifting, the communists have been growing and moving on a fixed course at sea. They have been steadfast in their purpose: we have been indecisive.

We should not commemorate these phenomena, my friends, for they strike at the very foundations of our capability to survive as a nation virtually surrounded by water and dependent upon the seas for commerce and protection.

Yet, on Maritime Day 1969, it seems to me that we can properly commemorate the clear vision of the need for change, the need for decisiveness and the need for action which these happenings so powerfully dictate.

President Nixon recognizes the need for change. He has declared his intention to restore the United States as a first-rate maritime power which it certainly is not today. His advisers will shortly present to him a blueprint for redevelopment of the nation's maritime resources in conformance with the desirable goals he defined here in Seattle last Fall. Among other objectives, he promised support for a domestic shipbuilding program to produce a fleet of American-flag merchant ships capable of carrying 30 percent of the nation's trade and commerce instead of the present deplorable 5 percent.

The expected program to carry out this ambitious objective comes "at the end of the beginning" of the Nixon Administration. There is reason for optimism. It could, and indeed must, mark the end of a serious downward trend toward maritime extinction. It could, and must, constitute the beginning of a bright new era in American maritime history. It will surely have strong bipartisan support in the Congress.

Senator Warren G. Magnuson of this State, the influential Chairman of the Senate Commerce Committee, has long been a leader in the advocacy of measures for revitalization of the American merchant marine similar to those now advanced by President Nixon. Senator Henry M. Jackson, from nearby Everett, has been a longtime supporter of the merchant marine; as a member of the Senate Armed Services Committee, he is among those who view our shipping and shipbuilding capabilities as fundamental components of national security.

On the other side of the political aisle, Congressman Thomas M. Pelly of this City, a ranking member of the House Merchant Marine & Fisheries Committee, has consistently championed the proposition that U.S. shipping and shipyards are vital to our economic well-being and to a favorable balance of international payments.

But for the efforts of these three distinguished public servants—and others—in marshalling Congressional cohesiveness, the American merchant marine would be in worse shape than it now is. If anything, the role of the Congress in the last decade can be likened to the legendary character who kept his finger in the dike to prevent a complete disaster.

To be sure, the Congress alone cannot hold back the tide indefinitely. Nor will the Administration's program, however promising, guarantee utopia. There are many problems to be solved; many obstacles to surmount; many responsible voices to be heard; and many planning, financial and fiscal bridges to cross.

The task will not be easy!

Our nation is today beset with a host of domestic and international problems of nearly incomprehensible dimensions. Social, urban, crime and defense problems vie for solution. The urge to curb inflation and to promote economic stability is persistent. Competition for national resources and Federal funding is thus increasingly intense.

In this atmosphere, the needs of the American merchant marine will not be considered in isolation. They must be justified on a logical and sound national interest basis. These needs, no matter how urgent, cannot escape the assignment of a priority which has a relation to all of the nation's other pressing wants.

Maritime industry and labor, as well as government, thus face an imposing challenge. On the one hand, the ills of the merchant marine cannot be remedied without greater expenditures of government funds than has been the case in the recent past. On the other hand, pressures to minimize or level governmental expenditures for maritime purposes can be expected to continue.

Some medium course between these two extremes is surely within the realm of possibility. But accomplishment, it occurs to me, will demand ideas, approaches and attitudes different from those of the past.

The costs of building ships, the costs of operating ships, and the costs of paying American craftsmen and seamen will always be in direct proportion to our high standard of living. No apology on this score should ever be necessary. But, we should strive to offset this self-evident truth with greater vision, greater initiative, greater imagination, greater enthusiasm, greater energy and greater productivity.

That new, modern merchant ships are needed for defense and commerce is an established fact. To increase from a level of 5 percent to 30 percent carriage of U.S. exports and imports in American bottoms by the mid-1970's, as envisoned by President Nixon, the U.S. flag merchant marine will require many more merchant ships than have been ordered and delivered in recent years.

In keeping with accepted economic axioms, it can be anticipated that shipbuilding capacity in this country will be equal to any expanding demand. This has been demonstrated in the past. Every major U.S. yard is at this moment engaged on either an upgrading or expansion program. Lockheed Shipbuilding and Todd Shipyards are very much in this group. But there would be no point in building ships merely to keep our shipyards occupied. Newly delivered ships should and must be put to active use, profitably employed, projecting our national interests.

If the 30 percent target is to be attained—and the United States will never again be a first rate maritime power unless it is—American industry and American business—the American public—will have to be convinced of the merit of shipping on U.S. vessels. They will have to be convinced that the American merchant marine can be adequate and reliable. They will have to be convinced that shipping by U.S. flag vessels can, in most trades, be no more expensive than shipping by foreign flag vessels. In such a promotional effort, industry, labor and government must share coordinate responsibility.

Those who need to be persuaded must be convinced on a variety of issues if the nation's maritime dilemma is to be resolved. This applies broadly.

On more than one occasion, the late Senator E. L. (Bob) Bartlett—a highly respected member of the Congress; perhaps one of the most knowledgable on maritime and shipyard problems—expressed the belief that the mood of the Congress did not favor a change in the Jones Act which reserves the domestic waterborne trades of the United States to American built ships. In the alternative, he espoused the pragmatic view that more vision, more imagination and more planning was necessary on the part of anyone predicating a shipping venture on the extremely remote possibility that an exemption to the Jones Act might be granted.

I remember talking with him more than two years ago about a proposal to develop suitable vessels to carry liquified natural gas from Alaska to Hawaii under a joint industry-government maritime research program. For the same service, he told me of another proposal involving American built barges and no government assistance.

He was most enthusiastic about both ideas, but his enthusiasm was apparently lost on those who even now want a shortcut exception to long established, time proven law for a particular situation regardless of the potential adverse impact on other sections of the country. They would substitute foreign labor and foreign ships for American labor and American built ships. They would ignore the tremendous investments in American built ships already made by other American citizens by virtue of the Jones Act.

That is not to imply that the needs of Hawaii—or any other State of this Union—are unimportant. What I mean is simply this: let us accept the cold facts of life, as Senator Bartlett used to suggest, the Jones Act is here to stay; let's not be deluded; let's get on with the task of finding ways and means for using American built vessels in our domestic trades; let's not hem and haw, procrastinate and mesmerize ourselves into believing that the Congress will suddenly reverse the accumulated logic and wisdom of nearly two centuries.

In almost the same context, the developing requirements for tankers to move crude oil from Alaska to refineries on the West Coast and East Coast are being discussed. With regularity, over the past six months, there have been misleading comments questioning the ability of American shipyards to produce tankers in sufficient numbers or adequate sizes, to accommodate the tremendous volume of North Slope oil which will flow to American markets in the 1972–1980 period.

Various methods of transportation, including pipelines, are under consideration. The numbers of tankers that will be needed in 1972 and later are still far from exact. Until the test voyage of a supertanker—the SS *Manhattan*—through the Northwest Passage this Summer is completed, until decisions are reached as to routes and tanker sizes, it is difficult to determine whether the demand will be for twenty 250,000 dwt. tankers or twenty 70,000 dwt. tankers or both.

Nonetheless, on April 30, 1969, Congressman Howard W. Pollock of Alaska said: "I see no reason why these ships can't be built in American shipyards with American labor." This is the prevailing view of the Congress. Yet, there are those—some from Congressman Pollock's home territory—who want to use foreign-built ships.

To them—and other skeptics—let me say most emphatically that the U.S. shipbuilding industry is gearing up to supply whatever types of ships—in whatever numbers—that will be needed for the Alaskan trades. In the last several months, three American yards have announced plans to build tankers in the 200,000/250,000 dwt. range. At least two other yards are understood to be developing innovations to permit construction of supertankers.

Clearly, no exception to the Jones Act is necessary. With proper planning and mutual faith in one another, oil companies, tanker operators and shipyards can coordinate the supply and demand for tankers to serve Alaska. In a like spirit of cooperation, all other problems of the American merchant marine can be solved—without detriment to national security and without violation to American industry and American labor.

And, so my friends, as we observe Maritime Day 1969, we may be momentarily unsure, but certainly not bowed. We could well be marking the end of a gloomy period in American maritime history and the begin-

ning of a new age of maritime thinking and action which could lead our nation to unprecedented effectiveness on the oceans. As Plato wrote many years ago: "The beginning is the most important part of the work." In this sense, we can look to the future with renewed optimism.

MAGNIFICENT GUN MUSEUM OPENING IN OKLAHOMA

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. EDMONDSON. Mr. Speaker, tomorrow is a redletter day for the people of northeastern Oklahoma. It marks the opening of the J. M. Davis Gun Museum at Claremore to the public. This museum will house the world's largest privately owned collection of firearms, and its opening is a tribute to the will and dedication of the people of Claremore.

Mr. James Monroe Davis, who for many years has displayed part of this collection at his hotel in Claremore, started his collection when he was 7 years old, when his father gave him a dollar and a half muzzle loading shotgun. He is 82 years old now, and still collecting guns.

The collection now has 20,000 firearms, more or less, and when cataloging is complete and the entire collection is put on display, the story of the complete evolution of firearms will be shown.

The story of this public museum began in 1965, when Mr. Davis issued a letter of intent to the State of Oklahoma. In this letter, he offered to lease the entire collection to the State for 99 years for the sum of $1, with an option to renew, if the State would provide suitable housing. As a result of this letter, the Governor appointed a commission of five members, which began making plans for the museum. When plans were complete, the State legislature appropriated $500,000, plus an operating budget, and work on the building was started.

The part of the building which is being opened tomorrow contains 14,400 square feet, with 239 lighted cases to display 10,000 firearms, or only about half the entire collection. An interesting sidelight is the fact that the 10,000 firearms to be displayed initially have never before been publically displayed. In addition to the many, many guns Mr. Davis displayed at his hotel, seven rooms of the hotel were filled with pieces of the collection stacked like cordwood. The museum staff will continue to catalog items in the collection and open additional sections to the public as the cataloging is completed.

Mr. Davis' admirable collecting instincts did not stop at firearms, and visitors to the J. M. Davis Gun Museum at Claremore also will see more than 2,000 steins, a large collection of Indian artifacts, saddles, statuary, pocketknives, cannon, and other items of interest.

Mr. Speaker, tomorrow truly is a great day for the people of Claremore. To give you an illustration of the local interest in this museum, let me tell you about the local drive to raise $3,500 to commission a portrait of Mr. Davis to hang in the museum. The drive opened at 8 o'clock this morning, and $1,200 was raised in the first 2 hours. I have not been in touch with Claremore since then, but I would be surprised if the entire amount is not raised today.

The opening of this museum is one more important step in the development of northeastern Oklahoma as a place of appeal and interest to all Americans. I hope my colleagues will find the opportunity to visit us soon.

TRIBUTE TO HON. WILLIAM H. BATES

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. BROOMFIELD. Mr. Speaker, we all feel a deep sense of loss today caused by the passing of one of our most beloved and distinguished colleagues. BILL BATES will be sorely missed by everyone who knew him. BILL BATES was a quiet, sincere, and dedicated American. He was a man molded in the image of the best American traditions.

I can recall seeking his expert advice and counsel on many, many occasions, especially in matters dealing with national security. BILL BATES was that kind of man—the kind you felt you could turn to for advice in deciding a matter of conscience. His advice was always offered in the most gracious and helpful manner. As the ranking minority member of the House Armed Services Committee, his expertise and up-to-date information were unquestioned. And, we could depend that in matters affecting national security, BILL BATES always put sincere good judgment above any potential for partisan gain.

It was typical of BILL BATES' character that he began in public life by selflessly laying aside his chosen career in the U.S. Navy. He did so to continue serving the people of Massachusetts in the fine tradition of his father, the Honorable George J. Bates, following the latter's untimely death in an air crash. BILL BATES assumed his new career with the same vigor and dedication that he devoted to every task he undertook.

Mr. Speaker, no one can describe adequately the grief BILL BATES' family and loved ones are suffering at this moment. All of us who knew and admired him are experiencing somewhat the same sense of tragedy. But the real loss has been suffered by the American people—the American people to which BILL BATES devoted his life and energy. Although his quiet and self-effacing nature may have made him a remote and even an unknown figure to many Americans, he was their friend and their servant during all of his years in Congress. America cannot afford to lose men of the caliber of BILL BATES.

I know, Mr. Speaker, that each one of us here today joins in extending the most sincere condolences to Mrs. Bates, their daughter Susan, and the rest of his family.

U.S. COAST GUARD AUXILIARY 30TH BIRTHDAY

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. CHAMBERLAIN. Mr. Speaker, this year the U.S. Coast Guard Auxiliary observes its 30th birthday. On June 23, 1939, Congress established the auxiliary as a means of assisting the Coast Guard in promoting boating safety. The tremendous growth and popularity of recreational boating, which in recent years has made many of our waterways resemble our urban highways at rush hour, underscores the vital importance of this organization.

During 1968, a total of 4,195 boating accidents were reported, resulting in 1,342 fatalities, 1,284 other personal injuries and over $6½ million in damage. I am sure that without the work of the Coast Guard Auxiliary and other like-minded, dedicated groups and programs this incredible toll would have been substantially higher. As we approach National Safe Boating Week—June 29–July 4—there could be no better time to salute the auxiliary for its service to our citizens and to focus greater public attention on the need for additional effort to cope with the tragedy on the waters of our Nation.

At this point I insert an article, "The U.S. Coast Guard Auxiliary Celebrates its 30th Anniversary," appearing in the June 1969 issue of the "Proceedings of the Merchant Marine Council":

THE U.S. COAST GUARD AUXILIARY CELEBRATES ITS 30TH ANNIVERSARY

(NOTE.—At one time or another during the 1969 boating season, you will probably come in contact with the activities of a unique boating organization—The U.S. Coast Guard Auxiliary. Auxiliary members will be busy this year, as they have been for the last 30 years, promoting boating safety in almost every waterside community in the country.)

The Coast Guard auxiliary dates back to 1939, though the concept of the organization had been proposed long before. After World War I, recreational boating began to steadily increase, so much so that by the end of the thirties it emerged as one of the most popular sports in the nation. Unfortunately, this rise in popularity was paralleled by a corresponding jump in boating accidents and fatalities. The Coast Guard had found itself in an uncomfortable position. On one hand it was required by law to enforce Federal requirements but on the other, the service was hampered in its mission by inadequate numbers of vessels and personnel. With the job steadily pulling ahead of the Coast Guard year by year, the atmosphere was right for a new approach, and it was not long in coming.

A group of prominent yachtsmen proposed the formation of an organization composed of owners of motorboats and yachts voluntarily affiliated with the Coast Guard. This boating group could assist the Coast Guard in the promotion of safety at sea by becoming proficient in all phases of seamanship and navigation, and by encouraging other boatmen to follow their example.

The plan won the wholehearted support of the Commandant of the Coast Guard, Adm. R. R. Waesche, and on June 23, 1939, Congress established the Auxiliary under the name of the Coast Guard Reserve. Thus today's Auxiliary became and still is, the only boating organization in the country specifically authorized and established by Congress.

During the second World War, Auxiliary members distinguished themselves on the home front. A new and fully military reserve was established by Congress in February 1941, and the old reserve was renamed the Coast Guard Auxiliary. Auxiliarists and Temporary Reservists did their share in defense of the country by performing beach patrols, harbor patrols, hurricane watches, search and rescue missions, and port security activities. Their efforts freed regular Coastguardsmen from routine stateside duties and allowed them to become an integral part of the naval forces fighting overseas.

Following the war, the Auxiliary reverted to its peace-time missions and gradually developed its wide range of programs that are so well known today. Each activity was based on the responsibilities explicitly set forth by Congress: ". . . to assist the Coast Guard:

To promote safety and effect rescues on and over the high seas and on the navigable waters;

To promote efficiency in the operation of motorboats and yachts;

To foster a wider knowledge of, and better compliance with, the laws, rules, and regulations governing the operation of motorboats and yachts; and

To facilitate the other operations of the Coast Guard.

Thus, the duties of the Auxiliary actually are reduced into two basic channels: instructing the public in safe boating and assisting the Coast Guard in operational matters.

EDUCATING FELLOW BOATMEN

Undoubtedly, the greatest service of the Coast Guard Auxiliary is its public education program. Last year more than 180,000 boatmen all over the country benefited from this instruction. Though it is nearly impossible to pinpoint the amount of good the education program is doing in terms of lives saved and accidents averted, boatmen are convinced that the Auxiliary's training activities have a positive effect on making boating safe.

There are three different courses to choose from, each designed to meet the needs of a particular segment of the boating population.

The Outboard Motorboat Handling Course is intended to present the novice outboarder with the basic knowledge required for the safe operation of his boat. It is a one-lesson course and lasts approximately 2 to 3 hours. The classes vary in size from a few to hundreds at one time. The subjects presented by the Auxiliary instructors in this course cover the spectrum of boating activities—boat construction and terminology, lifesaving devices, overloading, legal requirements, seamanship, rules of the road, fueling, aids to navigation, recommended equipment, and boat handling.

The Safe Boating Course is more valuable than the one-lesson course in that it covers more ground and yet is still short in duration. It is presented in three lessons, generally 1 day a week over a 3-week period. Auxiliarists rely on this course for beach and summer resort areas where vacationers operate boats for a relatively short period of time.

The Basic Seamanship Course is the mainstay of the Auxiliary's public education program. It is geared especially to those boatowners who have little or no experience in boating, although it is valuable as a refresher for the more experienced boaters. Basic Seamanship in an eight-lesson course given over an 8-week period with homework assignments and practical work in between. Subjects covered include boat construction, maneuvering, charts and compasses, marlinspike seamanship, aids to navigation, rules of the road, legal responsibilities, and safe operation.

All three public education courses are taught only by qualified Coast Guard Auxiliary instructors. These men and women have had years of experience on the water and are well acquainted with the subjects they are teaching. Each has completed a special course of training and practice teaching to prepare himself for his assignment. If you should elect to take an Auxiliary course, you are assured of receiving quality instruction.

SAFE BOATING CHECKS

Another major education program of the Coast Guard Auxiliary is the courtesy examination of motorboats. Next to the boating course, the Courtesy Motorboat Examination (CME) is the best known trademark of the Auxiliary. Courtesy examinations are provided as a free public service for the benefit of boatowners and are performed only by specific request. It is, in effect, a private practical education program involving a valuable exchange of boating safety information.

Courtesy Motorboat Examinations are conducted by specially designated members of the Auxiliary who, like instructors, have completed a period of intensive training and testing. Auxiliarists who complete this training are considered to be among the most knowledgeable of boatmen. Each courtesy examiner is fully aware of the intricacies of state and Federal law as they pertain to recreational boats. They know exactly what types of equipment belong on each class of boat and also have other recommendations they consider essential for truly safe boating.

Boatmen who pass the CME are given a decal—the Seal of Safety—which is displayed on their boats. This decal is an indication that the boat not only meets federal regulations, but also goes far beyond in safety standards and required equipment. Because of the obvious value of the CME, boats displaying the decal normally will not be boarded by the regular Coast Guard or most State enforcement officials unless an apparent violation in operation or equipment is noted.

SAVING LIVES

Although receiving less publicity than they deserve, the Coast Guard Auxiliary's operational activities help thousands of recreational boaters each year who are in trouble. Auxiliarists cooperate with the Coast Guard and State boating officials to augment their forces for search and rescue missions, safety patrols, and regatta patrols. Members take pride in the fact that the Auxiliary is the only boating organization in the United States that provides these services on a regular, scheduled basis.

The success of the Auxiliary's operational efforts are evidenced by last year's statistics: 128 lives saved, 4,540 regatta patrols conducted, and 7,234 boats assisted. Hundreds of Auxiliary members have received citations from the Coast Guard for their heroism in rescue work, while thousands of others have earned the gratitude of countless boatmen they have saved or assisted.

PROJECT AIM

Coast Guard Auxiliary units throughout the country sponsor a 4-day visit to the Coast Guard Academy for a selected number of high school students. Called the Academy Introduction Mission, or Project AIM, this program was initiated in 1955 to acquaint qualified young men with the Academy and the opportunity for a career in the Coast Guard. Normally, each Auxiliary division selects a student who has the potential for qualifying as a cadet from a physical, mental, and moral viewpoint. The Auxiliary pays his way to and from the Academy and promotes local publicity. Auxiliarists devote much time and money to this worthwhile project with candidates coming from as far away as Alaska. Last year 143 young men participated in the program.

JOINING THE AUXILIARY

The Auxiliary is eager to accept new members. Although the rolls total over 25,000 at this time, a newly announced goal projects an increase to 100,000 members. Both men and women may apply for membership. You must be at least 17 years old, a U.S. citizen, and own at least a 25 percent interest in a motorboat, yacht, aircraft, or radio station. The ownership requirement may be waived if you have special qualifications making you a desirable addition to the Auxiliary.

Individuals accepted for membership at the Auxiliary undergo an initial Basic Qualification Course. They learn elements of seamanship, piloting, weather, communications, Auxiliary history and organization, as well as many other subjects. When they have successfully passed this course, they graduate from a conditional member status to regular membership. This entitles them to participate in all of the programs of the Auxiliary, such as Courtesy Examination, Operations, Instruction, and Public Education.

Perhaps the most attractive program available to regular members is that of advanced membership training. Every basically qualified Auxiliarist has the opportunity to advance his nautical training in one of seven fields of operational speciality—Seamanship, Navigation, Patrol Procedures, Search and Rescue, Administration, Weather, and Communications. The advanced courses in each of these areas go far beyond those usually offered by other groups, giving Auxiliarists a chance to become true experts in the field of their choosing. Those who become proficient in all seven subjects are elevated to Operational Membership (AUXOP), the highest achievement in the Auxiliary.

Remember, the Auxiliary is a voluntary, nonmilitary organization. Though there is an authorized uniform, it is optional for each member. The organization's close affiliation with the Coast Guard remains strictly civil in nature and does not in any way constitute inactive or active military service.

If you should have any questions about any of the programs of the Auxiliary, or are interested in joining the organization, contact the nearest flotilla in your area or write the Director of Auxiliary in any of the following locations:

Director of Auxiliary, First Coast Guard District, J. F. Kennedy Federal Bldg., Government Center, Boston, Mass. 02203.

Director of Auxiliary, Second Coast Guard District, Federal Building, 1520 Market Street, St. Louis, Mo. 63103.

Director of Auxiliary, Third Coast Guard District (NA), Governors Island, New York, N.Y. 10004.

Director of Auxiliary, Third Coast Guard District (SA), Coast Guard Base Gloucester, King and Cumberland Streets, Gloucester, N.J. 08030.

Director of Auxiliary, Fifth Coast Guard District, 431 Crawford Street, Portsmouth, Va. 23705.

Director of Auxiliary, Seventh Coast Guard District, 51 SW. First Avenue, Miami, Fla. 33130.

Director of Auxiliary, Eighth Coast Guard District, Custom House, New Orleans, La. 70130.

Director of Auxiliary, Ninth Coast Guard District, New Federal Building, 1240 East Ninth Street, Rm. 2021, Cleveland, Ohio 44199.

Director of Auxiliary, 11th Coast Guard District, Heartwell Bldg., 19 Pine Avenue, Long Beach, Calif. 90802.

Director of Auxiliary, 12th Coast Guard District, 630 Samsome Street, San Francisco, Calif. 94126.

Director of Auxiliary, 13th Coast Guard District, 618 Second Avenue, Seattle, Wash. 98104.

Director of Auxiliary, 14th Coast Guard District, 677 Ala Moana Boulevard, Honolulu, Hawaii 96813.

Director of Auxiliary, 17th Coast Guard District, Post Office Box 3-5000, Juneau, Alaska 99801.

HARRIS B. STEINBERG

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. RYAN. Mr. Speaker, it is with great sadness that I call to the attention of my colleagues the death of Harris B. Steinberg, noted defense attorney, who died on June 4. A Phi Beta Kappa graduate of the City College of New York in 1932, Mr. Steinberg went to Harvard Law School where he graduated in 1935. Subsequently, he served as an assistant on Thomas E. Dewey's special investigation of rackets in New York. He worked briefly for the Securities Exchange Commission as an attorney, and in 1938 District Attorney Dewey appointed him as an assistant district attorney for New York County—a position he held for 5 years.

Throughout his career Harris Steinberg earned the respect of his adversaries and a reputation for his dedication and devotion to the administration of justice. A constant defender of the rights of the oppressed, Mr. Steinberg once said:

When the Constitution is abused, people get mad at the Constitution rather than at the abusers.

Harris Steinberg enjoyed a reputation as a thoroughly effective defense attorney. His courtroom work was much publicized during the case of libel brought against Ralph Ginsburg by Senator BARRY GOLDWATER.

During my service as assistant district attorney of New York County I came to know and admire Harris Steinberg. Not only was he an able and talented lawyer, but he was a warm and sensitive human being whose friendship I valued. He will be greatly missed.

I extend my deepest sympathy to Mrs. Steinberg and to his two children, Dr. Robert Steinberg and Jane Steinberg.

I include at this point in the RECORD the New York Times obituary of June 5, 1969:

HARRIS B. STEINBERG DIES AT 57; NOTED CRIMINAL DEFENSE LAWYER; CIVIL LIBERTARIAN AND ADVOCATE OF JUDICIAL REFORM ASSISTED "WHITE COLLAR" DEFENDANTS

Harris B. Steinberg, a lawyer who once worked for a dollar a day on Thomas E. Dewey's rackets investigation team and who later became one of the nation's foremost defensive attorneys in criminal cases, died of brain cancer yesterday in the Yale-New Haven Hospital. He was 57 years old.

Mr. Steinberg did not attain the national fame of Emile Zola Berman, attorney for Sirhan B. Sirhan. He did not have F. Lee Bailey's flair for television appearances, nor Percy Foreman's florid, arm-waving style. And in his custom-made London suits and with his ever-present Schnauzer, he bore not the slightest resemblance to Perry Mason.

Yet Mr. Steinberg was the lawyer sought and retained by one after another defendant charged with a so-called "white collar" crime, such as embezzlement, libel or fraud. And his reputation, unlike that of several more well-known criminal lawyers, was as high on the judge's bench and the prosecutor's side of the courtroom as it was on the defendant's.

"Harris Steinberg exemplified the best of the traditions of the American criminal defense lawyer, and was pre-eminent in his dedication and devotion to the administration of justice," Warren E. Burger, Chief Justice-designate of the United States said in a statement yesterday.

Judge Burger is chairman of the American Bar Association's Project on Minimum Standards for Criminal Justice, of which Mr. Steinberg was also a member.

WELL-KNOWN CLIENTS

Judge Burger's remarks were echoed by lawyers, professors and judges who knew Mr. Steinberg as an advocate of judicial reform and as a leading civil libertarian. But it was in his role as defender of such people as Ralph Ginzberg, publisher of Fact magazine, and L. Judson Morehouse, former chairman of the New York State Republican party, that Mr. Steinberg became known to the public.

In 1968, Mr. Steinberg served as the chief defense lawyer in the libel suit by Barry Goldwater against Mr. Ginzberg. The 1964 Republican Presidential candidate charged that Fact had defamed him when it presented, in October, 1964, an article based on a mail poll of psychiatrists who were asked to attest to Mr. Goldwater's psychological fitness.

During the trial Mr. Steinberg brought into the courtroom a large blackboard, on which he drew a true and false "box score." Then, reading line by line through the article, he divided the statements into such categories as "true," "false," "false but accurately quoted" and "unimportant."

Mr. Goldwater, who had sought a $2 million verdict, was awarded $75,000.

Two years earlier Mr. Steinberg was successful in saving a client from a harsh sentence: in the case of Robert Friede, a wealthy youth charged with the homicide of his girl friend, the judge gave the defendant a two-and-a-half year to five-year sentence.

In that case, a 19-year-old girl had been found dead in the trunk of Friede's car. She had died from a narcotics injection administered by Friede, but the judge found that Friede had not intended to kill her.

Throughout his career the short, baldish lawyer wrote and lectured about the role of the defense attorney as well as about defects in criminal procedural law. At one point, in order to explain the ambivalence of certain statutes, he told a group of law students the following story:

A woman found a revolver in her son's suitcase and called her lawyer to ask what she should do with the weapon. The lawyer called Mr. Steinberg, and he called the police station. The police sergeant told Mr. Steinberg not to bring the gun to the station, because to do so would violate a law prohibiting the carrying of guns. Mr. Steinberg therefore took the gun apart, and then, taking a short walk outside, dropped pieces of it every few feet along the street.

In recent years Mr. Steinberg concentrated his efforts on restoring the public's sagging view of the criminal lawyer and on rebutting the attacks on the Bill of Rights.

"When the Constitution is abused," he said, "people get mad at the Constitution rather than at the abusers."

Mr. Steinberg was born in New York City and was reared in Brooklyn. He graduated from City College in 1932 as a member of Phi Beta Kappa, and from Harvard Law School in 1935.

AIDE TO DEWEY

For a few months after his graduation, Mr. Steinberg worked as an assistant on then District Attorney Dewey's special investigation of rackets in New York. He then went to the Securities and Exchange Commission as a junior attorney, and in 1938 returned to New York to work for Mr. Dewey as an assistant district attorney. He later served as a consultant in several state investigations.

Mr. Steinberg was a partner for 10 years in Boyle, Feller & Reeves (now Boyle, Feller & Hirsch) in New York. He was a member of the Association of the Bar of the City of New York and served on many of the association's committees.

Mr. Steinberg was known in legal circles for his large private art collection and for his skill as a caricaturist. In addition, his wife said, he was a gourmet cook—"he had to learn, in self-defense, because I didn't know how."

Mr. Steinberg leaves his wife, the former Julie Sandler, with whom he lived at 22 East 36th Street, and two children, Dr. Robert Steinberg, a resident in surgery at Yale-New Haven Hospital, and Jane Steinberg, an assistant editor at Mademoiselle magazine.

A funeral service will be held tomorrow at 2:30 P.M. at Frank E. Campbell's, Madison Avenue at 81st Street.

STEEL IMPORTS

HON. JERRY L. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. PETTIS. Mr. Speaker, a year and one-half or more ago an ad hoc committee was formed for Members of this House to deal with the serious problem of Japanese steel imports into the United States particularly the west coast.

The statements of intent filed with the Secretary of State by Japanese and ECSC steel producers last year indicated a desire to help maintain an orderly steel market in the United States. This would be accomplished by a reduction of exports to the United States by these producers in the amount of approximately 22 percent in 1969 as compared to 1968. The statements further declared that they would try to maintain product mix and patterns of distribution as they had been.

Imports into the west coast for the first 4 months represent a glaring deviation from the previously announced policy of the Japanese. West coast imports are up 4.3 percent over 1968. One out of every 3 tons consumed represents imports—approximately triple the national rate. On the other hand, the Nation as a whole has experienced imports at a 29-percent lower rate than the comparable period for 1968. Dock strikes on the east and gulf coasts during the earlier part of the year undoubtedly accounted for some of this reduction; however, the fact remains that the west coast continues to bear the greatest part of the import burden of any section of the United States.

Mr. Speaker, if this incursion by a foreign power into our very basic steel industry cannot be controlled by the executive branch of our Government, then I feel that we must seriously consider taking legislative action or we may

find ourselves with thousands of jobless steel workers and rampant unemployment in other related industries such as mining and with an increasing dependence upon a foreign power for the most basic of commodities in this country—steel.

REPORT OF THE SPECIAL SUBCOMMITTEE ON CREDIT PROBLEMS OF SERVICEMEN IN PACIFIC COMMAND

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. PATMAN. Mr. Speaker, under House Resolution 1093, the Banking and Currency Committee was authorized to study the credit problems faced by servicemen in both the European and Pacific commands.

The report of the European portion of the investigation was published as a subcommittee print in October of 1968.

Today, I am placing in the RECORD the special subcommittee's report on the Pacific portion of its investigation. The subcommittee was headed by the gentleman from New Jersey (Mr. MINISH), and was composed of the gentleman from California (Mr. HANNA), the gentleman from Illinois (Mr. ANNUNZIO), and the gentleman from New York (Mr. WOLFF).

The report confirms the belief that the best way to fight loansharks and high-interest lenders is to establish credit unions wherever military personnel are stationed. The success of these credit unions has been spectacular and they have not only helped the servicemen but by easing their debt problems, have enabled these servicemen to better serve their country.

The members of the special subcommittee are to be commended for their efforts. I include the report herewith:

CREDIT AND CONSUMER PROBLEMS FACED BY SERVICEMEN IN PACIFIC COMMAND

INTRODUCTION

In October 1968, the special subcommittee, headed by Congressman Joseph G. Minish, Democrat of New Jersey, of the Domestic Finance Subcommittee, published a report "Investigation of Credit Frauds Used Against Servicemen in Europe and the Impact of Military Credit Unions in Solving the Problem". This report covers the second portion of the investigations authorized by House Resolution 1093, approved in the 90th Congress. This resolution provided for an investigation of the credit problems faced by servicemen in both the European and Pacific commands and the use of military credit unions in solving the problems.

In addition to Congressman Minish, the subcommittee visiting the Pacific command consisted of Congressman Frank Annunzio of Illinois and Lester Wolff of New York. They were accompanied by Retired Brigadier General Evert Thomas, Executive Director of the Defense Credit Union Council. General Thomas traveled at his own expense and served as an unpaid consultant to the subcommittee. The main body of the subcommittee was in the Pacific area during early December of 1968. Prior to the subcommittee's visit, Congressman Richard Hanna of California, also a member of the Domestic Finance Subcommittee, visited a number of military installations in the Pacific and gathered information which is included in this report.

During its investigation, the subcommittee visited military installations in Japan, Korea, Okinawa, Taiwan, Vietnam, Thailand and the Philippines. In addition, the subcommittee talked to a large number of servicemen and U.S. officials in Hong Kong concerning possible credit abuses and fraudulent activities in areas used by the military for Rest and Recuperation stops.

The subcommittee found, through its hearings and investigations, that many of the problems faced by servicemen in Europe, particularly the high cost of credit, were also prevalent in the Pacific and Far East areas. The main difference between the two areas, however, is that in Europe there is a far greater concentration of sharp practice operators than there are in the Far East.

This situation comes about because of the vast distances between military installations in the Pacific and Far East and because of the highly transient nature of the military personnel there.

Prior to the subcommittee's visit, servicemen, for the most part, had to obtain credit either through hometown banking arrangements, limited credit union service or from high rate finance companies.

Two credit unions, both headquartered in Washington, D.C., Navy Federal Credit Union and the Pentagon Federal Credit Union, provided mail order service for many Members of the Armed Forces in the Pacific areas. In addition, on-site credit union service was being provided by credit unions in Japan and Okinawa. However, these two credit unions are not chartered by any government or State regulatory agency but were operated under the auspices of the military installations which they served and through special arrangements made through the Department of Defense.

Thus, only two countries in the Pacific area have direct on-site credit union service and the subcommittee notes that in the areas where these two credit unions operate, they perform an outstanding service.

It is more difficult to evaluate the effects of the mail order credit union service, since it functions mainly as a lending operation and because of its distance and time delay factor, cannot provide full credit union service.

Since the subcommittee's visit, however, two new credit unions have been established—one at Clark Air Force Base in the Philippines and the second in Seoul, Korea. The Clark facility is a suboffice of the Barksdale Air Force Base Federal Credit Union in Louisiana, while the Seoul, Korea facility is a suboffice of the San Diego Navy Federal Credit Union.

JAPAN

U.S. military forces in Japan are provided with on-site credit union service through the United Credit Union. This credit union, which was formed in 1959, has 28,000 members and $9.7 million in assets. In addition, to its central office at Fuchu Air Station outside of Tokyo, United operates additional branches or suboffices that blanket the entire country. United is a unique credit union. It was organized because of a need for low-cost, reliabe credit among servicemen in Japan. However, at the time of the subcomittee's trip, the credit union was not charted nor sanctioned by any U.S. government or military agency. Thus, United had to operate as an unofficial credit union, although the credit union did operate under this status in an extremely safe manner and provided excellent service for its members. Although the credit union is not federally chartered, it does follow all of the laws, rules and regulations of the Federal Credit Union Act and officials of the credit union have indicated they would like to be a federally chartered credit union, although they realize because of their location outside of the United States, this is impossible. As a result of the subcommittee's visit, arrangements were made for United to become a certified credit union under the Department of Defense overseas credit union program. These credit unions, which are more commonly called "Patman Plan Credit Unions" because the idea for such credit unions was suggested by Chairman Patman, are not chartered by the Bureau of Federal Credit Unions but are examined by that agency and are required to operate under the Federal Credit Union Act.

Because United had not been an accredited Patman Plan credit union prior to the subcommittee's visit, the Department of the Army did not allow soldiers to make allotments to United. However, now that United has received its accreditation, the Army is allowing its soldiers to make allotments to United.

United is performing an outstanding service for Members of our Armed Forces in Japan. For example, of the more than 17,000 loans outstanding at the end of July 1968, more than 10,000 of these loans or 50% of the loans went to servicemen in the first four paygrades. An additional 34% of all loans went to servicemen in the paygrades E5 through E7. Thus, 91% of the loans outstanding at United are for servicemen in the seven lowest paygrades. This would indicate that the credit union is operating in the best interests of all its serviceman members, regardless of rank.

This is, of course, in keeping with the tradition of the type of service that credit unions should provide for members.

The lack of certification by United also presented one additional problem. All of United's offices are on either air bases or naval stations. Although United does not have offices on Army installations, they do have a substantial number of Army members. The Army personnel became members by joining at another military installation. During the subcommittee's visit to Fuchu Air Station in Japan, an Army comptroller was asked why there were no Army credit union facilities in Japan. His reply was that "the Army does not need credit unions since our men do not borrow."

This statement was immediately challenged by United credit union officials who pointed out that they had a substantial number of Army members in their credit union. To this, however, the Army comptroller stated that while it might be true that there were Army members in the United Credit Union, these were "savers" not "borrowers." During the luncheon break of the meeting, United Credit Union ran a survey of the number of Army borrowers in the credit union. It showed that there were nearly 1,300 Army borrowers in the United Credit Union with an outstanding loan balance of $434,000. Since there are roughly 5,000 Army personnel in Japan, the United survey shows that more than 1 out of 5 soldiers belong to United Credit Union. This is even more remarkable when it is considered that there are no credit union facilities on any Army installations. After this information was presented to the Army comptroller, he stated that if United received certification, he would not object to the credit union opening a branch at Camp Zama, about 40 miles from Tokyo, the Army's largest installation in Tokyo. In addition, he stated that the Army would provide facilities for the credit union.

It should be noted, however, that despite the assurances of the Army comptroller that United would be welcome at Camp Zama, efforts by United to open a suboffice there have been rejected by the Army.

All of the servicemen, both enlisted and officers, expressed praise for the work being done

by United and it is the subcommittee's belief that the military services should extend all cooperation necessary to the United credit union and every effort should be made to open branch offices where the need for such facilities are justified, regardless of the military service controlling the installation.

The following tables illustrate in graphic form the history and growth of United, as well as the outstanding record it has achieved since its inception in January 1959:

UNITED CREDIT UNION—ORGANIZATIONAL HISTORY

January 13, 1969: Fuchu office organized.

July 21, 1959: Tachikawa Air Base branch and central office (at Fuchu) organized.

March 15, 1961: Naha Air Base, Okinawa branch formed.

October 23, 1961: Yokota Air Base branch formed.

July 25, 1962: Yokohama Navy Housing Annex branch formed.

November 14, 1962: Misawa Air Base branch formed.

March 2, 1964: Atsugi Naval Air Station branch formed.

March 10, 1964: Merger of Kasuga branch (formed in July 1957) redesignated as Itazuke Air Base branch.

June 25, 1965: Naha Air Base branch withdrew.

November 22, 1967: Yokosuka Fleet Activities branch formed.

KOREA

Prior to the subcommittee's visit, there were no on-site credit union facilities in Korea, although the Pentagon Federal Credit Union does provide mail order credit union service to the troops and places membership and loan applications throughout various exchange facilities in Korea.

The question of credit union service in Korea has been under review for more than a year by U.S. military officials in that country. About 18 months ago, military officials conducted a survey to determine whether or not a credit union was needed. The survey reportedly showed that there was little credit union interest. The subcommittee was not presented with copies of the survey nor were any of the military officials well-informed about the results of the survey or how it was conducted. In addition, it does not appear that this survey was given wide circulation among the enlisted men, those who would derive the greatest benefits from the credit union. However, in June, 1968, a new survey was conducted which revealed a pronounced degree of support for credit unions in Korea.

For instance, 33.8% men interviewed said that they would borrow from a local credit union if available and 44.7% said they would deposit savings in a local credit union.

The results of the survey are listed below:

CREDIT REQUIREMENT QUESTIONNAIRE

	Yes	No
1. What is your pay grade? (E–1, E–2, O–3, O–4, or GS–9, etc.) Pay grade_____		
2. Have you served more than 4 years on active duty in the U.S. Armed Forces and/or as a military department GS rated civilian?	2,284	6,244
3. Are you married?	3,414	5,114
4. If not married, do not answer the next 3 questions:		
(1) Is your wife a U.S. citizen?	2,700	714
(2) Is your wife in Korea?	783	2,631
(3) Do you have any children?	1,985	1,429
5. Are you now in DEBT to a U.S. bank or credit union?	1,968	6,560
6. Do you anticipate any future need to borrow money during your tour in Korea?	1,732	6,796
7. Would you borrow money now if you could?	2,370	6,158
8. If you borrowed money, would it be to purchase items from the Post Exchange such as a tape recorder or car for State-side delivery?	3,779	4,749
9. Would you expect to have to borrow money in event of an emergency or mid-tour leave situation?	4,336	4,192
10. Do you have a bank or credit union savings account at home that will allow you to borrow money by mail?	3,392	5,136
11. Have you borrowed money by mail from a U.S. bank or credit union since your arrival in Korea?	1,074	7,454
12. Would you borrow money from a bank or credit union in Korea, if available?	2,881	5,647
13. Would you open a savings deposit account in a credit union in Korea, if one was available?	3,811	4,718
4. Are you now saving money through purchase of U.S. Savings Bonds and Freedom's Shares?	5,295	3,233
15. Are you now saving money through the 10 percent Uniformed Services Savings Deposit Program?	1,475	7,053

1. USFK personnel surveyed: 8,528 personnel of the Army, Navy, Air Force and GS rated civilians.

	Enlisted	Warrant officer	Officer	General services
Army	7,268	47	610	162
Navy	13	0	9	1
Air Force	323	0	58	19
PROVMAAG–K	9	1	3	0
	7,618	48	680	182

2. 26.8% are career men, i.e., have served more than 4 years of active Federal Service.

3. 40.0% are married.

(a) 79.1% have U.S. citizen spouses.

(b) 22.9% are accompanied.

(c) 58.1% have one or more children.

4. 23.0% are in debt.

5. 20.3% anticipate a future requirement to borrow money during their current tour in Korea.

6. 27.8% would borrow now if they could.

7. 44.3% would use their loan to purchase merchandise from the PX if they were to borrow money.

8. 50.8% anticipate a loan requirement if they went on emergency or mid-tour leave.

9. 39.8% have a bank or credit union connection in CONUS from whom they can borrow by mail if desired.

10. 12.6% have borrowed by mail during their current tour.

11. 33.8% would borrow from a local credit union if available.

12. 44.7% would deposit savings in a local credit union if available.

13. 62.1% are saving through Bonds and Freedom Shares.

14. 17.3% are saving in the BIG TEN Uniform Services Savings Deposit Program.

Following the survey, military officials determined that a credit union should be established in Korea. These officials felt that the survey provided enough of an indication of credit union support to justify the establishment of the credit union. In addition, they were of the belief that the survey would have shown a greater percentage of favorable interest in the credit union had many of the servicemen been fully aware of what a credit union could provide. The officials felt that because of the lack of information concerning credit unions, the respondents were not able to answer the survey intelligently. Military officials felt that once the credit union was established, the response would be far greater than that indicated by the survey.

It is interesting to note that if a credit union were available, the majority of the loans made from the credit union, according to the survey, would be for mid-tour leaves. A tour of duty in Korea is 13 months. At the mid-way point in that tour, all servicemen are entitled to a "mid-tour leave". This leave is normally 25 days and a great many of the servicemen in Korea use the leave to return to their homes in the United States. Since there are no lending institutions in Korea, servicemen, for the most part, must save their funds in order to take advantage of the mid-tour leave. This may be one of the main reasons that participation in the Soldiers, Sailors and Airmen's Deposit Program has been so low among servicemen in Korea. For instance, only 30.9% of the officers in Korea take advantage of the 10 percent savings program while only 6.7% of the enlisted men have their savings in this program.

Servicemen making deposits in the 10 percent program may not withdraw the funds until they return to the United States on a permanent reassignment or for discharge unless they need the money for an emergency. Thus, money placed in the 10 percent program would not be available to the servicemen for their mid-tour leave. Thus, credit union facilities in Korea might be a boom to the 10 percent program and help our gold flow situation, since servicemen could save their funds in the 10 percent program and have a lending institution available for loans such as the mid-tour leave. Another reason for the lack of participation in the 10 percent program is the relatively short tour of duty in Korea. Many servicemen find that it takes from two to three months in order for them to get their finances in shape after they arrive in Korea and by that time they have less than a year remaining on their tour. They do not feel that placement of their funds in the 10 percent program for this short period would be worthwhile.

Following the subcommittee's visit, arrangements were made for the opening of a suboffice of the San Diego Navy Federal Credit Union at Yongsan, a military reservation on the south side of Seoul. This is the largest permanent military installation in Korea and also serves as the focal point for all military activity in the country. Servicemen off duty normally come to Yongsan to use the various facilities there since the largest PX in the country is located at that military installation. The San Diego credit union opened its office on April 1, 1969, and the response to the credit union activities was outstanding. During its first month of operation, the credit union made loans of $115,467.07 and received shares of $97,674.39 and 506 servicemen joined the credit union.

The subcommittee feels that once the credit union has gained experience in operating in Yongsan, careful consideration should be given to extending its facilities to military installations throughout the country, such as the 7th Infantry Division Headquarters at Camp Casey, about 20 miles north of Seoul. Military officials at Camp Casey have indicated a willingness to have a credit union at the installation and said they would provide all necessary support and, if necessary, would even erect a building for the credit union.

During its stay in Korea, the subcommittee found more evidence of loan sharking than in any other country that it had visited, both in the Far East and Europe. Perhaps the best description of how the loan sharks operate is contained in an article published in the BAYONET, a weekly newspaper published by the 7th Infantry Division Information Office in Korea. The article, which appears below, reports that American servicemen who cannot repay their debts are subject to physical violence or are encouraged to engage in black market activities in order to reduce the size of their obligation.

BAYONETMEN FALLING PREY TO EASY CREDIT IN THE "VILL"

(By Sgt. Bill Hoerger)

CAMP CASEY.—Over one million won (about $3,700) is borrowed by 7th Infantry Division personnel in the Casey-Hovey area from Korean Nationals every month. Add another million won for current and back interest and an $85,000 a year business is the result.

These are the estimated figures of Sgt. 1. C. Harrison L. Richardson of G–5, Civil Affairs Office, 7th Inf. Div. The "open door" policy of G–5 allows Korean Nationals with grievances of all sorts to personally present their problems to the division without having to go through a multitude of red tape. And probably the most outstanding complaint of the Koreans is with regard to unpaid loans by American soldiers.

Bayonetmen, ignorant of existing laws, their personal rights and responsibilities, have been borrowing money from local Korean Nationals, many of whom are "loan sharks." As a consequence, they have fallen into a vicious circle of indebtedness and unimagined trouble.

Commenting on the situation a concerned Sgt. Richardson said, "These man (the borrowers) are blind! They cannot foresee their monetary obligations during a month's span. They do not stop to think about how much they will have to pay back for one of these loans, and they just do not realize the extent of complications that may evolve from such a transaction."

Men have foolishly signed questionable promissory notes and have agreed to usurious interest rates. Korean law requires all individuals loaning money for a profit to obtain a license. Most of the "loan sharks" have no such permit.

In addition, Korean law stipulates that interest charged will not exceed 36 percent per month. Even if a creditor has the necessary license he may still be charging more than the prescribed interest limit.

Although 30 percent per month on a 1,000 won loan doesn't seem exhorbitant, it adds up to an annual interest of 360 percent. So if an individual doesn't pay his loan back promptly he could end up owing three and half times his original loan in a year's time.

Oftentimes men do not stop with just one loan. They discover how easily credit is obtained and may borrow some 12,000 won during the month. It is not unusual for a man to find that he cannot repay all of his debts incurred for the month.

When the "due date" passes on a loan, a new interest charge is often added. Forty percent on the unpaid balance is a frequent figure. Now, the soldier not only owes 1,300 won, but 40 percent of that—or 1,820 won.

Sometimes there is a man who, for a number of reasons, finds it impossible to ever repay all of his village bills. The "loan shark" has an answer to this man's monetary problems: the Black Market. For the mere delivery of a "made in the USA" television set, a GI might have his interest rate cut in half.

Or, for three sets of slightly used OD's the soldier might be granted the reduction of as much as 1,000 won off his original bill. Just as simple as that—until the actual delivery is made.

Then, who can guarantee that both parties will keep to the illegal transaction? Can the soldier go to the authorities if the "loan shark" doesn't live up to his part of the bargain?

What about the fellow who is going to "outsmart" the Korean and simply refuse to pay his debts? It takes but a split-second for some hired hoodlum to give a hesitant soldier a brutal reminder of his responsibilities.

An honest creditor will go to G–5 and request the military's aid in settling disputes over unpaid bills. The usual reaction is for the office to notify the man's unit, describing the circumstances and leaving it up to the unit commander to decide the outcome. The result is often a disgusted "short-timer" being flagged until his debts to Korean Nationals are paid in full, for a dishonorable failure to pay just debts is an offense under the Uniform Code of Military Justice for which judicial action may be taken.

A "just this once" Black Market deal; a beating by hired thugs—can all lead to an even worse situation: Subversion. The power of money overcomes the power of common sense. Even though the information provided may seem to be of relative unimportance, a man might betray his country for the mere reduction of an imprudent loan made in the village.

The "loan sharks" and "pawn brokers" are not stupid. They know all the angles. And, just as you make a loan for a house or car in the States, you are responsible for your actions when making a loan from a Korean National.

The soldier has created his own dismal situation. He requested the loan. He agreed to the exorbitant interest rates and he signed his name to the contract.

Military officials in Korea, while admitting that there was loan sharking activity going on, played down its magnitude. They did admit that in order to foster Korean-American relations, the Army provided Korean nationals assistance in collecting the debts from servicemen. This practice was justified by Army legal officers as being necessary to prevent American servicemen from being tried by Korean courts.

For the most part, the lenders are unlicensed and operate in the bars or small shops near the military installations. Most of their loans are for a relatively small amount and it is difficult to measure the magnitude of these lending operations since the only cases that reach the military authorities are the ones in which the serviceman fails to make payment. However, in May of 1968, 40 such debt complaints totaling $3,000 were received by the 7th Infantry Division. In July, there were 25 cases for $1,600; in August, 32 cases for $2,200; and, in September, 24 cases for $1,400. The cases average about $64. However, one soldier had contracted an indebtedness of $560.

Military officials explained that most of the loans are made to servicemen who run out of money while they are "out on the town."

The lenders are well-versed in the help that they can receive from the military in collecting the debts. Almost every "loan contract" shown to the subcommittee contained statements such as the following:

"In case of failure to repay loan by above date as stated, the lender may make a claim for this debt through my company commander," or;

"Furthermore, I am gladly going to offer the particular authority to any superior USA officers to take the underwritten amount of the debt out of my regular pay, when I miscarry the promise of payment," or;

"I further understand that failure to repay the loan on said date will result in a suit and I give my permission to my Commanding Officer to deduct the said amount of money from my pay."

Some of the lenders require that the serviceman, in addition to signing his name, affix a thumb print to the document for further identification. In some cases, the serviceman is required to leave his ration card (for use in purchasing items in the PX) as collateral for the loan.

The subcommittee was not able to ascertain whether or not military officials had ever withheld money from a serviceman's pay in order to satisfy the lenders. While the subcommittee is in complete agreement that servicemen should not be turned over to Korean authorities for prosecution of nonpayment of debts resulting from such lending contracts as described above, the subcommittee does feel that military officials should use all their power to curtail the operations of these loan sharks, including placing off limits those places of business where loan sharks operate.

OKINAWA

Okinawa is served by a very fine credit union, the Kadena Credit Union.

The Kadena Credit Union opened for business on 15 June 1961, under the provisions of AFR 176–1, has been in continuous operation to the present, and received a Department of Defense Charter, granted by CINCPAC, on 14 November 1966.

Field of Membership includes all, permanently assigned to Okinawa, Department of Defense personnel.

The present business operation is conducted in two offices at Naha and Kadena Air Bases; the two having merged on 1 February 1968, the date on which Kadena became the first Department of Defense credit union chartered under the "Patman Plan."

There are over 18,000 members in the union, with $5,225,000 in assets. An average of over $500,000 per month has been paid out in loans this year, and members have $4,575,000 in savings. Net earnings have exceeded $20,000 every month during 1968.

An average of 70 loan interviews are handled daily and recent statistics reflect that they have negotiated 5,818 loans in grades E–1 thru E–4, for $1,929,001; 5,738 loans in grades E–5 thru E–7, for $1,924,115; 349 loans in grades E–8 and E–9, for $118,591; 588 officers loans, for $268,274 and 801 civilian loans, for $201,206.

The credit union paid a six per cent (6%) per annum dividend, compounded semiannually, in 1967 and 1968.

Share life insurance with maximum $2,500 and loan life insurance with maximum $10,000 is carried at no cost to the member on all accounts. A maximum of $50,000 is permitted to be on deposit in any one account.

KADENA CREDIT UNION LOANS OUTSTANDING—OCT. 31, 1968

Category	Number	Amount	Average loan	Percent of number of loans
E–1 thru E–4	3,905	1,758,000	450	42
E–5 thru E–7	3,880	1,740,000	448	41
E–8 thru E–9	300	205,000	683	3
Officers	550	305,250	555	6
Civilians	750	250,500	334	8
Totals	9,385	4,258,750	454	100

Note: Current loans to shares 89.84%.

KADENA CREDIT UNION LOANS AND SHARES

Year	Loans	Number of members	Percent dividend paid
1961	612	1,133	UNK
1962	2,294	3,447	UNK
1963	2,861	4,806	UNK
1964	3,118	5,575	UNK
1965	4,030	6,993	5½
1966	4,887	7,609	5½
1967	8,667	12,018	6
1968	9,385	18,289	6

Note: Dividends compounded semiannually.

Okinawa is faced with a pawnbroking problem that has worked a great hardship on many servicemen because they do not understand the interest rate structure of the pawnshops. The interest rate, which starts at 9 per cent per "interest period" can triple in a little over a month and many times the serviceman who has pawned his car for a few dollars will end up being unable to make the interest payments and lose his car.

The following chart indicates the regulations used by pawnbrokers operating on Okinawa:

Terms of Contract

1. Rate of interest shall be 9% for each interest period.

2. Interest periods are defined as follows:

(a) An article pawned during the month up to and including the 25th of the same month must be redeemed before the first day of the following month to stay in a single interest period.

(b) If the article is allowed to stay in pawn until the first day of the following month then it shall be considered as 2 interest periods.

(c) Any article pawned on the 26th of the month or after will be granted till the 5th of the following month to redeem same and stay in one interest period.

3. Forfeiture of pawn:

Watches, cameras, electrical appliances and clocks will be considered forfeited if a period of 2 months or 60 days from the date of pawn. Providing no interest has been paid, 60 days shall be considered as consecutive days with no interest having been paid.

4. All pawners are required to show I. D. Cards.

5. Any article damaged or lost through disaster or typhoon shall not be a responsibility of pawn shop.

6. Upon signing the pawn pledge it is considered that these terms of contract are understood accepted by the pawner.

7. These terms were established by the Okinawa Council and approved by Convening authority.

To illustrate the problem faced by servicemen, consider a loan for $100 obtained on the 24th day of the month with repayment to be made on the 1st day of the following month. By regulation, this loan will have covered two "interest periods" and, therefore, the serviceman will be charged an interest rate of 18 percent. Thus, for the use of the $100 for nine days, the serviceman will be required to repay $118. This works out to a simple annual interest rate of 811 percent.

Despite these high interest rates, military officials on Okinawa have uncovered pawnshops that were charging in excess of the legal rate. No action was taken against these pawnshops other than to warn them not to continue to practice.

The credit union had been combatting this problem by making short-term loans to take the servicemen off of the pawnbroker's market. However, the Department of Defense put a stop to the short-term loans because the credit union was charging a $1 interest fee for a $20 loan and a 50c interest fee for a $10 loan. These fees were actually to cover administrative costs of the loan and bore no relationship to the interest on the loan. However, because these fees were in excess of the 1 per cent a month on the declining balance, the loans had to be

stopped. Arrangements have been made with the Department of Defense and the Bureau of Federal Credit Unions to reinstate these short-term loans to protect the servicemen from the pawnbroker's rate structure while, at the same time, conducting consumer counselling so that the servicemen can better budget their money and thus avoid needing the short-term loans.

THE PHILIPPINES

At the time of the subcommittee's visit, there were no on-site credit union facilities in the Philippine Republic. However, for a number of months, officials at Clark Air Force Base, outside of Manila, have been attempting to obtain a suboffice of a U.S. based credit union but with little success. Military personnel of all ranks at Clark Air Force Base expressed the strongest sentiment for a credit union ever encountered by the subcommittee. Following the subcommittee's visit, arrangements were made for a suboffice of the Barksdale Air Force Base Louisiana credit union to open at Clark. This office was opened on December 20, 1968, and the enthusiasm generated by the servicemen at Clark is shown in the February report of operations of the suboffice. By the end of February, the Barksdale credit union suboffice had acquired 3,490 members, had received shares of $407,000 and had made loans of $1.3 million. It had been hoped by the subcommittee that the credit union at Clark could establish satellite offices at the other major military installations in the Philippines, principally Subic Bay and Sangley Point, both predominately Naval activities. Naval personnel at both of these installations will be eligible for membership in the credit union at Clark but because of the distances involved and the limited transportation facilities, it will be difficult for the Naval members to make active use of the credit union. Members of the subcommittee found great enthusiasm for a credit union at Subic Bay among enlisted men but this enthusiasm was not shared by officers of the installation.

These officers felt that there was no need for a credit union. However, following the subcommittee's visit, exploratory contacts were made by officials at Subic Bay for the installation of a direct wire credit union service with the Navy Federal Credit Union.

This would seem to indicate that there is a need for credit union service at Subic Bay.

The need for adequate lending facilities at Subic Bay is further backed-up by a review of the lending transactions engaged in by the American Express banking facility at Subic Bay from September 1966 to September 1968. During that two-year period, the banking facility made only 2,254 loans for a total of $182,539. Of this total, the lowest four enlisted grades received only 484 of the loans for a dollar amount of only $87,686. The following chart outlines the complete lending activity of the banking facility during the two-year period.

LISTING BY PAY GRADE OF LOANS CONTRACTED FOR AT THE AMERICAN EXPRESS BANKING FACILITY—SEPTEMBER 1966–68

Pay grade	Total dollar amount of loans by pay grade	Number of loans by pay grade	Average loan by pay grade
E1	325	4	81
E2	2,992	20	149
E3	33,480	185	181
E4	50,889	275	185
E5	240,110	691	347
E6	169,135	468	361
E7	76,161	209	364
E8	10,546	20	527
E9	2,100	6	350
WO	16,188	30	539
01	8,965	24	374
02	29,314	56	523
03	59,871	85	704

LISTING BY PAY GRADE OF LOANS CONTRACTED FOR AT THE AMERICAN EXPRESS BANKING FACILITY—SEPTEMBER 1966–68—Continued

Pay grade	Total dollar amount of loans by pay grade	Number of loans by pay grade	Average loan by pay grade
04	27,650	46	601
05	7,212	13	555
06	3,062	6	510
Civilians	74,539	116	643
Total	812,539	2,254	360

Two assumptions can be made from the chart. The first is that the banking facility, because of policy or regulation, is not meeting the loan needs of the Navy personnel at Subic Bay. The second possible reason is that Navy personnel at Subic Bay do not make loans to any extent. If the second reasoning is true, it marks the first time that the subcommittee has encountered such a phenomena at a military installation. The subcommittee believes that a competent survey should be undertaken at Subic Bay and Sangley Point, including a broad sampling of enlisted men, to determine if on-site credit union service is needed. If such service is needed, immediate arrangements should be made to establish a satellite office of the Clark Air Force Base credit union facility at the Naval installations.

TAIWAN

There are nearly 10,000 U.S. military and civilian personnel assigned in Taiwan. Many of these individuals are accompanied by dependents, since the average tour of duty Taiwan is 24 months.

There are no credit unions on military installations in Taiwan, although as in most other countries, mail order service is being provided by some credit unions. The need and feasibility for setting up credit unions in Taiwan is unclear. Some military officials told members of the subcommittee that credit union service was not needed in Taiwan and that it would be extremely difficult, because of the laws of the country, to establish such credit unions. However, other military officials told the subcommittee just the opposite and stressed a strong demand for credit unions. The subcommittee, after reviewing the various information gathered from military officials, feels that there is a need for credit union service in Taiwan.

As pointed out earlier, the tour of duty in Taiwan is 24 months which means that many servicemen and government employees are accompanied by their dependents. Because of this, there are needs for the normal household items, plus other large ticket items. The military banking facility in Taiwan does provide loans for such purchases but, by regulation, the loan must be repaid prior to the serviceman's rotation date. This restriction places a hardship on the borrower, since it greatly increases the amount of his monthly payments and virtually precludes him from borrowing any funds near the end of his tour of duty.

Credit unions, which do not have such restrictions, would be of a great benefit to servicemen, civilian employees and dependents in Taiwan and the subcommittee suggests that an in-depth survey be taken to determine whether or not there is adequate need for a credit union.

The subcommittee notes that Taiwan, and particularly Taipei has become one of the favorite Rest and Recuperation stops for our troops in Vietnam. Because of this, military officials in Taiwan should guard against the operation of fraudulent business operators such as questionable discount car brokers who might cheat the serviceman out of his funds.

THAILAND

There are no on-site military credit unions in Thailand but Major General Howe N. McCown, Commanding General, JUSMAG, Thailand, told the subcommittee that he enthusiastically endorses the idea of having credit union service established in Thailand. He indicated, however, that under existing agreements with the Thai government, it would not be possible to establish credit unions at this time. General McCown was of the opinion that negotiations should be conducted informally with the Thai military and that no efforts should be made to secure any changes in the Status of Forces Agreement by the United States and Thailand. He felt that to involve SOFA might jeopardize our relationship with the Thai government. He appeared to believe that the best approach could be taken through the Thai military.

Since U.S. bases occupied by U.S. personnel in Thailand are, in fact, commanded by Thai officials and not by the commanders of the U.S. troops on the base, it would appear that the Thai military could grant authority for the establishment of credit unions without involving the Status of Forces Agreement.

There does appear to be a need for credit union service in Thailand. At one installation visited, it was estimated that about ten enlisted men per day made loans via mail order credit union service. It was further indicated that the average time to complete such loan transactions was about three weeks which appears to the subcommittee to be excessive. It is the consensus of the subcommittee that credit union service could be provided in the Bangkok area at this time if arrangements could be made with the Thai military. However, in the up-country areas, it would appear that credit union service should not be established until the situation in Vietnam has stabilized and tours of duty in Thailand would conceivably be more static.

HONG KONG

Like Taipei, Hong Kong is a major R&R point for servicemen in Vietnam. There are no U.S. military installations in Hong Kong other than the R&R reception centers and thus, there is no need for credit union service in Hong Kong.

However, the subcommittee's interest in Hong Kong is that the financial interests of servicemen are protected while they are on R&R. The subcommittee notes that Navy Auto Sales, one of the fraudulent car brokers that took thousands of dollars of servicemen's funds without delivering cars, had a large office in Hong Kong. Since there are no military installations in Hong Kong, it is up to the American Consulate to maintain a constant check to make certain that operations such as Navy Auto Sales are not allowed to operate.

The subcommittee further feels that every serviceman going on R&R should be given a small pamphlet or some other suitable document discussing the type of questionable business practices being conducted in the R&R area that he is visiting. If these practices are deemed too objectionable, they should be placed off limits to servicemen on R&R.

VIETNAM

There are no credit unions in Vietnam, although Members of the Armed Forces are obtaining loans from mail order credit unions, as well as mail order finance companies.

Because of the combative nature of Vietnam, there is relatively little purchasing of large ticket items by servicemen, as compared to servicemen stationed in other Pacific and Far Eastern countries.

Some of the loans have been for the purchasing of stereo equipment, Leave and Rest and Recuperation expenses and, to a minor extent, for the purchase of motor bikes or motor scooters although loans of this type are primarily confined to the Saigon area.

There are a considerable amount of loans obtained for purchasing automobiles for delivery in the United States when the servicemen complete their Vietnam tour but most of this is done with state-side banks, credit unions or finance companies.

Because servicemen in Vietnam are not accompanied by dependents, many of the spending requirements that a serviceman and his family might have on an accompanied tour are not present in Vietnam.

While military officials in Vietnam indicated there were some cases where servicemen borrowed for Rest and Recuperation trips, by and large, the vast majority of the servicemen have been able to save funds out of their pay for the R&R trip.

After careful consideration by the subcommittee with military officials in Vietnam, it was determined that it would be unwise to establish a credit union there until the secession of hostilities.

Vietnam is under strict currency control regulations and it is felt that the establishment of a credit union would not be conducive to the effective management of the currency controls. In addition, military leaders felt that the credit union would be used primarily by servicemen in the rear echelon areas rather than the troops in the front lines. It is the subcommittee's feeling that any facilities opened in Vietnam should, first of all, benefit, for the most part, the men in the front lines.

In addition, the constant movement of troops through Vietnam and the relatively short tour of duty in that country would handicap effective credit union operation.

Although there may not be a need for credit union service in Vietnam at this time, the subcommittee feels that arrangements should be made for the establishment of on-site credit union service in Vietnam upon the secession of hostilities.

Until about a year ago, Vietnam was a hot bed for fraudulent business activities that prayed on servicemen, particularly phony automobile brokers who offered servicemen huge discounts on automobiles that would be delivered in the United States when the serviceman rotated. Although there were bona fide companies operating such car broker arrangements, there were other companies that cheated servicemen out of thousands of dollars. Most of the questionable operators are no longer in existence in Vietnam. The TET offensive of the North Vietnamese scared off many of the sharp practice operators and, in addition, a curfew in Saigon effectively curtailed the number of servicemen that visited that town on their off duty hours. Since there was little military "traffic", the car brokers' business suffered.

Once again, the subcommittee feels that it is imperative that military officials make certain that fraudulent car dealers and sharp practice operators of any description are not allowed to gain the foothold they had about a year ago. It is, therefore, recommended that wide publicity be given to the operations of any questionable dealers or merchants and if the situation becomes serious enough that the off limits procedure be used.

THE LATE HONORABLE WILLIAM H. BATES

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. CORMAN. Mr. Speaker, I join my colleagues in paying tribute to the memory of WILLIAM H. BATES, our friend and colleague. We mourn the passing of a tireless worker and a respected friend and associate.

In the 19 years that he served his country and his district, both on the Armed Services Committee and the Joint Committee on Atomic Energy, he set a standard of loyalty and dedication which all of us may admire. The loss of a man of such integrity, knowledge, and honor must be deeply regretted and mourned by each of us.

Mrs. Corman and I join in extending our condolences and sympathy to the family.

WHY THE GENERAL ACCOUNTING OFFICE IS CONGRESS' LOGICAL GUARANTOR OF FISCAL RESPONSIBILITY IN GOVERNMENT CONTRACTS

HON. BERTRAM L. PODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. PODELL. Mr. Speaker, national debate rages over cost overruns in Government contracts. Various solutions are put forth, many containing elements of solution. Most will not do the job. Power is ebbing from the legislative branch of Government. Today we lack guaranteed overseeing power to right this situation. Yet an agency lies at hand which Congress may utilize to insure fiscal responsibility. I refer to the General Accounting Office, which would, under my Government contract scrutiny measure, automatically audit and publicly report to Congress on all military and civilian Government contracts which incur cost overruns exceeding 10 percent of contract price. Descriptions of GAO and our Bureau of the Budget are in order.

GAO and BOB were established by the same Budget Accounting Act of 1921. GAO was placed in the legislative branch under direction and control of the Comptroller General of the United States, independent of executive departments.

BOB was placed under direct supervision of the President, even though it remained physically in the Treasury Department. In 1939, Congress passed the Reorganization Act, establishing the Executive Office of the President and transferring BOB to this Office. The Secretary of the Treasury continues in charge of preparation of Government's revenue estimates.

GAO's chief officers, Comptroller General and Assistant Comptroller General, are appointed by the President with Senate consent. They hold office for 15 years, subject to removal only by joint resolution of Congress or impeachment. The Comptroller General is not eligible for reappointment. There is a virtual absence of Presidential control over these chief GAO officers.

BOB's Director is appointed by each President, serving at his pleasure. This agency is completely responsive to the Executive.

Functions of GAO and BOB are so dissimilar that no valid, point-by-point comparison can be made. Let us present their functions separately.

GAO audits and reviews the manner in which Federal programs are carried out. It makes independent examinations for Congress into governmental expenditures and use of property and personnel for authorized programs, activities, or purposes. It reviews organization, management, and control of agency systems, identifying weaknesses, reporting on conditions found, and recommending improvements. Specific factors considered prior to deciding to audit are statutory requirements, congressional requests, and indications of congressional interest; potential areas of improvement in Government operations; deficiencies in management control and operations; deviation of agency from congressional intent; and programs or activities with large expenditures, assets, or revenues.

After identifying waste or inefficiency, GAO inquires into circumstances and reasons surrounding it, ascertaining whether it is an isolated or recurring problem. If it is a recurrent state of affairs, it recommends necessary corrective actions. GAO auditing authority generally extends to all activities, financial transactions and accounts of Federal Government—directly pertinent books, documents, papers, and records of contractors having Government contracts negotiated without formal advertising, records of their subcontractors, and certain recipients of Federal financial assistance in form of advances, grants, or contributions. Exceptions relate principally to activities of the Federal Reserve Board and Federal Reserve banks, activities of the Comptroller of the Currency, Exchange Stabilization Fund established by the Gold Reserve Act of 1934, Federal land banks and funds relating to certain intelligence activities.

GAO responsibility to report to Congress after audit is expressly stated in the act of 1921:

> The independent audit will serve to inform Congress at all times as to the actual conditions surrounding the expenditure of public funds in every Department of government.

Accordingly, GAO submits several hundred audit reports yearly to Congress, its committees, members, and officers. GAO staff members, including its auditors and attorneys, testify before and are assigned to congressional committees, furnishing comments to Congress on proposed legislation.

Audits include examination of several types of fixed-price as well as cost-type contracts. Audits of negotiated contracts—contrasted with those awarded on basis of formal competitive bidding—constitute an important part of GAO's work because of extensive use of such contracts and major sums of money involved. Now they are audited on a selective basis only, one of the roots of today's dilemma. My measure would automatically call for audit of any contract, military or civilian, which exceeded the contract price by 10 percent. Congress, which today can call for an audit when it knows of an overrun, will be assured of automatic safeguards in the form of GAO audits whenever a contract crosses the boundary drawn in this measure. We too often are utterly unaware of what is happening in the bowels of an agency

with a given contract. This bill places every civil servant on notice that they must flag and report to GAO for audit any contract crossing the 10-percent line.

Audits of negotiated contracts may involve review of the contractor's cost representations and pricing proposals, comparison of contractor's cost estimates with his cost experience, and an audit of costs incurred in those cases where reimbursement is based upon or affected by actual costs. They may also include review of the contractor's negotiation and administration of subcontracts.

Such audits are correlated with reviews of actions of the administrative agency in negotiating and administering contracts. Underlying causes of weak or costly procurement procedures are sought, and recommendations made for improving contracting practices and administration.

The Comptroller General may render legal decisions at request of contracting officers on questions pertaining to contract awards, if procedures of the administrative agency permit the contracting officer to submit such questions. Such decisions are final on the executive branch and binding on GAO in its audit. They are not binding upon Congress or courts.

GAO's second function is to determine propriety of rates and classifications on bills and claims for freight and passenger transportation services furnished for the United States. It also settles claims for and against the United States. These may involve military or civilian personnel, Government contracts, or any services or supplies furnished Government by individuals, business entities, or foreign, State or municipal governmental entities.

BOB assists the President in preparing the budget and formulating his fiscal program. It develops economic assumptions, obtains forecasts of international situations, prepares fiscal projections, discusses program developments, and effects and compiles local expenditure estimates. It develops fiscal policy recommendations. Administration decisions, guidelines, and planning figures are then conveyed by BOB to agency heads. It assists and advises agencies on form, structure, and language of appropriations. After agencies submit formal budget estimates, BOB analyzes them, holding hearings with agency representatives. BOB finally determines amounts to be recommended to the President.

It notifies agencies of the President's decisions, advising him, in turn, of appeals, preparing the budget itself, with summaries and analyses. It supervises and controls budget administration.

The 1921 Budget and Accounting Act safeguarded the budget as transmitted by the President to Congress, by denying Federal agencies the right to seek funds outside the budget except at legislative request. It makes detailed administrative studies for the Chief Executive to secure economy and efficiency, advising executive departments and agencies on improved administrative practices and organization.

BOB informs the President of progress by agencies on work proposed, initiated, and completed. BOB's functions and procedures are necessarily attuned to the President's policies, control, and influence. His final decisions govern it. BOB cannot serve as a fiscal guarantor or watchdog on behalf of Congress. BOB was never designed to watchdog Government and its operations as a sole purpose. This, however, is the main reason for being of GAO. BOB is not organized, staffed, or equipped for such a responsibility. GAO is. BOB is incapable of required objective analysis so Congress may efficiently fulfill its constitutional duty "to pay the debts and provide for the common defense and general welfare of the United States." Only GAO was created for and is able to accomplish these ends.

There is no legislatively responsible counterweight serving Congress to offset BOB. GAO can be that counterbalance. We are in dire fiscal straits because of lack of fiscal responsibility regarding expenditures of Government money through Government contracts. A solution is within our grasp. As of this morning, 184 Members of this House are sponsoring my measure, which is the Government Scrutiny Act. I welcome further cosponsorship.

LIGHTS ON FOR DECENCY

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. BIAGGI. Mr. Speaker, the National Committee for Responsible Patriotism, Inc., based in New York, recently wrote to me expressing belief that some way must be found for New Yorkers to express their support for good taste and values in entertainment, literature, and art. For the information of all who are concerned with this problem, I am pleased to place at this point in the RECORD, the following descriptive statement which the committee sent to me:

LIGHTS ON FOR DECENCY

On Saturday and Sunday—June 28 and 29—New York and New Jersey motorists by the thousands will drive with their headlights on during daylight hours. Charles W. Wiley, Executive Director of the National Committee for Responsible Patriotism, announced:

"This will be an opportunity for people to express their preference for good taste and high values in entertainment, literature, and art—and their disgust with the smut flooding our communities. Men and women, young and old, those of every race and religion—regardless of differences on other issues—can unite in making clear that the overwhelming majority of Americans favor decency."

WHAT YOU CAN DO TO HELP

Ask schools, Churches, Temples and organizations to support this project. Distribute the poster on the reverse side. We have it available in this and a larger size—contributions deeply appreciated. Contact your local newspapers (we'll take care of the larger communications media). Have lights on announced at theatres, sports activities, meetings and other public events. Write letters-to-the-editor and call in to telephone-conversation radio and television programs. Pass the word to your friends—and put them to work.

COMMITTEE BACKGROUND

The non-partisan National Committee for Responsible Patriotism has sponsored numerous activities dedicated to show support for the men and women of our armed forces, respect for law, pride in our heritage, and love of country. In October 1967 the Committee initiated a nation-wide program that included turning on vehicle headlights during the day to indicate approval of these causes. In May 1967 the Committee organized the "Support Our Men in Vietnam" parade down New York's Fifth Avenue, the longest parade in the United States since 1947. Last year, the Committee coordinated the Free the Pueblo petition campaign and other non-political activities backing the Government in any honorable action to obtain the crew's freedom.

NCRP projects have received the endorsements of President Richard Nixon, the late President Dwight Eisenhower, former Vice-President Hubert Humphrey, the late Senator Robert Kennedy, the Governors of 41 states and numerous other outstanding public figures.

The NCRP is a non-profit organization, financially supported by contributions from the public. Its activities are decided by a board of directors elected by the membership.

The NCRP has no local chapters or affiliates, choosing instead to work with well-established, non-controversial organizations on specific projects. It has received the cooperation of nearly all major veterans' and fraternal organizations, plus many police and firemen's line organizations, labor unions, ethnic and youth groups, etc.

TRIBUTE TO HON. WILLIAM H. BATES

HON. JACK BROOKS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1969

Mr. BROOKS. Mr. Speaker, I join my colleagues today in paying tribute to the memory of a man who was a dedicated public servant, an able legislator and a true gentleman.

Congressman WILLIAM BATES served on the other side of the aisle and although he was strongly partisan, he was never antagonistic. The high respect and admiration that he earned from all of us was only surpassed by the warm friendship and personal affection which he evoked from those of us who knew him.

During the years that I served here with him, I was always impressed by his capable and effective manner of getting things accomplished for his district and for our Nation. Without creating a great stir and fanfare, he accomplished much and was an example for all of us.

It was with pleasure and respect that I served in the Congress with BILL BATES. We will feel his absence as the days go by. I offer my condolences to his wife, Jean, and his daughter, Susan. They can be proud of a husband and father who gave many years of his life in the service of the people of his district and the Nation.

LINCOLN BACK COUNTRY

HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. OLSEN. Mr. Speaker, a recent editorial in the Butte-Anaconda Standard expressed pleasure that the Senate has approved wilderness designation for the Lincoln Back Country area in my district in Montana.

I have introduced this legislation in the House, and it is currently pending action before the House Interior and Insular Affairs Committee. I am hopeful favorable action will be taken soon on this proposal and, for the benefit of my colleagues in the House, I include the editorial, "They're Jubilant," in the RECORD at this point:

THEY'RE JUBILANT

When the Senate last week approved the Mansfield-Metcalf Lincoln Back Country Wilderness Area, there was reason for jubilation among Montana conservationists. They long have sought to keep this section of the state south of the Bob Marshall Wilderness Area, in its pristine state.

The Lincoln bill now goes to the House where we can also expect passage, since no organized opposition to it has been developed. The bill in the House is sponsored by Western District Rep. Arnold Olsen. It should be pointed out, however, that the wilderness movement has bipartisan support, particularly in Montana where Republicans and Democrats have cooperated in pressing for national legislation. If this bipartisan support continues in the House, the measure should pass and this wild area will be protected from all harmful development or exploitation, including road networks, massive recreational facilities and heavy timbering, as has been proposed.

The Lincoln Back Country is a particularly fragile area, wild and beautiful. To preserve it the wilderness legislation was necessary.

Although there has been talk for years about protecting this wild land, rich in wild life, action did not become imperative until in recent years. The rugged terrain, lack of marketable timber and other resources saved this primeval country from normal development.

Perpetuation of the Lincoln Back Country as it is, will be a significant victory for Montana conservationists. Their efforts and those of our state and national officials in preserving for future generations a priceless part of the state are deeply appreciated.

Elizabeth H. Smith, writer of Bozeman, in presenting testimony to a Senate committee on the Lincoln wilderness project said: "The American peoples' needs for surcease from a noisy, crowded, mechanized world is critical. The necessity to 'get away from it all' is well documented, persistently articulated and growing stronger every day—and you can't get away from it all by taking it with you. As your untamed resources shrink, as developments of all sorts abound and proliferate, the value of a natural environment of unobstructed space, unscarred scenery, unshattered quiet, and unmanipulated living organisms—rises proportionately. Lincoln area, which as a wilderness contains all these features, represents the scarce commodity; as a wilderness it satisfies a specific, long-range human need; as a wilderness its value will increase."

Establishment of the Lincoln area, should the House go along with the Senate, will stimulate national interest in other conservation measures. Among these are other wilderness area proposals, but they are so few in number as to always remain scarce. As they are scarce, as Writer Smith said, their value increases. In the creation of such areas we today can leave a legacy of much greater value in another generation.

FEDERAL ARTS FUNDS

HON. JULIA BUTLER HANSEN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mrs. HANSEN of Washington. Mr. Speaker, on June 18 of this year there was a discussion in the RECORD on "Lame-duck Handouts in Federal Arts Funds." After this appeared, I immediately wrote Roger L. Stevens, the immediate past Chairman of the National Council of Arts, and Chairman of the Board of Trustees for the John F. Kennedy Center for the Performing Arts.

For the information of the Members of this House, I am appending this letter, as follows:

JOHN F. KENNEDY CENTER
FOR THE PERFORMING ARTS,
Washington, D.C., June 23, 1969.

Hon. JULIA BUTLER HANSEN,
House of Representatives,
Washington, D.C.

DEAR MRS. HANSEN: The following information is in answer to your request for clarification of the article placed in the Congressional Record on June 18, 1969, under the title, "Lame Duck Handouts in Federal Arts Funds," criticizing some of my actions while Chairman of the Arts Council. The Congressman has been badly misinformed as to the facts.

In the first place the ANTA Theatre was in no way "bailed out by a maneuver because it was in trouble." These are the facts regarding this allegation.

1. At the time arrangements were being made to turn over the equity of the property to the National Council on the Arts, ANTA had an offer of $2.5 million cash from the adjoining owner—so it was not at all a question of being "bailed out."

2. To reproduce the theatre today and acquire the land would cost a minimum of $8 million. The Board decided rather than take the offer for the property, that if the equity were given to the Arts Council, it could be used as a showcase for regional theatre and other non-profit performing groups throughout the country. It is literally impossible for a non-profit regional theatre company outside New York to show its wares in New York because of the peculiar problems present in the theatre today. So, far from a bailing-out operation, the equity was being given to the Council for the benefit of the people of this country.

3. The Government is not a landlord of the show mentioned in the article, as the theatre is still under lease and the Endowment has not yet taken possession of it. There will be no further commercial activities in the theatre after the lease expires.

4. I have not been elected Chairman of the ANTA Board, and, in fact, am not a member of the Board.

5. Since there appeared to be sound business and policy reasons for the Board's action, I submit that there was no "undisciplined and chaotic approach to a serious problem."

6. Far from being a Lame Duck operation, as stated in the article, the agreement to turn over the ANTA Theatre was made with the officers of ANTA in the early fall of 1968 and was actually confirmed on November 13 by the ANTA Board.

Secondly, with regard to the grant for support of the New Thing Art and Architecture Center with which Mr. Carew is connected, the funds provided by the Endowment comprised only a small portion of those needed by the Center. Additional funds were made available from other private and public organizations, including the Department of Labor. Moreover, before the grant was made, unanimous endorsement was received for it from the National Council on the Arts, although I, personally, did not recommend it. I would also like to point out that, while the grant was dated January 10th, it had been approved months before. The January date resulted only from a need to carry out administrative requirements.

Thirdly, the Congressman raised a question regarding the Endowment's grant to Arena Stage for support of its improvisational company. The application from Arena State discussed at some length the objectives of this project, objectives which to us were highly commendable. It involved the utilization of a small company which was to perform in settlement houses, recreation halls and schools; the audience would comprise different age groups up to the age of twenty and would respond to and participate in the performance. Improvisation, by its very nature, implies spontaneous activity by the performers and the audience; therefore, the application did not discuss the details of the performances. As with the grant to the New Thing Art and Architecture Center, this grant was approved long before the date of which it was made.

There is one further point that should be brought to your attention, and which I believe is extremely important in connection with the support of the arts and humanities by the Federal Government. The directive of the Congress in establishing the Foundation is that, as provided in Section 4. (c) of the National Foundation on the Arts and Humanities Act of 1965:

"In the administration of this Act no department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over the policy determination, personnel, or curriculum, or the administration or operation of any school or other non-Federal agency, institution, organization or association."

This is an extremely important point. Any other attitude on the part of the Federal Government would make an arts and humanities program subject to political or other whims and thereby destroy its value.

If you have any other questions about the article, I will be glad to provide additional information. I appreciate very much your inquiry and the opportunity to straighten out the record.

Sincerely,

ROGER L. STEVENS,
Chairman, Board of Trustees.

CHEROKEES AND OKLAHOMA TAKE GREAT STRIDE FORWARD

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. EDMONDSON. Mr. Speaker, tomorrow, June 27, a great dream of the Cherokee Nation of Oklahoma, and of their neighbors, the people of northeastern Oklahoma, will bear fruit. Tomorrow night, in a beautiful amphitheater at the Cherokee Cultural Center near Tahlequah, the drama, "The Trail of Tears," will play before its first audience.

The drama was written for the Cherokees by Dr. Kermit Hunter, of Southern

Methodist University, who also wrote the story of the Cherokees before they were moved west on the Trail of Tears. This drama, "Unto These Hills," has played to millions of people over the past 20 years at Cherokee, N.C.

The Cherokee drama in Oklahoma and the Cherokee Cultural Center of which it is a part, are sponsored by the Cherokee Nation of Oklahoma, the Cherokee Foundation, and the Cherokee National Historical Society. There has been great local support in the form of financial donations. The State of Oklahoma has helped finance the project, as has the Federal Economic Development Administration, which extended a loan and grant to help build the amphitheater. This amphitheater, incidentally, is reported to be one of the finest in the country from the standpoint of acoustics.

The opening of the drama tomorrow is the second step in the four-part development of the Cherokee Cultural Center. The first, opened last summer, is Tsa-La-Gi village, a reconstruction of a Cherokee village of the 1600's, which drew 67,000 visitors during its first year.

The third and fourth steps will be the Cherokee National Museum and the Cherokee National Archives, both of which are on the drawing boards.

Mr. Speaker, it will be a great pleasure to me to be with the Cherokees tomorrow night to observe this dramatic new step they have taken in their program to develop their tribal resources and protect their tribal heritage, under the able guidance of Principal Chief W. W. Keeler, Vice Chief C. C. Victory, and their outstanding tribal council.

This is just one more step in the dramatic story of the development of northeasern Oklahoma as a major recreational area, and I sincerely hope that all of you here will have an opportunity to visit us. You have helped us in many ways, and we are grateful.

VIETNAM—ONE WEEK'S DEAD

HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. LANDGREBE. Mr. Speaker, I wish to bring to the attention of my fellow colleagues in the House the lead article in the June 27 issue of Life magazine, entitled "Vietnam—One Week's Dead." The faces shown in this article are the faces of American men killed in Vietnam during the week of May 28 through June 3, 1969. Among the list are 242 American soldiers—an average number of dead for any 7-day period during this stage of the war. The article states:

We cannot tell with any precision what they thought of the political currents which drew them across the world. From the letters of some, it is possible to tell they felt strongly that they should be in Vietnam, that they had great sympathy for the Vietnamese people and were appalled at their enormous suffering. Some had voluntarily extended their tours of combat duty; some were desperate to come home. Their families provided most of the photographs, and many expressed their own feelings that their sons and husbands died in a necessary cause. Yet in a time when the numbers of Americans killed in this war—36,000—though far less than the Vietnamese losses, have exceeded the dead in the Korean War, when the nation continues week after week to be numbed by a three-digit statistic which is translated to direct anguish in hundreds of homes all over the country, we must pause to look into the faces. More than we know *how many*, we must know *who*. The faces of one week's dead, unknown but to families and friends, are suddenly recognized by all in this gallery of young American eyes.

It seems fitting that this article should appear at a time when we in the Congress are considering the extension of the income tax surcharge and other fiscal measures which are essentially the result of our involvement in Vietnam. Although there has been next to nothing spoken or written on this issue, the need for the surtax has resulted because of the enormous amount of our resources that have been diverted to prosecute the war in Vietnam. Because of this, our economic and domestic scene is showing the strain of the resulting inflation and the second-class priority it is receiving.

The article in Life magazine reminds me of the soldiers who even today see the face of death and feel its sting as they carry out their commitment to this country and to the cause of freedom. It also reminds me of the halfhearted and sometimes feeble support that we give these brave men. In the face of the mounting death rate in Vietnam, dare we continue this halfhearted commitment and feeble support? Dare we continue to provide loans and assistance to countries who aid and trade with North Vietnam? Dare we continue our no-win policy?

I believe it to be not only reasonable but also imperative that we Americans be willing to make the necessary sacrifices to provide whatever materials and resources are needed by our forces to bring this horrible struggle to a prompt and honorable conclusion. It is my conviction that our men in Vietnam not only have the right to expect our fullest support, but we, as citizens, have a duty to give it.

Therefore, I believe that the extension of the surtax is a necessary and essential part of our total commitment for the prosecution of the war in Vietnam.

I fully realize that meaningful tax reform is years overdue. However, I fail to appreciate the political strategy that is so obviously being brought into play at this time by opponents of the surtax extension. These same people, who enjoyed substantial majorities in both Houses of Congress and controlled the White House during the past 8 years, somehow overlooked the glaring tax loopholes that they now suddenly point to with disdain and cry out for fair and just treatment of all American taxpayers.

Are these not the same Members of this Congress who are now so loudly demanding the withdrawal of our troops in Vietnam, much to the disadvantage of our remaining forces? Are they not the same ones who for the past several years seemed quite content as our former President, a member of their party, continued to commit greater numbers of our young men to hand-to-hand combat in the jungles of Vietnam, only to announce just prior to last year's general election the discontinuation of the bombing of Vietnam? The substantial increase in the number of deaths of American boys following that announcement is a matter of public record.

I feel that the quickest, cheapest, and most effective way out of Vietnam is to order our military strategists to take whatever action is necessary to force the Vietcong either to surrender or submit to prompt and meaningful negotiations. In order to support a successful military engagement, greater sums of money may yet be needed. Dare we Americans be stingy when the finest of our young men are dying at the rate of 250 or more per week? I, for one, intend to fully support measures which will bring to an end the tragic losses of these young American boys, which this recent article in Life so painfully portrayed.

I am, therefore, supporting the temporary extension of the surtax and would urge my colleagues to do the same, hoping that the constituents of our individual districts will respond in a spirit of patriotism and concern for our fighting men.

As I look at the pictures of these courageous and gallant men who died defending a people who wish to remain free of domination and control, the poignancy of their death and bravery of their service is worthy of the highest tribute. As a Member of the House of Representatives, I feel a keen sense of responsibility for the death of these heroic men who gave their lives in Vietnam. I wish to extend to their families and loved ones my sincere sympathy and expressions of sorrow.

LAW AND ORDER

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. JACOBS. Mr. Speaker, on the subject of law and order these articles seem of interest. They are as follows:

[From the Washington Post, June 20, 1969]

PROVISION IN SURTAX BILL GIVES 13 FIRMS A BREAK

(By Bernard D. Nossiter)

Thirteen gas pipeline companies would save around $14.2 million in taxes due to a little-noticed provision in the surtax extension bill reported out yesterday by the House Ways and Means Committee.

The provision would enable the firms to take the 7 per cent investment credit on pipeline they have not yet bought but for which they sought approval from the Federal Power Commission before April 19.

All other corporations are denied the credit for any purchases of capital equipment made after April 18.

The Ways and Means Committee bill also includes a special stimulus to encourage industry to purchase depollution equipment. Companies can write off such purchases at a rapid rate, amortizing them over five years.

The precise origin of the pipeline section is obscure. But Rep. George Bush (R-Tex.), a former Houston oilman, acknowledges that he was the provision's principal defender within the Committee.

Bush told a reporter:

"These companies should not be penalized because a Government agency is slow to move."

He said he was asked to look out for the section by his old Houston friend and backer, Marvin K. Collie. Collie is a senior partner in the Houston law firm of Vinson, Elkins, Weems and Searls.

Reached in Athens, Greece, where he is on a business trip, Collie said he represents three pipeline companies but declined to name them.

He said he had sought the help of Bush as a matter of equity to the pipeline companies.

Bush and Collie argued that a company that planned to buy equipment before the April 19 cutoff, and had delayed its purchase because it is waiting on the FPC, should be eligible for the credit, just like other corporations that actually bought machinery.

Many economists, however, argue that the credit should never have been extended to utilities in the first place because they recover all their investment costs plus a reasonable rate of return under the rates set for them by regulatory commissions.

The thirteen beneficiaries and the value of the pipeline cited on their pre-April 19 applications to the FPC:

Cities Service Gas, Oklahoma City, $32.5 million; Columbia Offshore Pipeline, a subsidiary of Columbia Gas System of New York City, $31.0 million; Consolidated Gas Supply, Clarksburg, W. Va., $21.1 million; Florida Gas Transmission, Winter Park, Fla., $18.3 million; Michigan Wisconsin Pipe Line, Detroit, $14.5 million; El Paso Natural Gas, El Paso, $13.8 million; Tennessee Gas Pipeline, a subsidiary of Tenneco, Houston, $12.4 million; Transcontinental Gas Pipe Line, Houston, $10.8 million; Texas Gas Transmission, Owensboro, Ky., $10.7 million; Northern Natural Gas, Omaha, $9.6 million; Transwestern Pipeline, Houston, $9.4 million; Chandeleur Pipe Line, Louisville, $9.2 million; Columbia Gulf Transmission, Houston, $10.0 million.

Under the Ways and Means Committee Provision, each firm will save in taxes 7 per cent of its planned investment. Combined, the thirteen intend to spend $203.3 million and that will cost the Treasury $14.2 million.

Bush's office said that Collie had contributed $20 to the Congressman's campaign and to a special "extraordinary" expense account fund maintained for Bush by Houston businessmen. His office did not know whether any gas pipeline executives had also contributed.

A fight to eliminate the pipeline provision was led in the Committee by Reps. Charles Vanik (R-Ohio) and Martha Griffiths (D-Mich.).

Under the special tax write-off provisions for depollution equipment, a firm could deduct four times as much as it usually can for depreciation on machinery that lasts 20 years.

The surtax extension bill is scheduled to reach the House floor next Wednesday.

[From the Washington Post, June 22, 1969]

TAX RIDER AIDS 3 SHIP COMPANIES

(By Bernard D. Nossiter)

A second special provision, this one for three shipping companies and representing an estimated tax savings of $3.5 million, is included in the surtax extension bill reported out Thursday by the House Ways and Means Committee.

The section would extend the 7 per cent investment credit to unordered and unbuilt barges designed for a new transportation scheme.

According to Maritime Commission sources, three companies would benefit. All are building, with subsidies from the Maritime Administration, a new type of sea-going cargo vessel to carry barges that would ultimately unload on inland waterways.

The three companies and the dollar amounts they plan to spend on barges are: Lykes Brothers Steamship of New Orleans, $16 million; Prudential Steamship of New York City, $15 million, and Pacific Far East Line of San Francisco, $20 million.

The special section is designed to enable the companies to deduct from their tax bills 7 per cent of the cost of the barges. This would save Lykes $1,120,000, Prudential $1,050,000, and Pacific Far East, $1,400,000.

URGED BY BOGGS

The provision was urged by Rep. Hale Boggs of New Orleans, the Democratic Whip and second-ranking Democrat on the Committee.

He said Friday, "I think it's a perfectly legitimate proposition" and that it was first proposed by the Committee's staff.

Boggs explained that a company that had a contract to buy a ship before the April 19 cutoff date on the investment credit would be entitled to claim the credit for the ship's engine even though it had no specific contract for the engine.

He said that the same analogy should hold for the barges. "The barges are in effect part of the machinery of the vessel. Without the barge, the vessel is useless."

Boggs said that he had raised the point without any prompting from the shipping companies, although he has talked with them since. He added that two firms believe that the provision will not help them anyway, either because of the way it is drafted or because they think their barges are entitled to the credit without it.

The Democratic Whip said that there was no "audible opposition" to the section in the Committee's closed discussions. However, two members who did not want their names used said that they had argued against it.

On Friday, The Washington Post reported that the Committee had approved a similar provision that would save thirteen pipeline firms an estimated $14.2 million in taxes.

UNITED STATES SHOULD RATIFY BAN ON CBW ATTACKS

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. FRASER. Mr. Speaker, I am pleased to join with 61 other Congressmen in cosponsoring a resolution (H. Res. 444) urging the President to resubmit to the Senate for ratification the Geneva protocol of 1925.

The protocol prohibits the first use of poison gas and biological weapons in time of war.

The expense and horrors of CBW have only recently been brought to public attention. The United States is now spending at least $350 million per year on chemical and biological weapons. Five high-security bases, where research is conducted, have a total value of about $1 billion. It was at one of these bases, Fort Dugway in Utah, that a misspraying of 320 gallons of the deadly nerve gas VX resulted in the death of 6,000 sheep—although the army at first denied any connection. Our arsenal has been sophisticated to the point where we can now induce plagues and diseases for which there is no known cure. And the United States is not alone in researching these weapons—a number of other major nations are known to have CBW arsenals of their own.

The Geneva protocol is not a perfect instrument. Broader agreement is needed to control the development of chemical and biological agents. We should also support the British proposal for a new convention to prohibit the use, production, stockpiling, and testing of biological weapons. But as a big step in the right direction, the Geneva protocol deserves U.S. approval.

The resolution follows:

RESOLUTION

Resolved, That it is the sense of the House of Representatives that the President of the United States should resubmit the Geneva Protocol of 1925 banning the first-use of gas and bacteriological warfare to the United States Senate for ratification; and be it further

Resolved, That it is the sense of the House of Representatives that resubmission of the Geneva Protocol would provide an opportunity for a comprehensive review of United States' policies in the fields of chemical and biological warfare; and be it further

Resolved, That it is the sense of the House of Representatives that ratification of the Protocol would constitute a clear and unequivocal reaffirmation of the United States' traditional policy of no first-use of gas and bacteriological warfare.

WHAT WOULD SATISFY SENATOR FULBRIGHT?

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. ROBISON. Mr. Speaker, Vietnam's continuing cost in men, money, and national morale seems to be felt ever more painfully these days, especially so now that there are hopes that some end may be in sight. I strongly endorse and support President Nixon's plan for "re-Vietnamizing" this unfortunate war as fast as is possible, and it is natural that our first step in that direction—namely, the withdrawal of 25,000 troops by August—has renewed the national debate over the war to a certain extent and likewise focused our attention on the possible next steps toward disengagement.

Some of the President's critics have—as the editorial I shall mention in a moment notes—have been putting "forth their own prescriptions for ending the war quickly and, of course, honorably, and with no visible injury to our interests." All of which is far easier said than done, and I, for one, believe Mr. Nixon is forcing the pace of events just about as fast as he reasonably can.

I am sure the President expected some such criticism, for he has to be as keenly aware as any one of us of the impatience with which the American people await the day when the burden of combat in South Vietnam has been lifted off our backs. However, I must question the wisdom of our doing anything here to feed that impatience for our chances of successfully negotiating our way out of this conflict and of salvaging at least a part of our original goal—leaving a non-Communist government in Saigon, or at least one not dominated by Hanoi—now stand at a very crucial point. For what

Hanoi has so evidently always counted on was the prospect that the United States would so tire of this struggle that its Government would be forced by public and financial pressures at home to simply get out altogether, and regardless of the consequences.

The recent indirect exchange of views between the President and former Secretary of Defense Clark Clifford is an example of the kind of trouble we could get into—unintentionally, I am sure—if there were now to be an open public inquiry in the other body into what has been called "President Nixon's war policy." I am not at all suggesting that Mr. Clifford, Ambassador Harriman, Cyrus Vance, or anyone else should not be free to make whatever suggestion they wish, or offer any pertinent criticism, with respect to what the President is or is not doing, but what I am suggesting is that I think it would be extremely unfortunate if Congress now undertook a formal inquiry into our present policy, in the course of which we might give Hanoi further reason for thinking that all it had to do was wait another year and we would be out of Vietnam, anyway, and hang the consequences. The risks of that sort of a result are, I suggest, as obvious as they are great.

In any event, on yesterday the Washington Post had something to say, editorially, about all this and, under leave granted, that is now set forth for the consideration of my colleagues:

ON NOT BEING OUT TO LUNCH

The frustration of Senator Fulbright and his Senate colleagues is understandable; having been out to lunch, as it were, when President Johnson was whipping the Tonkin Resolution through the Congress in 1964 and leading us into a massive combat commitment to the Vietnam War, they have good reason to demonstrate a bit more vigilance, and display a little less faith, about the plans and intentions of the Nixon crowd. That said, it is hard to see at this point what useful purpose will be served by plunging into a public investigation of President Nixon's war policies, as Senator Fulbright has announced he feels compelled to do. He will, of course, have no trouble rounding up witnesses ready to denounce the past or assail the Nixon approach or put forth their own prescriptions for ending the war quickly and, of course, honorably, and with no visible injury to our interests. Bright visions will doubtless be spun of the good purposes the money thus saved will be put to at home. It isn't as if we hadn't heard all this before or that Mr. Nixon and his associates are not as eager as the next man to stop the war.

If this last is accepted, the only question is how, precisely, the Nixon Administration intends to go about it, and while this may be a perfectly valid question, the results from public hearings at this point are almost entirely predictable; Senators will state their own views, at length, and wish to be told how many more troops the President plans to withdraw and how fast; what are our final settlement terms, and do they envisage a coalition government; are we wedded, as they say, to the Thieu government; have orders been issued to our troops to pull back and stop carrying the fight to the enemy, and if not, why not; are we still conducting the same old war policy? And the Administration will answer that it is too early to tell, or that it depends on enemy actions, or on progress in Paris, or on something else that isn't entirely up to us, and that in any case it is not a thing that can be discussed publicly, but that you can be sure our policy is to end the war.

This won't satisfy the Senators, of course, but then you have to wonder what would satisfy Senator Fulbright, the way he was talking on *Issues and Answers* the other day. He explained he had been "quiet during some six months" in the hope that the President "would make some movement . . . that would indicate a hope that he was moving towards a change in the war and a de-escalation or stopping it, but nothing of this has happened." He then went on to say that the President had made a "flat statement" that he "is going to get all the troops out before the end of next year."

Well, in the first place the President didn't make a "flat statement" (he expressed a *hope*). But if Senator Fulbright thinks he did, it's hard to see what his quarrel is with the Nixon policy. In any case, the President has withdrawn 25,000 troops and promised to withdraw more, which would seem to constitute "some movement that would indicate a hope that he was moving towards a change . . ." And, besides, it hasn't been six months yet, only five. In short we find it all a little puzzling, this urgent need for an investigation of a Nixon war policy which would seem, at the moment, and on the available evidence, to meet Senator Fulbright's minimum requirements—unless it has something to do with the fact, readily conceded by the Senator, that on the way into this war he and a lot of his colleagues were out to lunch.

RETIREMENT OF CHIEF JUSTICE EARL WARREN

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. UDALL. Mr. Speaker, I am pleased to join my colleagues in expressing respect and esteem for Chief Justice Earl Warren on the occasion of his retirement from the Bench. I have long been one of Mr. Warren's admirers, and I view with some sadness the conclusion of his service on our Nation's highest court.

As one who loves the law, who grew up in it as the son of a country judge, who saw his father become chief justice of the Arizona Supreme Court, I have a special affection for the man we honor today. I believe history will accord him a very special place.

When in 1953 President Eisenhower appointed the then Governor of California as his Chief Justice, I suppose few Americans regarded this as much more than a wise political appointment reflecting the importance of California in our political system. Surely few would have predicted that the service of Earl Warren would stamp him as one of the greatest Chief Justices, if not the greatest, in our history. It is one of the ironies of the historical process that not even President Eisenhower seemed to realize what a trailblazer he had chosen.

How can we assess Earl Warren's career? I think it must be assessed on the basis of the changes in our society, our Government and our social consciousness that have been effected by the Warren court. When viewed in this way, the career of Chief Justice Warren has been monumental. If one had to name the 12 Americans who have had the greatest impact on their country in this century, I believe his name would have to be on the list.

Justice Warren personally and professionally represents all that is good in America. His faith in his fellow man, his honesty, his outlook on life are all that any of us could hope for in our children and in our children's children. His ability to get to the essence of difficult problems, his insistence that the law must deal in the question of basic fairness, rather than technicalities, his compassion for true equality before the law—all of these marked him as a great judge. Yet he was more than this. He was a judicial leader who led, not by authority or coercion, but by persuasion and example.

The public service was Earl Warren's life, as it was my father's. He recognized, as some in this complicated and cynical world do not, that real public service often requires sacrifice of personal gain. Thus in a time when many questions were raised about standards of conduct and conflicts of personal and public interest among our national and State leaders, Earl Warren set his own high standards. He is reported to have said that he lived and supported his family for the past 30 years entirely on his public salaries.

I salute Chief Justice Warren on his retirement and believe I speak for the vast majority of my constituents in wishing him many more years of health and happiness.

BALTIC STATES FREEDOM DAY

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. ROONEY of New York. Mr. Speaker, in our preoccupation with the armed conflict in Vietnam and in the Middle East and with our attention being focused on the conflicts on our college campuses, some of us may forget to observe the anniversary of one of three of the most tragic days ever experienced by mankind.

Twenty-eight years ago the stanchly independent peoples of Estonia, Latvia, and Lithuania fell victims to a savage and ruthless subjugation by the Soviet Union. In those painful hours of June 14 through June 15 in 1941 the Soviet military might overwhelmed the peace-loving people of these Baltic States.

The brutality of the Soviet takeover will always stand out as a blot on the pages of history. The world can never forget, nor should it ever forget, the bestial behavior of the Kremlin in the murder of over 30,000 innocent and unarmed men, women, and children. Mankind must never forget that whole families composed of thousands upon thousands of persons were starved and persecuted and sent to Soviet slave-labor camps to endure suffering of a nature so painful that death would have been welcomed. Few of these victims of the wholesale deportation were ever heard from. Only a few escaped their barbaric slave masters to reveal the depths of degradation to which they and their companions had been subjected.

Mr. Speaker, this black act against mankind, this inhuman treatment of

God-fearing, hard-working people is not of ancient history. It is not one of the painful episodes of medieval times. It is a happening of our time and lives painfully and graphically in the minds of hundreds of thousands of people from Estonia, Latvia, and Lithuania. I know personally the extent to which this is true with respect to the many fine Lithuanian American citizens who are my friends and neighbors in Brooklyn. These survivors of the relatives and neighbors who suffered the fate of the damned can never forget the agonized cries of the suffering. They can never forget the sudden theft of their freedom and independence as the Red jackals descended upon the cities and farms looting and killing like some barbarian horde.

These atrocities must never be forgotten. Never should Russia's slate be wiped clean without redress and retribution being made. Only the return of the countries to their rightful owners and only after comprehensive and liberal compensation has been made for the loss of life and property can the Soviet Union be considered for membership among the respected civilized countries of the world. Regardless of the overtures the Kremlin's leaders may make toward peace, the world must not forget its dastardly acts of June 1941.

Regardless of the sweet-sounding siren songs to which the Reds resort today to appease a critical world, we must not let such false notes dim the agonizing cries of peoples being murdered and forced into cruel bondage. Regardless of how willingly the Russians hold out their hands in friendship, we must remember those hands are drenched with the blood of brave people whose only crime was to live peaceably in self-determination.

We must pay tribute to the fine organizations composed of our loyal American citizens who are justly proud of their Baltic backgrounds and lineage. To them we owe a debt of gratitude for keeping alive the memory of the Soviet illegal annexation of Lithuania and her sister nations. Let us join these patriotic organizations in rededicating ourselves to the pledge of seeking anew the righting of this colossal injustice perpetrated upon the innocent citizens of three sovereign countries. Let us continue as a nation to refuse recognition of Soviet jurisdiction over these countries. Let us continue to recognize only the true representatives of these peoples, even though they now must live in exile.

MAIL SERVICE

HON. JOE SKUBITZ

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. SKUBITZ. Mr. Speaker, I recently received a letter from one of my constituents pointing out some of the problems facing our mail service. It clearly points out some of the inefficiences of our postal service that inconvenience the American public every day. I have long been aware that delivery of the mails has not been of the high standard that we have a right to expect from this Government service, and I would like to use this letter as an illustration of typical public dissatisfaction with postal service.

I therefore insert this letter in the RECORD:

PITTSBURG, KANS., *June 18, 1969.*

Mr. JOSEPH SKUBITZ,
Congressman From the Great State of Kansas, House of Representatives, Washington, D.C.

HONORABLE AND DEAR SIR: The mail must go forward, Hail, high water, or hell shall not stop or delay the mail.

I think we had better forget that slogan. I am very sorry that I ever quoted it to my children or my grandchildren.

An independent businessman can sell you a service and you generally pay for it when you get the service. You buy and pay in advance for postal service and then they fail to furnish the service. You have to take it and you have to like it. It is just one more department of our government that you cannot depend on. The most efficient branch of our government is the tax department, and they do a pretty good job of hitting the average working man as well as the poor pensioner 100%.

My dear Representative, I am enclosing for your information evidence of my gripe. You will note these letters were received in the Post Office on the afternoon of June 13 and they were delivered at about 8:30 a.m. on the 17th. They were in the hands of the postal department for five days. (My motor car registers 186 miles by the crooked road between the two points.) Would you say that this was special delivery or was it a new type of Zip Code service? You will note that the letters were sent special delivery.

At the time these letters were mailed there was a package also mailed parcel post. I received the package the following day (June 14). Personally, I think that if they sell you a service and they do not honor the contract there should be a penalty, just as they penalize the railroads for a train that is a few minutes late. A contract which does not work both ways is not the U.S.A. way of life. I realize that this is trivial, but if you don't look after the penny you will never save a dollar. It seems that there is only salve and yet no cure. Where are all the "guts" that used to be in the House Members? Is the Postal Department going to be allowed to do as the railroad have done—deplete the service so that they will only handle carload freight?

Yours truly,

———— ————.

SDS SUMMER WORK-IN MEMORANDUM

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. MINSHALL. Mr. Speaker, the director of business relations of the Junior Achievement of Greater Cleveland, William W. Demeritt, has performed a splendid public service by circulating among the Junior Achievement membership copies of the SDS student summer work-in plan. Mr. Demeritt has alerted the fine young teenagers who operate their own private enterprise businesses through Junior Achievement to the modus operandi of the Students for a Democratic Society.

I am indebted to my good friend, Herbert S. Richey, of the Valley Camp Coal Co., in Cleveland, for sending me copies of Mr. Demeritt's memorandum and the SDS work-in plan, which follow:

MEMORANDUM

To: All members of Junior Achievement of Greater Cleveland, Inc.
From: William W. Demeritt, Director of Business Relations.
Date: June 20, 1969.
Subject: SDS Summer Infiltration.

The Junior Achievement office has just received some very interesting news concerning disruptive plans aimed specifically at business and industry.

The Students for a Democratic Society have distinguished themselves thus far with their radical destructive activities on college campuses. NOW, they plan to branch out into manufacturing plants. The "SDS Student Summer Work-In" is printed verbatim and attached to this memo. This plan was mailed from SDS headquarters in San Francisco to chapters all over the nation.

This is one form of "business" activity that Junior Achievement is attempting to combat. J.A.'s economic education program will, hopefully, provide our teenagers with a better and more positive understanding of business and industries role in our lives.

I am sure you will agree that it is not only very interesting reading, but it might be useful to you, your customers, or clients, when hiring summer employees. Therefore, we share it with you.

SDS STUDENT SUMMER WORK-IN

Student concern about poverty, poor education, the war, etc. has grown considerably on college campuses around the country. The desire to make meaningful changes can be seen in the growth of such programs as Free Universities, Tutorial programs, anti-draft unions, and the like. We have ignored the largest section of the population: the workers.

As intellectual students who seek certain social changes we must begin to ally ourselves with the workers. We should not and cannot remain in our ivory tower.

In order for any student-worker alliance to come into existence, we must face squarely the misconceptions we may have regarding worker apathy. With the current strike levels higher than since the depression we see clearly that the workers are not apathetic. The Workers ARE on the move.

S.D.S. is planning a program that will help students get summer jobs in an attempt to break down the barriers that are keeping students isolated. Students involved in the Summer Work-In will meet regularly to discuss their on-the-job experiences; contradictions they may face, how to speak to certain issues, conclusions drawn from their experiences with workers. The student Summer Work-In is an opportunity for students to learn from workers.

I. HOW TO RESEARCH JOBS IN YOUR AREA

Manufacturing—A Directory of Manufacturers (from the library or Chamber of Commerce) lists plants, number of employed, and sometimes a breakdown as to male and female employees.

Transportation, utilities, hospitals—Consult phone book or ask librarian for any other directories. Also try union hiring halls.

II. WHAT JOBS TO LOOK FOR

Job-seekers should try to get hired in places that have several hundred workers. Reasons for this include: a) if we want to distribute literature, the potential is greater, b) the larger the company, the better chance of a basic union, that the workers will have a sense of organization (even if the union is a sellout one), that there will be a tie-in to workers nationally, c) in large

plants in national unions there is a better chance that workers will become part of (and have a history of) mass strike movements, rebellions against sellout leadership, conflict with the gov. due to "national interest" injunctions, which might create the basis for greater mutual exchange about questions relating to opposition to gov. policies, d) the larger the company the likelier the existence of masses of unskilled jobs which we can fill, especially as replacements for workers taking vacations. If at all possible, choose a plant in the area of your school, to facilitate the possibility of worker-student alliance later on.

If you are white, select a plant where the majority are white. While Black workers might be thought of as more politically conscious, what we are trying to do is to reach white workers on the questions of the war and racism, to name but two areas. If Black, a student should get a job with Black workers; woman should give special consideration to jobs where many women are employed (such as electrical industry, department stores, phone).

III. HOW TO GET A JOB

Some places hire students specifically for the summer as replacement for workers on vacations (altho usually bosses try to get by with not filling in, unless the union contract has specific stipulations and they are enforced). Most won't hire a student and in most cases it would be best not to mention you are a student (unless you have sounded out the situation before hand by sending someone who doesn't really want the job to ask questions, etc.). If you can't say you're a student, you will have to come in as a high-school graduate with a "former place of employment" for the past ¼ year. Talk about this with your group beforehand to work things out. In most cases indicate that whatever you did on your previous job involved some kind of manual work. You're not afraid of real work, is the idea to get across.

Be familiar with whatever type of transportation will get you to work or say you "have a friend who works nearby". Some places won't hire you if they think you are a potential latecomer.

Draft status may be a problem, since 1–Y or even 4–F applicants are usually turned down, and 2–S immediately reveals your student status. Try not to mention it and use your wits if they do.

If you use a "background" story make sure your former boss knows about it, and make sure you were "laid off" due to slow business, etc. and not fired. Choose a salary approximate to the job for which you are applying or a little less and make sure your former boss knows this too.

If you take an aptitude test, don't show off. On a time test, answer about half of the questions or they may be suspicious and want to use you in the "front office". Sometimes it is hard to judge, and if possible it is good for someone to test out the situation for you.

If you have any physical defects which can't be detected from a normal physical exam, don't mention them. Companies are wary of hiring someone with previous injuries which could be re-injured, creating the basis for a suit.

You should be at your first place looking at around 8:30 or 9:00, and don't go to your last place any later than noon. Generally, don't wear a suit, but don't dress like a slob or a hippy. Sports jacket/dress with low heels usually will do.

If you have to sign a "non-communist" or "non subversive" statement you can do so without breaking any law unless the company is doing govt. work (this would be stated). Discuss this with the group if you are going unclear.

Be straightforward, use simple language and attitude, not $20 words. Don't volunteer information, just answer what is asked.

IV. WHAT TO EXPECT ON THE JOB

Don't start sounding off the first day on the job, or even the first week. Work, learn your job and don't goof off on someone else's back, but if the workers are taking a break or goofing, go ahead (unless it will cost the job, which the others will understand). Although we're here for a short time and can't expect miracles in three months, we don't have to wait as long as we might (if it were a permanent job) to "open up" on political questions. Learn from the workers, about the work, job, history of the plant, their attitudes on every question. Listen, and participate in bull sessions. You might find out who the finks are.

Don't be shocked by the racist remarks of the white workers, by confused political impressions, pro-war talk, "keeping-up-with-the-Joneses" talk. If the workers understood racism, the war, middle class morality, capitalist manipulation, etc., things would not be the way they are. Do let them know you're a student as soon as possible without risking the job. You can't be honest with the workers until they know. Altho some workers think students are snobs (some are), they also respect education and want their kids to go to college. Your job is to bring across the *identity of interests* between students and workers. Without workers there would be no universities, they create the wealth, and have the power. Without them no basic changes can happen in the system, etc.

But we are there with a specific purpose—to talk about political issues even the student movement, since we will have a chance to "change our image" from what the press has said about us. Talking about racism among white workers is no easy thing, to point out how the boss uses race, union, sex, craft, nationality, etc., to separate workers; it is easier to sit on them if they are divided, etc. The illusions created by the coming elections will be hard to combat. We can't expect wild things in three months, but we can begin to question, to point out relationships they might not have thought about or might be afraid to express out loud, and we can begin to learn how to express these ideas without being presumptuous or arrogant. Try talking to receptive individuals; don't start by using the lunchroom for a "soap box oration". Discuss the use of literature, when to use, what kind.

Try to make a few friends to last beyond the summer, and try to get their addresses and phone numbers before you leave the job. Otherwise it might be hard to contact them again. Concentrate on making new friends, even join a bowling team, etc.

Don't talk to workers like you know everything and they know nothing. First of all, it's not true (probably the reverse). Even if you do know more about the specifics of the Geneva Agreement or statistics on Black Oppression that doesn't mean that by making a speech you'll get the facts across. Be patient; make it an *exchange* of experience, not a one-way affair. We will all make mistakes; don't give up! Discuss things with the group. The workers were all rookies once, but they survived because they had to; they had to eat.

Try to record your experiences by day or week. Just a few notes about relevant events will be invaluable for other people participating in the Work-In, for those next summer and for other publicity such as a regional newsletter or New Left Notes (or any other).

Come to work on time! Lateness is the first cause of being fired in a trial period. Don't start broadside against the union leadership. Listen, ask questions about grievances and perhaps suggest types of fights if you can think of something. But don't feel compelled to give leadership on all questions. One important result of your job may just be an appreciation of what workers are up against in their fight against the boss, the govt. and sellout union leadership. Knowledge of the in-plant gripes will help if there is to be follow-up along the lines of work-student alliance when you get back to school. You will be able to relate your leaflets to actual problems inside the gates.

Remember when you start talking about war, many workers who agree with you will keep quiet, while the supporters will speak out. Don't get into knock-down, drag-out arguments with the latter, rather talk with the ones you're making friends with. Don't get yourself into a position of being 'you against the workers'. Know the facts (the group could compile pertinent bibliographies)! If you talk with workers whose sons are in Viet Nam, be careful. That's an emotional area in which it may be very hard to convince him that your idea of supporting his son is correct. Start by understanding his position of having been brainwashed all these years and seeing his son in danger 'from the other side'. To convince an already convinced student is one thing; to change the mind of this worker will be a task we will have to develop patience and understanding for.

After you are there a month or so, try to pick a few workers who are interested in your ideas and who have friends in the shop, concentrate on individual discussions with the hope of keeping these workers as contact after you leave. Talk about the possibilities of students offering the workers assistance in any struggles coming up, on picket lines, doing research, etc. Don't necessarily start asking about union meetings. Many times they are suspended during the summer or at any rate many workers don't attend meetings. If there are meetings, go if you are asked to, but with the idea of listening rather than orating.

Since only general things have been covered here, it will be essential to keep in close contact with the group to discuss problems with them. If possible, try to have two students in the same job to compare notes, exchange experiences, and get a broader view of the place. However, if students work together, they should not team up. It will be a constant temptation to stick with the person you know the best, can communicate with easiest, etc. This is not to say that you should ignore each other on the job, just that your primary aim will be to work and communicate with the permanent workers in the plant.

GEORGE E. RUNDQUIST

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. RYAN. Mr. Speaker, George R. Rundquist, former executive director of the New York Civil Liberties Union, died Tuesday, May 27, in Dunedin, Fla. He was 72 years old.

A founder of the New York Civil Liberties Union. George Rundquist was a constant defender of the oppressed and the aggrieved. He was dedicated to the defense of the principles set forth in the Bill of Rights. Although he frequently came under criticism for his views, he enjoyed the great respect of even his opponents and adversaries.

A graduate of New York University and Harvard, Mr. Rundquist started work for the Lewis Publishing Co. in 1916, where in 1919 he became an associate editor. However, in 1923 he entered the investment field in Los Angeles.

The publishing profession regained his attention with'n 3 years, and in 1926 he

became an associate editor with the American Historical Society. After 13 years with the society he left to join the publishing firm of James T. White & Co.

During World War II Mr. Rundquist served as the executive secretary of the Committee on Resettlement of Japanese-Americans, an organization which helped Japanese American evacuees from the west coast. Starting in 1932 he held the position of associate secretary of the American Friends Service Committee and from 1945 to 1947 he worked in the capacity of associate secretary of the committee's foreign section in Philadelphia.

He was executive director of the New York Civil Liberties Union from 1951 until his retirement in 1965.

One of Mr. Rundquist's triumphs was the establishment in 1953 of a review within the New York City Police Department to study allegations of police brutality. The establishment of the board was a result of pressure from Mr. Rundquist's organization, the New York Civil Liberties Union. In 1966, 1 year after his retirement, the New York Civil Liberties Union participated in the unsuccessful campaign for a Civilian Review Board.

Dedicated and hard working, George R. Rundquist was committed to the defense of civil liberties, and devoted his efforts to insure their preservation. As one who admired and respected his work, I know his presence will be keenly missed.

I would like to extend to his widow my deepest sympathy and condolences at the loss which she, as well as all those who knew George Rundquist, have suffered.

I include at this point in the RECORD the obituary from the New York Times of May 28, 1969:

GEORGE E. RUNDQUIST, 72, DEAD; DIRECTED LIBERTIES UNION HERE; HEAD OF GROUP FROM 1951 TO 1965 FOUGHT FOR FORMATION OF POLICE REVIEW BOARD

DUNEDIN, FLA., May 27.—George E. Rundquist, executive director of the New York Civil Liberties Union from its founding in 1951 until his retirement in 1965, died today in a hospital here. He was 72 years old.

He is survived by his widow, the former Alice L. Perinchief.

DEFENDER OF THE AGGRIEVED

Mr. Rundquist's soft-spoken and dignified manner belied the ferocity with which he attacked a wide range of civil liberties issues.

In his dedication to the defense, interpretation and practice of the principles set forth in the Bill of Rights, Mr. Rundquist frequently encouraged antagonism from opponents but rarely a lack of respect.

In 1960, he led his organization's fight on behalf of George Lincoln Rockwell and the American Nazi party for the right to speak in Union Square. He maintained that the denial of such permission would violate constitutional rights of free speech and assembly.

"This position is consistent with our traditional defense of free speech, despite the fact that the groups of individuals under attack are abhorred by the majority of the community," he said.

The New York Civil Liberties Union succeeded a committee that had been operated by its parent body, the American Civil Liberties Union, of which Mr. Rundquist had been an assistant director since 1948.

The new group, which served the aggrieved in New York City and Westchester County during his administration, later expanded its activities to cover all of the state.

One of Mr. Rundquist's successful campaigns bore fruit in 1953 when, under his organization's persistent urging, the city's Police Department set up its own board to review allegations of police brutality.

In 1966, the year after his retirement, the Liberties Union was again to attack the problem of police brutality. It was one of the many civic groups that actively campaigned to protect the new police review board—this one controlled by civilians—against the threat of a referendum urged by the Patrolmen's Benevolent Association and the Conservative party. The board was subsequently defeated and abolished in the referendum.

Mr. Rundquist, however, was usually victorious. He was proud of having brought to a successful conclusion in 1956 the case of a Brooklyn man, Camilo Leyra Jr., who had been sentenced to die three times for the murder of his parents in 1950.

The Court of Appeals dismissed the first-degree murder indictment and freed him, ruling that his confession to the police would well have been influenced by a lack of sleep, painful sinus attacks, the shock of the incident and the destruction of his alibi.

He and his organization succeeded in 1960 in persuading the New York State Legislature to eliminate the Security Risk Law, which required a loyalty oath from State Civil Service employes.

Mr. Rundquist, a native New Yorker, attended New York University and Harvard and in 1916 went to work for the Lewis Publishing Company, with which he became an associate editor three years later. In 1923 he left the publishing field to enter the investment business in Los Angeles.

The business world held his interest only for three years, and in 1926 he became an associate editor with the American Historical Society. In 1939, Mr. Rundquist joined James T. White & Co., publishers.

His humanitarian outlook first found professional expression when he became associate secretary of the American Friends Service Committee in 1942. During World War II, Mr. Lindquist was executive secretary of the Committee on Resettlement of Japanese-Americans, aiding Japanese-American evacuees from the West Coast. From 1945 to 1947, he worked as associate secretary of the American Friends Service Committee's foreign section in Philadelphia.

CONSUMERS UNION BACKS MILITARY CREDIT UNION PROGRAM

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 26, 1969

Mr. PATMAN. Mr. Speaker, the highly respected private consumer's organization, Consumers Union, recently completed a study for the Department of Defense into all aspects of the serviceman as a consumer. As a part of its study, Consumers Union strongly endorsed the operation of credit unions on military installations. In fact, the study recommends that the military provide more assistance to these worthwhile institutions so that they can better perform their jobs in helping our servicemen.

The Banking and Currency Committee has long been interested in the credit problems of servicemen and has consistently recommended that credit unions be established on every U.S. military installation throughout the world. I am glad that Consumers Union has endorsed this recommendation.

I am including in my remarks a copy of a press release issued by Consumers Union on the study. I sincerely hope that the military will follow the advice presented by Consumers Union, for the study, if implemented, would go a long way toward bettering the lives of all our servicemen. The press release follows:

THE SERVICEMAN AS A CONSUMER—CONSUMERS UNION COMPLETES DEFENSE DEPARTMENT STUDY

MOUNT VERNON, N.Y.—A study of the program of the Department of Defense for the protection of the serviceman as a consumer has been completed by Consumers Union, the nonprofit testing and advisory organization.

The Defense Department is given high marks, on the whole, for its policies, but enforcement is seen as varying widely from installation to installation. The principal recommendation is that the Pentagon should give emphasis, now lacking, to developing the individual's capacity for self-protection through education.

Recommendations are also made regarding expansion of credit unions, comparative testing of military exchange merchandise, the adoption of "no fault" auto insurance and the development of regulations governing the sale of mutual funds and variable annuities.

For more than a decade, the Defense Department has been developing "Directives" to serve as guidelines for the protection of servicemen against fraud and unscrupulous commercial practices. For example, two years before the Congress passed the truth-in-lending law, DOD issued a directive which called for full disclosure of annual interest rates for all transactions conducted on military installations and provided other protections now found in the federal law. Other directives sought to eliminate fly-by-night life insurance companies, stabilize the auto insurance picture, and provide for counseling in personal affairs and establish standards of fairness in commercial transactions.

The report by Consumers Union finds the directives "appear to have had a salutary effect in eliminating the most flagrant abuses."

But the study is critical of the enforcement of the directives and of the briefing process through which servicemen are made aware of the protective measures. Enforcement was found to vary with the degree of commitment to the prorgam by individual commanders. In some installations authority enforcement was found to be diffused among several different commands. In addition, the study notes that pressures from Congressmen can be helpful or harmful to the enforcement process and that, by and large, disciplinary control boards appear to take little interest or action in "off-base" violations of DOD's Standards of Fairness.

At all military installations visited for the study, the "letter" of the orientation and counseling program was met by the quality of presentation was found to be low and the effect minimal, according to the report.

The report likens the department's consumer protection directives to essential consumer protection laws for civilians and points out that the real ultimate protection for either servicemen or civilians must come from a growing sophistication achieved through education of the individual. Recommendations are made to expand the training of personal affairs counselors and legal assistance officers, and to develop more, and more effective, education materials.

Credit unions have the potential for making an even greater contribution to the welfare of the servicemen, according to the report. It estimates that only one-eighth of the military and civilian defense workers are being served by credit union facilities now. Attention is called to the initial success of six experiments with overseas branches of large U.S. based defense credit unions and

rapid expansion of that program is urged. In addition, the report proposes that a training program in debt and money management counseling for defense credit union personnel be initiated.

Part of the study deals with the price/quality aspects of the military exchange program. The principal goal of the exchange system, to make necessary goods conveniently available at low prices, is largely achieved, the report says. But the lack of any performance-quality testing is seen as a weakness that should be corrected either by expansion of present extremely limited lab facilities or through contracts with other government labs or commercial facilities. The report also points to the need for more consideration of the needs and pocketbooks of low-rank military personnel in the selection of merchandise.

The problems of servicemen in securing auto insurance and the rates charged them were also studied. The department is urged to study the merits of the "no fault" insurance concept now being widely debated and under consideration by the legislatures in a number of states. A feature of this new approach known as "excess coverage" makes the youthful serviceman suddenly an attractive risk at a relatively low rate. This change in status derives from the fact that the premium would not have to cover such potentially costly items as loss of income and medical payments, the report says.

Still another section of the report recommends that the directive covering conditions for the sale of life insurance serve as the basis for similar regulations for the sale of mutual and variable annuities.

HOUSE OF REPRESENTATIVES—*Friday, June 27, 1969*

The House met at 11 o'clock a.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

All things come from Thee, O Lord, and of Thine own have we given Thee.—1 Chronicles 29: 14.

O Thou whose wisdom is so wise that we often doubt it, whose love is so loving we often deny it, and whose truth is so true we often fear it, grant unto us such a full measure of Thy spirit that we may never doubt Thy wisdom, never deny Thy love, and never fear Thy truth.

Thou hast called us to live together in peace and good will. Let Thy presence so move in men that the leaders of the world may find support for peaceful procedures in their endeavor to establish justice, to maintain order, to develop understanding, and to build bridges between nations and people.

Teach us to unite what we ought to do with what we will do, that walking in the way of Thy word and obeying Thy commandments, we may have life more abundant, liberty more abounding, and love more abiding—all to the glory of Thy holy name. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 265. An act to amend section 502 of the Merchant Marine Act, 1936, relating to construction-differential subsidies.

The message also announced that the Senate had passed with an amendment in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 12167. An act to authorize appropriations to the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes.

The message also announced that the Senate agrees to the amendment of the House to a concurrent resolution of the Senate of the following title:

S. Con. Res. 17. Concurrent resolution to recognize the 10th anniversary of the opening of the St. Lawrence Seaway.

The message also announced that the Senate had passed bills and a joint resolution of the following titles, in which the concurrence of the House is requested:

S. 621. An act to provide for the establishment of the Apostle Islands National Lakeshore in the State of Wisconsin, and for other purposes;

S. 1076. An act to establish a pilot program in the Departments of the Interior and Agriculture designated as the Youth Conservation Corps, and for other purposes;

S. 1708. An act to amend title I of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), and for other purposes;

S. 1932. An act for the relief of Arthur Rike; and

S.J. Res. 122. Joint resolution to provide for a temporary extension of the authority conferred by the Export Control Act of 1949.

THE HONORABLE JOHN MELCHER

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Montana, Mr. JOHN MELCHER, be permitted to take the oath of office today. His certificate of election has not arrived, but there is no contest, and no question has been raised with respect to his election.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. MELCHER appeared at the bar of the House and took the oath of office.

PERMISSION FOR SUBCOMMITTEE ON FISHERIES AND WILDLIFE, COMMITTEE ON MERCHANT MARINE AND FISHERIES, TO SIT TODAY DURING GENERAL DEBATE

Mr. BOGGS. Mr. Speaker, I ask unanimous consent that the Subcommittee on Fisheries and Wildlife of the Committee on Merchant Marine and Fisheries may be permitted to sit today during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

PROVIDING EXTENSION OF AUTHORITY CONFERRED BY EXPORT CONTROL ACT OF 1949

Mr. PATMAN. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate joint resolution (S.J. Res. 122) to provide for a temporary extension of the authority conferred by the Export Control Act of 1949.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. GROSS. Mr. Speaker, reserving the right to object, would the gentleman briefly explain the purpose of the resolution?

Mr. PATMAN. Will the gentleman yield?

Mr. GROSS. I am glad to yield to the gentleman from Texas.

Mr. PATMAN. Yes. I shall be very glad to. The enactment of the proposed legislation will extend the Export Control Act of 1949 for 2 months, to August 30, 1969. The Export Control Act furnishes the basic authority for control of exports to Communist bloc countries. It furnishes the authority for restricting the outflow of scarce materials, as well as the authority to regulate exports in furtherance of the foreign policy and national security of the United States. The temporary extension of the Export Control Act, which would otherwise expire on June 30, 1969, will enable the committee to complete its deliberations.

This has been agreed to unanimously by the subcommittee and by the gentleman from New Jersey (Mr. WIDNALL), the ranking minority member of the full committee.

Mr. GROSS. I thank the gentleman for his explanation.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the Senate joint resolution, as follows:

S.J. RES. 122

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1 of the Export Control Act of 1949, as amended (50 U.S.C. App. 2032), is amended by striking out "June 30, 1969" and inserting in lieu thereof "August 30, 1969".

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

A similar House joint resolution (H.J. Res. 780) was laid on the table.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. BOGGS. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 94]

Albert	Gallagher	Nedzi
Anderson, Ill.	Gibbons	O'Hara
Ashbrook	Gray	Ottinger
Aspinall	Green, Pa.	Pepper
Berry	Griffiths	Pettis
Biaggi	Grover	Podell
Bingham	Gude	Powell
Blatnik	Hagan	Pryor, Ark.
Brown, Calif.	Halpern	Purcell
Brown, Mich.	Harsha	Railsback
Broyhill, Va.	Hawkins	Reid, N.Y.
Byrne, Pa.	Hays	Riegle
Cahill	Hébert	Roberts
Carey	Heckler, Mass.	Ronan
Casey	Helstoski	Rostenkowski
Celler	Hicks	Ruppe
Chappell	Holifield	St. Onge
Clancy	Ichord	Sandman
Clark	Joelson	Satterfield
Clausen, Don H.	Kee	Schadeberg
	Kirwan	Scheuer
Cohelan	Kluczynski	Smith, N.Y.
Collier	Koch	Snyder
Conable	Kyros	Stanton
Cowger	Latta	Steiger, Wis.
Daddario	Leggett	Stokes
Daniels, N.J.	Lennon	Teague, Tex.
Davis, Wis.	Long, La.	Thompson, N.J.
Dawson	Lowenstein	Tunney
Delaney	Lujan	Ullman
Denney	Lukens	Waggonner
Derwinski	McClure	Watkins
Dingell	McEwen	Whalen
Dorn	McMillan	Whalley
Edmondson	Mailliard	Wiggins
Edwards, La.	Mathias	Williams
Esch	Meskill	Wilson, Bob
Eshleman	Michel	Wilson, Charles H.
Evans, Colo.	Montgomery	
Evins, Tenn.	Morgan	Wolff
Fish	Morse	Wright
Ford, William D.	Morton	Wydler
	Murphy, Ill.	Wyman
Fraser	Murphy, N.Y.	Zion

The SPEAKER. On this rollcall 303 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PROVIDING FOR CONCURRING IN THE SENATE AMENDMENTS TO H.R. 4229

Mr. COLMER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 455 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 455

Resolved, That immediately upon the adoption of this resolution the bill (H.R. 4229) to continue for a temporary period the existing suspension of duty on heptanoic acid, with the Senate amendments thereto, be, and the same is hereby taken from the Speaker's table, to the end that the Senate amendments be, and the same are hereby agreed to.

The SPEAKER. The gentleman from Mississippi is recognized for 1 hour.

Mr. COLMER. Mr. Speaker, I yield the customary 30 minutes to the minority Member, the able and distinguished gentleman from California (Mr. SMITH), and pending that I yield myself such time as I may consume.

Mr. Speaker, this is a very simple resolution, the import of it is very simple, as are the objectives that are sought. It really should not require a great deal of debate.

Mr. Speaker, for the benefit of those who are interested in the parliamentary situation, let me state very briefly this is a resolution that would, if adopted, take from the Speaker's table the bill, H.R. 4229, having to do with duties on heptanoic acid and agree to the Senate amendment.

When the House passed this bill and sent it over to the Senate, the Senate passed it and added an amendment. That amendment would simply provide for an extension of 30 days of the withholding of taxes on the surtax bill which expires in a few days.

Apparently, there is some confusion as to what happens when the rule is adopted. If the rule is adopted, that is the end of it. It is just that simple. There is no following legislation. The Government, the employers, and other interested employers are authorized to continue the withholding tax for 30 days.

Now I do not care whether you are for or against the extension of the surtax. This really has no bearing on it. It is not a test of how you are going to vote on the tax bill. This is a matter of housekeeping. This is a matter of avoiding the confusion that would result within the Internal Revenue Service, the employers, and other employers who are involved.

There would be a lot of confusion if the surtax were finally enacted and the withholding tax, or the right to withhold, expired next week without this authority.

So, I repeat, it is purely a matter of housekeeping. It is a very simple matter and I see no reason to take any further time in discussing it.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman.

Mr. VANIK. I would like to state to the gentleman that I think this is a necessary resolution.

I think it is a resolution which does not commit the House in any way on the question of the surtax. It would be practically impossible to readjust the withholding schedules within the time that remains and it would cost great expenditures and cause a great problem for the Government itself with its over 3 million employees.

Mr. Speaker, I certainly urge the adoption of the resolution and the legislation.

Mr. COLMER. I thank the distinguished gentleman from Ohio. He has said what I tried to say so much better than I said it.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from Iowa.

Mr. GROSS. I would like to take this opportunity to protest this kind of legislative procedure. We passed a bill and it has been amended with a totally ungermane provision and sent back to the House. But that is the situation we have before us, and unless the rule is defeated, or unless the previous question is defeated, we are stuck with it.

The question I really wanted to ask is this: If continuation of the surtax is defeated, will the withholding be restored to the taxpayer?

Mr. COLMER. I think in response to that question it is so evident that that is exactly what will happen, I should have stated it in my previous remarks.

Mr. GROSS. I thank the gentleman from Mississippi.

Mr. COLMER. I thank the gentleman from Iowa.

Mr. BOGGS. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from Louisiana.

Mr. BOGGS. In further answer to the gentleman's question, the taxpayer would receive an automatic refund when his return is filed in April.

Mr. COLMER. I thank the gentleman.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from Oklahoma.

Mr. ALBERT. The gentleman is correct. There are two aspects to the question of the surcharge being extended to any degree or for any length of time. Extension is necessary to avoid confusion and waste. If it is not extended, the taxpayer's right to refund is fully protected.

Mr. COLMER. Again, the gentleman has well stated the situation.

Mr. BURTON of California. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from California.

Mr. BURTON af California. I would like to join with the distinguished chairman of the Rules Committee in support of this rule. I fully associate myself with the remarks of our colleague, the gentleman from Ohio (Mr. VANIK). I think the proposal is a reasonable and necessary one, and should be adopted without controversy.

Mr. COLMER. I thank the gentleman for his contribution.

Mr. GROSS. Mr. Speaker, will the gentleman yield further?

Mr. COLMER. I yield to the gentleman from Iowa.

Mr. GROSS. The gentleman says the money will be refunded next April. Is the Federal Government going to pay interest on the money that it takes from the taxpayer under this withholding and uses until next April?

Mr. COLMER. The gentleman from Iowa, as usual, raises a very interesting question. Judging by the response of the House, perhaps I should leave it there. But I did not intend to treat lightly the question of my friend. I can only say to him that I do not have the answer to that question.

Mr. BYRNES of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from Wisconsin, the able ranking minority member of the Committee on Ways and Means, who is better qualified to answer that question than I.

Mr. BYRNES of Wisconsin. I do not think there should be any question as to what the situation is. In the event withholding is extended for 1 month, and the surtax is not continued, then the amount becomes part of the basic withholding of that particular individual taxpayer. In April it is determined whether there has been an overwithholding or an underwithholding in terms of total tax liability. If the proposed action should result in an overwithholding, the taxpayer would receive a refund. If there should be

an underwithholding, even with the withholding that would take place under this measure, the taxpayer would have to pay an additional amount as far as his tax liability is concerned. No interest is paid on overwithholdings.

Mr. JACOBS. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from Indiana.

Mr. JACOBS. I would like to direct a question to the gentleman who just spoke. I would like to ask what would happen for the 30 days in which that amount would be withheld which would not have been withheld without this continuing resolution? By the end of the year the taxpayer might catch up, but what about deprivation of the use of that money during the 30 days? There would be no interest paid for that time, and the man would not have given up use of that much money for the 30 days otherwise; is that not correct?

Mr. BYRNES of Wisconsin. The gentleman is absolutely correct. We have overpayments by other taxpayers that exist, irrespective of this surtax, under the law today by reason of withholding. In the course of a year more has been withheld than was necessary.

That takes place for many taxpayers are concerned. We should try to avoid overwithholding, but it does take place, and as of this date we pay no interest on overwithholding.

Mr. COLMER. Mr. Speaker, if I may I would like to add that as a practical matter it would appear to this humble person that the overwithholding is a saving that would occur under this unless we continue the surtax.

Mr. JACOBS. A savings account, however, that would pay no interest.

Mr. GILBERT. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from New York.

Mr. GILBERT. Mr. Speaker, I thank the gentleman for yielding. I wish to clarify the statement by our distinguished colleague, the gentleman from Wisconsin (Mr. BYRNES), and indicate this would be a benefit to the taxpayer, because the taxpayer in the event the surcharge is not voted into effect would receive either a refund or a credit, so the credit would become very important, because in the next period, instead of paying the higher rate, he would be paying the lower rate and receiving a deduction for the amount he had already paid.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I will be glad to yield to the gentleman from Illinois if he will now agree to use the time I promised to him.

Mr. PUCINSKI. Mr. Speaker, we have heard a great deal about all the confusion that is going to be created in withholding and not withholding and about all the computers which would have to be restructured.

I wish somebody would tell me what right anyone has in this country to assume that the Congress will continuously rubberstamp the surtax. This surtax dies Monday night, and I would have assumed all parties concerned would have prepared their machines and computers to end the tax on Monday night in the absence of any affirmative action by the Congress. Will somebody tell me what right anyone had to assume this surtax would be continued?

Mr. BYRNES of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. COLMER. Mr. Speaker, I yield to the gentleman from Wisconsin.

Mr. BYRNES of Wisconsin. Mr. Speaker, I do not think anyone is assuming that.

Mr. PUCINSKI. Then there will be chaos. All these people are supposedly programing for the deduction after July 1, when there is nothing in the record to indicate this House is going to continue the surtax after July 1.

Mr. BYRNES of Wisconsin. Mr. Speaker, I am telling the gentleman we will have confusion because the employers will have to set up their payrolls differently from the way the payrolls are presently computed, because currently the surtax is in being and currently, therefore, the withholding tables take into account the surtax.

Mr. PUCINSKI. Mr. Speaker, if I may say something further.

Mr. BYRNES of Wisconsin. Mr. Speaker, I am not going to yield.

Mr. PUCINSKI. Mr. Speaker, I would like to say something further.

Mr. BYRNES of Wisconsin. Mr. Speaker, I am not going to yield to the gentleman.

Mr. Speaker, after the first of July, if the surtax is not extended, then the employers have to revert back to the payroll and the withholding tables that were in effect last year prior to the enactment of this tax. That will be the law under which they will have to operate.

Mr. PUCINSKI. And for a whole year they knew this law would expire Monday night. Let us stop kidding this Congress and the American people.

Mr. BYRNES of Wisconsin. Mr. Speaker, the gentleman from Mississippi yielded to me.

Mr. COLMER. I yielded to the gentleman from Wisconsin.

Mr. BYRNES of Wisconsin. Mr. Speaker, that is what I thought.

The confusion that will exist for the employers and employees, let me say to the gentleman, is that they will move back under the old withholding schedule in the checks, which will be issued after July 1 unless we do this. Then should Congress enact the surtax, the employers will have to go back again to another table and another withholding schedule. Then in January, if we continue the tax at the lower rate of 5 percent, we will have other withholding tables.

Why have this constant confusion of changing from week to week or month to month? We should give the employers and employees 30 days, so we may determine whether or not the surtax will or will not be continued and on what basis the withholding will be done.

Mr. COLMER. Mr. Speaker, I would like to take another moment to comment upon the observation made by my friend from Iowa (Mr. GROSS) with reference to his general objection to this type of legislating. I agree heartily with him that this practice of the other body in taking some minor House-passed bill and adding nongermane amendments is highly objectionable. As the gentleman may be aware, I have been protesting this procedure for years. In fact, I have a resolution pending that would simply provide that where the Senate placed an amendment upon a House-passed bill that was not germane under the House rules that the same would be subject to a point of order when the bill was returned to the House. Although I have urged this for several years, I have not succeeded in getting it reported because of the objection of the House leadership. I am now attempting to have it written into the reorganization bill which is in process of study in my own Rules Committee. I hope that I may be successful.

Mr. BOGGS. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from Louisiana.

Mr. BOGGS. First I should like to commend the gentleman from Mississippi for a very fine explanation of the problem before the Congress.

Also, I can say there is nothing unique about this. Time and time again, in the case of the excise taxes, for example, we have continued collecting the excise taxes although Congress had not acted. But in the case of a withholding situation we have to act on it.

I could give the gentleman from Illinois, if he is interested, case after case after case in the enactment of legislation where this happens.

I commend the gentleman. Now permit me to take just a few additional minutes to explain precisely the Senate amendment.

Mr. Speaker, the Senate amendment added to the House-passed bill extends the surcharge withholding rates for the 1-month period from June 30, 1969, to July 31, 1969. This is withholding at a rate approximately 10 percent above that which would otherwise be applicable. This does not represent a change in any taxpayer's tax liability for 1969 but instead is intended to make it possible to postpone until July 31, 1969, any decision with respect to the administration's proposal to extend the surcharge. Should Congress not extend the surcharge, this will increase refunds or decrease tax payments otherwise due at the time of the filing of tax returns for 1969. This change should increase receipts with respect to the quarter immediately ahead by $600 million. It is merely a continuation of the present situation so that there will be time to consider this matter without upsetting the present withholding.

As you know, the administration has requested that a 10-percent surcharge be applied for the entire calendar year 1969 and that withholding rates reflecting the 10-percent surcharge be made applicable for the last half of the calendar year 1969. The request of the administration also, in effect, included the continuation of the surcharge at a 5-percent rate for the first half of 1970—or, more accurately, at a 2½-percent rate for the entire year. Other recommendations included in the administration proposals would repeal the 7-percent invest-

ment credit and would continue the excise taxes on automobiles and communications services, the present rates of 7 percent and 10 percent, respectively, for 1 more year—along with the postponement for 1 more year of the latter scheduled reductions. Nothing in this amendment relates to anything other than the surcharge.

As you know, on June 30, 1969, the surcharge withholding rate on individual income taxes terminates. The surcharge adds approximately 10 percent to withholding rates otherwise applicable. In view of the fact that the House will not be able to consider the administration proposals until Monday, June 30, this amendment provides additional time to consider these proposals without being confronted with the immediate termination of the surcharge withholding rates as of June 30.

Not only is more time needed for Congress to consider the administration proposals, but also in the absence of any action at this time employers might be faced with the difficult problem of changing over from one set of withholding rates as of July 1 and then, should Congress subsequently decide to accept part or all of the administration proposals, be faced with the necessity of shifting back to higher withholding tables if such action is completed by the Congress. This represents a considerable administrative burden for employers and also presents employees with changing take-home paychecks to which they would not be accustomed. It might also present the employees with the problem of underwithholding—that is, owing tax—at the end of the year should the full 10-percent surcharge be continued by the Congress for the remainder of the year.

It was for the reasons I have outlined above that the Senate concluded it was desirable to extend the surcharge withholding until July 31, 1969. This will give Congress time to adequately consider the administration proposals and will give assurance that employers will not be faced with two changes in withholding tables in a relatively short period of time.

It should be clearly understood, however, that this action does not prejudice congressional consideration of the issue of the surcharge since this does not represent a change in tax liability but only a change in the amount withheld. Therefore, should Congress subsequently decide not to enact any extension of the surcharge for the remainder of the calendar year 1969, this change in withholding would not affect any taxpayer's tax liability for the year. Instead, it would either increase the size of the income tax refund for which he had been eligible after the beginning of next year or, alternatively, would decrease tax payments he would be required to make at the time of filing his tax return for the calendar year 1969.

It is estimated that the extension of the surcharge withholding rates until July 31, 1969, will increase receipts coming into the Treasury during 1969 by $600 million. Whether this represents an increase in receipts for the entire fiscal year or merely represents refunds—or decreased tax payments—with respect to the latter half of the fiscal year 1970 will depend on whether or not subsequent action is taken by the Congress with respect to the administration's proposal to extend the surcharge.

The Senate amendment changes three dates in present law. First, it amends section 3402(a)(1) to provide that the percentage withholding tables which are applicable before the surcharge, and which under present law again become applicable after June 30, 1969, instead are to be applicable after July 31, 1969. These withholding rates are approximately 10 percent lower than the withholding rates applicable during the period when the surcharge applies.

The second change made by the Senate amendment amends section 3402(a)(2) relating to the percentage withholding tables applicable during the period when the surcharge applies. Under present law, the use of these tables terminates as of July 1, 1969. Under the Senate amendment, these tables continue in effect until August 1, 1969.

As an alternative to the percentage withholding tables, wage bracket withholding tables may, under present law, be used by the employer to determine the appropriate amount of withholding.

The third change made by the Senate amendment relates to section 3402(c)(6) which presently suspends the use of the regular wage bracket withholding tables for the period of the surcharge. Under present law, the use of the regular wage bracket withholding tables is suspended until July 1, 1969. The committee amendment suspends the use of the regular wage bracket withholding tables until August 1, 1969. In the interval, special wage bracket withholding tables apply, which in general provide rates that are 10 percent higher than the rates under the regular wage bracket withholding tables.

The changes made by the committee amendment apply with respect to wages paid after June 30, 1969.

Mr. Speaker, I will conclude by placing in the RECORD at this point an article from the Wall Street Journal indicating the concern which employers have over this matter:

CAPITOL HILL SLOWNESS ON SURTAX RENEWAL COMPLICATES JOBS OF PAYROLL EXECUTIVES

While Congressional leaders pondered in Washington whether the income surtax should be extended, payroll officials across the nation bemoaned that the slow deliberations were complicating their jobs.

The executives don't know if they should continue withholding the 10% surcharge on paychecks to be distributed after Monday, when the levy is scheduled to expire.

Congressional leaders are attempting to give them guidance; they hope to complete passage tomorrow of a measure extending the withholding rates a month.

"We just want some type of indications so we'll know what to do," pleaded a spokesman of Fibreboard Corp. in San Francisco.

Some companies were allowing for any eventuality. General Electric Co., for one, said in New York that it has prepared two sets of computer tapes for its payroll due July 3. One of the tapes continues the deduction; the other drops it.

Few companies, however, have the computer expertise of GE, itself a computer maker, so they've been forced to choose one alternative or the other.

General Dynamics Corp., for instance, is convinced Congress will extend the levy, at least temporarily. As a result, it said in New York it hasn't made any plans to alter its withholding procedures.

A pharmaceutical company in the Midwest said it, too, intends to continue collecting the withholding tax. It has notified its payroll centers to continue the existing tax schedule "until further notice."

But this company, less convinced than General Dynamics that the tax will be extended, concedes it may be treading on thin legal ground if it continues to withhold the surcharge without specific Congressional direction.

"In a technical sense, we ought to go around to all our people and say, 'Hey, can we have your permission to do that?' But I don't see us doing that," declared a spokesman for the drug producer. The solution, he said, is more "practical" than legal.

Another company examined the legal issue and concluded it had to stop withholding the surcharge the minute it ran out. "Barring passage of legislation," said an official at Reliance Electric Co., Cleveland, "we don't think we have any legal right to continue withholding at the higher level."

Holly Sugar Corp., Colorado Springs, took a similar position. "I don't see how we can legally withhold more than the law allows," a spokesman declared.

At another company, the timing of the levy's expiration is the subject of a lively debate. Lawyers for CPC International Inc., Englewood Cliffs, N.J., are trying to decide whether the tax expiration applies to when the wages were earned or when the paychecks were signed. At CPC, hourly workers will be paid July 3, after the scheduled expiration, for work performed in the week ended tomorrow, when the tax was still on the books.

Some executives insisted they could handle any necessary tax changes with ease, no matter what Congress ultimately decides on the surcharge extension.

TRW Inc., for example, said in Cleveland that one of its major divisions could adjust its payroll accounting by "merely plugging in a new withholding table." Another division of the same company, however, would have to reprogram its computer to reflect new tax rates, a spokesman said.

Such reprograming could be time consuming and expensive. One company estimated it would take 40 hours of skilled manpower. Another said that a programing switch could take "at least a month," all of which could prove wasted effort if Congress allows the tax to expire and then reinstates it at some later date.

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

In all honesty, Mr. Speaker, I believe we are all prepared to vote now. I believe we all know exactly what this resolution will do.

The gentleman from Mississippi, the distinguished chairman of the Rules Committee, has explained it in great detail.

By way of reiteration, however, we are voting on one resolution, and that is House Resolution 455. When that is voted up or down, that will be the answer.

The gentleman from Iowa says it could be defeated by a vote on the previous question. That is true, of course, but that procedure is used when there is a different rule someone desires to substitute in place of the resolution reported by the Rules Committee, and then the additional hour would be allowed for that debate. As I understand it, there is nothing different to be suggested on this. It is

either to extend the withholding rates for the month of July or not, to vote it up or to vote it down. I do not see any necessity for two votes, with one on the previous question, because one vote on the resolution would accomplish the same purpose.

This is a rather unusual procedure, that is true, but it is the only way it could be brought to the floor. We did it twice last year, as I recall. We did it on the omnibus crime bill and on the civil rights bill. We may have extended the time specifically for discussion on one resolution beyond 1 hour, but outside of that it was one vote up or down.

I believe this must be done this way. The Rules Committee is simply cooperating with the Members, to make this possible, so that we will not get into a lot of confusion.

I urge the adoption of the rule and a "yea" vote on House Resolution 455.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Is it correct to conclude that if this resolution is adopted we really will be setting up at least for 30 days a dual tax system? The workingman, the man who has his surtax withheld, will continue paying a surtax at least for 30 days, but the self-employed man, the person who does not have withholding, will not be affected, because the surtax will expire for that person at midnight Monday. That is true simply because this resolution says, on line 7, page 2, "with respect to wages paid after June 30." In other words, what we are doing now, when we vote for this—those who vote affirmatively—is really to say that the workingman will have the surtax continued at least for 30 days but the self-employed man, the one who does not have wages withheld, does not come under any withholding system, will have the surtax end for him as of midnight Monday night, assuming the Congress does not take any further action.

Mr. SMITH of California. I am not going to get into a discussion of theory. The gentleman from Wisconsin explained this situation. I will put in my nickel's worth.

My understanding is that if this is adopted the withholding tax rates on all wage earners will be extended through July 31, 1969, at the present rates.

We may have to make a change later with reference to the surtax bill, but since that question cannot be finally resolved prior to July 1 this procedure will insure that we do what we can to avoid confusion with respect to withholding of Federal income taxes.

Mr. BOGGS. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman from Louisiana.

Mr. BOGGS. The gentleman from California stated it so clearly. Determinations will be made when Congress makes its own decision on the extension of the surtax. That would include everybody, including some people who are supposed to be overpaid, like Members of Congress and so on. The term "working man" includes every man who earns a salary and not just a man who has a specific job to do. Everybody's tax will be withheld when that passes.

Mr. SMITH of California. It might be a good idea, as a matter of fact, for those with outside income to keep withholding the amounts necessary, because next spring they may have to find a little more money, if the surtax is extended next Monday.

Mr. Speaker, I reserve the balance of my time, but I do not have any further requests.

Mr. COLMER. Mr. Speaker, I yield 5 minutes to the gentleman from California (Mr. SISK).

Mr. SISK. Mr. Speaker, I appreciate the distinguished chairman of the committee yielding to me, and I hope not to take 5 minutes.

I want to join with my distinguished friend and chairman in support of this resolution. Along with my colleague, the gentleman from California (Mr. SMITH), I agree with him in his explanation of the position. He did an excellent job in explaining it. This is a very simple position. I hope that this resolution will pass by an overwhelming majority vote.

Mr. Speaker, I might say, of course, that this was in line with the desires of many of us in the past few weeks in our attempts to get a little more rationale into the so-called surtax package which the Committee on Ways and Means presented to the Committee on Rules. We felt that, based on the President's own statement, there was no rush and no reason to hurry, as indicated here, which existed in this area. The very action that we are taking today indicates that we do have plenty of time to give consideration to some of the other things which relate to taxes that the American people are concerned about.

Mr. Speaker, I wish to take just one moment longer to call the attention of the Members of the House to the fact that it is my understanding on next Monday—and I am going on the assumption that the program will not be changed, because I might say that, without criticism of anyone specifically, the gears have been shifted so regularly, almost every 24 hours, that I am not sure what we will be considering then but it is my understanding at this point at least—the surtax will be up on the floor. I would like to have my colleagues keep in mind the statements that occurred in the last 24 hours regarding the position of the other body. They propose to take up substantial reform measures in connection with this so that if perchance this House should decide to act affirmatively on Monday or on whatever time it may be scheduled, that is, on the surtax bill, I can very easily see that the House will be foreclosed from its opportunity really to write tax reform legislation and we will see the other body usurp that prerogative. I hope over the weekend or sometime between now and the time we vote on this measure that we can give real consideration to this, because if that should occur, then so far as this House is concerned, we will be precluded in the 91st Congress from taking any action or making any attempt to vote specifically on any of the issues that the American people are so gravely concerned about. We will simply not see this matter considered in Congress. I hope that thought will be kept in mind.

Mr. COLMER. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Indiana (Mr. MADDEN) a member of the Committee on Rules.

Mr. MADDEN. Mr. Speaker, we had quite a long session in the Committee on Rules the other day on this 1-year surtax extension. I agree with my colleague, the gentleman from California (Mr. SISK) who just addressed the House that there is not much we can do today on this 1-month extension of the 10-percent surtax. I intend to support this resolution today, but the big vote on this question of surtax extension comes up on Monday. That will be the important vote. A year ago I opposed the 10-percent 1-year surtax. I listened at that time to the arguments about how it was going to stop inflation, and I see it has not stopped inflation at all; it has helped expand inflation.

I was very much disappointed to find that we are going to have this vote come up on Monday because I thought that the Members were going to have an opportunity to go home next week over the Fourth of July weekend and talk to the people. Had they had that opportunity to go home over the July 4th weekend this surtax legislation next Monday would be defeated and get the death of a rag doll, because the people are aroused against unjust and unequal taxation. The salaried and wage earners are paying approximately two-thirds of our Federal taxes.

I do not know what the Members are going to do next Monday on this matter, but I am going to say that if we pass this surtax measure any real and effective tax loophole and reform legislation is dead for this session of Congress.

Now, we may get some kind of a tax reform bill from the Ways and Means Committee in August or September, but it will be a skim-milk operation. It will not repeal the fraudulent 27½-percent depletion and other oil tax credits and exemptions. It will probably take a small percentage of tax loopholes from big estates, inheritance and foundations, and real estate and conglomerates.

For the last 3 or 4 years every time the Committee on Ways and Means comes in to the Committee on Rules for a rule on tax legislation I have asked the chairman, "How about loopholes and tax reform." The chairman would always reply that the committee was too busy with other legislation.

The SPEAKER. The time of the gentleman has expired.

Mr. COLMER. Mr. Speaker, I yield 2 additional minutes to the gentleman from Indiana.

Mr. MADDEN. Mr. Speaker, I thank the gentleman for the additional time.

Mr. Speaker, I do not know why we should be in such a hurry on this thing, we are going to be here all day anyhow.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. MADDEN. Permit me to finish my statement, and then I will yield if I have time available.

Well, Mr. Speaker, I discovered that there are no subcommittees whatsoever set up in the Committee on Ways and

Means. It is the only major committee where the chairman of the committee does not appoint subcommittees.

The chairman could have appointed a Subcommittee on Oil last January. The chairman could have appointed a Subcommittee on Foundation Loopholes, also a Subcommittee on Real Estate, Estates, Inheritance, Stock Transactions, and hearings could be held separately by these subcommittees. One subcommittee could have handled each one, and we could have had a real tax reform bill here in April or May and enacted it by now. The Ways and Means Committee is the only major committee that does not have subcommittees.

Why, Mr. Speaker, there are committees that have as many as 13 subcommittees. The Committee on Education and Labor has six subcommittees, the Committee on Appropriations has 13 subcommittees, the Banking and Currency Committee has eight subcommittees, the Committee on the Judiciary has five subcommittess, and the Agriculture Committee has 10 subcommittees.

What is the matter with the Committee on Ways and Means that it cannot have subcommittees, and stop filibustering on this tax loophole legislation? There could be at least $15 to $20 billion in taxes brought in by fat cats "loopholers" that are not paying any taxes on their profits. There are 25 members of the Ways and Means Committee. I want to comment on nine or 10 of these members who are in favor of effective tax reform.

The American public is aroused at tax reform delay. If the Members next Monday vote to continue this surtax for a year, without major tax reform legislation, we will eventually get a real tax reform bill, but it will be after a year from next November when the American people vote in a Congress that will give them the necessary tax reform.

The SPEAKER. The time of the gentleman has again expired.

Mr. MADDEN. Mr. Speaker, by permission granted I hereby include with my remarks the statement made by me on March 26 of this year before the Ways and Means Committee hearings on tax reform legislation:

STATEMENT OF CONGRESSMAN RAY J. MADDEN

Mr. Chairman, I wish to thank the Chairman and the Members of the Ways and Means Committee for giving me an opportunity to testify on this much-needed Federal tax reform legislation. I also want to commend your committee for calling these long-delayed hearings in order to secure first hand information for the American public on the deplorable conditions which our Federal tax system has reached in recent years. During my 27 years in Congress I have been shocked by the gradual increase in power, year by year, of specially privileged and powerful segments of our economy slowly and cleverly securing favorable legislation until, in some cases, they are totally exempt on Federal taxes from their exorbitant profits.

Our Federal tax laws, as of today, have become riddled with tax concessions, loopholes, tax credits, and depletion exemptions to a favored few who have the finances to employ powerful lobbyists to relieve their client of the responsibility for providing the revenue necessary to finance the enormous cost to keep our land the No. 1 nation in the world.

Former Treasury Secretary Joseph Barr revealed in January that 21 persons with incomes of over $1 million paid no taxes at all in 1967, while 155 with incomes of over $200,000 also escaped taxes entirely.

When the wealthy escape taxes, it is the average taxpayer who gets hit for higher taxes to make up the difference. The best example of this is the 10 percent tax surcharge. Faced with the need for more revenues, the Administration came running to the average middle class taxpayer, while doing nothing to make wealthy foundations, oil millionaires, real estate speculations, and highly-paid corporate executives pay their fair share. Those with incomes of $15,000 a year or less already pay nearly two-thirds of all personal Federal income taxes, and the surcharge simply adds to their burden. But to the wealthy exploiter of loopholes the surcharge is no problem at all—*10 percent of nothing is still nothing.*

If just a modest number of the fantastic and excessive tax loopholes and exemptions were eliminated there would be no need for an extension of the surcharge. I have introduced H.R. 9195, which if enacted into law would bring in more than $9 billion in additional revenue by plugging 13 of the more notorious loopholes in our Federal tax system. This happens to be the same amount that an extension of the 10 percent tax surcharge would yield in fiscal 1970. Thirty-one other Congressmen have sponsored identical legislation.

Among the loopholes this bill would close is the depletion allowance for oil and other minerals. Largely because of the oil depletion allowance, the 20 largest oil companies in the country paid only 8½ percent of their net income in taxes in 1966. One large company with profits ranging from $61,110,000 in 1962 and similar increased amounts of income in 1963, 1964, and 1965 paid no Federal taxes whatsoever.

Standard Oil of New Jersey had an income of $1,271,903,000 in 1962 but paid only sixtenths of one percent on their fabulous profits. In the following four years their percentage tax on similar profits ranges as follows:

Organization	Year	Net income before tax	Percent tax paid to Federal Government
Standard Oil (New Jersey)	1962	$1,271,903,000	0.6
	1963	1,584,469,000	4.3
	1964	1,628,555,000	1.7
	1965	1,679,675,000	4.9
	1966	1,830,914,000	6.3
Atlantic Oil	1962	61,110,000	0
	1963	56,747,000	0
	1964	61,081,000	0
	1965	105,299,000	0
	1966	127,384,000	

Some companies do not do as well as the oil companies, however. Perhaps they do not have as powerful a lobby in Washington as "big oil."

The following statistics on three coal companies illustrate the contrast:

Organization	Year	Gross profit	Percent tax paid to Federal Government
Consolidation Coal Co.	1964	$44,863,073	26
	1963	39,568,737	28
	1962	32,918,065	26
Pittston Co.	1964	13,721,024	30
	1963	(1)	
	1962	14,699,420	35
Island Creek Coal Co.	1964	7,713,060	18
	1963	5,149,930	24
	1962	3,459,563	(1)

[1] Lost by SEC.

The oil lobby will of course argue that the 27½ percent depletion allowance is needed to insure an adequate supply of reserve oil in emergencies, that it is vital to our national defense, that our economy will collapse without it, and that it will cure the common cold. Fortunately the Treasury has just released a thorough-going study of the tax breaks currently enjoyed by the oil industry and their effect on the level of oil reserves. The study, done by the CONSAD Research Corporation of Pittsburgh, challenges these oil industry arguments, concluding that the depletion allowance and special expense deductions enjoyed by the oil companies add only a small amount to the Nation's petroleum reserves. Furthermore, the Report goes on, the depletion allowance encourages excessive drilling and inefficient production methods and discourages research into other potential fuel sources. I don't think this is a very good bargain for the $2.25 billion worth of loopholes we gave to oil men in 1968. Big oil has been enjoying this financial bonanza for years. Real estate speculators are almost as generously treated at tax time as oil men.

Former Treasury Assistant Secretary Surrey, in a speech last year, said, "The Treasury recently examined the 1966 tax returns of 13 real estate operators, all of whom had very substantial gross incomes, and found that depreciation 'losses' reduced the tax liability of nine of them to zero and of two others to less than $25."

Doing away with the accelerated depreciation gimmick on speculative real estate would head off operators of this sort and bring in an extra $150 million in tax revenues each year.

Another gaping tax loophole is the 7 percent investment tax credit, enacted in 1962, which permits business firms to subtract from their tax bills 7 percent of the value of eligible new equipment installed during the year. It was intended to stimulate the economy by providing a subsidy to private investment.

However, our economy has been overstimulated and we are now in a period of serious inflation, fed in part by the investment tax credit. The credit concentrates inflationary spending power on precisely that portion of the economy that is already most overheated—the capital goods section in the first place, it creates a second round of inflation by causing business to hasten to invest before inflation drives up capital goods prices even further.

The Commerce Department Survey of business fixed investment plans for 1969, released on March 13, underscores the need for repeal of the investment tax credit. The survey predicted that total 1969 expenditures for new plant and equipment will reach a whopping $73 billion, a 14 percent increase over 1968. This contrasts with year-to-year increases of only 4 percent in 1968 and 2 percent in 1967.

This survey indicates strongly that it is capital goods inflation that is most serious, yet the Administration still insists on a 10 percent surcharge on the average consumer to combat inflation. If it is inflation they are concerned about, why not get at the real culprit by repealing the 7 percent investment tax credit?

The list of tax loopholes can be extended almost to eternity, as this committee well knows.

Capital gains which pass through an estate at death are not taxed.

The unlimited charitable deduction allows many millionaires to escape taxation entirely

Special tax treatment for stock options allows highly paid corporate executives to get tax advantages not open to the average wage earner.

The tax exemption for municipal industrial development bond interest encourages plant piracy and gives unwarranted subsidies to wealthy corporations, while costing the Treasury millions in lost revenues.

As an example, certain states of the Union who enjoy the exemption privileges of Sec-

tion B of the Taft-Hartley Law are paying sub-standard wages to millions of factory workers in their localities. These sub-standard wage workers are practically out of the buying market in regard to $3–$4 thousand dollar automobiles, $400 refrigerators, etc., etc., and are adding nothing to the employment and prosperity in factory production of our Nation. This, of course, is an exemption over which the Ways and Means Committee has no responsibility. On the other hand, your committee has recommended, and the Congress has enacted, tax exemptions for municipal industrial development bonds, which encourages plant piracy and gives unwarranted subsidies to wealthy corporations and industrial factories to move into these 14B states because thousands of towns and cities in these areas have taken advantage of the tax exempt industrial development bonds with cheap land and cheap wages to capture thousands of industrial factories from states paying a living wage to its workers. Multimillions could be brought into the Federal Treasury by the repeal of the interest on municipal and other local civic bond promotion.

The hobby farm loophole allows wealthy part-time farmers to escape taxes by using fictional farm "losses" to offset income.

I will not take more of the committee's time by extending the list of loopholes, for time is something we don't have very much of because of the need for immediate action in repeal of tax loopholes, exemptions, etc.

The American people are weary of being told that we are all very concerned about tax reform, that we are working very hard on it, and that it is very difficult and complicated and it is going to take a long time. The taxpaying public is running out of patience, and the surcharge is doing little to make them more tolerant.

Therefore, I would urge the committee to act within the next two months on as many major tax reform items as possible. Tax reform should not be postponed until we can put together a neat, tidy, "skimmilk" package that everyone can agree on. We will be here until the year 2000 if that is the goal.

I am not going to take the time of this committee in detailing the fabulous and fraudulent raid on the Federal Treasury by thousands of tax-avoiding estate foundations. A former Secretary of the Treasury stated before a Senate Committee that he could not speculate as to how many foundations are operating and enjoying tax exempt benefits. Some foundations are engaging in free enterprise industry in competition with regular tax paying corporation and non-exempt business and industries. One official in the Treasury Department testified that he would place the number of foundations enjoying tax exemptions at approximately 25,000. Congressman Wright Patman and other Members have gone into the foundation tax bonanza in detail before your committee, and I know your committee and all Members of Congress are familiar with its tax-avoiding ramifications.

Every tax dollar lost through these loopholes must be paid by another source. For the most part, this loss—and it has been estimated to be a whopping $50 billion—is paid by moderate income groups, by small people with incomes of $15 thousand and less, who cannot afford to hire high-priced accountants and tax lawyers to locate loopholes.

The House should be given an opportunity to work its will on tax reform at the earliest opportunity. I firmly believe that the heavy obligation of Government would warrant your committee concentrating on major loopholes which involves literally billions of escaped taxes by certain segments of our economy, and report a bill closing the top-bracket tax-escaping loopholes so the Congress can act immediately on the same. The minor loopholes can be taken up by your committee and considered later in the year. The American public has become familiar in recent years with the necessity of taking the gigantic tax load off the wage-earner and the salaried citizen while mammoth corporations and gigantic mergers of corporations profiteer on the American public. I do hope your committee will not submit a weak, and ineffective recommendation on the closing of the tax loopholes. As a Member of the Rules Committee, I for one, and I know of others that for the first time in years, will insist on an open rule on this legislation. This will give the other 410 Members of Congress an opportunity to answer the demand of the almost unanimous cry of the American public for tax reform.

It has been suggested by some Members that this legislation could be enacted in the next few months if the major loophole recipients, whose payments on their huge profits is but a pittance, would start paying into the Federal Treasury a blanket minimum Federal tax ranging from 15 percent to 30 percent of their profits. They then would join with the small businessmen and the wage and salaried citizen in supporting our huge domestic and foreign programs and other Federal obligations.

Mr. GIBBONS. Mr. Speaker, I am opposed to the extension of the Senate amendment to H.R. 4229. The purpose of this Senate amendment is to extend the surcharge withholding rates for the 1-month period from June 30, 1969, through July 31, 1969. Important hearings on deepening the Tampa Harbor necessitate my presence in Tampa.

I plan to be present Monday, June 30, and vigorously oppose H.R. 12290, the extension of the surtax.

Mr. KOCH. Mr. Speaker, I rise to speak about the surtax, one of the most important issues facing this Congress. Of concern to all of us are today's inflationary trends, and I am anxious that the President and the Congress take steps necessary to combat inflation. But I also believe that it is vitally important for the Congress to enact some meaningful tax reform; it is urgent that we right the injustices now threatening the integrity of our Nation's tax system. In addition, tax reform too can affect the Nation's deficit and counter inflationary trends through the revenue it raises.

Three administrations have talked about tax reform and yet none has been enacted. This year the Ways and Means Committee has made significant progress toward reform, and there are indications that a reform package will be submitted to this body for a vote in August.

On Monday we are scheduled to vote on a year's extension of the surtax. I believe that it would be a mistake to approve a full extension of the surtax without reforms. With the passage of the surtax, pressure in the Congress for reform will dwindle and once again the people of this country will not get the reform they deserve.

The surtax is our trump card for reform, let us not give it away until we get that reform.

It is clear that a complete reform package cannot be readied by Monday and so I would urge that only a 3-month extension be submitted for a vote with the understanding—clearly stated in the House—that in late August or September a total surtax/reform package will be submitted.

Three months will give the Ways and Means Committee sufficient time to complete its consideration of the reform proposals, opportunity to better evaluate the fiscal needs of our economy, and a chance to submit a combined reform/surtax package.

Today I am supporting the continuation of the surtax withholding schedules for 30 days. On Monday I will be prepared to vote for a 3-month extension of the surtax if it is coupled with a promise of meaningful reform; but I will not vote for H.R. 12290 now scheduled which provides the year's extension. I regret that in this same bill there are three needed measures which I support: the repeal of the 7-percent investment credit, a delay for another year of the reductions in telephone and automobile excise taxes, and the additional allowance to reduce taxes for those people at the poverty level.

The repeal of the investment credit and the poverty allowance are sweeteners intended to soften our opposition. But at this time I believe we must hold out for tax reform—otherwise the opportunity will be lost for perhaps another 10 years.

Mr. VANIK. Mr. Speaker, on Monday, the House of Representatives is scheduled to take up H.R. 12290, the Surtax Extension Act. Before this bill is considered, the House will act on Resolution No. 453 which provides a closed rule allowing no amendments to the bill after 4 hours of general debate.

In view of the fact that many who are opposed to the extension of the surtax will support the closed rule resolution as a matter of procedure, it is not my intention to oppose the closed rule. Nor is it my intention to support the motion to recommit which will be offered by a member of the Republican minority. The language of this motion has not been identified.

In my judgment, the goals of meaningful revenue-producing tax reform would be more readily achieved on a straight vote against the extension of the surtax. The legislation which we passed today authorizes the withholding of the 10-percent surcharge. A "no" vote on the extension of the surtax and the defeat of this proposal will provide the Ways and Means Committee and the House an extended period of time to develop a program of meaningful tax reform.

I am pleased to advise that my distinguished colleague from Indiana, the Honorable RAY MADDEN, and my distinguished colleague from Wisconsin, the Honorable HENRY REUSS, concur in this position.

Mr. COLMER. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

CONFERENCE REPORT ON H.R. 8644, SUSPENSION OF DUTY ON CRUDE CHICORY ROOTS—AID TO FAMILIES WITH DEPENDENT CHILDREN

Mr. BOGGS. Mr. Speaker, I call up the conference report on the bill (H.R. 8644) to make permanent the existing temporary suspension of duty on crude chicory roots, and ask unanimous con-

sent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of June 26, 1969.)

Mr. BOGGS. Mr. Speaker, I shall try briefly to explain the conference report.

I will start by saying the conference report is unanimous. It was signed by all of the conferees on the part of the House on both sides of the aisle and all of the conferees from the other body from both sides of the aisle.

Mr. Speaker, the other body made no change in the text of the original House bill, but it did add two social security amendments, which are involved in the conference report.

These two amendments to the original bill are not complex and can be easily explained.

One amendment provides for the extension of a provision which we wrote into law some years ago—June 30, 1961, to be precise—in an attempt to help indigent American citizens who, through no fault of their own, were forced to return to the United States because of war, illness, destitution, and so forth. The best example of that happens to be Cuba where about 70 people a month, mostly old people, come back to our country and Mr. Castro has well taken care of whatever worldly goods they had. That provision of law has been continued on a temporary basis since its original enactment. This conference agreement provides for the continuation of that program so that when such persons land at a dock somewhere in the United States, the Government of our country takes care of them until they are able to take care of themselves. Then they repay this obligation to the Government. That is the first amendment. We continue that program for 2 years.

The second amendment has to do with the so-called freeze on Federal matching with respect to the number of children who are eligible for assistance under aid to dependent children programs. The Senate repealed the provision on this subject, which was included in the Social Security Amendments of 1967.

The House conferees concurred and agreed in the Senate amendments. They did so unanimously because the Governors of every State, I think, whether they be Democrats or Republicans, were terribly concerned about this provision and the administration was terribly concerned about it. We received a letter from Secretary Finch just a week or so ago strongly supporting the repeal of this provision. The provision was originally enacted in an effort to stimulate activities and obtain results under the work incentive program which was also contained in the 1967 amendments. It has not accomplished that purpose.

It was the feeling of the conferees that the way to dispose of this matter was to repeal the freeze provision. That is what the amendment does.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. BOGGS. I yield to the gentleman.

Mr. GROSS. What is the cost of this supplemental bill? Or are we dealing with the supplemental?

Mr. BOGGS. No, not at all.

Mr. GROSS. Then we are dealing only with the aid to dependent children?

Mr. BOGGS. That is correct; we are repealing the so-called AFDC freeze.

Mr. GROSS. That is the issue that was raised by the gentleman from California (Mr. BURTON)?

Mr. BOGGS. This issue has been made by many Members of the House including the gentleman from California. As a matter of fact in the last week or so every time I walked down the aisle here somebody asked me about it, and on your side of the aisle as well. I admit the gentleman from California was very forceful in bringing the issue up several days ago and he has been very, very anxious for this result to come about.

But this result could not have come about if it had not been for the complete cooperation of Members on your side of the aisle, and particularly the ranking member of the Committee on Ways and Means the gentleman from Wisconsin (Mr. BYRNES), who was very helpful.

Mr. GROSS. Yes, I do know that there is forceful interest in this, since it is coming up under such short notice and in advance, not after the issue of whether or not to continue the surtax on Monday. It is real interesting that this "AFDC unfreezing" is coming up so suddenly and at what appears to be a propitious time in connection with the drive to pass the surtax.

Mr. BOGGS. May I say to the gentleman that we have exactly the same situation here. There is an expiration date of June 30, which happens to be next Monday. So the same problem exists

Mr. BURTON of California. Mr. Speaker, will the gentleman yield?

Mr. BOGGS. I yield to the gentleman from California.

Mr. BURTON of California. Mr. Speaker, it is with pleasure and approval that I support the conference committee report before us to eliminate the AFDC freeze.

It is impossible to do justice to all those who contributed to this significant effort. Tens of thousands of concerned citizens called upon their Government to respond to the pressing needs of its children and today's action was the result.

I should, however, like to particularly commend our able and effective majority whip, HALE BOGGS, for his decisive leadership in removing this sword of Damocles from over the heads of the poor and most needy children in America.

It was the united effort of California's able members on the Ways and Means Committee, JAMES CORMAN and JAMES UTT, and the leadership of the dean of the California delegation, CHET HOLIFIELD, speaking in behalf of a united delegation which insured its viewpoint was presented effectively. This victory represents a savings of some $40 million in the next fiscal year to the State of California.

I should also like to commend Health, Education, and Welfare Secretary, Robert Finch, for his support of the repeal of the AFDC freeze and John Veneman, the outstanding Under Secretary of Health, Education, and Welfare, for his leadership in the removal of this unrealistic ceiling.

The AFL–CIO, as well as auto, teamster, longshore, and other independent unions have, over the years, lent valuable support to this effort.

Last, but certainly not least, very special mention and tribute must be paid to Dr. George A. Wiley and the National Welfare Rights Organization, of which he is executive director. They have by their continuous effort alerted the poor of this Nation to their rights under existing laws and to the ominous problems which this freeze would impose. Without their decisive contribution, it is most unlikely that today's action would have been possible.

Mr. WILLIAMS. Mr. Speaker, will the gentleman yield?

Mr. BOGGS. I yield to the gentleman from Pennsylvania.

Mr. WILLIAMS. Mr. Speaker, I would like to state to this House that we proposed a freeze on AFDC payments back in 1967, I believe, for a very, very good reason. The fact is that AFDC payments are actually accentuating the very problems they are supposed to solve.

During the last 2 years I have visited neighborhoods where most of the families are receiving aid-to-dependent-children payments. These families have no father present. These children are actually being raised in filth, squalor, and neglect.

Aid-to-dependent-children payments have doubled in the last 4 years mainly because of an increase in illegitimacy. Of course the Governors are concerned about this freeze, because the Governors that you speak of have not faced up to their responsibilities and have simply permitted more and more people to go on the welfare rolls every year, and many of these people are receiving AFDC payments.

In the State of Pennsylvania alone, where employment is at an alltime high and where various companies and industries have trouble employing people, the welfare rolls have increased by 144,000 persons just during the last year. There are many cases where death and injury have occurred to some very young children who are being supported by the aid-to-dependent-children program. Where these children have been left alone at the age of 1, 2, and 3, fires and other things have occurred. And these youngsters have been killed or injured.

In my opinion, since we are going to permit the AFDC payments to escalate each year, we are simply going to make it possible to avoid facing up to the problem that this program is not working. I thank the gentleman for yielding.

Mr. BOGGS. Mr. Speaker, I yield to the gentleman from California (Mr. UTT), a member of the committee.

Mr. UTT. Mr. Speaker, I rise in support of the amendment placed on this bill by the Senate. I favored the freeze in the first place, but we did not have sufficient information before us to know what effect it would have. The com-

plaints that the gentleman from Pennsylvania has just made are generally in regard to administration. I am sure we are going to have a tightening up of administration nationally as well as in the States.

I talked yesterday with our administrator in California and he said:

I assure you we are going to tighten up on any of the aid to families with dependent children.

I urge adoption of the conference report.

Mr. BURKE of Massachusetts. Mr. Speaker, it gives me a great deal of satisfaction to vote for this conference report which provides for the repeal of the AFDC freeze that was enacted over my objection in the Social Security Amendments of 1967.

I opposed this provision vehemently in committee when it was being formulated. When the social security bill was up for a vote in the House in August 1967, I voted in favor of it with a great deal of reluctance because it included this provision, but at that time, I cast my vote in favor of the bill because of the many beneficial provisions it contained and in the hope that when the bill came back from the Senate and the conference committee the freeze provision would have been eliminated. When the bill did come back to the floor of the House from the conference, the freeze was still a part of the legislation, and it was primarily for that reason that I cast one of the three votes that were cast in opposition to the conference report in December of 1967.

I support the repeal of the freeze for two reasons. First of all, I think it is unfair to the States to shift the cost of paying a tremendous portion of the AFDC program upon them when the increased cost of those porgrams results from factors which are largely beyond the control of the States.

Second, I believe that the AFDC freeze could not help but work a hardship upon all of the AFDC recipients of the country. The AFDC freeze provision was aimed primarily at only one segment of the AFDC caseload. By its own terms, it would have operated whenever there was an increase in the proportion of children in any State who are drawing benefits by reason of the fact that they had been abandoned by their fathers. Yet, under the general provisions of the Social Security Act, all of the families, including those in which the fathers were dead, disabled, or unemployed, would have felt the effects of the freeze. The States would have had no choice in this matter since the law provides that the programs be administered uniformly with regard to all recipients.

It is clear, Mr. Speaker, that if the freeze provision had been allowed to become operative next Tuesday, most States would have been required ultimately to have reduced benefits payments for all recipients and probably on top of that, to increase their eligibility standards thereby making it more difficult for individuals to qualify for assistance under the program.

For these reasons, Mr. Speaker, I will very happily vote in favor of the conference report.

Mr. STOKES. Mr. Speaker, I rise in support of the conference report.

There is no doubt in my mind that the AFDC freeze should be repealed as provided in the conference report. If the freeze provision were allowed to go into operation on July 1, not only would the State and local governments have to assume the burden of paying for 100 percent of the benefits received by individuals on the AFDC rolls in excess of the limitations laid down in the freeze, but also the AFDC recipients on the rolls in most States would have suffered unconscionable hardship. According to the budget for this fiscal year, the freeze provision would have required the States to assume obligations normally the responsibility of the Federal Government in the amount of $322 million.

Most States would undoubtedly have been forced to lower their benefit payments for all AFDC recipients in an effort to finance their programs within available resources. I would like to emphasize that the effects of the freeze would have been felt by all recipients on the AFDC rolls, regardless of the reason for their being there.

As indicated by the statement of the gentleman from Louisiana who is managing the conference report, it is obvious beyond doubt that the freeze position, in addition to being unjust in principle, has proven to be ineffectual in application. I, therefore, believe that this House is to be commended for recognizing when it has made a mistake and taking the proper steps to undo its mistakes. This is clearly what we are doing today in voting to repeal the AFDC freeze.

Mr. RODINO. Mr. Speaker, I am most gratified that the House votes today on the conference report on H.R. 8644 which would repeal the AFDC freeze that otherwise would go into effect on July 1 under existing law.

In my judgment, the freeze proposal was, from the time it was first enacted, a most unwise, unrealistic, and inhumane approach to solving the serious problem of rising welfare costs and inequities existing in our welfare system. In this connection, I would like to have included in the RECORD an excellent editorial from the June 26 issue of the Newark Evening News commenting on the situation created by the freeze in New Jersey and on a recent court decision upholding it. The editorial concludes:

National inequities on the welfare program still cry for correction in a thorough overhaul which would shift all welfare costs to the federal government.

I most strongly agree with this assessment of the problem and will continue to work for legislation along these lines.

The full text of the editorial follows:

RIGHTING A WRONG

Refusal of a federal court in Newark to upset the freeze on federal participation in the Aid to Dependent Children program leaves this necessary action to Congress, which was responsible for the action in the first place. And with the restriction scheduled to take effect next Tuesday, Congress has little time to respond.

The court is understandably reluctant to interfere with an act of public safety, short of evidence of unequal application, other discrimination or denial of due process. The court held none of these objections applies to Congress' determining that coverage must be held to a fixed percentage of children in a state, regardless of how fast the number of individual cases grows.

This need not mean closing the door to additional clients or paying them less than others, the court argued, for the state and counties could make up the additional cost—or, bleak alternative in an era of runaway prices, cut back every recipient. And there lies the difficulty, for Gov. Hughes has estimated that even to maintain present levels would cost New Jersey taxpayers an additional $10.2 million a year.

The Senate voted last week to eliminate the freeze, and sent the measure to conference with the House. The House should concur promptly. National inequities on the welfare program still cry for correction in a thorough overhaul which would shift all welfare costs to the federal government. Congress should be moving in that direction, and not toward foisting more of the burden on the states.

Mr. DONOHUE. Mr. Speaker, as one of the many sponsors of legislation—H.R. 4576—in this Congress to repeal the existing provisions in the social security law limiting the number of children with respect to whom Federal payments may be made under the program of aid to families wtih dependent children, I most earnestly urge and hope that this House will promptly and overwhelmingly approve the conference report before us, which will accomplish the objective outlined above.

When this so-called freeze or limiting amendment was included in the Social Security Act amendments by our legislative action here back in early 1968, many of us advocated against it and recorded ourselves in opposition, because we very deeply believed, despite the sincerity of its proponents, that the practical effect of such legislative action would prove to be unjust in its projection and uneconomical in its operation. That our doubts and fears about the wholesomeness and efficacy of this legislative proposal were well grounded is indicated by the fact that many of the leading proponents of this particular amendment have, most creditably, upon further research and study, come to agreement with those of us who originally protested against the amendment's merit.

In essence, we believe it is convincingly clear that this freeze proposal, if applied, would inevitably visit extreme hardship and deprivation upon great numbers of innocent and blameless children by forcing mothers into work-training programs, inducing unemployed or low-earning fathers to abandon children, setting up a very doubtfully effective and most uneconomical work-training program, and imposing unjustifiably larger tax burdens—in my own State, some $5 million—upon the citizens in our various States.

On the economic side, while the work training involved is for low-level jobs, the program is high cost, principally because a mother cannot be required to work or train unless child care facilities are provided. Budget figures show that average per-child day care costs are about equal to the average per-child cash benefit, thereby doubling the welfare outlay for these children on the very long-shot gamble that the new capacity to fill second-rate jobs will, at some indefinite future time, reduce wel-

fare rolls and costs. To most of us, this kind of operation represents a process of reasoning that leaves much to be desired.

As against this mandatory program, wise experience and authoritative evidence indicates that a voluntary program, giving decent jobs and better income, would provide sounder motivation and more lasting improvements than a forced program clouded with compulsion and distrust.

In short, upon the most careful study and examination, the attempt to cure a serious welfare problem by restricting payment benefits to blameless children would appear to be the wrong program for the wrong individuals at the wrong time.

Surely we can and we should, at the earliest moment, in legislative wisdom, provide a better way of helping unfortunate parents and families off the welfare dole, encourage fathers to remain with their families without loss of benefits, while granting them appropriate job training through the shift of child care funds and fostering a proper mother-children relationship that is the basis of wholesome family life. Let us, right now, act to repeal this freeze amendment and speedily move toward the accomplishment of a more equitable and effective child and family assistance program that will be truly in accord with our civilized traditions and beliefs.

Mr. FARBSTEIN. Mr. Speaker, I wish to restate today my strong support for the repeal of the AFDC freeze, a proposal which was embodied in my bill, H.R. 5978, introduced in February of this year.

My regret is that Congress has been so slow in taking definitive action on the repeal. Under law the freeze is to go into effect July 1 of this year, just a few days from now. Understandably, the States have become more and more disturbed by the slowness of our response to this deadline. They stand to lose about $300 million in Federal matching funds in fiscal year 1970 if the freeze becomes effective.

My own State of New York, with its very large welfare burden, would be particularly hard hit by the freeze. Welfare analysts in my State estimate that we would lose approximately $80 million a year in Federal funds under the freeze provision. In this period of particularly high and rapidly growing welfare costs, the additional cost to the State would be almost impossible to absorb.

There is, at this time, no justification for retaining the freeze. The rationale behind its initial adoption as part of the 1967 welfare amendments was to act as a spur to the States to initiate rehabilitative programs which would move families off the AFDC rolls and into self-sufficiency. The freeze has not served this purpose. Despite the threat of a cut-off in Federal funds, the work incentive and other programs which the Congress provided in the 1967 amendments have been developed extremely slowly. This has not been the sole fault of the States. The Departments of Health, Education, and Welfare and of Labor have also moved slowly in providing the States with guidelines for programs and in the actual establishment of work and training programs to which the States could refer their welfare recipients. We cannot place a responsibility for action on the States which is not fully theirs.

I also want to note that the administration has recommended repeal of the freeze, and has taken the repeal into consideration in its 1970 budget presentation. Thus, by repeal of the freeze we are not going to place any new or unexpected financial burden on the Federal Treasury. This is an expense which has already been anticipated.

Mr. Speaker, many of us in Congress look forward to fundamental changes and improvements in our welfare system. Legislation which I have introduced would establish nationally uniform minimum standards for welfare and would provide for increased Federal matching for welfare programs. Until we have time to undertake more basic legislation, however, we must at least attempt to keep our present system functioning as adequately as possible. We must remove the financial threat to our States and to our welfare recipients which the AFDC freeze embodies. The repeal has been passed by the Senate and approved in conference. I hope we shall overwhelmingly agree to it here today.

Mr. RYAN. Mr. Speaker, I am pleased that the conference report on H.R. 8644 eliminates the freeze on aid to families with dependent children payments which was imposed as part of the Social Security Amendments of 1967.

I should like to take this opportunity to commend our colleague from California (Mr. BURTON) for the part he played in convincing the conferees of the importance of this action. His intimate knowledge of social security and welfare issues combined with his parliamentary skill were instrumental in making it possible for the conference report to be before us today with a unanimous recommendation on the part of the conferees.

This recommendation recognizes the disastrous effects which the freeze on AFDC funds would have on the lives of those citizens dependent on public assistance and on the financial resources of our large urban States. I vigorously opposed the AFDC freeze when it first came before the House in August of 1967. I pointed out that it would adversely affect the large industrial States like New York, California and Illinois, which are the recipients of migration from the rural South, which, by contrast, would lose nothing in Federal payments through this provision. When the freeze was enacted despite my objections, I joined 17 other House Democrats in urging the chairman of the Senate Finance Committee to reject the "antiwelfare" provisions of the bill passed by the House. Among the five antiwelfare provisions specified in that letter was the AFDC freeze.

When the conference report was brought before the House in December of 1967, I reaffirmed my objections to the AFDC freeze and pointed out the disastrous effects it would have on public welfare programs in urban areas. Despite my objections, and those of many other Members, the AFDC freeze was adopted by the Congress, however.

Subsequent to the enactment of this provision of the social security amendments I have introduced legislation to repeal the AFDC freeze in two Congresses—H.R. 14609 in the 90th Congress and H.R. 618 in the 91st Congress. I have additionally cosponsored H.R. 11662 with several Members which would also repeal the freeze on AFDC payments.

As I said in introducing legislation to repeal the AFDC freeze in January of 1968:

> In the absence of bold and imaginative efforts to solve the causes of poverty, welfare costs will continue to rise, unless we are willing to see people starve. It is no solution to take out the failures to deal with these problems on impoverished families and dependent children. The percentage freeze on AFDC payments is particularly unwise because it penalizes States which are the net recipients of rural migrants and it punishes children whose sole crime is to have been born of indigent or separated parents.

The effect of the freeze on New York City, as estimated by Mitchell Ginsberg, administrator of the New York City Human Resources Administration, would be between $30 and $50 million in possible Federal revenue. This year New York City budgeted $50 million to cover the loss produced if the AFDC freeze were put into effect. But severe budgetary strains have caused the city to subsequently remove this allocation from the budget.

Hence, if the AFDC freeze is instituted, the only recourse for New York—given its limited financial resources—will be to reduce the level of AFDC payments. At a time when inflation is already severely taxing the meager resources of those dependent on public assistance, a reduction in payments would cause inestimable suffering and hardship to financially deprived families.

Many individuals and organizations have worked diligently to explain the consequences of the AFDC freeze to Congress. In particular, I believe Dr. George A. Wiley and the National Welfare Rights Organization, of which Dr. Riley is executive director, deserve special mention for their efforts to make the poor of this Nation aware of their rights under existing public assistance laws and the implications of the AFDC freeze.

Mr. Speaker, I urge the House to accept the recommendation of the conference report to repeal the ill-considered freeze on AFDC payments which was enacted in 1967. To retain this provision in the face of the mounting crisis in our cities would constitute an abdication of our responsibility. Congress has to assist our urban areas in their efforts to provide decent standards of public assistance to those citizens caught in the vicious cycle of poverty which engulfs our inner city areas.

Mr. BOGGS. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore (Mr. ALBERT). The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. WILLIAMS. Mr. Speaker, I object to the vote on the ground that a quorum

is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 269, nays 65, not voting 98, as follows:

[Roll No. 95]

So the conference report was agreed to.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Anderson of Illinois.
Mr. Waggonner with Mr. Ashbrook.
Mr. Ullman with Mr. Latta.
Mr. Delaney with Mr. Cahill.
Mr. Hicks with Mr. Stanton.
Mr. Pepper with Mr. Pettis.
Mr. Thompson of New Jersey with Mr. Meskill.
Mr. Dorn with Mr. Davis of Wisconsin.
Mr. Tunney with Mr. Conable.
Mr. Fraser with Mr. Railsback.
Mr. Hays with Mr. Clancy.
Mr. Edwards of Louisiana with Mr. Snyder.
Mr. Lennon with Mr. Berry.
Mr. Daniels of New Jersey with Mr. Steiger of Wisconsin.
Mr. Edmondson with Mr. Denney.
Mr. Brown of California with Mr. Ruppe.
Mr. Pryor of Arkansas with Mr. Lujan.
Mr. Long of Louisiana with Mr. Dickerson.
Mr. McMillan with Mr. Broyhill of Virginia.
Mr. Kirwan with Mr. Lukens.
Mr. Podell with Mr. Grover.
Mr. Carey with Mr. Fish.
Mr. Gallagher with Mr. Brown of Michigan.
Mr. Daddario with Mr. McClure.
Mr. Lowenstein with Mr. Smith of New York.
Mr. Rostenkowski with Mr. Collier.
Mr. Scheuer with Mr. Whalen.
Mr. Morgan with Mr. Gude.
Mr. Celler with Mr. McEwen.
Mr. Casey with Mr. Cowger.
Mr. Blatnik with Mr. Watkins.
Mr. Evins of Tennessee with Mr. Don H. Clausen.
Mr. O'Hara with Mr. Whalley.
Mr. Evans of Colorado with Mr. Derwinski.
Mr. Charles H. Wilson with Mr. Mathias.
Mr. Leggett with Mr. Wydler.
Mr. Kluczynski with Mr. Zion.
Mr. Clark with Mr. Wyman.
Mr. Cohelan with Mr. Dawson.
Mr. Gray with Mr. Gibbons.
Mr. Green of Pennsylvania with Mr. Hechler of West Virginia.
Mr. Bingham with Mr. Hawkins.
Mr. Helstoski with Mr. Powell.
Mr. Ronan with Mr. Purcell.
Mr. Joelson with Mr. Montgomery.
Mrs. Griffiths with Mr. Nedzi.
Mr. Wright with Mr. Byrne of Pennsylvania.
Mr. Chappell with Mr. Kee.

Mr. FISHER and Mr. FUQUA changed their votes, from "yea" to "nay."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. BURKE of Massachusetts. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the conference report on H.R. 8644 just agreed to.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. BURKE of Massachusetts. Mr. Speaker, I further request unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the resolution (H. Res. 455) previously agreed to.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

TO AMEND THE ACT OF NOVEMBER 8, 1966

Mr. KASTENMEIER. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 4297) to amend the act of November 8, 1966, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 1, line 9, strike out "$850,000"." and insert "$850,000", " and adding at the end thereof a new sentence as follows: "Authority is hereby granted for appropriated money to remain available until expended." "

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

LEGISLATIVE PROGRAM

(Mr. ARENDS asked and was given permission to address the House for 1 minute.)

Mr. ARENDS. Mr. Speaker, I take this time in order to ask the distinguished majority leader to advise us as to the program for next week.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Oklahoma.

Mr. ALBERT. In response to the inquiry of the distinguished gentleman from Illinois, Mr. Speaker, we are listing for Monday and the balance of the week:

H.R. 12290, to temporarily continue the income tax surcharge and certain excise taxes and to repeal investment credit, and for other purposes, under a closed rule with 4 hours of debate waiving points of order; and

H.R. 11400, the second supplemental appropriation bill for fiscal year 1969—the conference report.

There will also be called up by the gentleman from Maryland (Mr. FRIEDEL) miscellaneous printing resolutions from the Committee on House Administration. In addition to that, Tuesday is Private Calendar day and the Private Calendar will be called. We also hope to adopt the concurrent adjournment resolution sometime on Monday or Tuesday. I note, of course, that the Independence Day recess starts at the close of business Wednesday, July 2, and the House reconvenes on Monday, July 7.

This announcement is made subject to the usual reservation that conference reports may be brought up at any time and any further program may be announced later.

ADJOURNMENT OVER TO MONDAY, JUNE 30

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the business in order on Calendar Wednesday of next week, July 2, 1969, be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ARENDS. Mr. Speaker, I ask the gentleman, is it possible to go through the first two bills and could they both be called up on Monday? Is it possible?

Mr. ALBERT. It is possible. I doubt that it is probable, I will say to the gentleman, because of the 4-hour debate on the tax bill, but we do hope to finish the legislative business on Tuesday. We have two very important bills next week; if we can finish them by Tuesday, Members can do their office work on Wednesday and be free to leave as soon as the adjournment resolution is adopted.

Mr. ARENDS. I thank the gentleman. That is what I thought.

AUTHORIZING THE SPEAKER TO SIGN ENROLLED BILLS AND JOINT RESOLUTIONS AND THE CLERK TO RECEIVE MESSAGES FROM THE SENATE

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that notwithstanding the adjournment of the House until Monday next the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

LIFE IS FUN, FUN, FUN FOR THE YOUNG

(Mr. HUNGATE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HUNGATE. Mr. Speaker, I would like to call to the attention of the House an article from the University of Kentucky Notes for the Veterinary Practitioner, April 1, 1968, which seems particularly timely:

While the FCC is berating television for its cigarette commercials, we wish it would look into another aspect of TV ads aimed not at corrupting the youth, but at demoralizing the adult. In TV commercials, nothing good happens to anyone past the age of discretion. Life seems to end at age 25.

Watch the people in these ads for awhile. Teenagers invariably have great glistening teeth. Adults have dentures and denture breath. Boys switch hair grease and girls are glad. Men don't have hair. If they do, it is full of dandruff. Boys douse themselves with shaving lotion and wait to beat off the women, like traps full of cheese. Older men are happy to find something that drains all eight sinuses.

Young people have fun. Older people have nagging headaches. Young people spend all night wolfing hamburgers at amusement parks or beach parties. Older people go to a nearby movie and have to leave because their stomach is killing them. Girls have yards of blonde hair full of body, and boys nuzzle it. Wives have gray hair and their husbands won't take them dancing.

Men work hard and get ahead, only to have some pimply assistant tell them they have bad breath. The teen-age wife makes a cup of coffee and turns her husband into a sex maniac. The older wife washes, irons, mops floors, and puts up with birds on the sink, and her husband comes home with a miserable headache and takes it out on her. Girls are always washing their hair. Wives are always washing dishes.

Teen-agers wear sneakers and sandals. Adults wear support hose. Teen-agers rub each other with suntan oil. Adults rub each other with liniment. Teen-agers spend a lot of time in boats, sports cars, and swimming pools. Adults spend their time in doctors' offices and listening to tedious insurance peddlers. Adults get hay fever and sneeze. Young people are always at the end of a glorious evening. Adults are always at the end of their rope.

Life is fun, fun, fun for the young. They can laugh even with their mouths full of hair. About the only happy time for an adult is when he has an accident and the insurance company pays off. It isn't fair.

Worse, we have a feeling that it's all too true.

THE CREDIBILITY CHASM: NEW ADMINISTRATION MOVES NEAR THE BRINK

(Mr. VAN DEERLIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. VAN DEERLIN. Mr. Speaker, when my longtime and respected friend, Herb Klein, took office as President Nixon's communications director, he made himself responsible for keeping open the channels of truthful information to the American public.

As of this morning, Mr. Klein seems faced with his first serious challenge.

Late editions of yesterday's Los Angeles Times quoted HEW Secretary Robert Finch as saying he would resign if denied the appointment of Dr. John H. Knowles as Assistant Secretary for Health and Scientific Affairs.

Later in the day, both the White House press secretary and Secretary Finch himself flatly denied that published report. Their denials are carried widely in this morning's newspapers.

The Times, though, has a different story, one of intrigue and purported behind-the-scenes wheeling and dealing over the proposed nomination of Dr. Knowles.

In fact, there seems to be some suspicion that Dr. Knowles—and the objections to his appointment from some of the mossier elements of the American Medical Association—are being used to trade for votes on the administration's surtax extension bill.

I continue to have full confidence in the Los Angeles Times. The coverage of the Knowles case is the kind of responsible, enterprise reporting we have come to expect from the Times and, in particular, from Tom Foley, the reporter who broke the story of Secretary Finch's threat to resign.

At this point, I will include two articles from this morning's Los Angeles Times dealing with the Knowles situation:

THE KNOWLES CASE: NIXON'S DOMESTIC POLICIES AT STAKE

(By Robert J. Donovan)

WASHINGTON.—Robert H. Finch's agony over the Knowles case raised serious questions Thursday not only about the influence and political future of the secretary of health, education and welfare but over the direction of the Administration's domestic policy.

The essential question is whether Finch's victory or defeat in this case, which will be decided today or Saturday, will foreshadow a progressive or conservative course in civil rights, welfare and other major fields.

The immediate issue is whether Dr. John H. Knowles, a liberal favored by Finch but opposed by the American Medical Assn. and its conservative allies in Congress, is to be nominated by President Nixon as Finch's chief assistant in the health field.

The President and his associates, who pride themselves on adminstrative efficiency, have made a monstrosity out of the handling of this matter. Washington has not seen a worse mishmash of its kind in years.

DIFFICULTY IN DECIDING

At the very least—and not for the first time either—it has portrayed the Nixon Administration as having great difficulty making up its mind on a tough issue.

Beyond that, however, the showdown, in which the President took a direct hand Thursday, harbors deeper implications. Since Finch has become preeminently the symbol of the moderate, progressive elements in the Administration, for example, would his defeat signify that the conservatives in the White House and in Congress have got the upper hand with the President?

Already an outcry has been raised by liberals—and even some conservatives—against the Administration's first civil rights program—a proposal outlined to Congress Thursday by Atty. Gen. John N. Mitchell. It would replace the soon-to-expire 1965 Voting Rights Act, which Negroes regard as an important symbol, with a new law to ban literacy tests for voting everywhere in the country.

Furthermore the Administration appears to be on the brink of a new policy giving some racially segregated school districts in the South more time to desegregate.

All of this, let alone the possibility of a conservative being chosen instead of Dr. Knowles as assistant secretary for health and scientific matters in HEW, adds up to welcome news for Southern conservatives. This is the case despite the fact that the Administration will argue strongly that its voting bill and school guidelines are not regressive but are designed to meet changing conditions.

FOLLOWING SOUTHERN STRATEGY?

Still, especially now that the Knowles case is in the headlines from coast to coast, the question is being asked here whether the President may not be following a so-called Southern strategy.

There was speculation on Capitol Hill Thursday, for example, that Mr. Nixon might be trying to talk Finch out of the Knowles nomination in exchange for Republican and conservative Southern votes in the tight fight over extension of the 10% income tax surcharge.

Whatever strategy finally emerges, the President has put Finch through an ordeal on the Knowles case.

As far back as January Finch tapped the Massachusetts physician to be chief operating officer for extensive medical programs, including Medicare and Medicaid.

Congressional allies of the AMA swung into opposition to Knowles behind the leadership of Sen. Everett M. Dirksen (R.-Ill.), Senate minority leader.

After five months of tugging and hauling, Finch seemed to have won his fight. At his televised press conference last week the President said he would support whomever Finch recommended.

Then on Tuesday, Finch said that "a letter is going to the White House with a recommendation" and Dirksen as much as conceded defeat.

Evidently, however, enormous hidden pressure continued to be applied to Mr. Nixon presumably by senators and representatives who received campaign contributions from the AMA. The medical association is one of the largest contributors to House and Senate candidates.

In any case, just when Mr. Nixon was expected to nominate Knowles, word leaked from Capitol Hill Wednesday night that he had changed his mind.

On Thursday instead of sending up the nomination the President sat down with Finch and discussed several possible candidates for the post, of whom Knowles was only one. This was either some kind of unfathomable window-dressing or else a severe setback to Knowles' chances and, if this is the way it works out, to Finch's influence and prestige.

Finch, who resigned as lieutenant governor of California last January to come to Washington, knew he was taking a big gamble with his political future by heading HEW when he could have had any one of several other important posts.

He was aware that HEW would be the cockpit of bitter fights over civil rights, school desegregation, medical care and welfare.

Finch is politically ambitious. While he knew that HEW might prove a political graveyard for him he calculated that he could win his fights, or enough of them anyway, and emerge with an even greater reputation than he had when he entered.

From the outset he became, in many eyes, the star of the Administration, its most publicized and glamorous figure.

Now, however, he has run up against the buzz-saw of conservative Republican power in this city, and the outcome of his gamble is at stake.

The changing of the school desegregation guidelines, which is expected to be proposed either today or early next week, will not enhance his reputation among the liberals, in all probability. If in addition he should feel forced to surrender on Knowles, his standing here would be diminished politically. It would suggest among other things that his influence with the President is somewhat less than has been pictured.

Indeed the Knowles case seems to have become a symbol of its own—a symbol of the conservatives' influence with the President. This may be why Mr. Nixon has found it necessary to put the star of his Administration and a loyal friend of long standing through an ordeal that is not just uncomfortable but may be politically damaging to Finch in the end.

FINCH BATTLE WITH PRESIDENT ON KNOWLES CASE NEARING CLIMAX

WASHINGTON.—A tug of war between President Nixon and his longtime political ally, Welfare Secretary Robert H. Finch, over the appointment of an assistant secretary for health neared a climax Thursday after a 45-minute Nixon-Finch White House conference.

Only one thing seemed clear, however, at the end of a day of confusing and often conflicting statements: Finch's choice of Dr. John H. Knowles of Boston for the job was as much in doubt as it has been anytime in the five-month history of the controversy.

White House Press Secretary Ronald Ziegler said no final decision had been reached but indicated the nomination of someone would be announced today or Saturday.

Late Thursday, Finch authorized his press office to say the Health, Education and Welfare Department would issue a statement today on the matter. A spokesman did not say what the statement would be about—except that it would not reveal who would get the appointment.

The only hint of the outcome came from Sen. Charles F. Goodell (R-N.Y.), a Knowles supporter, who told newsmen in mid-afternoon Thursday that he was confident Finch would recommend Knowles and that the announcement would be made today. Goodell's prediction was made after he talked with top HEW officials but before Finch returned to his department after the White House conference.

At a White House briefing for newsmen Ziegler denied that Finch had threatened to resign if the President did not support his recommendation of Knowles, 43-year-old head of Boston's Massachusetts General Hospital, for the HEW post. The Times quoted Finch Thursday as saying the President would "have to find another secretary" if he did not name Knowles and The Times stands on the accuracy of its report.

Finch chose Knowles for the job last Jan. 15. Knowles immediately ran into heavy but largely behind-the-scenes fire from the American Medical Assn. and Senate Minority Leader Everett M. Dirksen (R-Ill.).

The basis of the AMA objections to Knowles appear to be varied. The only public statement was made April 23 by the AMA President Dr. Dwight L. Wilbur, who said the association favored the appointment of someone who would represent "the broadest scope of meidcine and would not be too closely oriented to any one segment of medicine or the health field."

Knowles, a physician, has been primarily a hospital administrator and it was his well-recognized success in this regard at the huge Boston medical complex that first attracted him to Finch.

The AMA opposition is also believed to stem from other factors. Knowles has been an outspoken advocate of prepaid medical insurance for all Americans, an issue that has been anathema to the AMA for decades.

WANTS VOICE

Furthermore the association is said to have felt that in return for its substantial support for Republican office holders, particularly in the House, it should have a voice in the selection of the assistant HEW secretary who would be running the increasingly important federal health programs.

During the months of struggle, while the AMA's fight was being led by Dirksen, White House officials refused to acknowledge that Finch had reached a final decision in favor of Knowles—and Finch continued to insist he had not changed his mind.

There was little question that the Senate would confirm Knowles if the President submitted the nomination. Knowles has had the open and enthusiastic backing of Senate Majority Whip Edward M. Kennedy (D-Mass.) and Sen. Edward W. Brooke (R-Mass.).

However, Finch was said to be concerned that proposing Knowles in the face of Dirksen's opposition might endanger other HEW programs. He also wanted to avoid an open party scrap.

FINCH RESPONSIBILITY

At his news conference last week Mr. Nixon was asked whether he supported his HEW secretary, Finch, or his Senate leader Dirksen. He replied that Finch has the responsibility for selecting his assistant secretaries and that "when he makes a recommendation . . . I will support that recommendation." Furthermore he said Finch would make the recommendation this week.

Finch visited Dirksen briefly Tuesday at the Capitol on another matter and told newsmen later that he had written a letter to the White House with his recommendation, although saying he was not sure the letter "has actually left my office yet."

Through it all there was never any question that Knowles was Finch's man. Thus Finch expressed surprise when he was informed by Times reporter Thomas J. Foley early Thursday morning that Mr. Nixon was being quoted by senators and congerssmen as saying Knowles was out.

KNEW NOTHING

Finch, who had been in New York during the day, said he knew nothing of any change and that neither the President nor any other White House official had called him about it. Finch said he would like to make some phone calls and would call the reporter back.

He did so and told Foley he had not been able either to confirm or deny that the President had decided not to back Knowles. But he said he had no reason to believe the post would go to anyone other than Knowles.

During the telephone conversation Finch was asked what a repudiation now—after Mr. Nixon's televised news conference support would mean to him.

"Well, he'd have to find another secretary," Finch replied.

SON LISTENING

After the telephone conversation, Foley discovered that his 19-year-old son, who had become intrigued by the story his father was reporting, had been listening to the conver-

sation on an extension in another part of the house.

Finch went to the White House early Thursday morning for a series of meetings but first authorized the HEW press office to issue a statement saying a number of names had been discussed with the White House and that Finch "has indicated his preference for assistant secretary for health and scientific affairs. The selection is now up to the White House."

A few minutes later, however, Ziegler told newsmen several times at his regular morning briefing that "no final recommendation had been made. Asked if the White House had received the Finch letter, Ziegler said there had been no formal recommendation.

A 45-MINUTE TALK

At his afternoon briefing Ziegler told newsmen the President and Finch had talked for about 45 minutes and that "several names were discussed" but that no final decision had been made. He said he was confident it would be made before the end of the week.

Ziegler was asked about the HEW statement that a letter with Finch's recommendation had gone to the White House. Ziegler replied, "This matter is not being handled in a letter manner." He said it was being handled in conference between the President and Finch.

"VERY ACCURATE"

Next Ziegler was asked about a report circulating on Capitol Hill that the nomination was being withheld pending a vote in the House on the President's request for an extension of the 10% surtax. Ziegler said he had no knowledge of any such request by lawmakers.

Asked about Foley's story on the threatened resignation, Ziegler said, "I can categorically and absolutely deny" that this is Finch's position.

When informed that Foley's son had heard the conversation, Ziegler replied, "Tom Foley of the Los Angeles Times is a very fine reporter, a very accurate reporter . . . What I'm reporting here is what I was told."

At the HEW department Finch issued a statement that "I have no intention of leaving the Administration. I regard my post as HEW secretary as a four-year commitment."

In Boston a spokesman for Knowles said the doctor would have nothing to say about the issue. Knowles has maintained a discreet public silence about the controversy swirling around him. However, he is known to be anxious to take the job and accepted the offer from Finch as soon as it was made last January.

TREATED "SHABBILY"

One congressional source close to the fight said he was concerned that Knowles "has been treated so extraordinarily shabbily" by the opposition to his appointment.

The biggest unanswered question Thursday was why the President changed his mind, if indeed he has, about supporting Finch's choice.

Some sought to tie it to the surtax fight, speculating that a certain number of additional conservative Republican votes would be obtained for the unpopular tax measure in return for dropping the Knowles appointment. However, several House Republican leaders denied any such motive.

HERE IS ONE WAY TO REDUCE POSTAL DEFICIT

(Mr. HENDERSON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HENDERSON. Mr. Speaker, I am here inserting for inclusion in the RECORD a copy of an editorial from a newspaper published in my district.

It concerns the practice of Federal departments and agencies sending out one- and two-page news releases in big 8½ by 11 envelopes.

I commend the editor for publicizing this practice. I am confident that there are many, many other wasteful uses of the mail being made by Federal departments and agencies.

In an effort to start some action in this area, I am writing each Cabinet member and the heads of all major independent agencies to ask that each appoint a responsible official in their department or agency to look into their use of the mail and make recommendations as to more efficient use. I am asking that they report to me what actions they take in response to this request.

I invite all of my colleagues to join me in this effort to insist that before we increase postal rates or make other demands upon the public regarding the postal service, we insist that the Federal Government put its own house in order.

The editorial, taken from the Goldsboro, N.C., News-Argus of June 24, 1969, is as follows:

BY DURN, MAYBE WE CAN DO SOMETHING

We Americans have a built-in cushion of apathy that keeps us from going completely ape over the incomprehensibly big problems we can't do anything about—like the national debt.

But every now and then one of the little things can really get our dander up and it makes our whole day when, with a stroke of inspiration, we realize we CAN do something about it.

For months we have a couple of times a week had our day marred by getting in the mail a "news release" from some government agency.

The release would be a single page, or, perhaps two pages. But it invariably would come in a whopping 12½ by 10 inch manila envelope—and of course at government expense.

The U.S. Department of Commerce and the Internal Revenue Service are habitual in this.

Not only does the big envelope cost 10 times what a regular size envelope costs, but because of its additional weight, it falls into a 12 cents rather than six cents postage rate.

Now it seems to us that an economy-minded Congress or department heads should have lowered the boom on such obvious and easily eliminated waste long before now.

But since they haven't, through inspiration born of frustration, we have come up with a plan of persuasion:

Let's all of us in the newspaper, radio and TV field who receive these "news releases" make a deal with the government agencies. If they will send their releases in regular size envelopes whenever possible, we'll consider them. But if they send them in the whopping 12½ by 10 inch jobs, we'll file 13 them without even looking.

There are almost 10,000 newspapers in this country. Based on one weekly news release each from the IRS and the Department of Commerce to newspapers alone, the potential savings in postal costs would exceed $150,000 annually.

NEED FOR DAY CARE FACILITIES

(Mr. ST GERMAIN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ST GERMAIN. Mr. Speaker, on June 12 I introduced the Day Care Center Facilities Act, a bill which would authorize $55 million a year during the next 4 years to renovate and construct child-care facilities.

The need for additional facilities is of such growing magnitude that there is no question but that a federally supported national program will have to be initiated within the next few years. It is important, however, that the Congress act now before the situation becomes any more urgent.

To indicate one part of the problem in very concrete terms, I include here a column from the March 31 issue of the Washington Post:

DAY-CARE SHORTAGE HURTS JOB TRAINING

(By William Raspberry)

Don't talk to Maurice Knighton about welfare recipients not wanting to work. He knows better.

But if you want to talk about how society seems to be doing all it can to see to it that welfare recipients remain on the dole, that's something else again.

Knighton is president of the Sequential Computer Corp. at 6507 Chillum pl. nw. His firm is training 120 former welfare mothers as data transcribers under two Manpower Act programs.

The training program is a success, according to Knighton, the Labor Department and the women themselves.

But a number of women have had to leave the program because they can't find day-care facilities for their children.

"It's really a very serious problem for us," Knighton said. "I'd say that at least 85 per cent of these women are the sole support of anywhere from one to four children, mostly from newborn infants to 5 or 6 years old.

"There just isn't any adequate day-care service available to them, so they end up leaving the children with older relatives or in some cases virtually unattended.

"The result is accidents, lost time when the babysitters don't show up, full days lost sometimes when the children have to go to the clinics. Some of our women have actually moved so they could be close enough to a day-care center to get on the waiting list."

In an attempt to see what could be done about the problem, Knighton assigned his assistant, Michael Zajic (pronounced Zike), to explore the possibilities.

What Zajic found was that most of the legislation directed at training the hard-core unemployed takes note of the need for day care and often provides for payment for day-care services. But it does not provide for creating day-care facilities, and the problem is that there simply aren't nearly enough to go around—only some 3000 slots when more than 100 times that number are needed.

The Welware Department will reimburse mothers for babysitting services. The Department of Health, Education, and Welfare has some money available for upgrading established day-care centers. "But no government agency," Zajic said, "seems to have the authority, the ability and the money to establish a day-care center."

As a result, only between 6 and 7 per cent of Knighton's trainees have their children in day-care centers. The rest are being taken care of on a catch-as-catch-can basis.

It is a particular problem, he said, because most of the trainees have had almost no previous work experience and, as a result, no experience at procuring sitter services. The absence of adequate day care is the chief reason for the high turnover rate among the

trainees, Knighton said. About 20 of the first 60 enrollees have left the program.

Knighton thought he had come up with an ideal solution to the problem.

There is in the warehouse district where his officers are located a vacant restaurant that could be converted into a day-care center capable of handling up to 60 children.

In addition, next door to the restaurant is another vacant building that could be used for expanding the center. Knighton has an option on both buildings.

"We contemplated a Class A center that would meet the most stringent requirements for nutrition, health care, education, cultural experiences and the rest," he said. "We had in mind to operate on a nonprofit basis, with the mothers paying as little as $1 a week per child on a sliding scale based on income. We believe we could do it at 25 per cent less than any other Class A center in town and still provide a full-time registered nurse, trained teachers and one staffer for each five to seven children."

Knighton said he was willing to put $10,000 of the company's money into the center.

The problem is that he needs at least $25,000 to renovate the buildings as well as some operating funds. The money, as far as he can tell, simply isn't to be had.

A part of the reason is that much of the pertinent legislation simply assumes the existence of day-care facilities. Another is more philosophical: There is the rather middle-class notion that children under age 3 are better off at home with their mothers.

DR. MARK SHEDD SHOWS CALLOUS DISREGARD FOR NORTHEAST HIGH SCHOOL, PHILADELPHIA, ITS TEACHERS AND STUDENTS

(Mr. EILBERG asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. EILBERG. Mr. Speaker, at this moment, as I address this body the schools superintendent of Philadelphia, Dr. Mark Shedd, is showing the film "High School" to members of the Philadelphia Board of Education at the school administration building in Philadelphia.

The film is a controversial representation of education at, in the words of its director-producer, "a typical white middle-class school—Northeast High School in Philadelphia." Northeast High is in my district, the Fourth, of Pennsylvania.

Inexplicably, Dr. Shedd has not objected to out-of-Philadelphia showings of the film in its 6 months of existence. But Dr. Shedd has deliberately excluded the concerned community, including myself, and the faculty and students of Northeast—the "actors" in this film—from this screening.

After comparing accounts of the film in the press with the observations of the teachers and students of Northeast, I must conclude that the film is a gross distortion which does not begin to reflect the school's fine program.

For example, year after year, 70 percent of Northeast's graduates go on to some form of higher education.

Dr. Shedd's failure to lead in the defense of the school in face of criticism in the national press raises serious questions about his ability to preside as administrator of Philadelphia's entire school system.

His failure to take the lead in decrying this film as a gross misrepresentation shows his callous disregard for the school and its teachers and students, my constituents.

The Philadelphia taxpayers have a right to complain over the school superintendent's failure to obtain rent for the use of the premises over several weeks by the film's producer, Frederick Wiseman, or pursue an interest in the film's profits.

Dr. Shedd should not have allowed the film to be made on the school premises without the consent of the actors—the faculty and students. I advise interested participants in the film to determine their legal rights against Mr. Wiseman as well as Dr. Shedd.

I think the situation in Philadelphia closely parallels recent complaints against movie producers for using Federal facilities at Fort Benning, Ga., to film "The Green Berets" and at Pearl Harbor to film "Tora! Tora! Tora!" in violation of Government regulations.

I suggest to my colleagues that Dr. Shedd's conduct in this matter is such as to raise questions as to his credibility as he appears espousing many projects before our various congressional committees.

VOTING DISCRIMINATION

(Mr. McCLORY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. McCLORY. Mr. Speaker, the Attorney General of the United States presented a constructive and forthright statement at a meeting of the House Judiciary Subcommittee yesterday on the subject of voting rights.

In addition to calling attention to the benefits which have resulted from enactment of the Voting Rights Act of 1965 the Attorney General recommended extension of his authority so that voting discrimination can be attacked in all of the 50 States.

The precise measures which the Attorney General is recommending have not yet been introduced, and my personal attitude regarding the various proposals which he has made will depend on subsequent testimony and a careful review of the subjects to be covered.

Let me state initially that I have joined with a number of my Republican and Democratic colleagues in urging an extension of the 1965 Voting Rights Act. However, this should not be interpreted as meaning that I am satisfied that this is a complete answer to voter discrimination. Certainly this approach has relatively no effect on vote frauds, a subject which requires our earnest and prompt attention. Nor does it begin to approach other parts of the comprehensive attack which the Attorney General has proposed.

In his testimony before the House Judiciary Subcommittee, the Attorney General stated quite clearly that he was proposing amendments to the 1965 Voting Rights Act "designed to clearly strengthen and extend existing coverage in order to protect voting rights in all parts of the Nation."

In pursuit of this objective the Attorney General proposed the following:

First. A nationwide ban on literacy tests until at least January 1, 1974.

Second. A nationwide ban on State residency requirements for Presidential elections.

Third. The Attorney General is to have nationwide authority to dispatch voting examiners and observers.

Fourth. The Attorney General is to have nationwide authority to start voting rights law suits and to ask for a freeze on discriminatory voting laws.

Fifth. The President is to appoint a national voting advisory commission to study voting discriminations and other corrupt practices.

It is both unfair and inaccurate, in my opinion, to suggest that the Attorney General's recomendations are anything less than an attempt to strengthen existing coverage.

The Attorney General pointed out specifically:

> There is little statewide disparity between the percentage of eligible Negroes registered in, say, Louisiana—a state covered by the 1965 Act—or Florida which is not covered. . . . There are dozens of counties in Texas where less than half of the eligible electorate voted in 1968 but only 9 in Alabama.

The Attorney General's testimony on these subjects is entitled to the fullest and fairest consideration by the committee.

It is my firm belief that that part of the Attorney General's recommendations for the appointment of a national voting advisory commission to study discrimination and other corrupt practices should be acted upon without delay—either as a part of the extension of the Voting Rights Act of 1965 or as a separate measure, but at the same time.

As one of the sponsors of a simple extension of the Voting Rights Act of 1965, a move in which I have joined with a number of other Republican Members of this House, I have endeavored to express a strong desire to further reduce discrimination in voting on the basis of race or color. In my opinion this position is consistent with the policy of this administration as expressed both in this House and in the White House. I am confident that any differences which may appear between the Attorney General's testimony and the position of the majority of the Republicans on the House Judiciary Committee will be resolved in the weeks ahead consistent with this objective.

I direct the Members' attention to the full testimony of the Attorney General and urge that we give thoughtful consideration to the recommendations which he has made.

DR. ANDREW D. HOLT

(Mr. FULTON of Tennessee asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. FULTON of Tennessee. Mr. Speaker, in September 1970, Tennessee will lose the active services of Dr. Andrew D. Holt, when his retirement as president of the University of Tennessee becomes effective.

"Dr. Andy," as he is known to all of us in Tennessee, and to all who have had the privilege of becoming acquainted with this outstanding individual, states that he will be 65 on December 4, and that he feels the university deserves a younger president. There are many of us who will disagree with Dr. Holt on this issue.

But there are few, if any, who will disagree with the goals and objectives he set—and attained—for the University of Tennessee.

During the period of his presidency, from 1959 to the present, the University of Tennessee, both the Knoxville campus, and the medical school at Memphis, have reached major heights in both their academic standing and in their physical facilities. The University of Tennessee Martin Branch has been added; the graduate space school at Tullahoma, near the Arnold Engineering and Development Center, has been created; a branch of the University of Tennessee has been established in Nashville; and effective next year, the University of Chattanooga, formerly a private institution, will become a part of the University of Tennessee complex.

Dr. Holt attained national prominence in 1949 when, as president of the National Education Association, he played a major role in Washington in urging Congress to approve the Federal aid to education bill.

Dr. Holt's wit and humor was well known, and he was in demand, and will continue to be in demand, as a public speaker. An example of his humor is reflected in his retirement announcement which came, without advance notice, after he had reported to the university's board of trustees that UT students had rejected violence as a method of protest and deserve to be involved in processes leading to decisions affecting student life. In his retirement statement, he said:

I conclude this report with an announcement of dubious significance to the University, but of more than casual interest to me. At the end of the coming school year, I shall be retiring as President of the University. My sole motive for retirement is a cantankerous calendar and a birth certificate which stubbornly refuses to deny that on next December 4, I shall be 65 years old, UT deserves a younger President.

A new president will be found for the University of Tennessee, but there will never be a replacement for "Dr. Andy."

Fitting testimonials to Dr. Holt and his career are given in the following editorials carried in the Nashville Tennesseean and the Nashville Banner, and in an exceptionally perceptive article by Mr. Joe Hatcher, political columnist for the Nashville Tennesseean:

[From the Nashville (Tenn.) Banner, June 20, 1969]

BEST WISHES, DR. HOLT

A vast majority of Tennessee residents, because of his long years of energetic service to education in general and to the University of Tennessee which he has headed since 1959, has come to know and respect Dr. Andrew D. Holt.

His thousands of friends across the state, and the region, will feel a deep sense of regret in the announcement that Dr. Holt will retire effective Sept. 1, 1970. At the same time, those closest to the university and the proud record of growth and achievements it has attained under Dr. Holt's leadership will be happy for him.

Andy is retiring for the best of all reasons—"a cantankerous calendar and a birth certificate of disgusting integrity which stubbornly refuses to deny that on next Dec. 4 I shall be 65 years old."

Students, alumni, faculty and friends fully are aware that Dr. Holt has more than earned his announced retirement. They are reminded of this fact every time they look at the UT campus in Knoxville—which has grown into a city unto itself—and other facilities of the university in Chattanooga, Memphis, Nashville, Martin and in other areas of the state.

The assurance from Gov. Buford Ellington that Dr. Holt will play a prominent role in the selection of his successor does not minimize UT's loss. But it is comforting news that the veteran educator will remain to guarantee an orderly and successful transition.

Although Dr. Holt is stepping down officially, those who know him best expect he will never cease in his efforts to boost UT. As the No. 1 Big Orange fan, they fully anticipate he will be around on fall Saturday afternoons to root for the Volunteers. They also cannot envision a session of the legislature without Dr. Holt knocking at the door for more funds to build a bigger and better university.

The Banner joins a grateful citizenry which long will remember his devoted service in hearty congratulations to Dr. Holt. It extends to him its warmed wishes for many happy, fruitful years ahead.

[From the Nashville (Tenn.) Tennessean, June 22, 1969]

A MAN TO REMEMBER: ANDY HOLT LED UT TO NEW HEIGHTS

(By Joe Hatcher)

(NOTE.—Political columnist Joe Hatcher has been a member of the reporting staff of the Nashville Tennessean since 1921. Over the years he has had a close acquaintance with Dr. Andrew Holt, who has announced his retirement as president of the University of Tennessee next year. In this article Hatcher recalls some fond memories of Professor "Andy" Holt.)

Dr. Andrew David Holt, A.B., M.S., Ph.D., LL.D., Litt.D., D.Sc., president of the University of Tennessee (1960–70) will go down in Tennessee history as one of the great educators, who built the University of Tennessee from a relatively small state school to the rank of 22nd in the nation.

But to those who knew "Andy" Holt best through all his years, he will rank perhaps first as an educator, but right up near the top as one of the greatest politicians of an era, and certainly one of the greatest lobbyists of the mid-19th Century in the state and to a degree in the nation.

Somehow we never ranked "Andy" as a great academic scholar, nor as the purely academic, ivory-towered type of college president—but as a genius of organization, a genius of getting what he wanted from governors, legislatures, and the public.

His speeches will not go down as great literature, nor his writings as great books nor great educational gems, but his accomplishments will set standards for all who follow his as an educator, politican, college administrator, and lobbyist for education generally, for the teachers and the institution of higher learning he represented.

It was a privilege to have known Andy Holt through many years—to have know him well enough to call him "Andy" as well as formally "Dr. Holt" is his later years.

NATIVE OF MILAN

He was born and raised in Milan, less than 15 miles from the scenes of our own childhood. We did not know him in those days but we did know many whom he knew in that area of Gibson county, and to have been associated with the same folks with whom Andy grew up.

We knew him first when he was associated with the Tennessee Teachers Association, and when he paired with W. A. (Jiggs) Bass to represent the teachers, and work through those years of the great renaissance for the teaching profession.

Holt was not born with a silver spoon in his mouth. He worked for his education—firing furnaces, washing dishes, blowing a slide trombone and leading a jazz band on his way to his education at Memphis State Teachers' College, at Emory University in Atlanta, at Peabody College, and later at Columbia in New York for his graduate work.

ELEMENTARY TEACHER

He started as a teacher at Bluff Springs elementary school in Humboldt in his native Gibson county, and served as head of the demonstration school at Memphis State Teachers College. He was for seven years high school visitor and supervisor in West Tennessee, and became executive secretary of the Tennessee Teachers Association in 1937, succeeding W. A. Bass in that post.

Incidentally, he was getting his political foundations also. He had been closely allied to the Browning campaign of 1936 when he became governor, and thereby a natural to step into the TEA post during Browning's first administration.

He led the TEA to major progress under Browning in that first administration, but he was to crown his successes in 1947 when his leadership of the TEA actually brought into being the 2-cent sales tax for the first great forward leap for education. Gov. Jim McCord was generally credited in educational circles with making possible the sales tax, but actually "Andy" Holt was the "father of the sales tax." It was his mastery as a lobbyist that made the passage of the tax possible in the first place, and his lobbying genius in defending the tax through the wave of resentment that followed.

POLITICAL CRISIS

Governor McCord was to be defeated in 1948, and Andy Holt faced one of the greatest of his political crises, riding the fence between his long-time friend Gordon Browning and Governor McCord.

He was constantly on the spot in that campaign. He was quoting here as endorsing Governor McCord, and there as declaring his neutrality, and then again as defending Governor Browning's record for support of the schools.

But he was to ride that tumultuous era in politics out, and attain at the same time his highest recognition nationally. He was elected president of the National Education Association in 1949 with the principal goal of getting through Congress the federal aid to education bill which had been rejected in the previous Congress. But he had President Harry S. Truman on his side in that fight, and he was to win that one too, giving him rank as a national lobbyist.

SKY ROCKET

As President of the NEA he spoke in practically every state in the nation. * * * In his days as president of the university, he attained the heights as the most powerful lobbyist in the state's history. It seemed he had but to ask to bring about the greatest growth in the state's physical plant in history. Only in the last two years has the legislature balked at the Holt magic touch, and he has undoubtedly felt this loss keenly, probably as part of his stepping down process while he is so far ahead.

He has seen the university grow from around 10,000 to more than 20,000 enrollment and 22nd rank in the nation. He has seen the campus at Martin added, the graduate space school at Tullahoma, the consolidation with the University of Chattanooga which becomes

effective with next year, and the expansion of Nashville's branch as a night school.

IN POOR HEALTH

His health has not been the best in recent years. He has had bouts with ulcers in 1963 and again in 1966, but his activities have never lessened. He has never moved into an ivory tower of a college president but has remained available to the students and the public at all times. He is not likely to retire into limbo, but will remain active in an advisory capacity to the university and to schools in general for the years to come.

He ranks as one of the great story tellers of the time, probably the greatest on the political scene since the immortal Robert L. (Bob) Taylor. * * *

He took with him from the state government Dr. Edward J. Boling, who has served as his right hand and his alter ego in the administration of the university. Dr. Boling appears to be in line to take over from President Holt in orderly succession next year. Certainly he will have the Holt support and advice in the years that follow, as he may need them.

SHOWED THE WAY

Dr. Holt's regime has shown the way for bright, progressive administrative leadership in contrast to the cloistered academic figure.

Dr. Holt reaches the age of 65 on Dec. 4, 1969, and might have remained for another five years before compulsory retirement. But he apparently prefers to step down from the peak, and watch the blossoming of his dreams for the university.

Dr. Holt was probably the No. 1 "Big Orange" athletic fan, and the odds are he will be there Saturday afternoons during football seasons for years to come. Likewise, he will likely be available in years to come to speak to many school and civic groups in the inimitable Holt story-telling way. Certainly, the university will be asking his folksy approach to legislators and to the board of trust when problems are tough in the next several years.

There'll not be another "Andy" Holt likely within the next generation, at least. Long live the record of Dr. Andrew David Holt, and the happy memory of "Andy" Holt.

[From the Nashville (Tenn.) Tennessean, June 2, 1969]

ANDY HOLT TO BE MISSED, AND DIFFICULT TO REPLACE

Dr. Andrew Holt's annnouncement that he will retire as president of the University of Tennessee in September, 1970, comes as a surprise and a disappointment.

Although he will be 65 next Dec. 4, Dr. Holt has shown no noticeable decline in health and vigor. It was hoped he would stay on to guide the university a few more years. But his sudden and apparently final decision to retire seems to preclude that possibility.

UT has experienced its greatest growth and expansion of service since Dr. Holt took over as president in 1959. Its physical plant has become one of the most attractive and serviceable in the South. The university's academic program has been broadened and improved under Dr. Holt's administration, and the athletic program has become the envy of universities all across the country.

So far, UT has weathered the wave of campus disturbances with a minimum of disruption. This is not to say there has been no dissent on the campus. There has been. But for the most part, the administrators have been able to achieve a delicate balance between student demands and the anti-intellectual reaction in the legislature and other public bodies:

One of Dr. Holt's most recent accomplishments was the negotiation of an open speaker policy which was approved by the board of trustees Thursday. The policy, giving recognized student organizations full authority to select speakers of their choice, resulted from several months of earnest discussion among students, administrators, and board members. Without Dr. Holt's well-known tact and diplomacy, it is doubtful if this issue could have been resolved in such an amicable manner.

Some may feel that Dr. Holt is stepping down to avoid the even greater student unrest which is predicted for the future. This would be an unfair criticism of a university president who has absorbed his share of difficulty.

If more disturbances do come, they are likely to come next year while Dr. Holt is still president of UT. This final year of his administration—during which he should be relatively free of political pressure and uneasiness about his job may give Dr. Holt the opportunity to perform some of his most valuable service to the university.

Dr. Holt deserves much credit for bringing the University of Tennessee to its present high level of educational proficiency. He will be missed when he steps down as president.

The UT board will have to choose his successor with great care if the advances in academic achievement and academic freedom are not to suffer.

PATH OF UNITY PAVED BY NATIONAL EDUCATION ASSOCIATION

(Mr. CORMAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. CORMAN. Mr. Speaker, few Americans do not, to one degree or another, share the guilt implicit in the conclusion of the National Advisory Commission on Civil Disorders:

Our Nation is moving toward two societies, one black, one white—separate and unequal.

In a quite literal way, the professions have reflected the divisiveness that is a part of our society. The legal profession, of which I am a member, has its separate Negro and white organizations, as do many others including the medical, clerical, and teaching professions.

To their credit, many of these professions have made great strides in recent years in uniting their dual associations. One in particular, deserves the applause of the entire Nation, and I would like to bring it to the attention of my colleagues today on the eve of their 107th annual convention in Philadelphia. It is the teaching profession, and in particular, the million-member National Education Association.

In 1857, Mr. Speaker—the same year the Supreme Court ruled that Dred Scott is a property—Robert Campbell, a Negro immigrant from Jamaica, became a charter member of the National Education Association.

In 1866, while the Southern States were still smoldering after the horrors of the Civil War, NEA President James Wickersham called for and got an association platform supporting a system of free public education for every boy and girl in America. Booker T. Washington, the great Negro educator, was a featured speaker at NEA conventions in 1884, 1896, and 1904.

Thus, long before the term "civil rights" came to mean, popularly, equality for Negroes and other minority groups, NEA policy and programs were behind the Negro's cause.

It is significant, Mr. Speaker, that it was the National Education Association that held the first completely integrated convention in the South. It was the NEA that pioneered in staff appointments without regard to race and was cited for so doing in 1955 by the Urban League of Washington, D.C. The largest professional organization in the world, NEA in 1968 elected the lady who now heads the women's bureau, Mrs. Elizabeth Koontz, as its president. Mrs. Koontz, a North Carolinian, is black.

But the teaching profession, perhaps even more acutely than other professions, is scarred by the sores of segregation. It, too, has suffered its separate associations divided by race.

Although the NEA never denied membership to Negroes, 17 border and Southern States did establish dual education and teacher associations along racial lines. Because it never had the direct power to set membership requirements for its largely autonomous affiliated State and local associations, NEA has recognized both Negro and white dual affiliates. But in recent years it has worked painstakingly to eliminate the last vestige of racially organized affiliates. The NEA is fast approaching that goal, with the merger of dual affiliates completed in all but three of the States. Mr. Speaker, I believe that educators, through the NEA, have made the most outstanding record in the Nation among all the professions in eliminating racial lines among members, and I would like to make this record known to my colleagues in the House.

In 1952—2 years before the historic Supreme Court ruling on school desegregation—a joint committee of the NEA and the predominantly Negro American Teachers Association recommended establishment of local and State joint committees in areas having dual associations to grapple with the common problems and to work toward integration of the teachers associations. Most of these potential mergers have come about, usually with NEA assistance.

When the Supreme Court struck down school segregation, the 1954 NEA Representative Assembly adopted a resolution reading, in part, as follows:

The principle embodied in the recent decision of the Supreme Court of the United States with regard to racial segregation is reflected in long-established provisions of the platform of the National Education Association. The Association recognizes that integration of all groups in our public schools is more than an idea. It is a process which concerns every state and territory in our nation.

In 1964, the NEA adopted a resolution—which was strengthened in following years, requiring the full merger of dual local, district, and State associations on penalty of disaffiliation from the NEA.

In 1966, NEA sponsored a workshop for officers of local associations that had merged or were considering such a step. This group discussed constructive ways of dealing with this problem and the roles of State and National associations in providing assistance.

By November 1966, all States had removed their racial restrictions on membership, and 41 of the 50 State associations were fully merged. This same year the American Teachers Association united completely with the NEA after more than 3 years of careful planning and negotiation. The Negro organization's staff people were hired by NEA to work in the newly opened southeast regional office in Atlanta, Ga.

Since that time, Tennessee, Texas, South Carolina, Arkansas, Georgia, and Alabama have erased racial lines in their respective State's professional education associations.

The path toward unity in many cases has been difficult. A good deal of courage, trust, patience, and determination has been required by both white and black teachers in the South to achieve a merger plan acceptable to both groups. The complications have been numerous: disposal of assets, assumption of new financial obligations, guarantees of a leadership role for the smaller Negro membership in the new organizations.

Through it all, the NEA has patiently but stubbornly prodded for unity, making its facilities, staff, and funds available to help its southern affiliates affect merger.

Only three States have not yet agreed upon mutually acceptable plans for merging their dual associations. They are Mississippi, where the white association rejected an NEA factfinder plan; North Carolina, where the Negro association refused another NEA factfinder plan; and Louisiana, where both associations have failed to vote on a plan for merger.

These NEA affiliates have been suspended by the NEA executive committee, and thereby have been denied the benefits and services of the national organization. But, I am told, Mr. Speaker, that there is reason for optimism that unity will be effected in these States in the near future.

Whatever the outcome—and I am hopeful it will be unification for these three States—it can be said that the teachers of America, through the National Education Association, have paved a path of unity for all of the professional organization of this land.

"THE BRIDGE AT REMAGEN"

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, numerous press statements have been directed at those war films which are made with the assistance and cooperation of the Department of Defense. Without passing any judgment on or commenting upon any other film, I would merely like to point out that the record is crystal clear on the use of American military equipment in the motion picture "The Bridge at Remagen." All of the tanks, trucks, jeeps, armored cars, and other vehicles were rented from the Austrian Ministry of Defense and transported into Czechoslovakia, where the bulk of the filming was accomplished from June 6, 1968, up until the very day of the Russian and Warsaw Pact invasion of Czechoslovakia. This equipment had been sold many years ago by our Army as surplus material immediately following World War II. I can state categorically that no American equipment, no American military personnel, no free technical advice, and no expenditure of taxpayers' money went into the production of "The Bridge at Remagen."

I have carefully avoided the use of the pages of the CONGRESSIONAL RECORD to make any mention of "The Bridge at Remagen," lest anyone draw the conclusion that I am using my position as a Member of Congress to employ an official document like the CONGRESSIONAL RECORD to comment on this motion picture. However, in the light of recent news articles and speeches on the floor discussing the use of American military equipment and taxpayers' funds in the production of other films, I feel constrained in the face of other press inquiries to make these facts available concerning the filming of "The Bridge at Remagen."

Since it is impossible to set forward in a 1-minute speech the full details concerning the amount and nature of military equipment rented from the Austrian Minister of Defense, I intend early next week to spread upon the RECORD the full account of how this equipment was obtained and utilized in the film "The Bridge at Remagen."

WILLIAM PRESSER HONORED FOR ISRAEL AID

(Mr. FEIGHAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. FEIGHAN. Mr. Speaker, on Sunday, May 25 more than 1,500 persons gathered at the grand ballroom of the Sheraton-Cleveland Hotel to pay tribute to William Presser, international vice president of the Brotherhood of Teamsters for his efforts in promoting the sale of bonds for Israel among labor unions. Bill Presser is truly one of the most active, vigorous, and highly respected labor leaders in Ohio and this banquet in his honor was an expression of the deep admiration and affection felt for him by all who know him and those who are familiar with the scope of his philanthropic activities.

During the dinner it was announced that through Bill Presser's efforts more than $1.5 million worth of bonds for Israel were sold. This was certainly a remarkable achievement by one person and the presentation to Bill of the Tower of David Award by the State of Israel indicated the importance attributed to such an accomplishment by the Israel Government. The Tower of David Award is one of the highest awards that the National Israel Bond Organization can bestow upon an individual. It recognizes the efforts made by the recipient to maintain an outpost of democracy in the Middle East by participating in the economic development of the State of Israel.

The award was presented by Col. Isaac Sella of the Israel Air Force to William Presser "in acknowledgment of notable participation in the campaign to provide a sound economic foundation for the rebirth of Israel as a tower of spiritual renewal and strength for the Jewish people." Colonel Sella represented Prime Minister Golda Meir, who sent the following telegram:

Warm greetings occasion Testimonial Dinner in your honor. This symbolizes multiple causes linking Israel and the United States as individuals, as heirs of the Biblical heritage and as promoters of labor values in a just society. These links expressed in Israel Bonds help us maintain and expand our economy in face continuing refusal Arab states to enter into direct peace negotiations with us. Best wishes, Golda Meir.

The following excerpts from the remarks of Edward Wyner, chairman of the dinner, and an outstanding member of the legal profession, are also indicative of the high esteem in which Bill Presser is held.

Tonight we honor a man who for over 40 years has worked amongst us to improve the lot of the working man.

His skill and devotion as an advocate of the interest of labor has caused his services to be required in many parts of our country.

Recognition has come to him from all corners of his chosen field culminating in his election as Vice President of the International Brotherhood of Teamsters.

To each of his duties he brings a quiet thoughtful kindly approach.

A steady succession of problems involving people from all walks of life find their way to his office, where quietly, humbly and with apparent ease solutions acceptable to all seem to eminate from this slightly heavy set fellow who you sometimes think is dozing as you talk to him only to have him quickly and incisively go to the heart of the problem you have brought him.

What keeps him going with a program day in and day out frequently seven days a week—that seems backbreaking through periods of personal discomfort?

I believe it is a basic love of people—a basic desire to help others—and a willingness to be where he is needed and to stand and be counted.

Respected by his co-workers he is also held in the highest esteem by those with whom his work brings him into controversy.

And so friends I take great pleasure in welcoming you tonight to this evening devoted to Bill Presser and his interests, and it seems to me to be fittting and proper that those amongst whom he works should gather with the leaders from all walks of life to express their appreciation at this Labor Tribute Dinner when this affection for him is expressed by your being here and by your support of Israel, which is so close to Bill's heart.

This devotion to humanity is not confined to Bill alone, however. His wife, Faye, has consistently contributed her talents to the causes of the Teamsters Union and in 1967 was cited by the union for her outstanding service to the rank and file teamster member and his family. A member of the Cuyahoga County Board of Retardation and a director of the Parent Volunteer Association for Retarded Children, Inc., Mrs. Presser has also been the largest single individual fund raiser for retarded children and has tirelessly dedicated her energies to programs for the retarded.

Immeasurable benefit has been gained

by the Cleveland community because of the Pressers. I will not attempt to give individual recognition to Bill Presser's many and unique contributions to humanity but his singular success in the Bonds for Israel drive deserves special mention. I am proud to call to the attention of the Congress the tremendous accomplishment by one man.

LOW-INCOME ALLOWANCE

(Mr. SCHNEEBELI asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SCHNEEBELI. Mr. Speaker, I want to discuss in some detail the low-income allowance, which was one of the foremost proposals included in the President's initial tax reform program sent to us on April 21, and which our Ways and Means Committee has incorporated into the anti-inflation bill which is before us now.

Treasury studies of our income tax system have revealed a paradox in our social policy: while we are publicly pledged to relieve the plight of all Americans who live in poverty, we are adding to their plight by imposing a tax burden on them. That is why a top priority has been given to eliminating the tax liability of persons whose incomes are at or below poverty levels.

The low-income allowance would remove from the tax rolls all taxpayers with incomes up to amounts officially determined as poverty levels for 1969. It would provide substantial tax relief for single individuals and families with income above poverty levels but still short of adequate levels.

In combination with personal exemptions and the minimum standard deduction, the low-income allowance would make the income of a single individual tax free up to $1,700. A single individual with income over $1,700 but less than $3,250 would pay reduced taxes. In the case of a family of four, the income would be tax free if it did not exceed $3,500, and taxes would be reduced if it did not exceed $4,500. The effect would range up to a maximum of $5,900 of tax-free income for a family of eight.

For families larger than eight persons, the minimum standard deduction together with personal exemptions now prevent tax liability at or below official designated poverty levels.

The low-income allowance would be built into the tax tables, so it would not require complicated computations by the low-income taxpayer. He would simply read the tax table, as he does now.

In aggregate, the proposal would affect nearly 12 million tax returns, providing them with an average individual tax saving of about $50. It would relieve as many as 5.2 million tax returns, including some 2 million families whose total income is below the poverty level, of virtually all Federal income tax liability.

I would like to call your attention to tables prepared by the Treasury. The first table shows State-by-State benefits of the low-income allowance and the second gives a percentage ratio of benefiting returns. The tables follow:

TABLE 1.—RETURNS BENEFITING FROM THE ADDITIONAL LOW-INCOME ALLOWANCE, BY STATES

[Thousands of returns]

State	Total with tax decrease	Returns made nontaxable [1]
Alabama	164.4	73.0
Alaska	6.9	3.1
Arizona	84.7	37.6
Arkansas	101.3	45.0
California	1,115.7	495.4
Colorado	115.7	51.4
Connecticut	166.5	73.9
Delaware	34.8	15.4
District of Columbia	48.3	21.5
Florida	353.4	156.9

POSTAL REFORM AND MODERNIZATION LEGISLATION

(Mr. SCOTT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SCOTT. Mr. Speaker, on June 9, addressing the House under special orders, I discussed at some length with my colleagues the important issue of postal reform and the various proposals which have been introduced. At that time, it was indicated that most of us favor postal reform and that I agreed with portions of the several bills now pending before the Committee on Post Office and Civil Service.

I rise today to reinforce that statement with the introduction of legislation which, in my estimation, contains the features of prime importance in our efforts to accomplish sound postal reform. I am fearful of the consequences of some of the proposals which have been offered, and especially do not want to gamble with the future of the civil service merit system and the futures of some 700,000 postal employees who are under the protection of that merit system.

Mr. Speaker, I wish therefore to offer a brief explanation of the provisions of the bill I introduce today.

This legislation will, first of all, remove the Postmaster General from the President's Cabinet and provide for a 12-year term of office. This serves several purposes. It provides for continuity in administration of the Post Office Department, which has been recommended by every major witness who has appeared before our committee. It also removes the Postmaster General from the realm of chief patronage dispenser of the President and assigns him to no other duties

except those of administering postal affairs. The measure also provided are 6-year terms for the positions of Deputy Postmaster General, six assistant postmasters general, and the general counsel. The legislation staggers the terms of the initial appointees to assistant postmasters general so that after the system is in operation, only one term will expire in any single year.

The legislation places with the Postmaster General the authority to appoint postmasters in all classes of post offices, and such appointments would not be subject to Senate confirmation. In making these appointments, the Postmaster General would be obliged to give first preference to qualified postal field service employees who reside within the county in which the post office is located. Otherwise, the appointment would be made through competitive examination. The same procedure would hold true for appointments to rural carrier positions. In addition, this measure provides that each qualified substitute rural carrier of record who has completed 3 years of satisfactory service will be eligible to receive a career appointment as a rural carrier without examination.

The legislation also deals with the problem of the use of political influence in the postal service. It sets forth strict prohibitions against the solicitation or use of such influence in connection with appointments, promotions, assignments, transfers, and designations in the postal field service. Any person who violates these prohibitions would be subject to disqualification.

The final feature of my legislation deals with what is probably the most outstanding deficiency in the present system, that is the failure to provide modern and efficient facilities for the ever-growing postal operation.

The language in the bill creates a Postal Modernization Authority, a body corporate, to act as a development and holding company, controlled by the Postmaster General, for all buildings, facilities, equipment, and machinery needed in postal operations. The Authority is authorized to acquire, hold, develop, and perfect buildings and equipment suited to postal needs, and to issue and retire bonds, up to $10 billion worth, for these purposes. The Authority would lease needed buildings and equipment to the Postmaster General at rentals which will return the Authority's total cost.

This Modernization Authority would remove the obstructive handicap that has for many years deprived the Post Office Department of adequate facilities and has prevented it from developing long-range plans.

My bill has a feature which is not included in other similar legislative proposals. The language I propose would pledge the full faith and credit of the United States as well as the Authority behind the bonds. I believe this would enhance the marketability of the bonds and it would be a proper role for the Government to assume with respect to a postal modernization authority that serves the entire Nation.

Mr. Speaker, these are the features which I believe provide the necessary steps to take toward the reform and modernization of our postal system. Perhaps additional steps will be necessary in the future, but I think we should be cautious in our efforts to restructure the Postal Establishment and not run the risk of killing the patient with the cure.

COSMOPOLIS: A NEW CITIES PROPOSAL

(Mr. WALDIE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WALDIE. Mr. Speaker, last year I placed in the CONGRESSIONAL RECORD a proposal by a constituent of mine, Mr. Daniel W. Cook of Urban Development Analysts, entitled "New Metropolises." This proposal was aimed at a solution to the increasingly tragic problem confronting our Nation as its cities and population therein continue to deteriorate. Mr. Cook has now expressed some additional views on this serious problem and I am taking the liberty of sharing those views with my colleagues by including his article, entitled "Cosmopolis: A New Cities Proposal," as a part of my remarks:

COSMOPOLIS: A NEW CITIES PROPOSAL

(By Daniel W. Cook)

The people of the United States once lived on farms and in small towns. About seventy percent of their descendants now are gathered into 212 large metropolitan areas. This article proposes new cities as the third stage for the arrangement of population within the continental United States. Fiscal devices for smooth transition to an automated economy could be incorporated into new cities. For example, residents of a new city could own stock in automated enterprises located there.

Since the founding of the Republic, Americans have dreamed of building a great civilization, a society where people devote their energies and creative instincts to pursuing the good life for all. Today we are a metropolitan society. But our existing metropolitan areas display symptoms of disease and decadence. Our enormous megalopolises continue to expand but they are characterized by miles of slums, scattered suburban wastelands, snarled and snarling traffic, poisonous air, poverty, and depressing ugliness. As people from rural areas and smaller towns continue to pour into metropolitan areas, a host of new social and economic ills sprout. Our present attempts to cope with metropolitan problems chase people from their homes and businesses as the bulldozers of "urban renewal" replace slums with prison-like middle-income housing barracks. Parks and scenic areas are chewed up and spat out as super freeways push through the cityscape. Outer "new town" slurbs sprawl across nature's land as exurbanites seek open space. Bureaucracy grows as people become cogs in the wheels of forward motion. Workers are laid off as machines and computers assume the tasks of production and control. In short, we are a sick metropolitan society.

Projections of our future urban population growth indicate that by the year 2000 about 90 percent of our 350 to 400 million people will be living within our *existing* metropolitan regions. Dr. Harrison Brown of the California Institute of Technology predicts a U.S. population of a least *one billion* people by by the year 2075. He, along with many other experts in the field of urbanization, foresees two continuous urban conurbations, one running down the East Coast, the other along the West Coast. Other super strip "cities" are expected to emerge along the Gulf Coast, the Great Lakes, and perhaps along the front range of the Rockies. This then, if we accept trends, projections, and expert prognoses, is the shape of the future—the horror of "monsteropolis."

We don't have to accept this fate as inevitable. Nor should we consciously plan for it. We should not delude ourselves by thinking that the answers to our present and future urban messes will be provided by the magic of metropolitan planning, massive urban renewal, or even satellite new towns. What is needed is to chart a new course for building a new kind of urban civilization.

An alternative to the predicted spread of megalopolis could be the enactment of a *National Urban Policy* favoring the development of planned new metropolises. The objective of such a policy would be to encourage a substantial portion of our population growth away from present metropolitan regions to wholly new central cities. During the next half-century *at least 100 new metrocities* could be built in diverse locations throughout the United States. They could be developed upon surplus Federal Public Domain Lands and non-productive private lands in the west, the plains states, the east, and the south.

The new cities could be planned for populations ranging from 500,000 to 3,000,000. They could be constructed where land, water, scenery, climate, and accessibility suggest. At least two new metropolitan cities could be begun each year during the next 50 years. Fortunately, the more than 178 million acres of vacant Federal Public Domain lands in the western states offer many potential sites where new cities could be developed at no cost for land acquisition. With a projected population increase of 150 to 200 million people during the next half century, a minimum of 100 million people could be housed in these new cities if they averaged a million citizens each. This would still allow for substantial additions to our present metropolitan regions and viable smaller towns.

The concept of the *Cosmopolis* is that of a cosmopolitan city, conceived in the Space Age, with finite limits. Its economy would be organized upon the principle of private property ownership for all, equal opportunity for all to participate in the ownership of capitalistic production, and hence economic and social justice. It could be a city of universal affluence.

Within the continental western states we have a vast reservoir of land—land for living as well as for open space, recreation, wildlife, animal production, minerals, watershed, and timber. The United States Bureau of Land Management, part of the Department of the Interior, administers about 178 million acres of land in these states. Parcels of about 100,000 acres could be set aside for new urban growth and development centers. If 60 to 80 sites can be found in just the western states, then only six to eight million acres of the present inventory of 178 million acres would need to be converted to urban use. This would leave 170 million acres for additional new cities, open space, conservation, and other appropriate activities.

It is more economical to construct new cities than to attempt to rebuild existing cities in a "total urban renewal" program for the next 20 years. A reasonable estimate suggests that we can construct over one hundred new cities designed for an average population of 1,000,000 persons for a cost of about $1,000 billion—much less than half the cost for a total urban renewal effort. This does not mean, however, that we should not continue to rebuild and revitalize our present cities.

A primary cost item for both renewal and fringe growth is land, and land for urban redevelopment projects is the most expensive. Cleared land in urban renewal project areas, after acquisition, demolition, and site preparation, usually sells for a minimum of $100,-

000 per acre and can go as high as $1,000,000 per acre. Raw suburban land, readily available for new development near the fringes of our major metropolitan centers, typically goes for $4,000 to $20,000 per acre. This price pattern is one of the major reasons for the suburban sprawl of the past 25 years. But if Public Domain lands were utilized, the land would be free. No bond issues or special taxes would be needed for acquiring school sites, park areas, or rights of way for freeways, streets, and utilities. Also, each new city could be preplanned for community facilities and transportation routes. Finally, special urban development corporations could have the primary responsibility for actually building each project city. The economic advantages of modern technology and management techniques, along with advanced planning, could provide further economies in the urbanization process.

The new metropolis program, if imaginatively executed, could:

(1) increase the efficiency of our economy by adapting production to market areas rather than tieing it to natural resource deposits or cheap transportation areas;

(2) create millions of new property owners, jobs, and entrepreneurial opportunities;

(3) decentralize the concentrated pattern of decision making, now prevalent in our society. The concentration of economic power and political authority is a danger to political and economic freedom. Big government and big business directly and indirectly account for about 80% of the jobs, and nearly 70% of all productivity activity of the United States is lodged in the top 500 corporations. The Cosmopolis program, with its attendant economic reforms, could distribute economic and political power more widely;

(4) compete with existing cities and metropolitan areas, thereby accelerating action for massive improvement in all our major cities, as well as slowing their growth by attracting part of their population to new urban centers;

(5) distribute minority groups more evenly throughout the United States, and provide new "ground-floor" opportunities for the disadvantaged to participate in the economy.

Many economic and social innovations could be integrated into the development of each cosmopolis. For instance:

1. Initiation of an *urban homestead land grant system*. This program, after state acquisition of the city site, would grant free land to individuals and businesses for use as homes, apartments, businesses, office, industries, etc. Since the city would be totally preplanned, these homestead land grant parcels would have to be developed according to the Master Plan before title to ownership would be granted. This program would help the poor acquire land, diffuse the ownership of private real property, and aid in the creation of thousands of new capitalists—just as the original 1862 Homestead Act created many new capitalists in the agricultural sector of the economy.

2. Enabling legislation for chartering special Urban Development Corporations. New city building companies would operate like public utility companies. Their profits would be regulated, and their ownership broadly distributed. These corporations should be privately financed and owned by a broadly diffused stockholder group composed mainly of future citizens of each new city. The corporations could be charged with developing and precisely planning the new cities, constructing buildings for sale or lease, and operating as prime contractors. Their organization could be similar to that of the Communications Satellite Corporation, and similarly financed.

3. Participation of national industrial, financial, and construction corporations. American industry, when called upon, has responded to a variety of challenges. It will respond to a new domestic program of urban development if it is given the proper incentives, governmental legislation, and public support.

4. Creation of a life expectancy renewal fund, or a sinking fund to depreciate the replacement cost of buildings for automatic private "urban renewal." Upon the issuance of a building permit, the estimated life expectancy of the building would be determined. If a structure had a 50 year life expectancy, 1/50th of the estimated future replacement cost (less 6% compound interest) would be deposited annually in a municipal trust fund for continuous investment in public improvements and mortgages. These replacement funds would be part of the value of the structure, so that ownership would transfer from property to property in fair exchange value. This fund could also be used for periodic maintenance and remodeling. The advantages of this are that all private structures would have a time limit on their existence; the money for replacement would be automatically accumulated for each owner, at a fair rate of earnings in a trust fund; and continuous private renewal would take place, thus eliminating the need for future Federal urban renewal or slum clearance projects.

5. Replacing our present system of annual property taxes with a local system of graduated capital gains taxes, primarily levied upon real property capital gains. A graduated scale geared to the magnitude of capital gains realized either through sale or trade could provide local revenues for financing functions of government at the local level. A graduated capital gains tax ranging from 10% to 90% would discourage speculation, would tax unearned increments of value rather than productive outputs of wealth, and would tend to maintain the price of real estate at a lower level. By controlling urban land inflation, the incentives for suburban sprawl would be checked and the necessity for overcrowding the land because of its high acquisition cost would be ameliorated. The graduated capital gains tax would also have the effect of discouraging excessive capital accumulations based on unearned increments of land value and of encouraging diffused ownership of real property.

6. A functional school system which would train a person how to be a businessman, how to build a house, how to acquire a saleable vocation, how to develop civilized skills for city living. The poor settler, given the "Homestead Land," the house plan, and the "sweat-equity" procedure for home-ownership, must also be given the values and the know how for living in a city, and the skills for either obtaining a good job or for going into business for himself. If the other programs, i.e., "grubstake," or "new capitalist" finance plans are to work effectively, the people must be educated for utilizing such programs.

7. The establishment of social adjustment centers in each community. These centers, properly staffed, would re-educate and rehabilitate deprived persons moving to the city from other areas. The objective would be to take the "slum" out of people through understanding and education before a new slum could develop.

8. Creation of a Capitalist Economic Development Exchange, to operate under principles similar to the "grubstake" system of the old West. This institution would finance or "grubstake" individuals in the development of new enterprises. It would provide capital for businessmen, inventors, scientists, artists and writers, in return for a share of future profits. This institution, however, would be required to keep investing funds in new enterprises. Earnings would be continuously reinvested in order to provide a continuous flow of funds to finance "new capitalists." In effect, a revolving fund of financial resources would be created for assisting the city's new citizens in becoming businessmen, owners of income producing private property, or successful creators.

9. Creation of a Capital Diffusion Insurance Corporation at the Federal level which would insure loans to workers and other qualified "non-capitalists" for the purchase of income producing security portfolios consisting of diversified stocks, bonds, mortgages, and real property. Its function would be to assist those who may not be able to participate actively in the economy (either as an employed worker or entrepreneur due to automation and economic change) to participate in wealth production as owners of income producing capital. In other words, this government corporation, similar in concept to the F.H.A., would insure loans made to the new city residents by the existing commercial banking system for the purchase of shares of stock. Citizens moving into the new cities would be eligible to purchase stock in those corporations locating facilities in these same new cities on a "financed-capitalist" basis. They would become co-owners of the industries creating the economic base of the new cities.

10. Encouragement, through proper legislative policy and tax inducements, of profit sharing and equity sharing plans in mature corporations which might establish new plants or other facilities in these new cities. This would primarily benefit employees who retire early because of automation. The corporation would benefit indirectly from the recirculation of these funds within the local community.

THE VOTING RIGHTS ACT OF 1965 SHOULD BE PROMPTLY EXTENDED

(Mr. RYAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RYAN. Mr. Speaker, yesterday Attorney General Mitchell, after five previous postponements, finally appeared and testified before the House Judiciary Committee on legislation which the chairman of that committee (Mr. CELLER), as well as myself, have proposed to extend the provisions of the Voting Rights Act of 1965 for 5 additional years.

To the dismay of all of us who pointed out in our own testimony before the committee the gap between white and black political participation in the South which still exists, Attorney General Mitchell took a position which would have the effect of seriously diluting the impact of the Voting Rights Act on the Southern States now covered by the act. He also proposed that provisions of section 5 of the act, which require that States covered must obtain approval of the U.S. District Court for the District of Columbia for proposed changes in their election laws or procedures, be replaced with a system which would place the burden on the Department of Justice to identify election laws, rules, or procedures which might have a discriminatory effect. In order to prevent the application of such laws, the Justice Department would have to obtain an injunction from the Federal district court in which the rules were promulgated. This means that in the South these petitions would be heard by southern courts.

It would also mean a return to the tedious "case-by-case" method, lack of progress of which was one of the principal reasons Congress adopted the Voting Rights Act of 1965.

By postponing his appearance before

Subcommittee No. 5, five times the Attorney General has already delayed the approval of the extension on the Voting Rights Act for many weeks. Now he would inject new elements into the subcommittee's considerations, which would delay action on the Voting Rights Act for an even longer period.

I am shocked by the Attorney General's apparent ignorance of the need to extend the Voting Rights Act. Had he carefully read the testimony of governmental agencies such as the Civil Rights Commission, I cannot imagine he could say, as he did yesterday, that there is no justification for "regional" voting rights legislation.

As the testimony from the Civil Rights Commission, the National Association for the Advancement of Colored People, our colleague from Michigan (Mr. CONYERS), and myself before the subcommittee clearly shows, there is ample reason for extending the Voting Rights Act. Although 62 percent of voting-age Negroes are now registered in the 13 States of the Old South, 78 percent of the white voting-age population is registered. In the six States covered by the act, only 57 percent of the nonwhite voting-age population is registered, as opposed to 79 percent of the white voting-age population.

Instances of political harassment and intimidation of blacks seeking to register or vote continue to be reported. The presence of Federal examiners and observers is essential to protect the right to register and vote.

Mr. Speaker, I urge the Judiciary Committee to approve the extension of the Voting Rights Act and to send this legislation to the floor of the House for early passage.

The delaying tactics of the Attorney General and his desire to scrap vital parts of the machinery of that act should be promptly repudiated.

HON. GEORGE A. GOODLING, DISTINGUISHED ALUMNUS, PENN STATE UNIVERSITY

(Mr. DEVINE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DEVINE. Mr. Speaker, one of our most highly respected colleagues, Congressman GEORGE A. GOODLING, has been recognized and honored by the Pennsylvania State University. GEORGE GOODLING was granted the Distinguished Alumnus Award by the board of trustees and received the bronze medallion carrying the following inscription:

Presented to GEORGE A. GOODLING whose personal life, professional achievements, and community service exemplify the objectives of the Pennsylvania State University.

Our colleague, Mr. Speaker, also received the following citation:

To GEORGE A. GOODLING, for a career of legislative service to State and Nation; for nearly half a century of successful agricultural pursuits; for an exceptional record as a conservationist; and for community leadership in education and other public services.

I am proud to insert into the RECORD the full text of the Distinguished Alumnus Award as set forth in the brochure of June 21, 1969:

In his native State of Pennsylvania and in the Congress of the United States, Rep. George A. Goodling has enjoyed a distinguished legislative career. Beginning in 1942, he was elected to serve seven terms in the Pennsylvania Legislature, where in addition to his chairmanship of House committees, he was chairman of Joint State Government subcommittees. Now a member of the Agriculture and Merchant Marine and Fisheries Committees of the 91st Congress, Representative Goodling also held seats in the 87th, 88th, and 90th Congresses. His roots are deep in his York County birthplace, which he represents along with Adams and Cumberland Counties in the Nineteenth District. This south central Pennsylvania district has a population of some 425,000.

Representative Goodling attended York County Schools, the York Collegiate Institute, and Bellefonte Academy before enrolling at Penn State. His fellow students recall his considerable musical ability: he not only performed with the band but sang in the choir and the glee club. After obtaining a bachelor of science degree in horticulture in 1921, the future congressman taught vocational agriculture for two years; he then became the owner and operator of a fruit farm which he still maintains. His interest in education led him to become a school director, a post he held for twenty-eight years, serving as president of the board, treasurer, and a member of the building committee. In addition, he was one of the organizers of the Loganville Fire Co., and has been its secretary for thirty-two years.

An ardent conservationist, Representative Goodling succeeded against precedent—since he was a freshman congressman and a member of the minority Republican party—when a bill he introduced to protect the golden eagle was enacted into law. The population of the golden eagle, which is valuable to agriculture in the control of rodents, has declined at an alarming rate. The new law, Public Law 87–884, also provides a shield for the bald eagle, the United States' national symbol, which was often killed by persons mistaking it for the golden eagle.

During the last two sessions of Congress, Representative Goodling has introduced resolutions ranging from creating a select committee on ethics and standards for House members to permitting nondenominational and voluntary prayer participation in the public schools and other public institutions. He has also sponsored resolutions to broaden present federal control over oil pollution in coastal waters, a Human Investment Act to extend a tax incentive to employers providing training to upgrade workers' skills, and a resolution to reassert U.S. rights and privileges in the Panama Canal Zone.

A former member of the Civil War Centennial Commission and the Migratory Bird Conservation Commission, Representative Goodling served as a past president and is currently executive secretary of the Pennsylvania State Horticulture Association. His other memberships include the Agriculture Extension Association, Grange, Pennsylvania Farmer's Association, and Izaak Walton League.

GOVERNMENT PRINTING OFFICE ERROR

(Mr. ALBERT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ALBERT. Mr. Speaker, on yesterday the gentleman from Iowa (Mr. GROSS) called the attention of the House to the fact that the CONGRESSIONAL RECORD of Wednesday, June 25, 1969, on rollcall No. 91, contained a printing error. The name of our late colleague from Massachusetts, the Honorable William H. Bates, was listed as responding and voting "nay." The RECORD was corrected on the request of the gentleman from Iowa.

This error, of course, is extremely unfortunate in view of our colleague's death and the discussions that have occurred concerning voting in the House. There have been recommendations for changes in the voting procedures, as we all know.

In the instance of rollcall No. 91, the name of our late colleague was not called and was not listed by the tally clerk on the tally sheet sent to the Government Printing Office. The error occurred in the processing of this copy for the RECORD.

The Clerk of the House, the Honorable W. Pat Jennings, asked the Public Printer, Mr. James L. Harrison, for an explanation of the error. The Government Printing Office has advised that it is "completely at fault."

I insert at this point in the RECORD a copy of the Clerk's letter to the Public Printer and the reply received today:

JUNE 26, 1969.

Mr. JAMES L. HARRISON,
The Public Printer,
Government Printing Office,
Washington, D.C.

DEAR MR. HARRISON: I wish to call your attention to a very serious error in the CONGRESSIONAL RECORD of Wednesday, June 25th, on page H5210, Roll Call No. 91, on the passage of H. Res. 357. The late Honorable William H. Bates is listed as voting "Nay". However, his name does not appear on the official tally sheets of the House because of his death, and it was not on the sheet submitted to the Government Printing Office from which the RECORD was prepared. This sheet is attached.

Will you immediately furnish this office an explanation of how the late Congressman Bates' name came to appear as voting "Nay" on this Roll Call. I shall appreciate your responding to this inquiry by mid-morning of Friday, so this information will be available when the House goes in session at 11 A.M.

With kindest regards, I am

Sincerely,

W. PAT JENNINGS,
Clerk, U.S. House of Representatives.

U.S. GOVERNMENT PRINTING OFFICE,
Washington, D.C., June 27, 1969.

Mr. W. PAT JENNINGS,
Clerk, House of Representatives,
Washington, D.C.

DEAR MR. JENNINGS: In reply to your letter of June 26, requesting an explanation of how the late Congressman Bates' name appeared as voting NAY on Roll Call No. 91, page H–5210 in the CONGRESSIONAL RECORD of Wednesday, June 25, the Government Printing Office is completely at fault.

The alphabetical list of Congressmen for some years now has been produced in advance by pre-punched tape. This tape is used to control an automatic line-casting device which manufactures complete sets of the congressional roster. Because of the need for both speed and accuracy, this procedure was developed, and it has served to expedite RECORD production.

When preparing a roll call for insertion in the RECORD, a compositor, using copy submitted by the tally clerk, is supposed to separate the names into YEAS and NAYS, and remove names of those not voting. It was at this point the mistake was made. The name of Congressman Bates was not removed. The mistake was compounded when during proofreading the error was overlooked. We have identified both the compositor and proofreader responsible for this carelessness, and each has been officially

reprimanded for unsatisfactory workmanship.

I know of no single publication among the thousands we produce each day of which we are more proud, or which receives more careful attention, than the CONGRESSIONAL RECORD. I deeply regret this error which unfortunately is a source of embarrassment, not only to the Congress, but also to the Government Printing Office, and tarnishes our long-standing reputation for accuracy and promptness.

The galleys of type containing roll call material have been corrected, and Congressman Bates' name has been removed from all standing type.

As a future precaution, I might suggest that an official notice be sent to the Government Printing Office each time a name is no longer properly a part of the roll call list. If this were done, it would provide double assurance that such a deplorable error could not be repeated.

If there is anything further you may require concerning this incident, please let me know.

Sincerely,

JAMES L. HARRISON,
Public Printer.

I take the opportunity, also, Mr. Speaker, to commend our House employees who tally our votes during the daily sessions of the House. They work under extreme pressure and often find it difficult to hear the responses of Members when the names are called. In the instance of rollcall No. 91, Tally Clerk John Jenkins properly recorded the Members, the reported tally was correct, and the copy sent to the Government Printing Office was correct. It was simply a printing error and we should accept it in that fashion.

Also, Mr. Speaker, we should endeavor to understand the problems of the Government Printing Office. I am certainly sympathetic with the Public Printer's problems of producing a correctly and promptly printed RECORD for the use of the Congress and the public. It is well done, and we should all be grateful for the effort involved.

In conclusion, Mr. Speaker, I again commend our tally clerks, and trust this explanation ends the matter.

THE QUESTION OF CONTINUING THE SURCHARGE

(Mr. WIDNALL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WIDNALL. Mr. Speaker, there are many persons—including some in this Congress—who say the economy is not slowing up, that the income tax surcharge enacted a year ago has not taken hold.

On the other side, we hear from some who tell us inflation cannot be controlled without extending the surcharge and passing the other tax measures, that the measures have been put into place and they must be given the opportunity to work.

This is an important economic question, one on which honest men will differ.

One important economic analysis on this subject has just been released by the Chase Manhattan Bank, one of the Nation's largest financial institutions. In its June "Business in Brief" newsletter the bank notes "signs that these policies have begun to take effect have started to appear."

In the interest of having this timely economic analysis before us, I am inserting into the RECORD the bank's discussion:

BUSINESS IN BRIEF

The United States economy is, at last, set on a course that could eventually suppress inflation. Monetary and fiscal policies are both designed to that end. And signs that these policies have begun to take effect have started to appear.

The federal government is enjoying a modest surplus. A year ago, the deficit was running at a rate of over $10 billion on the income and product account basis. With higher taxes and tighter control of spending, there should be a surplus in the next fiscal year.

Monetary policy has been tight since late last year. Rates of growth in the various monetary measures have slowed sharply.

Slower growth in basic demand is the first requirement for containing inflation. The current inflation is by no means entirely due to excessive demand. But strong demand is necessary to allow prices to rise; only if demand weakens will it become more difficult to pass higher costs through the economy in the form of higher prices. Signs of progress:

Growth in total activity has slowed sharply. In real terms, gross national product was growing at an annual rate of 2.9% in the first quarter of 1969, down from 3.4% in the last quarter of 1968, and sharply below the 6.4% rate of the first half of last year.

The leading indicators—strong for most of the past three years—have begun to show moderate weakness.

A number of specific measures of activity—industrial production, income, housing starts—are either growing more slowly or actually declining.

Prices are still rising rapidly, in spite of these favorable signs. Consumer prices recently have been increasing at annual rates of more than 7%. This is to be expected; the momentum built up over four years of inflationary pressures cannot be broken quickly or easily.

Progress in reducing the rate of price change will be slow in coming, even if present policies are maintained. It now looks as if the economy will go on expanding at recent reduced rates for the next few months, with the growth rate tapering off later in the year. But the pressures for higher wages and higher prices are still so great that the actual rate of price increase is likely to slow only modestly by year end. Major progress on prices is not likely to appear before 1970.

Nevertheless, given enough time, the present monetary and fiscal posture appears sufficiently restrictive to break inflation. The problem for the authorities from now on will be to stick to their guns—to resist the inevitable temptations to change policy prematurely. They may be tempted to ease too soon, out of fear of possible recession, or to tighten too much out of dissatisfaction with progress on the price front.

Premature ease would validate the current inflation and add impetus to rising prices. It would reconfirm the inflationary psychology that lies behind excessive wage demands and the boom in business investment.

Further severe tightening, especially on the monetary side, could bring on the recession that nobody wants. Interest rates are already at extraordinary levels. Tighter money would threaten the availability of credit for the ordinary and necessary operation of the economy.

Patience and courage are now key factors in the fight against inflation. Patience is required because it will take at least a year, and probably longer, to restore an acceptable price trend. Political courage will be needed to resist pressures to ease up prematurely.

TAX LEGISLATION STUDY

(Mr. VANIK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VANIK. Mr. Speaker the issue which divides the House of Representatives on the surtax is whether meaningful revenue-raising tax reforms are a likely prospect this year. There are 102, or 42 percent, of the 245 House Democrats who have authored or cosponsored revenue-raising tax reform measures as of June 25, 1969. There are 26, or 15 percent, of the 188 House Republicans who have authored or cosponsored revenue-raising tax reform bills.

What is even more shocking is the determination that only one Republican member of the House Ways and Means Committee has sponsored a revenue-raising tax reform measure, and that was a bill to prohibit Federal land banks and land bank associations for qualifying as being tax exempt. The record in the other body is equally distressing.

In view of this shocking record of disinterest in meaningful tax reform, how can we believe those vague promises of "surtax now—reform later." This record clearly speaks for itself.

The study follows:

STUDY ON REVENUE-RAISING LEGISLATION

HOUSE OF REPRESENTATIVES

All bills listed herein are those listed in the House of Representatives Ways and Means Committee Legislative Calendar for the 1st Session 91st Congress through June 25, 1969 or the Congressional Record through May 8, 1969. Congressmen not listed have no tax reform bills producing new revenues on record through these dates.

Revenue measures—House

42% or 102 of 245 House Democrats have authored or co-authored tax reform bills producing new revenues.

15% or 26 of 188 House Republicans have authored or co-authored tax reform bills producing new revenues.

House Ways and Means revenue measures

Of the 15 Democratic members, 13 sponsor relief measures. The Democratic Committee members sponsor 6 revenue bills and 35 relief bills or 41 tax reform bills all together. In the revenue area, 3 members sponsor 2 or more bills.

Of Republicans 4 of 10 (40%) sponsor no tax reform measures, relief or revenue. Six sponsor relief measures (60%). The Republican members sponsor 14 tax reform bills, all relief measures.

33% or 5 of 15 Democratic members of the House Ways and Means Committee have authored or co-authored tax reform bills producing new revenues.

10% or 1 of 10 Republican members have authored or co-authored tax reform bills producing new revenues.[1]

Democrats

15 Members total—33% or 5 of 15 sponsoring Revenue Reform.

Michigan, Griffiths, H.R. 9896.
Ohio, Vanik, H.R. 9479, 9896.
California, Corman, H.R. 12135, 12185.
Pennsylvania, Green, H.R. 9896.
Florida, Gibbons, H.R. 7585, 9896, 10339.

Republicans

10 Members total—10% or 1 of 10 sponsoring Revenue Reform:

California, Utt, H.R. 9242.[1]

[1] A minor bill to prohibit Federal Land Banks and Land Bank Associations from being a tax exempt organization.

Categories of bills considered to be revenue raising reform legislation

1. Reduce or eliminate oil depletion allowance.
2. Limit deductions attributable to farming which may be used to offset non-farm income.
3. Minimum income tax (corporations; individuals).
4. Limit on tax exempt status of charitable foundations.
5. Excess profits tax.
6. General Tax Reform (repeal: unlimited charitable reduction; stock option provisions; dividend exclusion; exemption on municipal industrial development bonds; reduction in percentage depletion rates; use of United States bonds to pay estate tax; farming deductions to pay non-farm income; 7% investment tax credit; capital gains untaxed at death; foreign oil depletion; and increase; gift tax rates to estate tax level).
7. Miscellaneous (eliminate special treatment for gains from the disposition of depreciable realty; Federal land banks not exempt from taxes.)

SENATE

All bills are those listed in the Senate Committee on Finance's Legislative Calendar for the First Session of the 91st Congress through June 6, 1969.

There are no other speeches listed in the Congressional Record dealing with tax reform other than those made by the sponsors of the bills listed here. Those Senators not listed are not on record on revenue-raising tax reform.

Total Democrats: 57; 37 Authors or Co-Authors of revenue-raising tax reform (65%).

Total Republicans: 43; 9 Authors or Co-Authors of revenue-raising tax reform (21%).

Tax reform issues producing new revenues and Senate Bills which deal with them: 15 Bills, 38% Democratic authors author 2 or more, 9% Republican authors author 2 or more; 24% Democratic Senate members author 2 or more, 2% Republican Senate members author 2 or more.

Senate Committee on Finance

Democrats—10 Members

(7 of 10) 70% of members of committee sponsor bills:
Louisiana, Long.
New Mexico, Anderson, S. 2277.
Tennessee, Gore, S. 2091, 2103.
Georgia, Talmadge.
Minnesota, McCarthy, S. 500.
Indiana, Hartke, S. 500.
Arkansas, Fulbright, S. 2277.
Connecticut, Ribicoff, S. 2103.
Oklahoma, Harris, S. 500, 1827, 1829.
Virginia, Byrd.

Republicans—7 Members

(2 of 7) 28% of members of committee sponsor bills:
Delaware, Williams, S. 31, 2075, 2110.
Utah, Bennett.
Nebraska, Curtis.
Illinois, Dirksen.
Iowa, Miller, S. 1560.
Idaho, Jordan.
Arizona, Fannin.

Categories of bills

1. Oil Depletion Allowance—S. 31, S. 1522, S. 2091, S. 2103.
2. Investment Credit Suspension—S. 2110, S. 2039, S. 1829.
3. Minimum Tax:
A. Capital gains—S. 1773, S. 2211.
B. Percentage depletion—S. 1773, S. 2211.
C. Accelerated depreciation on real property—S. 1773, 2211.
D. Individuals—S. 1522.
E. Corporations—S. 1827, S. 2211.
F. Trusts—S. 1827, S. 2211.
G. Estates—S. 1827, S. 2211.

H. Unrealized apreciation in gifts to charity—S. 1827, 2211.

I. Exercise of qualified stock options—S. 1827, S. 2211.

J. Interest on state and local bond—S. 1827.

K. Intangible drilling and development costs—S. 1827, 2211.

4. General Tax Reform:

A. Property from descendant—S. 2039.

B. Repeal of dividend exclusion—S. 2039.

C. Repeal of corporate multiple surtax exemption—S. 2039, S. 2211.

S. 2211.

Gift tax rates—S. 2039, S. 2211.

D. Industrial development bond—S. 2039,

F. Federal bonds to pay estate taxes—S. 2039.

G. Deductions on farm income over $15,000—S. 2039, S. 2211.

5. Tax exempt status of: A. Private foundations—S. 2075.

6. Excess profits tax on corporations—S. 2277.

7. Status of Farm investments and incomes by non-farmers—S. 500, S. 1560.

A TECHNOLOGICAL ALTERNATIVE TO PESTICIDES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. HOSMER) is recognized for 15 minutes.

Mr. HOSMER. Mr. Speaker, the widespread use of DDT and other chemical pesticides, which is attracting so much public attention these days, poses a complex dilemma.

On one hand, there is little doubt that these products are causing damage—perhaps even permanent damage—to the world's fish and wildlife resources, and there is concern that man may even be endangering his own health. As we wage war on the endless varieties of insects, bacteria and other small creatures which plague man, we have unwittingly created harmful side effects.

Perhaps even half of the pesticides sprayed on crops find their way to areas for which they were not intended, affecting plants and animals that were not their original targets at all.

Yet the very tangible benefits from the use of pesticides also must be recognized. These compounds have helped man raise and protect a plentiful supply of food products all over the world. With the population explosion threatening to outstrip the world's food supply, this daily becomes a more crucial objective. It is estimated that for every dollar invested in protection by pesticides, between $4 and $5 worth of agricultural production is saved.

In addition, the use of pesticides has saved countless lives through control of malaria, cholera, typhus, Rocky Mountain spotted fever, encephalitis, and other diseases. In fact, in terms of the total production, more DDT is used by health authorities around the globe for the control of disease than is used for all agricultural purposes combined.

Clearly, then, a worthwhile national objective should be the development of economical and efficient pesticides free of the dangerous side effects which can be employed in place of DDT. The U.S. Forest Service is working toward this end with a very unlikely ally—the staff of the molecular anatomy—MAN—program at the Atomic Energy Commission's Oak Ridge National Laboratory.

Together, they are separating and purifying insect viruses—or natural pesticides—which attack only a single insect or a very few species of insects without endangering fish, higher forms of wildlife, or man.

This program was initiated in 1967 when Dr. Mauro E. Martignoni of the Pacific Northwest Forest and Range Experiment Station at Corvallis, Oreg., asked Oak Ridge to purify a particular virus known to be fatal to the caterpillar of the tussock moth, a destructive pest which kills Douglas-fir trees in that region.

Dr. Martignoni and an Oregon State University graduate student, John Carnegie, had performed a series of experiments and learned that the target virus always killed the caterpillar of the tussock moth yet was harmless to other insects. They determined that such a viral pesticide could be used without affecting valuable insects such as bees, wasps, and ladybugs.

The Oak Ridge National Laboratory has extensive experience in separating particles, based primarily on its classified work with centrifugation technology for the separation of uranium isotopes. From that work, the MAN program at Oak Ridge has developed a series of liquid zonal centrifuge systems specially designed to separate the individual particles of the human cell.

These centrifuges, in turn, led the MAN program to develop the highly successful K–11–C rotor systems which are now being used to develop super-pure human vaccines by removing the extraneous cellular material which is the cause of most unpleasant side effects of vaccinations, such as arm soreness, chills and high fever. This zonal centrifuge played a major role in the purification of the Hong Kong flu vaccine during the 1968 epidemic.

From this technological base, Dr. Norman G. Anderson and Dr. Julian Breillatt of the MAN program at Oak Ridge developed a centrifuge separation system to isolate the needed virus material from crude caterpillar homogenate in one step. Through the use of a continuous flow centrifuge rotor, similar to the ones being used by the pharmaceutical industry for human vaccines, enough purified virus was separated to justify consideration of use on a commercial scale.

Because the zonal centrifuge is so effective in producing a highly purified virus material, it is estimated that only 1 teaspoonful of viral insecticide would be required to protect 50 to 100 acres through aerial spraying. One centrifuge in a single day could produce enough material to be sprayed over 1,000 acres, whereas previous methods could produce only enough for small-scale research.

There are about 1,200 different insects which plague agriculture, and there are some 400 viruses which are known to affect these pests. Many of these viruses are specific to a single insect; others may kill five or six different but closely related species. It is believed that these insect viruses could be produced at a cost comparable to some of the newer pesticides on a cost-per-acre basis.

The material needed for the tussock moth pesticide is concentrated in particles called inclusion bodies which are located in the cells of infected tussock moth caterpillars. But since the crude caterpillar homogenate contains many unwanted bacteria, this presents an obvious danger if the virus is sprayed in watershed areas. Zonal centrifugation reduces the bacteria content from one bacterium per inclusion body in the unpurified state to one bacterium per 4 million inclusion bodies in the centrifuge-isolated material, sufficiently safe for use in watershed regions.

Protected within the inclusion body "capsule," the viruses are resistant to bacterial digestion, drying, weather extremes and moderate acid conditions.

The separation principles involved in the tussock moth experiments are now being applied to studies with inclusion bodies of the gypsy moth, European pine sawfly and bollworm. Caterpillars of all these insects are killed by specific viruses.

I am certain that all of us who are concerned with harmful side effects of DDT and other pesticides on man and wildlife will be watching for the results of this research and follow-on efforts with other natural pesticides. This is another example of the tremendous technological achievements which the Atomic Energy Commission's multidisciplinary national laboratories can produce.

NATIONAL SAFE BOATING WEEK

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. CHAMBERLAIN) is recognized for 30 minutes.

Mr. CHAMBERLAIN. Mr. Speaker, one-fifth of the Nation's population participates in some form of boating each year. The number of persons enjoying our countries' waterways has been steadily increasing. It was in recognition of this vast boating public that the 85th Congress passed Public Law 85–445, calling for the annual observance of National Safe Boating Week. In accordance with this law, the President of the United States has issued the following proclamation:

A PROCLAMATION

In a time of unprecedented opportunity for leisure-time activities, more and more Americans are discovering the benefits of boating. The ever-increasing traffic on the waterways has made it imperative that all boatmen observe the basic rules of boating safety.

Commonsense and courtesy are the two foundations of boating safety. An overloaded boat, failure to heed weather warnings or the taking of other unnecessary risks can, and too often do, lead to boating tragedy. If each boatman takes simple precautions, understands the capabilities of his craft, and exercises ordinary good judgment, tragic losses can be avoided.

Recognizing the need for emphasis on boating safety, the Congress, by a Joint Resolution approved June 4, 1958 (72 Stat. 179) has requested that the President proclaim annually the week which includes July 4 as National Safe Boating Week.

Now, therefore, I, Richard Nixon, President of the United States of America, do hereby designate the week beginning June 29, 1969, as National Safe Boating Week.

I urge the public to take advantage of educational courses in boating safety, and all

those who use our waterways for boating to exercise courtesy and apply safe boating practices.

I also invite the Governors of the States and the Commonwealth of Puerto Rico and appropriate officials of all other areas under the United States flag to provide for the observance of this week.

In witness whereof, I have hereunto set my hand this third day of March, in the year of our Lord, nineteen hundred and sixty-nine and of the Independence of the United States of America the one hundred and ninety-third.

RICHARD NIXON.

SCOPE OF BOATING

The emphasis placed on boating by this proclamation is clearly necessary when we consider the scope of boating and all it encompasses. It is estimated that some 42 million persons participate in recreational boating using almost 8½ million watercraft. Nearly $4 billion were spent last year for boats, associated equipment, and services. Boating is indeed big business involving a large portion of the population.

The U.S. Coast Guard is the Federal agency charged with the responsibility for the safety of the boating public on our navigable waters. The States, Coast Guard Auxiliary, U.S. power squadrons, American National Red Cross, National Safety Council, Boy Scouts of America, and many other organizations assist the Coast Guard in this enormous task by providing a most essential ingredient—education.

While education of the boatman is probably the most effective safety tool, it is by no means the only one. The Coast Guard enforces the various safety requirements called for by law. Unfortunately, the law in many cases is too specific to allow flexibility in adapting to new technological developments. Perhaps more important is that the law in almost every case places compliance responsibility on the boat owner or operator. Many boating experts believe that the boatman should reasonably expect that a boat he buys will meet established minimum safety standards. Present boating laws do not permit this.

On May 1 the Coast Guard released its annual boating statistics report as required by the Federal Boating Act of 1958. This act provides for a standardized system for the numbering and identification of undocumented vessels, including pleasure boats of more than 10 horsepower, uniform accident reporting, and participation in these programs by the States. Since the effective date of this legislation, April 1, 1960, every jurisdiction but the States of Alaska, New Hampshire, Washington, and the District of Columbia have provided for numbering systems which have been approved by the U.S. Coast Guard and meet the standards set forth in this act.

There was a slight increase in boating fatalities in 1968—1,342 as compared to 1,312 in 1967. In its annual report, the Coast Guard revealed that 22.2 percent, or 298, of the boating accident deaths last year involved watercraft not required by Federal law to carry lifesaving devices such as rowboats, canoes, sailboats, rafts, and other small craft. During the same period the boats numbered in all States and territorial possessions of the United States reached an all-time high of over 4.7 million.

Capsizings, as in past years, still remain responsible for the largest number of recorded deaths. In 1968, capsizings resulted in 45 percent of the total number of lives lost in boating accidents. This figure is about the same as the 1967 percentage. Of the 1,342 fatalities, drowning accounted for 1,203 victims, and 828 of the drowned either did not have or did not use lifesaving devices.

Last year a total of 5,427 vessels were involved in 4,195 boating accidents involving at least $100 property damage, an injury, or death, this is 82 more than in 1967; 1,062 of these vessels were involved in fatal accidents, while 879 were in accidents resulting in injuries. The amount of property damage was over $6.6 million.

Since 1964 the estimated number of boats has grown 9.6 percent while the number of accidents has increased 7.2 percent. During this same 5-year period fatalities increased 12.6 percent. The increases shown by these figures, while not as alarming as other more dramatic boating statistics that have been used, are of definite concern to the Coast Guard.

What is significant to me is that the number of fatalities, accidents, and injuries has remained relatively small over the past few year even though the number of boats in operation has increased appreciably. This situation is probably due to the dedicated efforts of the Coast Guard, the States, and the many fine volunteer organizations working hard to keep our waters safe. I hope this trend continues as the number of new boatmen increases, but unless additional resources are made available it is unlikely.

COAST GUARD BOATING SAFETY ACTIVITIES

An indication of the increased importance the Coast Guard is placing on the problems of boating safety is the reorganization which took place within the service in 1968. An office of Boating Safety was created in Coast Guard Headquarters with a flag officer at its head. Increased organizational emphasis also took place at district and local command levels.

Several pilot programs have been initiated, all designed to better provide boatmen with valuable educational materials and information. Perhaps the most promising of these is the boating safety center concept. The centers provide a central location where the boatman can obtain environmental information, a safety check of his boat, information on local conditions, legal requirements, and advice from the experienced and knowledgeable.

To have really safe boating, the millions of individuals comprising the boating public must be reached. In an attempt to reach these boatmen, the Coast Guard is also continuing its present programs of education and persuasion. Through boating films, safety publications, Coast Guard auxiliary programs, and utilization of boating safety detachments in public education activities, the Coast Guard takes advantage of every opportunity to stress the practical aspects of boating safety. The Coast Guard also has close coordination with the boating industry, the National Safety Council, and other such vital organizations. The safety patrol concept in recreational boating will continue to be stressed on all waterfronts this year. In the boating safety detachments, the Coast Guard has on-the-move safety patrols which visit navigable lakes, rivers, and other waters where boating activities are concentrated. The safety patrol is a roving waterborne patrol of boating areas for the purpose of deterring, detecting, and reporting unsafe practices. At the present time, there are 41 boating safety detachments and 164 shore stations which form the backbone of the safety patrol. More boating safety detachments are planned. These roving units have an effective broad impact because of their mobility and flexibility. Their primary mission is to minimize unsafe practices such as speeding in congested areas, overloading, improper loading, operating while under the influence of liquor, operating in swimming areas, and operating in posted dangerous waters through education and enforcement. In keeping with this mission, the policy of boarding for cause, begun in 1964, was reemphasized last year. The effectiveness of these mobile units is not to be measured in the number of boardings. The measurement of their effectiveness will be whether or not our waterways will be made any safer; whether the boating public is better educated in safe boating procedures by the apprehension of the reckless or negligent operator; and finally whether the accident rate decreases. The Coast Guard will educate, persuade, and enforce the law. Boating accidents and fatalities must be reduced.

The Committee on Governmental Operations has recommended that the Coast Guard triple the number of boating safety detachments in the next fiscal year. I strongly support this recommendation and urge those responsible to make every effort to increase the number of these detachments so vital to the boating safety program.

BOATING SAFETY A JOINT EFFORT

The Coast Guard auxiliary is extremely active in the education of the boating public in safe boating practices. As a voluntary nonmilitary organization, the auxiliarists' purpose is to promote safety in recreational boating. On June 23, the auxiliary observed its 30th anniversary. I congratulate the auxiliary on its dedicated and unselfish efforts to keep America's pleasure boaters safe. Its 26,000 members are experienced boatmen, amateur radio operators, or licensed aircraft pilots. The three basic programs carried out by the auxiliary are the courtesy motorboat examination, public instruction, and operations; 164,905 persons were instructed in three safe boating courses last year; 180,604 courtesy motorboat examinations were performed; over 4,000 regattas were patrolled; and almost 9,000 cases of assistance were recorded.

The States are also very much involved in boating safety and very concerned about what the future will bring.

Educational efforts by the States are increasing as rapidly as limited funds permit. The Coast Guard works closely with the States on every aspect of boating safety. This can be easily seen in the number of State jurisdictions—36 with five pending—that have signed cooperative agreements with the Coast Guard. These agreements directly affect the coordination and effectiveness of safety patrols and enforcement activities.

The encouragement of uniformity and comity among the different States in regards to these boating laws is of vital importance to everyone involved with boating. The Coast Guard encourages this, and the Congress, in the Federal Boating Act of 1958, endorsed this principle. The mechanics of uniformity however, are often complicated by the inadequacies of existing Federal laws.

NATIONAL SAFE BOATING WEEK

National Safe Boating Week—focusing attention upon the need of pleasure boatmen to know and comply with safe boating practices and regulations—begins June 29 this year as stated in the proclamation. Its objective is to emphasize efforts urging the more than 42 million people using boats on our waters to help "keep boating safe"; to teach important fundamentals of safe boating to newcomers; and to remind experienced operators as well as the novice to practice commonsense and courtesy afloat. The basic theme for this year's observance of the week is "Safety first, the golden rule of boating."

National Safe Boating Week also pays tribute to the many persons and organizations who have contributed toward maintaining boating's fine safety record. More than 1,500 Coast Guard auxiliary flotillas, U.S. power squadrons, boating clubs, and other boating and safety minded organizations are expected to participate in the National Safe Boating Week observance in communities throughout the country.

This year the National Safe Boating Committee distributed 7,500 promotional kits to local organizations all over the country. Promotional material has also been distributed to practically every news media organization. The Committee includes representatives from the U.S. Coast Guard, the U.S. Coast Guard Auxiliary, the American Boat and Yacht Council, the American National Red Cross, the American Power Boat Association, the American Water Ski Association, the Boatowners Association of the United States, the Boatowners Council of America, the Boy Scouts of America, the Corps of Engineers, the National Association of Engine and Boat Manufacturers, the National Association of State Boating Law Administrators, the National Boating Federation, the National Fire Protection Association, the National Safe Boating Association, the National Safety Council, the Outboard Boating Club of America, the U.S. Power Squadrons, the Yacht Safety Bureau, and the Young Men's Christian Association. To all of these organizations safety in boating is as important as it is to the individual and his family. To all of those national and local committees actively participating in National Safe Boating Week, I extend my congratulations. I urge all others interested in boating safety to join in making this an even more effective National Safe Boating Week, I extend my congratulations. I urge all others interested in boating safety to join in making this an even more effective National Safe Boating Week than the successful ones in the past. Let us continue the good practices set forth by National Safe Boating Week throughout the year.

FUTURE EMPHASIS

One final point, Mr. Speaker, as I have mentioned previously, there are several inadequacies in existing boating law. I know that the esteemed gentleman from Maryland (Mr. GARMATZ), and his committee are working on a new bill to remedy these defects. I support those efforts and urge that every Member of Congress do likewise when this legislation is offered for our attention.

HUNGARIAN-RUMANIAN BOUNDARY DISPUTE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. HALPERN) is recognized for 10 minutes.

Mr. HALPERN. Mr. Speaker, some interesting aspects of the issue of ethnic minorities and the Hungarian-Rumanian boundary dispute recently came to my attention. It raised some serious questions that prompted me to look further into the background of this issue. Because of the international interest in this issue and particularly the interest of vast segments of our own American population, I bring to the attention of the American people some research I have completed.

Mr. Speaker, the fate of the Hungarian minority in Rumania has been a frequent subject of congressional debate. But too often, concern for the plight of this minority has prevented an objective analysis of the question. The majority of studies confuse sympathy for a displaced minority with impartial study of the circumstance of the border revision. The perceptive speech of my distinguished colleague from Wisconsin (Mr. O'KONSKI), delivered April 30, 1965, is an exception.

After belonging to Hungary for a thousand years, Transylvania and adjoining areas were annexed to Rumania in 1919. The issue deserves reexamination. The Hungarian minority has been a burning issue in the Rumanian press for 50 years. For example, the November 28, 1968, issue of Tribuna of Cluj—Kolozsvar—carried an article by Prof. Keith Hitchins of the University of Illinois. The study, titled "American Policy and Transylvania's Union With Rumania in 1918," is a biased account of the role of the United States in the annexation of Transylvania by Rumania. Dr. Hitchins mentions the American loan of armaments and food to Rumania during World War I. But his interpretation of U.S. President Wilson's position on Transylvania's annexation is slanted by his judgment of behind-the-scenes American diplomacy preliminary to the Paris Peace Conference of 1919.

The American position at Paris must be clarified. The Rumanian press currently charges that at the Paris Peace Conference, the United States sponsored the subjugation of ethnic minorities by newly created states. There is no basis for this argument. The correspondence of delegates and the records of the Supreme Council of the Conference and the Council of Foreign Ministers disprove this interpretation. There is evidence in these documents that the United States supported national self-determination for ethnic minorities.

First, let us examine the position of Professor Coolidge, a member of the Special Commission appointed by Colonel House under the direction of President Wilson. This group of scholars was assigned to prepare material for the coming Peace Conference. It forged Wilson's famous 14 points. On November 16, 1918, Coolidge was appointed Special Assistant to the Department of State and dispatched on a fact-finding mission to Eastern Europe. That Coolidge was amply qualified for his role has been attested by his colleague at Harvard, Prof. Robert Howard Lord—"Archibald Cary Collidge: His Life and His Letters," page 192:

> Collidge's preparation for his work during the Peace Conference was, of course, the preceding thirty years of his life. No other American had specialized so much upon history and politics, the territorial and nationality questions of those regions of Central and Eastern Europe, that were to furnish the Conference with most of its hardest problems. By study and travel, judgment and insight, by his keen sense of justice and his sure instinct as to what was practically possible, he was admirably equipped to be of service to our government during the peace making.

Professor Coolidge surveyed the situation in Hungary and reported his findings to President Wilson. Coolidge opposed the splintering of Transylvania from Hungary. He recommended to Wilson the preservation of Hungary's historical economic and ethnic integrity. The text of the communication follows:

BUDAPEST,
January 19, 1919.

Re geographic and economic unity of Hungary.

The AMERICAN COMMISSION TO NEGOTIATE PEACE,
4, Place de la Concorde,
Paris.

SIRS: I have the honor to report that in support of their statements that the kingdom of Hungary forms a natural geographic and economic unity to a greater extent than any other state in Europe except Great Britain . . . The Hungarian state is made up of the basin of the middle Danube and its tributaries and of the surrounding hills and mountains. On the north, east and much of the south the frontiers of the wild Carpathians and of the Transylvanian Alps are about as good as could be desired. In the south until the loss of Croatia and Slovonia it has also been excellent. On the west, too, it is satisfactory. Hungary consists of flat, fertile plains and of the highlands about them. All the rivers (with some slight exceptions in Transylvania) ultimately flow into the Danube, which is thus the central artery reached by many tributaries. This great common river system now more than ever needs treatment as a whole. For instance, the Danube and its tributaries are subject to sudden rise and fall. What is needed is an elaborate storage system by which water should be preserved some times in one part, some times in another, and then used later in such measure as circum-

stances may require; but for such a system a central management is necessary.

The Hungarian plains are rich, flat lands, which in former times were a natural resort of nomad and pastoral peoples like the Magyars, and the Huns and Avars before them. Today they are chiefly devoted to agriculture and provide fine crops, although these often suffer severely of drought. The Piedmont or region of the lower hills seems to integrate rather than to separate the plains from the mountains, and it is here that many of the more important cities are to be found, cities which from their very position usually have a population belonging to several nationalities. In the more mountainous regions we find all the forests, all the mineral wealth and all the future considerable possibilities of water-power, of which the war has here as elsewhere shown the need. As the Magyars have been the men of the plains, in the mountains we find predominating in numbers Slovaks, Ruthenians and Rumanians (except in the seclar (Szeckler) portion of Transylvania). The Germans have been numerous in the cities and are to be found scattered about in various places, but throughout the whole country the chief landowners have been Magyars, and they claim to have lived on good terms with the peasantry.

Thanks to this diversity in the character of the different regions, Hungary has been from the earliest times a singularly self-sufficing state. The plains have furnished the food, the hills have furnished the wood and the mineral wealth, the Danube and its tributaries have brought the people together. The different parts of the country have been attached to one another by the countless ties that come from having formed parts of the same unity through long ages. With the development of modern industry and communication the unity of the Kingdom has been still further strengthened. In recent years mining has been carried on a much larger scale, and many new manufactories have arisen and thrived. These establishments are to be found in the hill regions, that is, the borderlands, but they have been financed and managed from Budapest, which has grown in the last half century from a comparatively small town into one of the capitals of the world, with a population of nearly a million people before the war. Here is the center for the railroads, the seat of the Government, the winter home of people from every part of the country, the great focus of national life. Even distant Transylvania is and always has been economically found more closely connected with the central plain into which most of its waters flow than it has with Rumania on the other side of the mountains.

As a final argument the Hungarians point to the historic unity of their state and say it could never have been preserved through all the ups and downs of history of a thousand years, despite the variety of nationalities that have lived in it, if its continuity had not been in the nature of things in obedience to geographic law.

We can understand then what a violent rupture in the economic life of the country has been produced by the occupation, whether temporary or not, of almost the whole Hungarian peripheral, by the Czecho-Slovaks, the Rumanians and the Serbians, and in their severing of all relations between the lands they have occupied and the heart of the country. We can appreciate, too, the anguish of people here when they face the possibility of a Hungary reduced to the dimensions of the present unoccupied territory, without wood, without iron, without coal, without manufactories, nothing but an agricultural region and a great city condemned to certain ruin.

I have the honor to be, Sirs,

Your obedient servant,

(Signed) ARCHIBALD CARY COOLIDGE.

Rumanians overlook this important document. They often refer to a note of President Wilson's to the Rumanian Government dated November 5, 1918, to support their contention that the transfer of the Transylvanian-Eastern Hungarian territories was engineered by the United States. They quote from the context:

> The United States will not neglect at the proper time to exert its influence that the just political and territorial rights of the Rumanian people may be obtained and made secure from foreign aggression.

Rumanians claim that this vague wording supports the secret Treaty of London of 1916, between England and France. The terms of the private agreement transfer more than 2 million Hungarians into the enlarged Rumanian state.[1]

Turning to events in the territories themselves, Rumanians allege that the local citizens voted to belong to Rumania. They support this argument with the results of the plebescite at Alba Julia—Gyulafehervar—of December 1, 1918, and of Transylvanian Saxons on January 8, 1919, at Medias—Medgyes. They assert that the plebescite sanctioned the desire of these peoples to be incorporated into Rumania by exercising their right to national self-determination. However, the Rumanians fail to mention that the majority was denied free choice. A recent analysis by Prof. Sherman Davis Spector of Russell Sage College, who is very sympathetic to the Rumanians, analyzes the element of coercion—"Rumania at the Peace Conference of Paris," New York: Bookman Associates, 1962, pages 70–71:

> The final act was at Medias in Transylvania on January 8 when the Saxon Germans requested incorporation into Rumania. This action and those . . . in the Bukovina and Bessarabia were carried out after Rumanian troops had occupied the regions . . . Rumanian troops seized most of Transylvania by the end of December. These moves raise the question: were the acts of union spontaneous, or were they arranged under the menacing or protecting guns of the Rumanian army?

The advance of the Rumanian Army into Transylvania was an illegal act, precluded by the Belgrade Armistice of November 13, 1918, concluded between Hungary and the Allied Powers. The resistance of Hungarian troops was overcome by the Rumanians with French connivance. The Rumanian aggression was condemned by the declaration of the Supreme Council of January 24, 1919. The document was personally drafted by President Wilson, who warned:

> Possession gained by force will seriously prejudice the claims of those who use such means. It will create the presumption that those who employ force doubt the justice and validity of their claims and purpose to substitute possession for proof of right and set up sovereignty by coercion rather than by racial or national preferences or natural association. They thus put a cloud upon every evidence of title they may afterwards allege and indicate their distrust of the Conference itself. (*Foreign Relations of the United States. The Paris Peace Conference 1919*, Vol. III, p. 715.)

The Rumanians had objectives other than securing the territories claimed. A secondary objective was to discredit the pro-Allied Karolyi government. By violating the Belgrade Armistice of November 13, Rumania wanted to prove to the Hungarians that they could not rely for protection on the Allied Powers. They wanted to demonstrate that they would not treat the Hungarians as a vanquished minority, but would welcome them into the Rumanian fold. If Hungarian hopes in the Allies were dashed, the current anti-Allied Bolshevik propaganda would find a fertile soil in Hungary. Rumania planned to turn this Bolshevik appeal against the Hungarians at the Peace Conference. Rumania encouraged the Allies to revise the boundary in her favor by placing the Hungarian Karolyi regime in an untenable position. The Bolsheviks supported Rumania's preventive action.

Professor Coolidge's report from Budapest, No. 26 of January 19, 1919, summarizes this insoluble dilemma of the Karolyi government resulting from Rumanian pressure. Both Coolidge and Wilson condemned Rumania's measures. Nevertheless, the American delegation to the Committee for the Study of Territorial Questions Relating to Rumania and Yugoslavia supported with limitations the majority of Rumanian claims. This factor is explained by the biased Rumanian presentation of facts to the Committee and the Supreme Council. The Hungarian Government was prevented from speaking in its own behalf.

The Rumanian barrage was led by Ion Bratianu, the head of the Rumanian peace delegation to Paris. On February 1, 1919, he told the Supreme Council that there were 2.5 million Rumanians and 1 million Hungarians in Transylvania proper according to the 1910 Hungarian census. However, the correct figures of the 1910 Hungarian census were 918,-217 Hungarians and 1,472,021 Rumanians in Transylvania proper. Mr. Bratianu conveniently added 1 million Rumanians to the figures in order to support his request for the annexation of Transylvania to Rumania. The area finally awarded to Rumania in the Treaty of Trianon was somewhat smaller than the territories requested by Mr. Bratianu. According to the 1910 census there were 1,704,851 Hungarians, 2,-800,073 Rumanians and 559,824 Germans in the territory. Mr. Bratianu stated before the Supreme Council that the population of the land demanded by Rumania included 55 percent Rumanians and 23 percent Hungarians. Again his figures were grossly incorrect. Hardly 50 percent of the population was Rumanian and over 36 percent Hungarian in the area delineated by the London Treaty of 1916.

Mr. Bratianu went on to assail the 1910 Hungarian census as untrustworthy, and asserted:

> If an exact census could be taken, 2,900,-000 Rumanians and 687,000 Magyars, or 72 percent and 15 percent, respectively, of the

---

[1] In referring to the ambiguous statement above, Rumanians obscure the more basic tenets of Wilsonian democracy. The Secret Treaty of London of 1916 conflicts with Wilson's belief in "open covenants openly arrived at."

population would be found to be the exact figures. (Excerpts from the Minutes of the Supreme Council, Held on February 1, 1919; Rumanian Territorial Claims.)

Again Bratianu was in error. It should be mentioned that the 1930 Rumanian census showed 826,796 Hungarians and 1,657,923 Rumanians in Transylvania proper despite the expatriation or expulsion of 197,000 Hungarians and the influx of sizable Rumanian masses from the other parts of the Rumanian Kingdom into Transylvania.

Fearful that the Allies might not consider the Rumanian numerical superiority large enough, Mr. Bratianu cited "the presence of near the Moldavian frontier, a race related to the Magyars numbering 450,000." Of course, these, the Szekelys, were really Hungarians who had been pro-Magyar in language and loyalty since the 12th century.

Yet Bratianu based his argument on the threat of anarchy in Hungary from Bolshevik influence. He stated:

In the territories not occupied by Rumania . . . conditions were very serious owing to the enemy having organized a violent agitation on Bolshevik lines. The division of wealth and the abolition of rank had been promised; Wilson's policy had been proclaimed to be nothing but a capitalist policy, people had been told to kill officers and to do away with the governing classes. (*Ibid.*)

Bratianu was not alone in warning of the danger of Bolshevik takeover in Hungary. Archibald Coolidge cautioned that, if continued, the present Allied policies and the Rumanian occupation would lead to the fall of the Karolyi government. George Creel, the Chairman of the Committee of Public Information, the predecessor of the OWI of World War II, was sent to Hungary in early 1919. His report to the American delegation is described in his memoirs, "How We Advertised America," New York: Harper & Bros., 1920, pages 423–424:

The Hungarian situation was deplorable to the last degree. Count Karolyi was in the President's chair, but it was plain that he could not last more than a couple of weeks unless the Allies decided upon some helpful action on his behalf. It was Karolyi who had agreed to the Franchet d'Esperey armistice, and it was the provisions of this armistice, that were now being violated daily. On three sides the Czechs, the Jugoslavs and the Serbs were making steady encroachments while on the fourth side the Rumanians were sweeping forward in utter disregard of what should have been sacred agreements. The food situation was also reaching a crisis and Bela Kuhn, plentifully supplied with Bolshevik money, was preaching the gospel of a new world.

The whole thing was tragic in the extreme . . . All that I could do was to send an instant report to Paris, outlining the situation and it was this report that brought a declaration from the Peace Conference to the effect that the boundary-lines laid down by Francet d'Esperey must be respected. This helped tremendously for the moment, but as nothing was done to give force to the declaration, things became worse than before and in the course of four weeks Karolyi was deposed and Bela Kuhn rose to power.

The Rumanian advance into Hungary was closely related to the strength of bolshevism in Hungary and the weakness of its Government. But the Bolshevik Party of Hungary numbered not more than 4,000 or 5,000 on February 1, 1919, and alone could not have exercised the great popularity ascribed to it by Bratianu. In spite of its limited membership, the Hungarian Bolshevik Party took power March 21, 1919—Rudolf Tokes, "Bela Kuhn and the Hungarian Soviet Republic," New York: Praeger, 1967, page 109. Such a small group could have never assumed power without the complete breakdown of governmental authority and the despair of the majority Socialists in the Allied inaction. Rumania precipitated the coup by having occupied, by March 21, most of the territory later allotted to it in Paris, or about one-third of historic Hungary. The appeal of communism was in fact very weak, especially in eastern Hungary, the area of interest to Rumania. No distribution of wealth had occurred, except for a moderate land reform. The Karolyi government had continued to appeal to the Wilsonian principles to its last day of rule. Not even the Social Democrats denounced the 14 points as a "capitalist" policy. Rather, Mr. Bratianu consciously sabotaged the Karolyi regime in the hope of a Bolshevik takeover in Hungary which would permit Rumania to occupy all claimed territories under the guise of "liberating" them from bolshevism. Under the impact of a probable Bolshevik takeover, the Supreme Council accepted the proposal of its committee for "the establishment of a neutral zone between the two proposed lines, to be occupied by Allied troops with a view of preventing the spreading of bolshevism, which was prevalent in Hungary."—Excerpts from the minutes of the meeting of the Supreme Council, held on February 21, 1919.

This resolution compromised Rumanian interests. Bratianu feared that the western delimitation of the neutral zone along the line promised to Rumania in the 1916 London Treaty would breed irredentism. It would be assumed that the final frontier was the western, rather than eastern end of the neutral zone. Bratianu suspected that the result would be an attempted, or completed Bolshevik takeover. On the other hand, both the Council decision and the occupation worked for Bratianu. In either case, he could prove his accusations about bolshevism in Hungary and appear the savior of democracy and Christianity.

Rumanian efforts were successful. The De Lobit Note, based on the decision of the Supreme Council of February 27, 1919, brought down the Karolyi regime, leading to the Social Democratic-Bolshevki coalition of March 21, 1919, in an Hungarian Soviet Republic, and rejected the terms of the Supreme Council. Exploiting the political instability in Budapest, Rumania renewed her military offensive April 16 and quickly occupied the Eastern Hungarian territories.

In the meantime negotiations about the frontiers were proceeding in the Committee. The Bolshevik coup had worked to Rumanian advantage. With Hungary turning Bolshevik, there was little opposition to allotting Transylvania proper to Rumania despite the protest of the Hungarian Transylvanians against the annexation and the belated accession of the Saxons to the annexation. The eminent Oxford historian of the era, C. A. Macartney, estimates that in a straight plebiscite the Rumanians would not have polled more than 60 percent in Transylvania proper. This plurality would not have been sufficient for annexation but would have led to partition similar to the 60–40 results of the Silesian plebiscite in 1921, which led to a partition of that province between Germany and Poland.

The American delegation was quick to recognize the untenability of the "neutral zone" decision. General Tasker Bliss criticized the decision on a number of counts. On March 27 he warned President Wilson ex post facto:

The present conditions in Hungary are the direct result of the action of the Supreme Council on February 26, 1919. That act, therefore, was politically unwise. It cannot be justified morally before the people of the United States . . . The line of the neutral zone which had been drawn was absolutely unjust, and we should not make matters worse by enforcing an extremely unjust decision by force of arms. (D. Miller, *My Diary at the Conference of Paris with Documents*, New York: Appeal, 1924; VII, pp. 259–261.

Bliss argued further that the entire zone was ethnically Hungarian. He felt that by changing the demarcation line, the Allies would sever a bond with Hungary established at the Belgrade Armistice of November 13, 1918. Bliss feared lest the Hungarians regard the demarcation line as validating Rumanian claims to the 1916 London Treaty.

However, the objections of the American delegates had little impact on the Council. For several reasons, the survival of bolshevism in Hungary overshadowed their views during the critical negotiations in the Committee in April and before the Supreme Council on May 8, 1919. First, neither the American, nor the other members of the Committee were aware that in practice they were drawing the final frontiers and that they were Hungary's court of last resort. The position of the delegates varied. Charles Seymour and Prof. Clive Day of the American delegation were more willing to accept compromises which they hoped would be modified in the Council. The French generally pressed for the London Treaty frontiers. The British and Italians were less adamant than the French. Although a compromise resulted in a partial revision of the boundary, the ethnic division between Hungarians and Rumanians was wholly disregarded.

In the report of the Commission, it was admitted that the nationality distribution was not one of the criteria used in defining the frontier. The account states that Magyar towns surrounded by Rumanian country districts were allotted to Rumania. But the report failed to mention that these were usually Magyar towns surrounded in the east by Rumanian, and in the west by Hungarian country districts. Five cities, with populations ranging from 30,000 to 75,000 fell into this category. Rumania was given the outlets to the valleys of the plain, and a railway connecting these outlets with each other and with the Danube. This meant again the inclusion of a long and narrow strip of technically Hungarian areas into Rumania. Finally, the Committee consid-

ered it advisable to facilitate the junction of the railways on the plains with the railway system of other Allied countries, which meant that the northern Banat area with its mixed Hungarian-German population was given to Rumania.

The U.S. position at the proceedings favored an ethnic division. At the May 8, 1919, meeting of the Supreme Council, U.S. Secretary of State Lansing asked where the ethnic line would be. Mr. Tardieu, the French Chairman of the Committee assured him that only in some cases would it lie "20 kilometers" to the east and pretended that such a line would cut railway lines and continuous communications. Lansing persisted, asking how many Hungarians would be placed under Rumanian rule and how many Rumanians under Hungarian rule. Tardieu estimated their respective numbers to 600,000 and 25,000. However, the actual number of Hungarians involved was closer to 1.7 million than to 600,000. Secretary Lansing protested:

> This distribution does not appear very just; in every case the decision seemed to have been given against the Hungarians. (Excerpts from the Minutes of the Meeting of the Supreme Council, Held on May 8, 1919.)

The frontiers proposed by the committee were finally adopted by the Council of the Ten on May 12, 1919. The decision was communicated to Rumania and Hungary following the Council of Foreign Ministers meeting of June 12, 1919. The objections of Lansing and Bratianu to the frontier were overruled.

It can only be concluded that the United States consistently opposed the present Rumanian-Hungarian boundary. While sympathetic to Rumanian demands for national self-determination, all American parties to the decree of May 12, 1919, favored a decision based on the interests of the displaced ethnic minority. At the second Paris Peace Conference of 1946, the American delegation again raised the issue of the contiguous Hungarian areas. However, Russian opposition at this time made it impossible to maintain a revisionist position. The correct demographic statistics were disregarded by the committee and misrepresented by the Rumanian claimants as well as by the French chairman of the committee. The American delegation was deliberately misled as to the true ethnic distribution of these areas. Only American pressure prevented an even further westward push of the Rumanian frontier resulting in the inclusion of another 500,000 Hungarians into the Rumanian state.

American public opinion opposed the transfer to Rumania of the Hungarian minority. The country was still sympathetic to the people of Luis Kossuth, the Hungarian nationalist famous for his role in the Hungarian revolt of 1848. Shortly after the declaration of war against Austria-Hungary, New York Representative—and later mayor—Fiorello LaGuardia addressed the House of Representatives on July 23, 1917, as follows:

> I know that the sympathies of the true Hungarian people are entirely with our cause. They are a liberty-loving people with a glorious history. There is no poeple in this world that could do more to bring this conflict to an end that the Hungarian people . . . It is advisible and prudent that we give all the moral support we can . . . I am sure the lesson of Kossuth, the great Hungarian liberator, is not forgotten.

The settlement of the boundary dispute in Rumania's favor, then, cannot be attributed to U.S. promotion of unjust Rumanian claims. Other factors are to blame. These include Bratianu's intrigues at the negotiations and the Rumanian invasion of the territory in question. The Bela Kun interlude blocked the interests of the population of the transferred territory. Although Bolshevik rule lasted only 133 days, the coup occurred in the midst of the boundary negotiations. The United States was not involved in these events. While it could not control internal Hungarian developments, the United States consistently supported national self-determination in the Hungarian-Rumanian boundary dispute.

McCARTHY DISPUTES KEY SECTION OF NATIONAL ACADEMY OF SCIENCES POISON GAS DISPOSAL REPORT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. McCARTHY) is recognized for 30 minutes.

Mr. McCARTHY. Mr. Speaker, yesterday the Department of Defense received the report of the National Academy of Sciences Committee on the U.S. Army's plans for disposal of large quantities of poison gas. This report, prepared by a committee of the Nation's top scientists and chaired by Dr. George B. Kistiakowsky, recommends that most of the gas be rendered harmless at the Army arsenals and depots where it is now stored.

I wish to commend the National Academy of Sciences committee for its thorough and informed study of this problem. The committee brought together the scientific and engineering disciplines needed to consider a difficult assignment. The committee applied its knowledge to the problem and has made recomendations with which I generally concur.

The National Academy of Sciences panel has recommended that the 21,000 M–34 Air Force nerve gas bombs be destroyed at the Rocky Mountain Arsenal or at the nearby Tooele Army Depot. They point out that the dangers of moving this gas by rail and of contaminating the Atlantic Ocean at the dumping spot are too great to warrant the risk. I agree.

The panel recommended that the 12,600 1-ton tanks filled with mustard gas be unloaded and burned at the Army installations where it is currently stored. The panel warned against the possible dangers to the ecology of the Atlantic Ocean that might result from large-scale dumping of this highly toxic gas. I agree.

The NAS committee recommended that a special committee, including ballistics experts, be convened by the U.S. Army to consider whether there is a practical way of disposing of defective M–55 Air Force nerve gas rockets now encased in cement. These rockets pose a difficult disposal problem. If it is absolutely necessary, the committee recommends taking it to either Earle Naval Ammunition Depot, N.J., or the Naval Weapons Station, Charleston, S.C., for burial at sea.

Here is where I disagree.

I urge that every conceivable means of disposing of these rockets at the Anniston Army Depot and the Blue Grass Army Depot be studied. An appropriate method most certainly can be found without disposing of them at sea. The sea disposal plan would require that the trains be given exclusive right-of-way on their trip to the sea. State and local health officials do not have the expertise to respond appropriately if there is an emergency.

The committee also made other recommendations relating to the disposal of contaminated containers and tear gas that seem appropriate.

The findings of the National Academy of Sciences committee on the U.S. Army's plan to dispose of this poison gas confirm my original suspicions that the movement of these deadly weapons of war across the country by rail and their subsequent dumping in the Atlantic Ocean was dangerous to the public and to the environment.

Their scientific expertise has pointed the way to a much safer way to dispose of these poisons.

Today the Defense Department announced it will follow the recommendations of the National Academy of Sciences committee. I applaud this action but reiterate the need to find an acceptable method of disposing of the M–55 rockets.

I insert in the RECORD for the information of my colleagues the report of Dr. Kistiakowsky's committee:

NATIONAL ACADEMY OF SCIENCES,
Washington, D.C., June 25, 1969.

Dr. JOHN S. FOSTER, Jr.,
Director, Office of Defense Research and Engineering, Department of Defense, Washington, D.C.

DEAR JOHNNY: I transmit to you herewith a report prepared by a committee I appointed on behalf of the National Academy of Sciences, in accordance with your request of May 14, to give technical advice on a plan developed by the Department of Defense and alternate plans, for the disposal of certain overage and surplus chemical warfare agents and munitions. The members of the committee were selected to bring a broad range of relevant expert scientific and engineering knowledge to bear on this matter, including chemistry, biology, toxicology, physiology, and oceanography, as well as practical experience in the manufacture, handling, transportation, and disposal of hazardous materials, including explosives and chemical warfare agents.

I believe you will agree with me that the committee should be commended for the intensive study they have been able to give to this complex problem, in the interest of public service, on such short notice. I am confident the unanimous conclusions they have reached represent the best judgment of the scientific and engineering community, and trust their recommendations will be helpful to you in deciding upon a course of action.

Sincerely yours,

FREDERICK SEITZ,
President.

DISPOSAL HAZARDS OF CERTAIN CHEMICAL WARFARE AGENTS AND MUNITIONS

(Prepared by an ad hoc advisory committee of the National Academy of Sciences)

This Committee was appointed by the President of the National Academy of Sciences in response to a request of May 14,

1969 from Dr. J. S. Foster, Jr., Director of Defense Research and Engineering, Department of Defense, for an assessment of hazards involved in the execution of "Operation Chase" (and alternate plans) for the disposal of certain surplus chemical warfare stocks of the U.S. Army. Dr. Foster noted that, because of seasonal considerations, an early response would be most helpful.

This limitation on time precluded an exhaustive study by the Committee of all alternatives and factors involved. Prior to meeting, the Committee reviewed printed material submitted by the Department of Defense relating to Operation Chase, and additional relevant material from a variety of other sources. Individual members of the Committee studied the records of pertinent hearings before the Subcommittee on International Organizations and Movements of the Committee on Foreign Affairs and the Subcommittee on Conservation and Natural Resources of the Committee on Government Operations of the U.S. House of Representatives, and consulted with a representative of the Colorado Committee for Environmental Information and with Mr. Louis Garona of Edgewood Arsenal. Various members visited Edgewood Arsenal, Rocky Mountain Arsenal, and Naval Amunition Depot Earle (including a flight over the adjoining territory and the tracks of the Central Railroad of New Jersey to the city of Elizabeth). Personnel at these facilities were cordial and cooperative, and discussions with them were most helpful in providing the Committee with background information based upon experience in handling the agents and munitions concerned.

The committee met subsequently for two full days of briefings and executive sessions. Briefings, with responses to questions from the Committee, were given on various aspects of Operation Chase and alternate methods of disposal by the following personnel from the Department of Defense:

Army: Mr. Samuel Berlin, Mr. Paul R. Chagnon, Mr. S. Eckhaus, Dr. Joseph Epstein, Mr. Norman G. Hansen, Mr. Robert Hurt, Mr. E. J. Jordan, and Col. John J. Osick.

Navy: Mr. Frank Dunham and Mr. Alfred Fernandes.

The following representatives of the Department of Defense, who also attended the meetings, responded to many queries from the Committee members:

Army: Acting Assistant Secretary (R&D) Charles L. Poor; Brig. Gen. James A. Hebbeler; Dr. Van M. Sims; and Mr. R. K. Webster.

Navy: Assistant Secretary (R&D) Robert A. Frosch, and Dr. William P. Raney.

Messrs. W. C. Jennings of the Department of Transportation and T. P. McCormack of the Federal Aviation Administration responded to questions about railroad transportation and about flight patterns and regulations at the Denver airport. Officials representing other agencies of the federal government also were present.

The Committee appreciates the cooperative attitude of all these individuals and the wealth of technical and other factual information that they provided.

CONCLUSIONS AND RECOMMENDATIONS

We are very much aware that continuing inaction will not reduce the hazards of eventual disposal of the chemicals and munitions intended for disposal in the 1969 Operation CHASE, and in some instances will increase them.

Furthermore we are aware that many activities of the federal government unavoidably involve some hazards to the personnel involved and also to private "bystanders". In this respect, government activities resemble those of private manufacturing and transportation organizations. We believe, however, that the government should set an example to private organizations and individuals of minimizing risks to humans and damage to the environment, even though this may complicate and make more costly its own operations. Therefore we recommend that Operation CHASE as originally conceived be modified as follows. Five types of materials are included in the plan:

1. AF M34 bomblet clusters containing GB, a "nerve gas"
2. Bulk containers of Mustard
3. M55 rockets containing GB in concrete "coffins"
4. Contaminated and water-filled bulk containers
5. Drums containing cans of CS agent in concrete.

We recommend that disposal of these materials should be as follows:

1. A total of 21,108 M34 clusters, each containing 76 bomblets, each of which is loaded with 2.6 lb of GB (volatile liquid "nerve gas"), 0.55 lb of tetryl burster charge, and fuze, are stored now at Rocky Mountain Arsenal (RMA), the site of their manufacture some sixteen years ago.

Discussion: We consider the Army's plans for minimizing the hazards of possible GB leakage during railroad transportation, including prevention of accidents and provisions for treatment of injured people, to be well developed. However, we cannot exclude the remote possibility of a catastrophic explosion in connection with transportation of large numbers of M34 clusters. Conceivably a sniper's high-velocity bullet could initiate a burster charge, and tests have shown that this induces sympathetic detonation of several adjacent bomblets; or, the collision of a gasoline truck with the train on a grade crossing could start a fire that could detonate the contents of many clusters. Other possible hazards associated with rail transport could also release large amounts of GB from M34 clusters. This could cause casualties far beyond the capacity of the attendant medical staff to handle.

Moreover, the Navy's plans for loading and towing the CHASE ship to the disposal grounds and sinking it there cannot preclude the remote possibility of a collision at sea or some other major accident that could conceivably result in the release of large quantities of GB.

There is some possibility of a large detonation of M34 clusters upon sinking of the ship in the ocean. As already noted, limited sympathetic detonation in a cluster has been observed in a test in air. The better impedance match of water invites a massive sympathetic detonation should a bomblet detonate. We consider that this is a probable event upon the impact of the ship's hulk on ocean bottom (7,200 ft deep), which it reaches at a speed that has been estimated from 10 to 100 ft/sec. While the consequences are impossible to predict precisely, lethal contamination of several cubic miles of the ocean (spread near the bottom downstream from the dump in a layer covering many square miles) for a period of many days is likely, on the basis of calculations involving the rates of hydrolysis (and thus of detoxification) of GB, its convective diffusion, and expected (very slow) sea currents. With no massive detonation, GB would be gradually released upon progressive corrosion of its thin-walled steel containers. Calculations such as those above suggest contamination of a small fraction (0.1 to 0.01) of a cubic mile of sea water as a bottom layer near the dump, lasting a few to many months, depending on the corrosion rate. In either case live fish are likely to be attracted into the contaminated layer by dead animals. The effects of these events on the oceanic ecosphere cannot be estimated but could be very serious. We are not fully convinced that a massive detonation upon the upending of the sinking hulk while still near the surface can be wholly excluded. If this were to happen, of course, the results could hardly be less serious.

We have considered and rejected (as the Army did earlier) various ways of entombing the M34 clusters on dry land. In essence, real disposal would thereby merely be postponed, while the stage would be set for an accident or even a major catastrophe for a future generation of Americans, when the records of such entombing would have been lost and human activities not now thought of would have been undertaken.

The burying of the clusters in a deep cavern, followed by the explosion of a small nuclear device there, could incinerate and detoxify the clusters. However, the hazards involved in various stages of this operation and the time required for its completion make this an undesirable plan.

Over a period of many years, RMA personnel have disposed of more than 2,200 leaky M34 clusters by disassembling them and chemically destroying or salvaging the GB without "lost time" accidents.

Recommendation: We recommend, therefore, that the M34 clusters be disassembled and the withdrawn GB be destroyed chemically either by acid or alkaline hydrolysis. This procedure would result in waste materials without "nerve-gas" properties and not more hazardous than larger volumes of industrial waste that are routinely discharged elsewhere.

On balance, weighing various hazards we recommend that this disassembly be undertaken at RMA because (i) the hazards arising from transportation by rail will be eliminated; (ii) RMA has an experienced staff that has already disassembled M34 clusters; (iii) RMA has facilities that can be fairly rapidly expanded for the recommended operation. We consider the addition of waste waters from hydrolysis to the sealed pond on the grounds of RMA not to be an issue since it would be only a small increment of similar waste now in the pond. If this recommendation is adopted, however, we urge the Army to proceed as rapidly as possible with the implementation of the plan, which may take from 18 to 30 months. In the meantime, immediate measures should be taken to protect the stores of M34 clusters from lightning and excessive direct sunlight, and also to distribute them so as to minimize the effects of the unlikely event of an aircraft crashing on the stores.

If, for any reason, the disposal of M34 clusters cannot be carried out at RMA, we recommend that they be moved by rail to the Tooele Army Depot and there disposed of by disassembly and chemical destruction of GB, as above. Tooele is recommended because (i) it offers a shorter haul by rail from RMA through a less-populated area (with the major exception of the passage through a part of Denver); (ii) it is located in a sparsely populated region and has a large land area; (iii) the Army has transported to Tooele other munitions containing "nerve gas" so that, when the time comes for their disposal, the disposal facilities that will have to be constructed at Tooele for M34 clusters would make further railroad transportation unnecessary.

As noted earlier, the probability of a catastrophic railroad accident involving M34 clusters is very low, but not zero. To reduce it further we recommend that, in addition to safety measures already planned by the Army, positive steps be taken to close grade crossings in inhabited areas during the passage from RMA to Tooele of trains loaded with explosive munitions containing "nerve gases."

2. A total of 5,311 one-ton heavy steel containers (like those used commercially for chlorine) filled with Mustard liquid were to be disposed of in Operation CHASE, and are stored at the Rocky Mountain, Anniston, and Edgewood Army establishments. Another 7,332 such containers that were to be disposed of later are at Pine Bluff and Tooele.

Discussion: The transportation of these

heavy steel containers by rail should be considered a hazardous operation subject to safety precautions practiced by the Army. However, we consider that such transportation of an almost non-volatile liquid (Mustard H or HD) would involve virtually no hazards of a catastrophic accident because even a strong fire would not rupture the tanks and boil off the Mustard. Hence the safety and security plans adopted by the Army to deal with accidents resulting in minor leaks and even larger local contamination are adequate. Similarly we can conceive of no likely *catastrophic* accidents occurring during the towing of a CHASE ship to the disposal area.

In the past, various chemical warfare agents have been repeatedly disposed of in the oceans by the United States and other nations (see, for instance, House of Commons Parliamentary Debates, Weekly Hansard, No. 484, 25 March–31 March 1960). We have no information regarding possible deleterious effects of these operations on the ecosphere of the seas.

Most of the one-ton containers of Mustard would probably not rupture upon the bottom impact of the sinking CHASE ship. However, their brass valves (forming an electrochemical couple) would cause moderately rapid corrosion of the steel containers, so that large numbers of cylindrical shapes of solid Mustard weighing about a ton each would eventually be exposed to sea water on the bottom. Considering the very slow rate of solution of solid Mustard in sea water at 3.5°C, the rate of its hydrolysis (and hence detoxification), and the effects of dissolved Mustard on fresh-water fish, we believe that the ocean volume made lethal to fish would in all probability be extremely small, although some pollution would continue for years. We are concerned, however, about the effects of Mustard on the germ cells of fish and on unicellular and larval organisms, concerning which no quantitative data were available. Thus the effects of these large masses of Mustard on the oceanic ecosphere are not predictable.

Mustard is readily combustible and, in the past, about 3,000 tons of it have been destroyed by burning in a special furnace at the RMA. Some of the products of combustion are air pollutants of the same type as those released in some industrial and electric-power-generating activities, namely hydrogen chloride and sulfur dioxide, and none have properties of chemical warfare agents.

Recommendation: We recommend that the Mustard scheduled for disposal in CHASE (and about 6,600 tons more in the 7,332 containers still to be disposed of, as mentioned previously) be burned in government establishments where storage is safe and *local* air pollution from the resulting SO_2 and HCl is not a serious problem. This procedure was successfully followed at RMA in an incinerator having a heat dissipation capacity of about $17(10)^6$ Btu/hr. The products of combustion were dispersed into the air from a 200-ft. chimney. Should maximum ground-level concentrations of pollutants prove to be excessive, a simple liquid scrubber should be added to the existing facilities and the effluent sent to the sealed lake. If for compelling reasons the disposal is at a site other than RMA, similar facilities are suggested, with thought being given, during design, to long-term use to incinerate other materials.

3. A total of 418 "coffins" containing M55 rockets are now at the Anniston (Alabama) and Blue Grass (Kentucky) Army establishments. The rockets are distributed evenly in solid blocks of concrete cast into heavy steel boxes with welded lids. Each such "coffin" weighs about 6.4 tons and contains 30 rockets. Each rocket contains 10.8 lb of GB liquid "nerve gas" and about 2.6 lb of Composition B burster charge, as well as rocket propellant and fuze. In previous CHASE operations during 1967 and 1968 1,706 such "coffins" have been sunk in one location east of NAD Earle at a depth of 7,200 feet.

Discussion: The transportation of the "coffins" by rail should be treated as a hazardous operation, but we conclude that the probability of a catastrophic accident is essentially nil because (i) the "coffins" should survive the wreck of a slowly moving train (35 mph or less, according to Army plans); (ii) a fire would take a long time to heat the large concrete mass of a "coffin" to a temperature high enough to cause rocket explosion; (iii) a sniper's bullet could not penetrate to a rocket to cause explosion; and (iv) sympathetic propagation of the explosion of any one rocket is not likely.

As in the case of the one-ton Mustard containers, the probability of a catastrophic accident during the towing of a CHASE ship loaded with the "coffins" is vanishingly small.

We expect that most, if not all, of these "coffins" would survive intact throughout the sinking of the hulk. Upon the corrosion of the steel containers, sea water will penetrate concrete and corrode the thin aluminum bodies of the rockets, thus allowing GB to diffuse slowly to the outside. Some hydrolysis of GB will take place within the pores of concrete. Where alkaline pH due to concrete prevails, the products of hydrolysis will be polymeric. These and the gelatinous aluminum hydroxide of the corroded rocket bodies may seal the pores in concrete, slowing down diffusion of GB. Hence the time interval after which "coffins" cease to be toxic cannot be estimated. The GB that escapes will be hydrolyzed gradually by sea water. The resulting toxicity of the sea should be highly localized.

The Army considers the demilitarization of M55 rockets now encased in concrete to be impractical.

Burying of the "coffins" on land or in lakes is inadvisable in our view, as well as in the Army's because they would probably retain their toxic contents long after the records of their disposition have been lost. The possibility of a serious (or even massive) accident involving human lives in some more or less distant future is thus not excluded.

Recommendation: We recommend that the Army convene a group of technically qualified individuals, including demolition experts (which we are not), to consider whether a practically feasible way could be devised to dispose of the "coffins" on an Army establishment. This method should be safe to neighboring population and positive in the sense that toxic and explosive contents of the "coffins" would be destroyed within a predictable time. As a group, however, we are unable to formulate a definite proposal that satisfies these conditions.

If the proposed study does not produce such a method (and assuming that what is now being recommended is consistent with the international obligations of the United States of America, a matter which we as a group cannot assess), we recommend that the 418 "coffins" be transported by rail (choosing routes minimizing proximity of population) to NAD Earle and, through, Operation CHASE, sunk in the same disposal area (centered at 39°38'N, 71°0'W) where the other 1,706 "coffins" have already been dumped. The choice of this location is based on reasoning that the concrete blocks will remain on the bottom for a very long time after the loss of toxic ingredients, and it is preferable that all of them be in one location when, in some more or less distant future, technological operations at the depth involved (7,000 ft) will be common and the records of CHASE operations may have been lost. To accelerate the conversion of the additional "coffins" into inert blocks of concrete, we recommend brazing to each of the outer steel boxes several pieces of copper to form electrochemical couples for accelerated corrosion.

If it is decided not to use NAD Earle for Operation CHASE, we recommend reconsideration of the use of the Naval Weapons Station-Charleston, Charleston, South Carolina, since, if these recommendations are carried out, only one CHASE ship would be required, and the local personnel and facilities at Charleston may be found to be adequate for its safe loading and towing to sea. The use of Charleston would entail a less serious rail-transportation problem and the ship could be sunk in the dump area (29° 20'N, 76°0'W) already designated on charts as used for "explosives chemicals, and munitions," which is in a very deep ocean (about 15,000 ft) where disposal might be less undesirable.

4. At Edgewood Arsenal (Maryland) are stored 2,325 one-ton steel containers that, at one time, contained some unknown contaminant, and have since been emptied and filled with water.

Discussion: These water-filled containers present relatively minor railroad and other transportation hazards, since such hazardous materials as GB and Mustard would already have been hydrolyzed for a long time by water-filling. On immersion in sea water, these containers should be corroded moderately rapidly because of their brass valves. Their leaking contents will serve as only a very minor local contaminant.

We have been informed that these containers cannot be disposed of through commercial channels because the chemical nature of their contamination is unknown.

Recommendation: We recommend that, to ensure only insignificant content of toxic materials, these containers be drained and refilled with water at the Edgewood Arsenal, a procedure, we were told, that presents no serious problems. Thereupon, if they still cannot be disposed of through commercial channels, we recommend disposing of them through Operation CHASE.

5. Also located at Edgewood Arsenal are 86 drums of 55-gallon capacity filled with cast concrete in each of which has been embedded canisters containing 80 lb of a mixture of a solid riot-control agent CS and some pyrotechnic composition.

Discussion: We were informed that safe disposal of the contents of these drums at the Arsenal presents serious problems.

The rail transportation and ship towing of this material present no serious hazards, since explosive hazards are virtually nil and the agent is non-lethal. The thin-walled drums will be fairly rapidly corroded upon sinking to sea bottom. The CS agent is rapidly hydrolyzed by sea water and, therefore, whether or not the concrete blocks survive the bottom impact, contamination of the sea will be minor and transient.

Recommendation: Unless a procedure similar to the demolition procedure first recommended in Section 3 is developed, we recommend including in the same Operation CHASE procedure recommended as second choice in Section 3 the small additional tonnage here involved.

While the following comments are outside the terms of reference of the Committee, we wish to suggest to the Department of Defense that it adopt basically the same approach to chemical warfare agents and munitions that the Atomic Energy Commission has adopted toward radioactive waste products from nuclear reactors. It should be assumed that all such agents and munitions will require eventual disposal and that dumping at sea should be avoided. Therefore, a systematic study of optimal methods of disposal on appropriate military installations, involving no hazards to the general population and no pollution of the environment, should be undertaken. Appropriately large disposal facilities should be regarded as a required counterpart to existing stocks and

planned manufacturing operations. As the first step in this direction, we suggest the construction of facilities for gradual demilitarization and detoxification of remaining M55 rockets.

AD HOC ADVISORY COMMITTEE

Frederick Bellinger, Chief, Chemical Science and Materials Division, Engineering Experiment Station, Georgia Institute of Technology, Atlanta, Ga.

Kenneth P. DuBois, Director, Toxicity Laboratory, University of Chicago, Chicago, Ill.

George B. Kistiakowsky (Chairman), Professor of Chemistry, Harvard University, Cambridge, Mass.

Carl M. Lathrop, Engineering Advisor, Esso Research and Engineering Co., Florham Park, N.J.

Stephen Lawroski, Associate Director, Argonne National Laboratory, Argonne, Ill.

Colin M. MacLeod, Vice President for Medical Affairs, The Commonwealth Fund, New York, N.Y.

M. S. Meselson, Professor of Biology, Harvard University, Cambridge, Mass.

N. M. Newmark, Chairman, Department of Civil Engineering, University of Illinois, Urbana, Ill.

James L. Whittenberger, Associate Dean, Harvard University School of Public Health, Boston, Mass.

Martin A. Paul, Staff Director.

HEPTANOIC ACID AND CRUDE CHICORY ROOTS—THE PEOPLE BE DAMNED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Louisiana (Mr. RARICK) is recognized for 10 minutes.

Mr. RARICK. Mr. Speaker, this House today put its seal of approval on a backroom bargain, surreptitiously negotiated, by those whose programs have been and continue to be soundly repudiated at the polls.

The original purpose of the 10-percent surtax was sold as a tool to help fight inflation by reducing spending in the private sector. There was another key promise to the agreement. Spending in the public sector was to be materially reduced also.

We all know that this was not done. In a few instances, showcase cuts were made in such highly visible programs as postal service for which the people already pay, or highways, which are supposedly financed from trust funds, but on the whole, the important cuts promised did not take place. So inflation has continued—in fact escalated.

There is something patently asinine about the theory that it is inflationary for the man who earned the dollar to spend it on his family—but that it is not inflationary for the Government to take the dollar away from him and give it to someone else to spend.

The people understand this foolishness and have plainly spoken against any extension of the surtax. As I said earlier this week, the dishonest and unpopular Johnson surtax is about to become the equally dishonest and equally unpopular Nixon surtax.

But suddenly something had to be done quickly, before the people could see what was going on. Although we have had 6 months to consider the matter, there had been nothing done. Suddenly there was a frantic cry to extend the surtax before midnight Monday, when it will expire. Then there were loud and newsworthy statements from many Members that they would not extend the surtax without what was called significant tax reform—relief for the taxpayers. Next came a postponement of action, because the votes for the surtax just were not there. Then there was the persuasion game in the name of "party loyalty," by both parties. Finally there was the political realization that the vote on the surtax extension must be taken before July 4 vacation when most Members would be at home and hear directly from the people in their districts.

And so, there was a political deal made. Some who had earlier demanded tax reform forgot the taxpayers. In consideration for more money distributed to the ever-growing, non-tax-paying, welfare class, they agreed to extend the surtax. This afternoon, by a constitutionally questionable device, without debate, the decent, hard-working, law-abiding taxpayers are stuck again—this time traded out for the direct benefit of the ever-growing parasitic class who pay no taxes, but who vote in ever-increasing numbers.

Mr. Speaker, I say that this is a constitutionally questionable measure. The Constitution, in article 1, section 7, clause 2, plainly provides:

> All bills for raising revenue shall originate in the House of Representatives.

This clause was put there for a purpose—to keep the real taxing power close to the people. This House has complied with demands to deliberately evade this constitutional command, because the safeguard it erects would work. The people do not want an extension of this surtax under present conditions and the Members of this House know it.

We have acted on a minor bill extending the duty exemption on a substance called heptanoic acid—but to which, without hearings, the other body hastily engrafted significant tax provisions. These provisions have never been accorded the courtesy of a hearing in committee in this House. The trading horse—a removal of the ceiling on the funds to subsidize illegitimate children—was tacked on to a simple measure removing the duty from crude chicory roots. The public is not even aware of what we are doing.

We have not extended the surtax—that will come Monday, we are told. We have only extended a law saying that employers must continue to collect, and to send to the Treasury a tax which has expired.

This hand in the pocket of taxpayers does not even extend to all taxpayers—just to the workingman for whose paycheck it can be withheld. The self-employed and the employer himself are excused from this seizure of wages in advance of a tax law.

The principle is the same as if we said that, Since the Government needs money, we will just have employers withhold all of the July pay, and get around to adjusting the tax later to cover the operation. Suppose the surtax fails Monday—then what? The employers would continue withholding for 30 days without a law.

The Constitution has something to say on this subject also. In addition to the due process clause, which certainly implies more than a backroom political bargain, in enacting tax measures the fifth amendment, commands:

> Nor shall private property be taken for public use, without just compensation.

This is exactly what we have done—by voice vote. We have taken private property, the dollars from workers' paychecks, with no compensation whatsoever.

We did not act on the tax. We acted only on the collection mechanism. We have required the taking of money from those we may get around to taxing later, on the appealing argument that to fail to do so would cost employers money by requiring them to change their bookkeeping, and then to change it back if we ever pass the tax.

I say that this is a totally phony argument for two reasons. First, employers who felt entitled to abide by the law, have already prepared for the end of the surtax according to the very withholding tables we are now asked to amend, and must now do the very thing we claim to avoid. Second, the expense of change to the employer is a tax deductible business expense, although the withholding of wages from the employee who earned them gives that employee no deduction, no interest on his money, no other advantage.

Mr. Speaker, we again have been asked to act in the teeth of the desires of our constituents, and against all logic or commonsense. In the name of political power we are asked to go along with a corrupt bargain, where we take more and more from those hard-working, productive Americans who are the backbone of this Nation, in order to redistribute their earnings to another class of people who are productive of nothing but the fourth and fifth welfare generation—and votes.

The people whom I represent do not approve of this sort of transparent scheme. I ask my colleagues who represent other taxpaying, working, Americans to stand up and be counted for their constituents and to join in preventing another such contemptible fraud on the American people. The people want and deserve the end of the surtax measure.

Mr. Speaker, I include a recent editorial outlining the behind-the-scenes maneuvering:

[From the Washington (D.C.) Evening Star, June 26, 1969]

RESPONSIBILITY AND THE SURTAX

The prospects for extending the surtax took a sudden turn for the better yesterday, thanks to Minority Leader Gerald Ford and the Republican Party.

Ford was able to inform the Democratic leaders that 170 of the 188 Republicans in the House were prepared to vote for a full-

year extension of this crucial measure. This represented a dramatic 40-vote increase over the accepted Grand Old Party nose-count up to that time. One explanation for the shift was the President's reportedly effective lobbying efforts behind the scenes. Also, Ford was likewise successful in his urgent appeal for party responsibility.

As a result, Speaker McCormack and Majority Leader Carl Albert agreed to schedule a vote on the surtax this Monday before the July 4 holiday break. Had the House gone ahead with its original plan to delay matters until after the recess, the chances for the surtax extension would, of course, have worsened accordingly.

Now that the Republicans have shown a commendable willingness to vote their consciences rather than their districts, the responsibility for the fate of the government's anti-inflationary program rests squarely with the Democratic majority in Congress. The American public is sophisticated enough nowadays to know when the party in control of Congress—rather than the man in the White House—is at fault. If a delay in extending the surtax rocks the standing of the dollar abroad, or causes panic in the domestic money markets, the voter will know that the Democrats are to blame. Moreover, he may be expected to figure out for himself that many Democratic Study Group members who now oppose the surtax extension unless a firm commitment is made for tax reform this session are, in fact, hiding behind that issue as a way of avoiding a vote for the surtax.

This Friday, the House will have the opportunity to vote for a one-month extension of the surtax. All indications are that this stop-gap measure will pass. But this move hardly can be expected to solve the crisis in confidence that doubts about the full-year extension of the surtax will engender here and abroad.

The responsibility of congressional Republicans and Democrats is altogether clear. The surtax must be extended for a full year—now.

THE PROBLEM OF DRUG USAGE AMONG TODAY'S YOUTH

(Mr. EDWARDS of California asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, we are living in the psychedelic age. It is an age which came upon us very quickly, with little warning, and has overtaken us at a pace which is difficult to keep up with. Because of this, a tremendous amount of confusion, concern, fear, and misunderstanding on the part of parents who find their children a part of a world they themselves do not know or understand, has resulted. Aside from the overriding necessity for detailed research on the effects of drug usage, there is a need for public education about the effects of drugs, the reasons for which youth are drawn to them, and what can and should be done about it. Western Electric Manufacturing and Supply Co., in Sunnyvale, Calif., has recognized this need and taken the responsibility upon itself for this education process.

In May, with the cooperation of Station KNTV in California, which kindly gave prime TV time for a public service broadcast, Western Electric presented a program entitled, "Marijuana, the Growing Grass Fire" which was designed to inform the public of the issues involved in the use of marijuana. The response to this broadcast by the public was very enthusiastic and Western Electric received hundreds of letters praising the show and requesting copies of a booklet which Western Electric had published in conjunction with the broadcast called "Parents Guide to Marijuana." I think the efforts of Western Electric to take on the responsibility of helping our society understand and adjust to its new problems are to be highly commended and should serve as an example to others in our country. I include the following portion from the above-mentioned booklet be as a part of the RECORD and as an insightful commentary on the problem of drug usage among today's youth:

Today's young people are a lot more idealistic than we were at their age. They have an awareness of social justice, world peace and other national and international problems. They are not easily fooled by hypocritical parents. Or tolerant of them, for that matter. In all fairness, we can't preach about drugs if we ourselves are hung up on tranquilizers or are partial to three martini lunches. We as adults must get off our duffs and earn our children's respect by setting good examples in what we do, think and feel in all our relationships.

We forget young people need—and even desire—authority. They say we now live in a permissive society. You don't have to be a policeman to recognize this is true. Children, the experts say, want strict parents, but at the same time want the discipline to be fair, not tyrannical, and discipline left up to the father, not sloughed off to the mother.

A little education on both sides won't hurt. Unfortunately for parents, teenagers know more about the drug scene than their mothers and fathers. What parents need to do is learn all they can about marijuana—and other drugs, too. Goof up one small fact about drugs and a child can make a big thing of it. A parent's point of view must be from a position of level headedness and factual knowledge. Hopefully, this booklet will assist you.

The times they are a-changing. Our youth are certainly aware of it. Too many of us are out of it as far as our children are concerned. And that's because we're not listening. Trite but true, few of us communicate Maybe a little two way communication will help break down the barriers between parents and child.

INTRODUCTION OF FOOD STAMP BILL

(Mr. EDWARDS of California asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, today I am introducing a companion bill to the Food Stamp Reform Act of 1969 introduced by Senator GEORGE MCGOVERN.

I am introducing this bill because of certain specific complaints from the congressional district I represent.

The Ninth Congressional District includes the fertile lands of southern Alameda County, the Santa Clara Valley and a small portion of San Mateo County in California. The Santa Clara Valley is one of the most famous agricultural valleys in the Nation and, even today in the age of urbanization its crops are still a rich resource. Farms are still producing lush yields and good profits in San Mateo and Alameda Counties. There is no lack of food here.

All three of these counties brag about the wealth of their inhabitants. In particular the greater San Jose area regularly advertises that the income level of its population is one of the highest in the Nation.

Thus, the Ninth Congressional District of California is fortunate enough to be in an area which produces an abundance of food and whose inhabitants earn far more than the national average.

The problem of hunger should be absent from my district.

It is one of the deep ironies of this Nation that instead there are those who go hungry in the Ninth Congressional District, those who go hungry in rich Alameda County, those who go hungry in the lush Santa Clara Valley, and those who go hungry in green San Mateo County.

I do not know how many these hungry number. No one has ever investigated fully, another irony.

I do know an official of the Santa Clara Valley Headstart program told me that of the 4,000 children served in that program last year she estimates 2,000 of them were hungry.

I also know Frederick B. Gillette, director of the welfare department of Santa Clara County reported on May 6, 1969, in testimony before the Select Committee on Nutrition and Human Needs in San Francisco:

In Santa Clara County today there are families with children suffering from the effects of diagnosed malnutrition. These are the families that cannot afford to buy food stamps.

Hunger in the Ninth Congressional District is a hidden problem.

We in the district have grown so fast that we failed to look back, we have failed to notice those who have not traveled our road to prosperity. There is, I believe, no one within the district who would allow a child to go hungry, if he or she could help. However, only a few have ever looked and recognized the face of hunger hidden among signs of prosperity.

The problem of hunger in the Santa Clara Valley is now being examined through a governmental study, yet this study made up of cold statistics cannot tell the full story of human misery. The study will serve a worthy purpose, but I am afraid it will not mobilize the total resources of the area in such a way that hunger can be fed through the warmth of private action.

I would hope the people of my district will help us find the hungry, discover where they live, and determine what can be done to help. Specifically, I would hope the Santa Clara County Council of Churches, through its task force on hunger, the Santa Clara County Medical Society, Metropolitan San Jose, other private organizations, and the minorities, would cooperate in a study of hunger in the area. School districts could play a vital role in such a study. Finally, I would hope the press, the newspapers, radio, and television would conduct their own independent and impartial investigations of the problems of hunger.

This kind of cooperative study could reveal, not only to Government, but also to the people of the area, the extent of the problem and the solutions to it.

Governmental programs have failed in

this area of hunger. Better solutions must be found, which involve all sectors of the area and of the Nation.

The Federal Government cannot eliminate hunger, but its programs can be improved. In particular there are reforms in the food stamp program which can help, and help now.

Mr. Gillette, in pointing out the problems within Santa Clara County, said many of those eligible for the food stamp programs cannot afford to purchase the stamps:

A household of nine with a net take home pay of $491 per month and an adjusted net income of $426 a month must pay $122 for $166 worth of food coupons each month.

Expenses for the family, including house payment, utilities, medical bills, furniture payment, car payment and gasoline are $400 per month, leaving them only $91 for food, incidentals and clothing. Obviously, they cannot pay $122 each month for food stamps.

As Mr. Gillette points out, one of the major problems in the present program is that food stamps are an all or nothing proposition. The recipient must buy every stamp he is eligible for, or none.

In the Ninth Congressional District this problem is extreme. Costs are high. Rents are among the highest in the Nation, if a rental can be found. A car is a necessity, for there is no public transportation worthy of the name.

A mother and three children with no income other than welfare payments, receives in Santa Clara County $221 per month. In order to obtain adequate housing, she must pay at least $100 a month in rent—and for that amount she would be lucky to obtain a two-bedroom old apartment in a deteriorating neighborhood. A modern, unfurnished three-bedroom apartment costs at least $240 a month, a three-bedroom unfurnished house with termites and a sagging bathroom floor, $180 a month.

This mother and her children face the choice of either inadequate housing, clothing or food supply, and a possible combination of all three.

It is my belief that many of those who depend on welfare payments, or social security for sustenance, go hungry.

The legislation I am supporting will not cure this hunger, but it will help.

It changes the present all or nothing law to read:

A household may, if it so elects, purchase any amount of coupons less than the full coupon allotment it is entitled to purchase.

Mr. Gillette pointed out another inequity in the present law:

Many older persons have three to five thousand dollars in the bank as a reserve against possible illness, funeral expense or other emergencies. Because they are sorely afraid of their savings dwindling and because they don't want to end up as a burden on their loved ones, they often live on marginal incomes which do not allow adequate funds for food.

To meet this problem, the legislation I support says of the standards for eligibility:

Such standards shall also place a limitation on the resources to be allowed eligible households, but such limitations shall apply to the income, if any, realized from such resources and not to any income which might be realized through liquidation of such resources.

There are a number of other portions of the act pertinent both to my congressional district and my State.

First, it would permit the Secretary of Agriculture to use private local agencies or other governmental agencies to operate the food stamp program, when local officials, as some have in California, refuse to operate such programs.

Second, the Secretary of Agriculture would set the maximum income for participation in the food stamp program, but the States on the basis of local needs could increase that maximum income level, if necessary and if the Secretary of Agriculture approves.

Third, any household whose income is less than two-thirds of the minimum cost of purchasing a nutritionally adequate diet will receive its coupon allotment free.

At present the Agriculture Department has established the cost of a low-budget diet at about $1 per day for each member of the family, a budget of $120 a month for a family of four. Thus a family of four with an income of less than $90 would get free coupons. There are presently 5.2 million Americans in such families.

Fourth, the maximum income level for participation—eligibility to buy stamps shall be no less than three times the cost of purchasing a minimum adequate diet.

Under present standards the maximum income level for a family of four would be $360 a month.

Fifth, recipients of food stamps would be permitted to purchase products necessary for personal cleanliness, hygiene, and home sanitation.

While I believe this legislation will aid in fighting hunger in my congressional district, I do not believe it answers the basic problems.

Let me use as an example again, the mother and three children on welfare in Santa Clara County, who receive $221 per month.

On this sum she must feed, house, clothe, and provide transportation for herself and her children. I, for one, do not believe she can feed herself and her children for $120 per month, leaving $101 for rent, clothes and transportation. Adequate housing of any sort is all but unavailable. She must report any additional income she receives, on the penalty of going to jail.

In Santa Clara County a family of four cannot live today on $221 per month.

I believe this legislation will help her, and her children.

I believe we in the Ninth Congressional District must investigate and find new solutions to the problems of hunger in a place where hunger has no right to exist.

Senator McGOVERN in introducing his bill said:

Are we to believe that our nation can afford 11 trips to the moon, a new multi-billion dollar manned bomber and a dubious anti-ballistic-missile system, but that we cannot afford a penny more to feed hungry children because this would cause inflation? This is nothing less than disgraceful—the use of the threat of inflation to persuade a person who is suffering from hunger to wait a few more years for food.

I would add that we can afford napalm for Vietnam, we can even afford to feed hungry Vietnamese, but we are now told we cannot afford the money to feed hungry Americans.

A French queen once said, "Let them eat cake."

Today, we in the United States must find a better answer, or we too will lose our heads, and deservedly so, if we allow our own children to go hungry.

THE SMALL BUSINESS PROGRAM MUST HAVE HELP NOW

(Mr. SIKES was granted permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, I am deeply concerned with the plight of the small business investment program. At the direction of the President, the Bureau of the Budget has declined to release the full $30 million appropriated for the SBIC program for the current fiscal year. In fact, only $8.7 million has been released to fund SBIC loan applications of pending but not funded from the prior fiscal year, 1968. Today 45 SBIC's out of a total 350 active licensees have approved loan applications on file with SBA totaling $28.7 million. These companies are in desperate need of matching funds if they are to continue to service the financing needs of small business concerns throughout the country. What is more, the very survival of many of these SBICs is at stake. Unless the Bureau of the Budget releases the remaining $22.3 million in appropriated funds, the entire SBIC industry can be placed in jeopardy, for it will become apparent to all SBIC's that they no longer can count on SBA funds in time of need and therefore have little reason to continue in the program.

I am aware that officials at SBA and Budget Bureau as well as industry representatives have been diligently working to find alternative funds through guaranteed borrowings from the private money market. Several proposals have been advanced, but because of the rising cost of money and legal complications with other Federal agencies, none has proven feasible. Thus the only remaining alternative of maintaining these 45 SBIC's as viable financial institutions is to release the $22.3 million frozen by the Bureau of the Budget before this fiscal year expires.

The administration has stated it has not released the entire appropriation, because it must comply with title II of the Revenue and Expenditures Control Act of 1968.

Mr. Speaker, I submit that a modest reduction in the allocation of appropriated funds might be understandable, but the refusal to fund any applications filed since the beginning of this fiscal year is inconceivable for it may ultimately lead to the destruction of the only organized source of venture capital available to small business in this country. The release of the remainder of the appropriation, $22.3 million, will have a minimal impact upon the Federal budgetary picture, but it means the difference between solvency and insolvency for hundreds of small business concerns dependent upon these SBIC funds. Inaction by the Budget Bureau will also

mean the loss of several million dollars already in the program as several SBIC's awaiting funds may be forced to liquidate. I believe we could also realistically anticipate the departure of dozens of other SBIC's as it will be apparent they can no longer rely on the Federal Government to comply with its end of the bargain by supplying money when needed.

Eleven years ago Congress passed the Small Business Investment Act of 1958 which promised to match SBIC private capital with Federal funds at a ratio of of 2 to 1 up to certain maximum amounts. Thousands of individuals were induced to invest their savings, time, and effort in hundreds of SBIC's. The Federal Government must not now break its good faith ageement with these entrepreneurs and arbitrarily cut off their source of funds.

We can keep faith; we must keep faith with our private partner. It is incumbent upon the administration to release these funds immediately. No other feasible solution to the SBIC money crisis is imminent and action is needed now.

HALT DDT ADVERTISING

(Mrs. MINK asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, recently I have joined with colleagues in efforts to curb the poisoning of our environment with chemicals used as pesticides. My action stemmed from a long interest in protecting our citizens, as well as wildlife, from the dangerous effects of these substances.

Of particular urgency is the need to halt the accumulation of the chemical DDT in our environment. This poison does not dissipate in the normal processes of nature, but instead continues to collect in greater concentrations as it is used ever more widely in agriculture. The result is that we are slowly poisoning the entire world by its use.

The threatened extinction of the American bald eagle from DDT best symbolizes the ravages that this chemical is making on our environment. All of us have a common stake in stopping this race to disaster.

Although efforts to control such pollution usually meet with public apathy, it is heartening to note that some responsible groups in our society are working diligently toward a sounder policy on poisonous chemicals. One example of this was the recent action of Sunset magazine in placing an immediate ban on advertising of DDT and related chemicals.

Sunset acted only after a long, careful study of the situation. Its conclusions—concerning the danger of these chemicals to all of us—are worthy of attention by all Members of Congress as well as other concerned citizens and public bodies. This magazine's action is especially significant since it currently carries more insecticide and pest-control advertising than any other nonfarm magazine in the United States.

In addition to banning advertisements for these products, the magazine is publishing a major article urging readers to use substitute products. Some 19 acceptable products for home and garden use are listed, along with recommended methods for getting rid of present supplies of the insecticides. A revision of Sunset garden books is also planned for this fall.

Since these are positive steps that put the public interest ahead of monetary gain, I commend this magazine for its concern for the public welfare. For the benefit of my colleagues, I place an announcement of the magazine's actions at this point in the RECORD.

The announcement follows:

SUNSET MAGAZINE MOVES AGAINST DDT AND FIVE OTHER INSECTICIDES

MENLO PARK, CALIF.—*Sunset* Magazine announced this week an immediate ban on accepting advertising for products containing DDT and five other insecticides, and is revising all of its *Sunset* gardening books to recommend substitute products, according to Lane Magazine & Book Company president, L. W. (Bill) Lane, Jr.

The move came after a continuing concern and a six-month intensive study convinced the magazine's gardening staff and management that damage to wildlife and the eventual possibility of harm to humans is far too great to offset the product advantages for use in home gardens.

The announcement is especially significant in view of the fact that *Sunset* currently carries more insecticide and pest-control advertising than any other non-farm magazine in the country.

Lane also announced that the magazine will publish a comprehensive report on the subject in its August issue, listing 19 acceptable substitute products for use around the home and recommended methods for getting rid of present supplies of the insecticides. He emphasized that many of the substitute products have been included in recent and all current printings of *Sunset* publications. The magazine's ban on product advertising goes into effect with the same August issue, which is the first issue going to press following the announcement.

Sunset's garden editor Joseph F. Williamson said that research and checking with all responsible authorities convinces him that the new restrictions imposed by the California Department of Agriculture are a step in the right direction, but that more controls are needed.

Sunset's decision not to accept advertising precedes the January 1, 1970, ban ordered by the State of California directive on only two insecticides—DDT and DDD.

Three other states—Arizona, Wisconsin, and Michigan—have passed or proposed legislation to control the use of DDT and related chemicals.

The *Sunset* article will also recommend that four other insecticides immediately be taken off the market for home gardening—aldrin, dieldrin, endrin, and toxaphene. They are also included in the ingredients not acceptable for *Sunset* advertising. Williamson explains that the major problem with these stems from what scientists call "nondegradability." Other kinds of insecticides "break down" or change into harmless substances within hours or days after application. These retain their chemical potency, wherever nature may take them, for years after application.

Williamson reports that manufacturers are actively cooperating in the drive to market substitute products that offer the benefits of insect control without the hazards of DDT and its related compounds. Some have voluntarily eliminated DDT products from their lines. Nevertheless, according to a *Sunset* survey of retail outlets, it still is currently contained in 35 products in the Western garden supply market.

Scientists report that certain forms of wildlife (California brown pelicans, peregrine falcons, bald eagles, and Dungeness crabs, to name a few) have taken enough DDT into their systems to make many adults no longer capable of reproducing, thus threatening their species with extinction.

Lane noted that not accepting certain categories of advertising is not new to *Sunset*. The publication, with a circulation of close to one million in Western America, has a long list of products that it does not accept in its advertising pages. "In the case of tobacco and hard liquor, we dropped advertising of such products 25 years ago," Lane said, "not because we set ourselves up as crusaders, but because we felt they didn't fit in the atmosphere of our family-oriented magazine. But in the case of insecticides, our readers expect us to be authorities; we can't very well accept advertising for products we would not endorse or recommend in our editorial pages."

In addition to publishing *Sunset* Magazine, the company is a major book publisher. Melvin B. Lane, publisher of *Sunset* Books, reports that revisions already are being made on all of the firm's garden books to conform with the new findings on insecticides.

A VOTE AGAINST H.R. 7906

(Mrs. MINK asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, I voted against H.R. 7906, a bill to impose Federal regulation on State and local taxation of commerce.

While unfair burdens are undoubtedly being placed on such trade by the States, the evidence indicates that the States are speedily moving to correct these difficulties by themselves. In my own State of Hawaii, for example, the legislature in 1967 enacted the Uniform Division of Net Income for Tax Purposes Act which was a uniform law proposed by the National Conference of Commissioners on Uniform State Laws.

In 1967 the Hawaii Legislature also passed a law preventing "double taxation" on the same sales transaction if completed on an interstate basis. Under this law, Hawaii gives credit to sales or use taxes paid to another State or local government.

Also, many States are adopting the multistate tax compact which seeks to redress the same ills which are the subject of this bill. I feel that the States should be given further opportunity to solve these problems before Federal regulation takes place.

The Honorable John A. Burns, Governor of Hawaii, opposed H.R. 7906 because it would result in a loss of revenue to the State and would place intrastate businesses at a substantial competitive disadvantage with interstate firms.

Governor Burns said:

The provisions of the Multistate Tax Compact already provide a better method of resolving multistate problems of taxation.

This bill has been before Congress in various forms for quite a few years. As originally proposed, it drew criticism from some Members of this body as being directed against small business. Subsequently it has been "toned down," and the committee report on H.R. 7906 assures us that the measure will help end the multiple taxation fears of small- and medium-sized businesses.

I hope that this is true, if the bill is enacted. Yet it is difficult to see how re-

moving taxes on transactions by a firm located in another State will fail to harm small businesses operating in only one State. These small firms have difficulty now in meeting the competition from "outside," and if a tax "break" is given to interstate firms then they will have a further advantage over local business.

While the bill excludes corporations with more than $1 million in average annual sales from the proposed limits on State income taxes, I further hope that this will not work to the advantage of big concerns which are segmented into small units. Who reaps the profits from reduced State revenues that are contemplated?

In view of these dangers, I feel that the benefits of H.R. 7906 are outweighed by its drawbacks.

THE WALL STREET JOURNAL DESCRIBES HOW A BILL IS MARKED UP

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, this morning, the Banking and Currency Committee reported out a bill in the general subject area of one-bank holding companies.

Many people, both inside and outside of the Congress, have asked what happened on this legislation during an open markup session, Thursday, when the critical votes were taken.

Mr. Speaker, the Wall Street Journal of this morning, Friday, June 27, carries a lengthy article which accurately reflects what happened.

Mr. Speaker, for those interested in the activities of the Banking and Currency Committee, I place this article in the RECORD:

[From the Wall Street Journal, June 27, 1969]

BANKING INDUSTRY SCORES IN HOUSE PANEL AS EASIER ONE-BANK HOLDING BILL ADVANCES

WASHINGTON.—The banking industry won a major victory in an embittered House committee on legislation to extend Federal regulation to holding companies controlling one bank apiece.

With the help of five Southern Democrats, Republicans on the House Banking Committee gained tentative approval for a measure that would regulate the one-bank holding companies more loosely than a rival bill backed by Chairman Patman (D., Texas) and the committee's Democratic majority.

The key effect would be to specify that affiliates acquired by one-bank holding companies before last Feb. 17 won't be affected by the new regulatory statute being drafted.

That date is much more recent than any that was thought to be under serious consideration. The Nixon Administration had suggested a June 30, 1968, cutoff date, and until yesterday morning that was the date contained in the bill sponsored by committee Republicans.

The Patman measure contained no such "grandfather clause." Instead, it would require one-bank holding companies to divest themselves of affiliates that the Federal Reserve Board deemed insufficiently related to banking.

The decision stunned and angered several committee Democrats, who maintained that such a recent cut-off date will make almost meaningless any one-bank holding company bill Congress eventually passes.

They argued that the main purpose of the holding-company bill being drafted is to extend regulation to the many big banks that in the past year or so have become one-bank holding companies in order to enjoy unregulated diversification. The Feb. 17 cutoff date would exempt most of these companies' acquisitions from regulation.

Currently, only the banking subsidiaries of one-bank companies are Federally regulated; the holding companies themselves are free to acquire other businesses far afield from banking. In contrast, holding companies controlling two or more banks are tightly regulated by the Federal Reserve Board under a 1956 law.

"I don't mean this in any personal way," Chairman Patman told the committee as it prepared to vote, "But this (Feb. 17) date is a disgrace. It is a disgrace which will haunt this committee forevermore. . . ."

Mr. Patman noted that in four weeks of hearings the only witness who testified in support of the Feb. 17 cut-off date was Nat S. Rogers, vice president of the American Bankers Association.

In response, Rep. Widnall of New Jersey, the committee's senior Republican and the sponsor of the adopted measure, said Feb. 17 was picked because it was the date the first one-bank holding company bill was introduced in the current Congress and thus "was the first time companies were put on notice there probably would be legislation in this area."

The Widnall substitute bill also specifies that one-bank holding companies would be allowed to acquire only those affiliates that the Reserve Board had determined to be "functionally related to banking."

The Patman measure uses the phrase "closely related to banking," and then lists various activities bank holding-company affiliates could engage in.

A Patman aide said substitution of "functionally related" for "closely related" might result in a new series of administrative interpretations to replace the Reserve Board's past rulings regarding the "closely related" standard in the 1956 law regulating multibank holding companies.

The dramatic 20-to-15 roll-call vote was taken in an extraordinary public session, as the press and a roomful of lobbyists watched. "We had $70 billion of assets in this room today," a committee aide remarked after the vote.

In urging its defeat, Mr. Patman called the Widnall substitute the "S&H Green Stamp amendment," because Sperry & Hutchinson Co., one of many concerns that would benefit from its passage, reportedly has been intensely lobbying the committee.

Outside the hearing room following the vote, Robert Oliver, a Washington lobbyist who said he represents Sperry & Hutchinson, commented that he hadn't been surprised by the outcome. "I knew we had anwhere from 19 to 23 votes," he remarked.

Mr. Oliver said that if the Patman measure had prevailed through final Congressional passage, Sperry & Hutchinson would have been required to divest itself of State National Bank of Connecticut, which he said it acquired last September.

Adoption of the Widnall measure isn't the committee's final action, but it appears unlikely the decision will be reversed before the committee sends the bill to the House floor.

Chairman Patman said in an interview he intends to do all he can to strengthen the bill before it's sent to the Senate, where hearings haven't begun on the bank-holding company issue.

Rep. Brasco (D, N.Y.) said he may offer a floor amendment to delete the Feb. 17 cut-off date. "If we accept this grandfather clause," he commented before the vote, "we might as well forget the legislation. If we're going to lock all these people in, then we're just wasting our time here."

In his statement, Mr. Patman made his first, albeit indirect, reference to the conflict-of-interest problem existing in the committee because of the ownership of bank stock by several members.

"Every member is well aware of the criticism that has appeared in the public print about this committee," he said before the vote. "I have steadfastly refused to discuss this criticism and to do anything to add fuel to the fire. But this committee is being watched for its actions on bank legislation. I hope nothing that we do here today will add to the criticism."

This was an apparent reference to newspaper accounts, based on Representatives' filings with the House Ethics Committee recently, that showed several Banking Committee members own stock in banks.

The Banking Committee, as well as the House generally, operates under a rule prohibiting a member from voting on an issue if "he has a direct personal or pecuniary interest in the event of such question." All members of the committee voted yesterday, and Rep. Patman conceded in an interview it thus would appear that some members had violated the committee's rules.

He said, however, that the committee would have to hold "an investigation" to determine whether that was true, and that he didn't intend to call such an inquiry. "That's difficult for me to do," he explained, "because I'm the chairman of this committee and I try to work with these fellows. We have other legislation coming up besides this."

The conflict-of-interest question within his committee is believed to be a source of considerable embarrassment to the chairman, who has mounted a one-man crusade in recent months to force Treasury Secretary Kennedy to sever his ties with the Chicago Bank he once headed if he's to remain in the Cabinet.

The five Democrats who joined the committee's 15 Republicans in support of the Widnall amendment were Reps. Stevens of Georgia, Gettys of South Carolina, Galifianakis of North Carolina, Bevill of Alabama, and Griffin of Mississippi.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. CAHILL (at the request of Mr. GERALD R. FORD) for today, on account of critical family illness.

Mr. CHARLES H. WILSON (at the request of Mr. BOGGS) for today, on account of official business.

Mr. MESKILL (at the request of Mr. GERALD R. FORD), for today, on account of official business.

Mr. HICKS (at the request of Mr. FOLEY), for June 27, on account of official business.

Mr. GOODLING (at the request of Mr. GERALD R. FORD) for the week of June 30, on account of official business.

Mr. MCEWEN (at the request of Mr. GERALD R. FORD), for today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. HALPERN (at the request of Mr. SEBELIUS), for 10 minutes, today, and to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. STOKES) and to revise and extend their remarks and include extraneous matter:)

Mr. McCARTHY, for 30 minutes, today.
Mr. GONZALEZ, for 10 minutes, today.
Mr. RARICK, for 10 minutes, today.
Mr. TUNNEY, for 15 minutes, on June 30.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MADDEN to extend remarks made on House Resolution 455 and include a statement he made before the Ways and Means Committee.

(The following Members (at the request of Mr. SEBELIUS) and to include extraneous matter:)

Mr. ZWACH.
Mr. CLEVELAND in two instances.
Mr. COUGHLIN in two instances.
Mr. SMITH of New York.
Mr. LANGEN.
Mr. SCHWENGEL.
Mrs. HECKLER of Massachusetts.
Mr. McCLURE.
Mr. BROOMFIELD.
Mr. BLACKBURN.
Mr. HOGAN in three instances.
Mr. O'KONSKI.

(The following Members (at the request of Mr. STOKES) and to include extraneous matter:)

Mr. LONG of Maryland in two instances.
Mr. BOLLING in two instances.
Mr. BLATNIK in three instances.
Mrs. HANSEN of Washington.
Mr. ALEXANDER in two instances.
Mr. DANIEL of Virginia.
Mr. MINISH.
Mr. VANIK in two instances.
Mr. NIX.
Mr. POWELL in three instances.
Mr. BROWN of California in two instances.
Mr. WOLFF.
Mr. HOWARD in two instances.
Mr. RARICK in four instances.
Mr. DIGGS.
Mr. EILBERG.
Mr. STOKES in six instances.
Mr. KOCH in four instances.
Mr. GONZALEZ in two instances.
Mr. PICKLE in three instances.
Mr. RYAN in two instances.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 621. An act to provide for the establishment of the Apostle Islands National Lakeshore in the State of Wisconsin, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 1076. An act to establish a pilot program in the Departments of the Interior and Agriculture designated as the Youth Conservation Corps, and for other purposes; to the Committee on Education and Labor.

S. 1708. An act to amend title I of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), and for other purposes; to the Committee on Interior and Insular Affairs.

S. 1932. An act for the relief of Arthur Rike; to the Committee on the Judiciary.

ENROLLED BILLS SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 265. An act to amend section 502 of the Merchant Marine Act, 1936, relating to construction-differential subsidies; and

H.R. 4229. An act to continue for a temporary period the existing suspension of duty on heptanoic acid, and to continue for 1 month the existing rates of withholding of income tax.

JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on June 26, 1969, present to the President, for his approval, a joint resolution of the House of the following title:

H.J. Res. 790. Joint resolution making continuing appropriations for the fiscal year 1970, and for other purposes.

ADJOURNMENT

Mr. STOKES. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 21 minutes p.m.), under its previous order, the House adjourned until Monday, June 30, 1969, at 12 o'clock noon.

OATH OF OFFICE

The oath of office required by the sixth article of the Constitution of the United States, and as provided by section 2 of the act of May 13, 1884 (23 Stat. 22), to be administered to Members and Delegates of the House of Representatives, the text of which is carried in section 1757 of title XIX of the Revised Statutes of the United States and being as follows:

"I A B, do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God."

has been subscribed to in person and filed in duplicate with the Clerk of the House of Representatives by the following Member of the 91st Congress, pursuant to Public Law 412 of the 80th Congress entitled "An act to amend section 30 of the Revised Statutes of the United States" (U.S.C., title 2, sec. 25), approved February 18, 1948: JOHN MELCHER, Second District, Montana.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

893. A letter from the Acting Director, Bureau of the Budget, Executive Office of the President, transmitting several plans for works of improvement prepared under the Watershed Protection and Flood Prevention Act, as amended, none of which involves a structure which provides more than 4,000 acre-feet of total capacity, pursuant to the provisions of the act (16 U.S.C. 1005); to the Committee on Agriculture.

894. A letter from the Assistant Administrator, Agency for International Development, Department of State, transmitting a copy of the semiannual report on architectural and engineering fees in excees of $25,000, for the period of July 1–December 31, 1968, pursuant to the provisions of section 102 of the Foreign Assistance and Related Agencies Appropriation Act; to the Committee on Appropriations.

895. A letter from the general counsel, National Council on Radiation Protection and Measurements, transmitting a report on the examination of the accounts of the council as of December 31, 1968, pursuant to the provisions of section 14(b) of Public Law 88–376; to the Committee on the Judiciary.

896. A letter from the Acting Director, Bureau of the Budget, Executive Office of the President, transmitting several plans for works of improvement prepared under the Watershed Protection and Flood Prevention Act, as amended, each of which involves at least one structure which provides more than 4,000 acre-feet of total capacity, pursuant to the provisions of the act (16 U.S.C. 1005); to the Committee on Public Works.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. PATMAN: Committee on Banking and Currency. H.R. 2. A bill to amend the Federal Credit Union Act so as to provide for an independent Federal agency for the supervision of federally chartered credit unions, and for other purposes (Rept. No. 91–331). Referred to the Committee of the Whole House on the State of the Union.

Mr. PATMAN: Committee on Banking and Currency. House Joint Resolution 780. Joint resolution to provide for a temporary extension of the authority conferred by the Export Control Act of 1949 (Rept. No. 91–332). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of California:

H.R. 12468. A bill to amend title 38, United States Code, to provide for the payment of pensions to veterans of World War I; to the Committee on Veterans' Affairs.

By Mr. BETTS:

H.R. 12469. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

H.R. 12470. A bill relating to the deduction for income tax purposes of contributions to certain organizations for judicial reform; to the Committee on Ways and Means.

By Mr. BROYHILL of North Carolina:

H.R. 12471. A bill to amend chapter 44 of title 18, United States Code, to exempt ammunition from Federal regulation under the Gun Control Act of 1968; to the Committee on the Judiciary.

By Mr. CHAMBERLAIN:

H.R. 12472. A bill to require the licensing by the States or the Federal Government of operators of certain vessels on navigable waters of the United States; to the Committee on Merchant Marine and Fisheries.

By Mr. CORMAN (for himself, Mr. BURKE of Massachusetts, Mr. BENNETT, Mr. ST GERMAIN, Mr. TIERNAN, Mr. ST. ONGE, Mr. O'NEILL of Massa-

chusetts, Mr. BOLAND, Mr. ROGERS of Colorado, Mr. MIKVA, Mr. VANIK, Mr. MESKILL, Mr. WEICKER, Mr. EDWARDS of California, Mr. HAWKINS, Mr. HATHAWAY, Mr. CLAY, Mr. ANDERSON of California, Mr. FASCELL, Mr. FUQUA, Mr. SYMINGTON, Mr. KYROS, Mr. BROWN of California, and Mr. WALDIE):

H.R. 12473. A bill to permit State agreements for coverage under the hospital insurance program for the aged; to the Committee on Ways and Means.

By Mr. DERWINSKI:

H.R. 12474. A bill to amend the Communications Act of 1934 so as to prohibit the granting of authority to broadcast pay television programs; to the Committee on Interstate and Foreign Commerce.

By Mr. DINGELL:

H.R. 12475. A bill to revise and clarify the Federal Aid in Wildlife Restoration Act and the Federal Aid in Fish Restoration Act, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. DULSKI (for himself and Mr. CORBETT):

H.R. 12476. A bill to amend title 5, United States Code, to provide for additional positions in grades GS–16, GS–17, and GS–18; to the Committee on Post Office and Civil Service.

By Mr. FRIEDEL:

H.R. 12477. A bill to promote public health and welfare by expanding, improving, and better coordinating the family planning services and population research activities of the Federal Government, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HOWARD:

H.R. 12478. A bill to amend the Communications Act of 1934 to prohibit the granting of authority by the Federal Communications Commission for the broadcast of pay television programs; to the Committee on Interstate and Foreign Commerce.

By Mr. KAZEN:

H.R. 12479. A bill to amend the Submerged Lands Act to establish the coastline of certain States as being, for the purposes of that act, the coastline as it existed at the time of entrance into the Union; to the Committee on the Judiciary.

By Mr. McCLORY:

H.R. 12480. A bill to amend the act entitled "An act to provide for the establishment of the Frederick Douglass home as a part of the park system in the National Capital, and for other purposes," approved September 5, 1962; to the Committee on Interior and Insular Affairs.

By Mr. MICHEL:

H.R. 12481. A bill to adjust agricultural production, to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

By Mr. O'KONSKI:

H.R. 12482. A bill to provide for the conveyance of certain mineral rights in and under lands in Dunn County, Wis.; to the Committee on Interior and Insular Affairs.

H.R. 12483. A bill to amend the act of August 13, 1946, relating to Federal participation in the cost of protecting the shores of the United States, its territories, and possessions, to include privately owned property; to the Committee on Public Works.

By Mr. OLSEN:

H.R. 12484. A bill to establish certain rights of professional employees in public schools operating under the laws of any of the several States or any territory or possession of the United States, to phohibit practices which are inimical to the welfare of such public schools, and to provide for the orderly and peaceful resolution of disputes concerning terms and conditions of professional service and other matters of mutual concern; to the Committee on Education and Labor.

By Mr. PODELL:

H.R. 12485. A bill to provide improved judicial machinery for the selection of juries, to further promote equal employment opportunities of American workers, to authorize appropriations for the Civil Rights Commission, to extend the Voting Rights Act of 1965 with respect to the discriminatory use of tests and devices, and for other purposes; to the Committee on the Judiciary.

By Mr. QUILLEN:

H.R. 12486. A bill to exempt a member of the Armed Forces from service in a combat zone when such member is the only son of a family, and for other purposes; to the Committee on Armed Services.

H.R. 12487. A bill to amend title 10 of the United States Code to prohibit the assignment of a member of an armed force to combat area duty if certain relatives of such member died or became totally disabled while serving in the Armed Forces in Vietnam; to the Committee on Armed Services.

By Mr. SCOTT:

H.R. 12488. A bill to restrict the mailing of credit cards; to the Committee on the Judiciary.

H.R. 12489. A bill to reform and modernize the Post Office Department, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. SHRIVER:

H.R. 12490. A bill to establish fee programs for entrance to and use of areas administered for outdoor recreation and related purposes by the Secretary of the Interior and the Secretary of Agriculture, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. WALDIE:

H.R. 12491. A bill to supplement the antitrust laws of the United States by providing for fair competitive practices in the termination of franchise agreements; to the Committee on the Judiciary.

H.R. 12492. A bill to amend the Tariff Schedules of the United States to permit the duty-free entry of certain personal effects of servicemen assigned to combat areas; to the Committee on Ways and Means.

By Mr. ZWACH:

H.R. 12493. A bill to amend the Atomic Energy Act of 1954 to permit a State, under its agreement with the Atomic Energy Commission for the control of radiation hazards, to impose standards (including standards regulating the discharge of radioactive waste materials from nuclear facilities) which are more restrictive than the corresponding standards imposed by the Commission; to the Joint Committee on Atomic Energy.

By Mr. COLLIER:

H.J. Res. 799. Joint resolution to provide for the issuance of a special postage stamp in commemoration of Gen. Douglas MacArthur; to the Committee on Post Office and Civil Service.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 12494. A bill for the relief of Francesco and Orsola Miceli and minor son, Vito Miceli; to the Committee on the Judiciary.

By Mr. BARRETT:

H.R. 12495. A bill for the relief of Annibale Cuozzo; to the Committee on the Judiciary.

By Mr. BIAGGI:

H.R. 12496. A bill for the relief of Polberto Obias Baranuelo; to the Committee on the Judiciary.

By Mr. GOODLING:

H.R. 12497. A bill for the purposes of the Immigration and Nationality Act and in the interest of Mrs. Kathleen Alice Heinze; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

157. By the SPEAKER: Petition of Roger Sherman Bandy, Decatur, Ill., relative to redress of grievances; to the Committee on the Judiciary.

158. Also petition of Geraldine M. Vickers, Lawndale, Calif., relative to redress of grievances; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

AMERICA'S HERITAGE OF FREEDOM

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. ALEXANDER. Mr. Speaker, a constituent from the First Congressional District of Arkansas recently sat down to record his ideas on "America's Heritage of Freedom." The resulting article on the price and responsibilities of freedom is worth the serious consideration of all of us as we approach the 193d birthday of our Nation.

The article, written by Mr. Rudy Thomas of Caraway, Ark., was printed in the local newspaper in Caraway. I commend it to the attention of each of my colleagues and include it in the RECORD at this point:

AMERICA'S HERITAGE OF FREEDOM

(By Rudy Thomas)

Another Glorious Fourth of July is just around the corner. It is a day remembered and celebrated as the birthday of our nation. Come next July 4th our nation will be 193 years old. This may sound as if ours is a very old nation, but quite the contrary, it is still a relatively young nation.

As we pause from our daily routine of life to once again celebrate our national birthday let us examine in all candor some of the basic elements that have made our America the greatest nation in the world today. Freedom as men know it under American government is indeed new. It has come to us only after men struggled for centuries to exercise their rights to be free, to throw off the fetters of tradition. Throughout most of the world's history men have lived their daily lives under rigid rules.

From birth to death primitive people obeyed tribal custom and taboos. As civilization arose, despot kings held the power of life and death over their subjects. In the middle ages merchants gained some business rights, but the poor peasant remained in bondage to his feudal lord. The turning point in these deplorable social conditions seems to have been steered by the hand of God. The spread of Christianity began to undermine the ancient idea that men were

merely servants of the state. Christianity preached "the importance and dignity of the individual", that a man had reason and a conscience and so the right to live his own life. Then the bold discovery of our continent opened new chances to break bonds. Our precious forefathers in due time quit the Old World for a fresh new world where they could nurture the seeds of freedom. To do this they had to conquer a wilderness, fight some six years of Revolution, and build their own nation on a raw continent. That is what they did earn freedom, to earn the chance to think and act for themselves and enjoy the fruits of their own labor and risks. The history of the Colonial and Revolutionary days show how dearly they paid for it. Our American forefathers knew how hard freedom was to earn. They were not going to take it lightly. To safeguard it they created a new kind of government. They wrote the constitution of the United States with the Bill of Rights—the first government in history to serve, not the state, but the people. Now that they were free they knew they could work out their own destiny. Their tools were courage, work and risk—the tools of free men.

This then is basically our American precious heritage of freedom. If it be just, if it be righteous, if it be Godly, let us all in America think on these things as we approach another glorious 4th and give due thanks to men of each generation who have been willing to pay the price to sustain such a noble heritage.

Now just a word about the future in our land of the free and the home of the brave. If we are to have and to hold our national honor we of this generation must assume serious responsibilities based upon high and noble character. Freedom is a hard-won prize. We have to work to keep it. Let a people become indifferent or greedy and that people is in danger of losing freedom. Freedom demands responsibility. It demands courage and hard work. It demands knowledge, thinking. It does not promise equal gains for all. It does however, promise equal rights, equal risks. Individual freedom is ours only as long as we earn it. The work starts in our own actions and behavior. We can keep freedom by respecting the rights of others—family, neighbors, community, and minority groups in race, religion and politics.

In conclusion, let us challenge the youth of our land to position your life, based on courage and character to hold these elements of freedom ever so high where it can be said by all generations of Americans to follow—you have passed to us the torch of freedom inherited from the glorious men of yesteryear.

Now that you have read these facts concerning our heritage of freedom please go out to your favorite picnic come July 4th and help celebrate one of the greatest days ever known to man.

SURTAX IN DANGER

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. HOWARD. Mr. Speaker, as a strong supporter of tax reform, I am quite naturally deeply disappointed with the income tax surcharge bill which is scheduled to come to the floor of the House for a vote on Monday.

Last year we were told that if we approved the 10-percent income tax surcharge as proposed by then President Johnson, we would get tax reform. Some of us, including myself, refused to merely listen to promises and demanded performance. We did not get it and refused to support the tax proposal. A year later we are again being asked to vote favorably on the income tax surcharge and again we are hearing promises about tax reform.

Mr. Speaker, the time for tax reform is now. If we are to pass a tax bill at all, it should be coupled with meaningful tax reform, particularly the tax-giveaway, 27½-percent oil depletion allowance.

To those who are hinting that we will get tax reform in return for passage of the income tax surcharge proposal on Monday, I ask you to commit yourselves now—before the tax vote on Monday—on the following question: "Are you prepared to vote in favor of the elimination or at least a drastic reduction of the 27½-percent oil and gas depletion allowance?"

Those who cannot answer with a loud yes, should not be asking anyone else to vote in favor of the income tax surcharge on Monday.

Possibly those of us who have fought for tax reform have been taken for granted too long. Possibly there are those who feel that we can be bought off by the insignificant proposal contained in the tax bill which covers the working poor. I assure them that they are wrong.

This morning's New York Times contains a very interesting editorial in relation to the current controversy over tax reform. I hasten to add that the New York Times supports the tax proposal as a way of throwing water on the fires of inflation. Nevertheless, its remarks about tax reform should be of great interest to everyone concerned with tax reform.

At this point in the RECORD, I place the Times editorial:

SURTAX IN DANGER

Prospects for extension of the 10 per cent income tax surcharge all by itself are not very bright.

The Democratic leadership in the House, fearful that their party would be tarred with the brush of "fiscal irresponsibility" have now scheduled a Monday vote on the Administration's bill, a measure conspicuous for its failure to embody substantive reforms. But if despite strong liberal opposition the bill is approved, an even taller hurdle will be encountered in the Senate, where the Majority Policy Committee has adopted a resolution rightly insisting "that meaningful tax reform should be passed simultaneously" with the surtax. Thus, as a consequence of the Administration's unwise decision to abandon tax reform, the surtax itself is in serious danger which means that business uncertainty and the likelihood of disturbances in the financial markets will be greatly increased.

The Nixon Administration and the Democratic House leadership made a serious miscalculation when they thought that the proponents of genuine tax reform could be appeased by an ineffectual provision to lighten the tax burden on the working poor. They failed to reckon with a new fact of political life.

Americans, with a splendid record for voluntary compliance in matters of taxation, bitterly resent the notorious loopholes in the revenue code that permit the wealthy to avoid taxes altogether or to pay far less than is warranted by their incomes. That resentment will subside only when there is genuine progress in reducing the 27.5 per cent oil depletion allowance, nailing down such escape hatches as make it possible to avoid all capital gains taxes on bequeathed assets, and eliminating the tax exemption on bond issues of state and local governments.

In the absence of reduction in expenditures, which would be a more effective means of dampening inflation, the surtax is needed to avoid a budgetary deficit and return to an inflationary monetary policy But the Administration should by now be reconciled to the fact that it cannot get the surtax extension without pressing for genuine tax reforms.

If the Administration bill is defeated on Monday, the House can follow the Senate precedent and temporarily extend the tax. If it passes, another battle will begin in the Senate. The blot created by the gaping tax loopholes can no longer be easily expunged from the conscience of the Congress.

INTELLECTUAL EXHIBITIONISM IN EDUCATION IS DEPLORED

HON. R. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. COUGHLIN. Mr. Speaker, as one of 22 Congressmen who visited college campuses last month to learn the causes of student unrest, I am most concerned with the course our universities take in preparing students to assume leadership in years to come.

I understand student desire to hear all points of view. I agree with student concern for better communication with college administrations, more voice in relevant curriculum and campus affairs, community problems such as housing, and national problems such as economic injustice.

Some colleges, however, are busily misinterpreting the valid student concerns into the terms demanded by a small minority of highly trained revolutionaries.

In my congressional district, Bryn Mawr College recently disclosed that it has retained as a visiting lecturer Dr. Herbert Aptheker, admitted Communist and Communist Party functionary, described as the leading theoretician of the Communist Party in this country.

When I learned of the appointment, I expressed my disagreement with the necessity and the wisdom of appointing a doctrinaire lecturer. The final decision as to whether or not Bryn Mawr should, in fact, retain Dr. Aptheker rests with the trustees, administration, students and faculty, and, perhaps, the alumnae who contribute and parents who pay tuition to send their daughters there.

I am weary of the cries of academic freedom as a cloak to cover any act that draws criticism. I am particularly disturbed at what appears to be a growing intellectual exhibitionism that institutions must outdo their peers in catering to demands for Marxism to the neglect of a system that has produced more things for more people than any society mankind has ever known.

It is a question of balance.

Just as I would protest a plethora of campus lecturers expounding authoritarian, racist, or Fascist theory, I as vehemently protest the parade of Marxist and revolutionary teachers onto our

campuses to "instruct" the students. I can hear the anguished screams from the academic community if colleges were to hire Democrats to espouse the theories of the Democratic Party and Republicans to promote the theories of the Republican Party.

This question of balance is critical. On many of our college campuses young men are being denied the opportunity to take ROTC even as an elective course in an attempt to cater to the demands of some students.

Yet, in direct contradiction to the elimination of ROTC, the institution will put "culture" courses into the curriculum and hire new instructors. This lack of balance can, in the long run, only hurt the education of a majority of students—black and white—who must learn also on the college campuses that life in an orderly society does not permit only your indulgences, but allows others equal opportunity.

I insert for the CONGRESSIONAL RECORD this editorial of June 19, 1969, from the Main Line Chronicle, published in Ardmore, Pa., which says some things that have to be said:

EDUCATION OR INDOCTRINATION?

Bryn Mawr College is a free-loading guest in the community. It pays no taxes but shares our municipal services. If the college administration assumes that the community will accept academic arrogance as academic freedom, it had better be set straight.

It has become increasingly noticeable of late that the college has lowered its standards and is going in more for indoctrination than higher education. You see it in the product.

None of the faculty will admit he is a Communist—which is, by the way, a libelous word, unless party membership can be documented. But too many members of the faculty are Marxist in effect and, as we have often said, equals to the same or equal things are equal to each other.

We have had to live with this, and there is nothing the Township can do but to accept the fact that we are playing host to an institution that is corrupting the minds of young people and working with the enemies of our government.

The administration now feels bold enough to appoint one of the leading Communist Party activists to its lecturing staff. This is an affront to the community, and to the alumnae of Bryn Mawr College as well.

The real significance of the appointment is what this means to the Red Party. Dr. Herbert Aptheker, the appointee, expressed it in the following words: "It is thrilling, with wide national significance for the Communist Party." And noting that the request for his appointment was made by black and white militants, he added: "It also reflects something of what the student movement is all about, which many people have failed to understand."

The meaning we are to take from this is that the "student movement" is aiming for a Communist takeover. Non-Communists have been saying that all along.

Dr. Aptheker's life has been devoted to the spread of Communism by indoctrination of students. He is a member of the party's National Committee and a director of the American Institute for Marxist Studies.

He successfully indoctrinated his own daughter, who, with Mario Savio, started all the trouble at Berkeley.

The Fedreal Bureau of Investigation has a whole dossier on the man, going back more than 30 years.

His call to Bryn Mawr must not be taken lightly. It has given his whole party a lift, and its members are saying that it now puts them on a level of acceptance with the Republican and Democratic parties.

Residents of the community should let the college administration know what they think of this affront, this show of contempt for decent American opinion.

Resentment should be shown, first of all, by the alumnae, either by voice or—what is more expressive—by holding back on gifts.

Alumnae tell us that when they are solicited for gifts and when they mention with dismay the pink hue the college has acquired, they are told: "Oh, yes, but this can be changed by continued loyalty." Oh, yes? The appointment of Dr. Aptheker proves that the administration values what transient black commies want above what the public thinks of the college.

They may go in for "intellectualism" at Bryn Mawr, but they don't show much intelligence.

POWELL MAY "JUST TRY TO BE REASONABLE" WITH THE HOUSE

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. DIGGS. Mr. Speaker, the historic decision rendered June 16 by the U.S. Supreme Court in the case of Congressman ADAM CLAYTON POWELL is a subject of broad interest to Members of Congress and the general public. In addition to the resolution, House Resolution 443, which I introduced June 19, 1969, proposing to restore the pay, allowances, and seniority now declared unconstitutionally taken away from him during the 90th Congress—1967–68—a delineation of his further legal options is also worthy of sober and objective reflection. It was thoughtful of the distinguished gentleman from Colorado (Mr. ROGERS) to submit the majority opinion rendered by Chief Justice Warren, additional views by Justice Douglas, and the dissent by Justice Stewart in the RECORD, June 25, pages 17326 to 17342. I would like to add the following which is an excellent article by William Greider, staff writer for the Washington Post, outlining Congressman POWELL'S current legal position:

POWELL MAY "JUST TRY TO BE REASONABLE" WITH THE HOUSE

(By William Greider)

According to those who counseled with him in Bimini in his hour of triumph, Rep. Adam Clayton Powell genuinely seeks accommodation with his old brethren in the House of Representatives, the men who tossed him out. He would like to settle matters, not entirely on his own terms, but in a way that would avoid a nasty confrontation between the House and the Federal courts.

This present mood is subject to change without notice, of course. It is certainly out of character with the flamboyant man everyone remembers, whose defiance led to his exile from Congress. But that is how he is said to feel as of now.

Judging from the current sentiments among his colleagues, it seems unlikely that the House will be willing to settle the dispute quietly with a little something for Adam like back pay or seniority.

Aside from the political benefits of attacking him, there is a special feeling toward the Harlem Congressman, even among some of the liberals who supported him. It is a personal animosity which they do not direct at other committee chairmen who have taken their secretaries on trips around the world or put their wives on the payroll at the taxpayers' expense.

They regard him as an unreformed scoundrel. More important, he has been an indiscreet scoundrel, continually calling the public's attention to congressional practices they all know exist. The other day, a Texas Congressman introduced a resolution to begin a counter-claim to recover the money Powell allegedly misappropriated in his days as chairman of the Education and Labor Committee. That would seem just to the public and it might seem just to Powell if the same standard were applied to all chairmen.

The Supreme Court decision which declared the House exclusion of Powell unconstitutional has put him in a position where at last he has a little leverage in the matter. He can offer the House something which most members undoubtedly want—a chance to avoid an embarrassing showdown between the Federal court and its co-equal, the Congress. No one can predict precisely how this confrontation of powers might unfold, but nearly everyone agrees that it would not enhance either institution.

For Powell the situation poses a delicious irony—the possibility that the House might be placed in the position of defying a court order. Even if Powell never collected a penny in back pay that would be a poetic turnabout. For the central element in the indictment against him was his defiance of a contempt order in a New York State court. As one of his supporters said, "It's just like they all say—it's a simple problem of law and order."

A lot must happen before the case gets that far. In his low-keyed press conference in Bimini Powell said he would meet first with the House leadership and the implication was that he would explore the possibilities of avoiding the clash.

Here is the legal situation from the challenger's position: Powell could seek a declaration from the District Court that the original House resolution on March 1, 1967, which excluded him was void. By amending his suit, he could easily apply the Supreme Court's reasoning to argue that a second House resolution, adopted Jan. 3 of this year, was also unconstitutional because it allowed him to be seated with conditions. The court held that the House doesn't have the power to keep a member from being sworn in if he meets the three constitutional qualifications—if he's a citizen, a resident and old enough. (That doesn't prevent the House from punishing him or expelling him afterward.) Powell's lawyers could argue that the House was again adding to the constitutional qualifications this year when it required a $25,000 fine and a loss of any seniority status as conditions for Powell's readmission.

If Powell won a court declaration that both of these resolutions were illegal, it would do two things for him. First, he could then argue for a court order (directed at the House staff officers, not its elected members) to recover $55,000 in lost pay, not to mention the $25,000 fine which they have been deducting from his paychecks. More important to Powell, he could then argue among his colleagues that his House seniority of 24 years was, in effect, restored.

Though many have forgotten this fine point, the original action taken against him by the House Democrats in January of 1967 did not strip him of his seniority. It merely ordered him removed as chairman of the Education and Labor Committee. That action was intended to head off the more drastic punishment of ouster which the House eventually took. If Powell's current status is determined by the January, 1967, punishment (which everyone agrees is beyond the reach of the courts), he could claim that he is not at the bottom of the seniority ladder—but

merely an ex-chairman with 24 years of seniority.

In terms of settling amicably, Powell's lawyers could win a declaration from the District Court of the Congressman's rights—but then drop the matter without seeking the court order to enforce a remedy for the damages—the order which would force the showdown.

It would then be a matter for the Democratic caucus and its Committee on Committees to resolve. Powell himself has said that he has no illusions about regaining the chairmanship, but he hasn't given up hope that his seniority could be restored. That would make him No. 2 on the committee and presumably chairman of a subcommittee.

It would also have the effect of pushing every other Democrat on the committee down a notch—including liberals who have spoken in his defense. Simple arithmetic suggests that their opposition—plus the Southerners and Powell's other natural enemies—would be enough to prevent any restoration movement in the Democratic caucus. All of his legal arguments will be academic if his fellow Democrats insist he is still a freshman.

These are the considerations which the House leaders will have to deal with if they wish to avoid a clash with a court order. Conceivably, we will be treated to the spectacle of an Adam Clayton Powell just trying to be reasonable, baby, while his congressional colleagues will be the ones insisting they are above the law.

INDEPENDENCE DAY OF MADAGASCAR

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. POWELL. Mr. Speaker, we take this opportunity to send warm felicitations to President Philibert Tsirenene, of Madagascar, and Madagascar's Acting Ambassador to the United States, Mr. Reneg Ralison, on the occasion of the ninth anniversary of Madagascar's independence.

Nine years ago today the island of Madagascar joined the family of nations as the independent Malagasy Republic. On this ninth anniversary of their independence, I would like to pay tribute to the leaders, Government, and 6 million people of the Malagasy Republic for the peace, harmony, and stability they have created in pursuit of their nation's motto "Liberty, Country, Progress."

Known as the "big red island" in recognition of its natural beauty, Madagascar is the fourth largest island in the world. Madagascar forms a cultural bridge between the African and Asian worlds as its people are of Indonesian-Malay, Arab, and African heritage. Though the 6 million people of Madagascar are members of 18 different tribes, a cultural cohesiveness—not yet attained by many African nations—exists as a result of a common language, Malagasy.

The economy of the Malagasy Republic is in the early stages of development. Problems of underpopulation and lack of capital forestall rapid industrialization. However, the economy enjoys a certain degree of self-sufficiency. Ninety percent of the people are engaged in agriculture and 90 percent of Madagascar's exports are agricultural products. The island's principal crops are rice, tapioca, coffee, vanilla, cloves, and tobacco.

The Malagasy Republic has been a stanch friend of the Western World and an old friend of the United States—relations between the United States and Madagascar date back more than 100 years. At present a NASA satellite tracking station very vital to the American space program is located on Madagascar. The United States is also the Malagasy Republic's second largest customer as it buys about 10 percent of the island's exports.

At a time when racial strife and international conflict is the norm, it is a pleasure to note that in a state such as the Malagasy Republic the worlds of Africa and Asia can come together and create a nation which peacefully pursues the goal of "Liberty, Country, Progress."

CITIZENS' CRUSADE FOR CLEAN WATER

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. BLATNIK. Mr. Speaker, a coalition of some three dozen private conservation organizations, labor unions, consumer groups, professional societies, and associations of local governmental officials has launched the "Citizens Crusade for Clean Waters" in a massive effort to alert the American public to the need for controlling water pollution. I was privileged to participate in the first organizational meeting of the crusade.

Initially, the crusade is directed at getting in fiscal 1970 an appropriation of $1 billion, as authorized, for Federal grants to local governments for helping in the appropriation of municipal waste treatment plants. On June 6, 25 of the private groups sent a joint wire to President Nixon, asking that he request the full $1 billion for waste treatment plant construction grants. Since that time, the number of organizations in the coalition has risen to 38, with two more taking independent action in a similar vein.

The crusade was kicked off on June 9 with a press conference at the National Press Club. Joseph W. Penfold, conservation director of the Izaak Walton League of America and chairman of the Natural Resources Council of America, which initiated the crusade, presided over the meeting and explained the organization of the coalition.

Louis S. Clapper, conservation director of the National Wildlife Federation and a member of the Federal Water Pollution Control Advisory Board, then explained the background of need for waste treatment works. A copy of the remarks of Mr. Penfold and Mr. Clapper follows:

REMARKS BY LOUIS S. CLAPPER, NATIONAL WILDLIFE FEDERATION, BEFORE PRESS CONFERENCE CALLED BY THE "CITIZENS' CRUSADE FOR CLEAN WATER"

People interested in clean water and concerned about contamination of the environment were distressed at a report issued earlier this year by the Federal Water Pollution Control Administration on the cost of abatement and control.

This report indicates that, if costs continue to rise, the total bill is expected to amount to $26 to $29 billion in the next five years. Broken down, this is $8 billion for municipal works, $6.2 to $4.6 billion for industrial waste treatment, with another $1.8 billion for industrial cooling, and from $5.3 to $5.7 billion for municipal and industrial operating and maintenance costs.

There is a growing money gap between what the Congress has authorized and what is appropriated for Federal grants to local governments for the construction of waste treatment plants. For fiscal 1968, only $203 million of the $450 million authorized was appropriated. For fiscal 1969, the authorization was for $700 million, yet only $214 million was appropriated. Finally, this coalition was formed with the Nixon Administration joining the Johnson Administration in recommending only $214 million, or less than a quarter of the authorized $1 billion for fiscal 1970.

We view the Federal grants as being tremendously important. Unless the Federal Government helps, it is a poor position to require high standards of water quality from the States and local governments. And, unless the governments handle municipal pollution, they are in a poor position to point a finger at polluting industries. And, so the whole water pollution control program is in jeopardy.

We are confident that the people want clean water and are willing to pay for it—if given the chance.

A survey conducted by the Gallup Organization, Inc., for the National Wildlife Federation earlier this year revealed these statistics:

About half (51%) of all persons interviewed expressed the opinion that they are "deeply concerned" about the effect of air pollution, water pollution, soil erosion, and destruction of wildlife in our natural surroundings. An additional one-third (35%) are "somewhat concerned."

Nearly three-fourths of those interviewed were willing to pay something in additional taxes to improve our national surroundings.

Three of every four persons favor setting aside more public land for conservation purposes such as national parks, wildlife refuges, bird sanctuaries, etc.

The public is almost evenly divided on whether or not it will, at some time, be necessary to limit the human population if present living standards are to be maintained.

Summarizing this survey, we conclude that the American public *appreciates* quality in the environment, *deplores* what is happening to it, and *stands ready to support* corrective measures, even to the extent of paying for it—as they will, one way or another, in the end.

The Conservation Foundation, as a matter of fact, has compiled data which shows that voters have expressed themselves in this manner. Since 1964, the voters of nine states have had the opportunity to vote in statewide elections on water pollution control bond issues. Seven of the nine state bond proposals were approved and even the other two attracted majority voter support. Of 17,625,254 citizens who participated, 11,725,444 voted "yes", an average "yes" vote of 66 per cent.

I should like to report to you that the Federal Water Pollution Control Advisory Board, of which I am a member, has recommended that the Federal Government meet its obligations. The following was adopted in the December, 1968, meeting of the Board:

The Board recommends that continued efforts be made by the Secretary to ensure that the Federal Government lives up to the commitment made to the States under the municipal grants program administered by the

Federal Water Pollution Control Administration. *A failure to press for adequate appropriations can be construed by the States as evidence that the Administration and the Congress were not sincere in their concern for the problem of water pollution control.*

TABLE 1.—RESULTS OF STATE ELECTIONS ON BOND ISSUES FOR WATER POLLUTION CONTROL, 1964–1969 [1]

Election date	State	Amount (in millions)	Vote		Pass/fail	Percent "yes" vote [2]
Nov. 3, 1964	Maine	$25	Yes	222,242	Passed	73.2
			No	81,469		
Nov. 2, 1965	New York	1,000	Yes	3,373,700	do	82.4
			No	718,398		
May 16, 1967	Pennsylvania [3]	250	Yes	1,163,779	do	63.2
			No	677,808		
June 29, 1967	Rhode Island	12	Yes	16,461	do	56.9
			No	12,439		
Nov. 5, 1968	Illinois [4]	400	Yes	1,656,600	Failed	57.6
			No	1,216,847		
Do	Michigan	335	Yes	1,906,385	Passed	70.5
			No	796,079		
Do	Ohio [5]	100	Yes	1,732,512	do	52.7
			No	1,550,759		
Do	Washington	25	Yes	845,372	do	75.4
			No	276,161		
Apr. 1, 1969	Wisconsin [6]	144	Yes	808,393	do	58.9
			No	569,850		
Total		2,291	Yes	11,725,444		66.5
Less Illinois		−400	No	5,899,810		
Total passed		1,891		17,625,254		

[1] State water pollution control agencies, State election agencies, and the Federal Water Pollution Control Administration are sources for the information summarized here. The table may not be complete; although each of the 50 States has been contacted, all have not yet responded to our inquiry. All reported bond issue election defeats, as well as approvals, are summarized here.

[2] The percent "yes" vote is the percentage of "yes" to total "yes" and "no" votes.

[3] Pennsylvania's 1967 bond issue totaled $500,000,000. Of this, $250,000,000 was for water pollution control ($100,000,000 for construction of sewage treatment plants, and $150,000,000 for acid mine drainage pollution control). In addition, $225,000,000 was for "elimination of land and water scars created by past coal mining practices" and closure of abandoned mines, and $25,000,000 for air pollution control.

[4] Illinois' 1968 proposal totaled $1,000,000,000, which was designated for open space-outdoor recreation land acquisition and air pollution control, as well as for water pollution control. Although no fixed amount was officially earmarked for water pollution control, there was general agreement that $400,000,000 would go for this purpose. Despite a majority of "yes" votes, the proposal was not approved due to an Illinois law which requires a "simple majority of votes cast for all State legislature candidates" to pass.

[5] Ohio's 1968 proposal totaled $120,000,000, which was divided into 2 parts: $100,000,000 for sewage and water treatment, and $20,000,000 for water management.

[6] Wisconsin' proposal totaled $200,000,000 and included $56,000,000 for open space-recreation land acquisition. This was an advisory referendum only; the legislature is to make the final decision.

Notes: In 1966 the Massachusetts Legislature authorized a $150,000,000 bond issue for an accelerated water pollution control program. Massachusetts has no law which requires either State or local bond issues to be referred to the voters for approval. In 1967 the Connecticut Legislature approved a $150,000,000 bond issue for water pollution control. The legislature took final action on this proposal; there was no referendum by the voters.

TABLE 2.—UPCOMING STATE ELECTIONS ON BOND ISSUES FOR WATER POLLUTION CONTROL

Election date	State	Amount (millions)	Vote	Pass/fail	Percent "yes" vote
November 1969	New Jersey [1]	$190 6			
Do	do [2]	222 0			
May 1970	Oregon [3]	50. 0			
November 1970	Maine [4]	50. 0			

[1] In January 1969 the New Jersey Legislature placed on the November 1969 State ballot a referendum on a proposed $190,600,000 bond issue for "expanding public sewage facilities to eliminate pollution of surface waters."

[2] In April 1969 the New Jersey Legislature placed on the November 1969 State ballot a 2d referendum on a proposed $222,000,000 bond issue for "controlling and eliminating pollution of tidal and surface waters."

[3] In April 1969 the Oregon Legislature voted to refer to the voters at the May 1970 primary election a proposed change in the State constitution to authorize the State to issue bonds to finance grants and loans to local governments for sewage works construction. Under the proposal the amount of bonds issued cannot exceed 1 percent of the value of all real property and the amount outstanding at any one time cannot exceed $50,000,000.

[4] In March 1969 the Maine Legislature placed on the November 1970 State ballot a referendum on a proposed $50,000,000 bond issue for construction of pollution abatement facilities.

JUNE 6, 1969.

Hon. RICHARD M. NIXON,
President, the White House,
Washington, D.C.:

Conservation, labor, and many other citizen-civic organizations representing millions of interested and concerned persons firmly believe water pollution is one of the most important domestic problems, involving serious health hazards and waste of beneficial uses of water.

State-approved applications for matching grant funds totaling $2¼ billion from States and local governments are now on file with the Federal Water Pollution Control Administration.

The proposed Federal budget for fiscal 1970 requests only $214 million to assist local governments in the construction of sewage treatment plants under the Federal Water Pollution Control Act. Our groups believe that your administration should seek for fiscal 1970 an appropriation of $1 billion for Federal grants to local governments to help them in the construction of these desperately-needed waste treatment plants. We consider it imperative that the $1 billion authorized be appropriated for the fiscal year beginning July 1, 1969.

VOTERS AND WATER POLLUTION CONTROL

(By Joseph W. Penfold)

Most Americans not only want clean water but are willing to pay for it.

This is indicated by a summary of results of recent statewide elections on bond issues for water pollution control. The summary was released today by the Citizens Crusade for Clean Water, a coalition of some 30 organizations concerned about the lagging national water cleanup program.

"The record of the last five years shows that when voters are asked directly in state bond referendums whether they want clean water and are willing to tax themselves to help pay for it, two out of three say 'yes,'" Joseph W. Penfold, coordinator of the Clean Water Crusade, said.

The summary reports that:

Since 1964 the voters of nine states have had an opportunity to vote in statewide elections on proposed water pollution control bond issues.

Eight of the nine proposals were approved and the ninth also was supported by most of those who voted on it.

Of the total of 17,625,254 citizens who voted on the nine proposals, 11,725,444 voted "yes"—an average "yes" vote of 66 per cent.

(Most states have not held elections in this field; their legislatures make the final decisions to issue bonds or to finance pollution control through regular appropriations.)

The state elections involved were in Maine in 1964, New York in 1965, Pennsylvania and Rhode Island in 1967, Illinois, Michigan, Ohio and Washington, all in 1968, and Wisconsin in 1969.

(Of the nine proposals, all were officially approved except the one in Illinois. Although supported by 57 per cent of those who voted on it, the Illinois proposal failed because of a requirement of Illinois law that such proposals must be approved by a "majority of votes cast for all state legislature candidates" in the same election.)

In commenting on the election summary, Penfold emphasized that "these state bond financing proposals were predicated on the assumption that the Federal government would keep its commitment, as declared by the Congress in the Clean Waters Restoration Act of 1966, to match the state money."

"If we are to turn the tide and begin to clean up our polluted rivers, streams and lakes, it is necessary for the Federal government to keep this commitment that the states and local communities have been relying on by putting the Federal money on the line in the form of grants at the level authorized by Congress," he said.

The Clean Water Crusade group is asking President Nixon and the Congress to provide $1 billion—the amount authorized by Congress—in matching grants for community sewage treatment plant construction during the 12 months beginning July 1. The Nixon Administration has asked the Congress for less than a quarter of that amount—$214 million.

Penfold said "the inadequacy of $214 million for this program at this time is put into perspective by the size of the backlog of grant applications from local and state governments already received by the Interior Department's Water Pollution Control Administration: $2¼ billion."

The official Federal-state estimate of state

clean-up costs over the next five years is more than $10 billion.

Penfold noted that in many instances water pollution control bonding proposals passed comfortably at the same time that voters were rejecting bond proposals for other purposes. "In the November 1968 general elections, as Engineering News-Record magazine has reported, voters across the country continued to approve most pollution control bond issues even though they rejected 49 per cent of all bond proposals," he said.

Penfold is conservation director of the Izaak Walton League of America. Other organizations cooperating in the Citizens Crusade for Clean Water include the League of Women Voters of the United States, the American Institute of Architects, Consumer Federation of America, National Association of Counties, National League of Cities, U.S. Conference of Mayors, U.S. Conference of City Health Officers, National Audubon Society, AFL–CIO, United Auto Workers, National Wildlife Federation, Sierra Club, and American Fisheries Society.

The summary of state election results was prepared by the Conservation Foundation at the request of the Clean Water Crusade. Sources for the election results reported in the summary are state pollution control and election officials, and the Federal Water Pollution Control Administration.

CAMPUS UNREST

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. BOLLING. Mr. Speaker, 22 concerned Members of the House of Representatives, who also happen to be Republicans, recently issued a 37-page report on the subject of criticisms of life in the United States by young people, particularly college students. This attitude often is euphemistically referred to as "campus unrest." But often it has been plainly destructive and has quite properly created widespread concern among the American people. While acknowledging the legitimacy of criticism, almost all Americans believe that the road of violence as a way to cure injustice is historically demonstrable as in reality a detour to political reaction. Grotesque remedies offered by some in this Congress and in the country sustain this observation.

In my view the report of my 22 colleagues is a useful and thoughtful one that draws its strength from the fact that it is based upon visits to several dozen institutions of higher learning—not upon guesses, preconceptions, and newspaper photographs. The report, among its other strengths, points out that radical students strive to prevent successful reform by moderates. But the report does not gloss over the fact that there exists a large, and perhaps growing, body of students who are extremely disgruntled and dissatisfied with both the inadequacies of their institutions of higher learning and society in general. Importantly, in this regard, the report points out that the "crucial factor in the widening gap between students and others is the student's perception of reality. This must be understood by all those who seek solutions. This requires of us comprehension and of the student, understanding."

This report, in its entirety, is worth reading. There are passages that are open to dispute but for the most part the report is helpful and those who took their time and made this effort are to be commended.

YOUTH'S CONTRIBUTION TO SOCIETY

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. LANGEN. Mr. Speaker, while everyone has been complaining about hippies and the SDS, a great majority of today's youth is making substantial contributions to society. My observations show that our youth want to help remold our "establishment" into a viable apparatus that is more in tune with the needs existing today rather than to destroy the fabric of our democratic way of life. I have personally known many of our youth who have taken on responsibilities far beyond their years, and I commend them for meeting the challenges that are put before them.

I share the sentiments of a very fine writer who wrote the following editorial which appeared in the Fargo, N. Dak., Forum:

DON'T WRITE THEM OFF

(By Lloyd W. Sveen)

Adults suffered a terrible shock last week [April 13–20]. They discovered they had written off teenagers and college students too soon.

"Students Fight Dakota Flooding" screamed the big black headline across the top of page 1 of the San Diego *Evening Tribune*. You could almost feel the amazement of California readers at the thought of schools closing because students were out sandbagging a river instead of a college president.

This is understandable in a state where student revolt was born at Berkeley in 1964, but the same stunned surprise was reflected here. A typical comment was that of Minnesota Gov. Harold LeVander: "The youth are said to be anti-establishment but when the chips are down they come through."

Why should we be so surprised that kids are eager to meet challenges? Maybe because we've taken away all the challenges that used to be normal in the process of growing up?

We're a smart generation which survived the spiked malt, Betty Coed, and Joe College age to establish a technological era where miracles are so common it is difficult to get excited about plans to land a man on the moon. We're so smart we've made it almost impossible for a child to develop into a man or a woman without wrenching experiences.

We preach about the virtue of work to our kids, but we have invented just about everything that can eliminate work.

We tell of the hardships we underwent during the depression while we hand them their own credit cards.

We teach them that the great heroes of history were individualists who dared to stand alone, but we lay down rules on length of hair and skirts so all will look alike.

We build schools to teach our kids to think and to reason, to weigh and consider; but when they arrive at a judgment that differs from ours we call them rebellious.

We call them hippies when they wander from place to place in search of happiness but we applaud and envy the millionaire jet set which does the same thing.

We tell them that delaying a present pleasure brings a far greater reward in the future but we can't wait to buy another luxury so we charge it.

We who once gloried in the lurid movies of the '30s before the Legion of Decency cracked down now are righteously indignant at the new wave of nudity and double entendre.

We tell kids to be patient with us because problems can't be solved overnight—but we give them instant bottles when they're babies, instant food when they're growing up, we take instant pictures of them at high school graduation, and give them instant entrance to a college.

And now when Mother Nature gives them an instant challenge we don't know what to do about it. We are so happily surprised that the electronic talk shows are full of suggestions about thanking the kids—give them a big party, set up scholarships, give them more opportunity for recreation.

We're in danger of flubbing it again. Why not just say, "Thanks. You did a good job," and then start to figure out a way to give them more ways to work off their energy and use their talents.

A LETTER OF PROTEST FROM A STUDENT WITH REGARD TO THE CUT IN TEACHER'S SALARIES

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. HOGAN. Mr. Speaker, I wish to call the attention of my colleagues to a letter which I recently received from one of my constituents, a student at Surrattsville Senior High School, Prince Georges County, Md. It is, I believe, eloquent testimony to the concern which the youth of today have, not only about their own future, but for the problems which face our society. The student, Mr. Steve Kane, has asked that I discuss with my colleagues the problem involving cuts in teachers' salaries. I am most happy to comply with his request by calling Mr. Kane's letter to their attention:

CLINTON, MD.

DEAR MR. HOGAN: I am a student at Surrattsville Senior High and I am writing in to ask you if you could speak to some of the other representatives about the salary cut of our teachers. Our teachers here really work hard to put things across to us and with the large classes, I and many other students feel that the salary cut of our teachers for next year is very unjust. Would you please see if you can do something about this for our hard working teachers?

Thank you.

STEVE KANE.

Mr. Speaker, I feel a sense of frustration because in the face of all of the money which the Federal Government expends each year on various programs and the billions of dollars spent across our Nation in matters far less important than education, we as a nation, have been unable or unwilling to see that our teachers receive the kind of compensation which they so richly deserve.

I confess that I have no immediate answer to the problem and so I call upon you to join with me in making a better effort to see that the teachers of our Nation are at least as well paid as others rendering comparable service to our society.

YUGOSLAVIA GETS FDA GRANT

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. RARICK. Mr. Speaker, last week HEW announced a $120,000 grant to a university in Yugoslavia to study spastic people.

This week, the FDA announces a grant of $200,000 and a second one for $130,000 for research in Yugoslavia. The purpose of the grant is announced for the study of any relationship between use of birth control pills and cancer of the cervix. An estimated 10,000 Yugoslav women are to be involved in the 6-year study.

Of course, it is understandable that with the high standard of living in the United States we could not expect to employ 10,000 women for 6 years for $200,000, but it does seem ridiculous—even if only counterpart funds—that our country must help subsidize the Communist economy of Yugoslavia.

It is possible that some in our Government are aware that the Red Yugoslav leaders have embraced the Vietcong government in South Vietnam in the killing of American boys, and see in this research project a chance to control the future population of Yugoslavia.

And all of this while the American taxpayers are being asked to continue the surtax because of excessive, frivilous, uncontrolled governmental spending.

In include a pertinent news release:

[From the Washington (D.C.) Post, June 26, 1969]

YUGOSLAVIA WILL STUDY PILL FOR FDA

(By Morton Mintz)

The Food and Drug Administration is contracting with Yugoslavia for two major studies on the safety of oral contraceptives—the first FDA research projects in an Eastern European country.

The larger study is intended to shed light on whether there is a relation between use of the Pill and cancer of the cervix.

A second objective is to gather data on the almost unexamined question whether the Pill in any way imperils the offspring of women who have used it. The study also will investigate whether use of the Pill effects fertility—an issue about which there are differing medical reports.

In an interview yesterday, Dr. John J. Schrogie, director of the Division of Research and Liaison in the FDA's Bureau of Medicine, said that the 6-year study will begin within several weeks and will involve about 10,000 Yugoslav women—about half of them controls who will use non-chemical or no contraception.

The cost is estimated at $200,000—much less than it would be in the United States, the FDA official said. The bill will be met with counterpart funds that are available to repay the United States for foreign aid, but that can be spent only in Yugoslavia.

The study awaits final approval which is expected, shortly from FDA Commissioner Herbert L. Ley Jr. and C. C. Johnson Jr., head of the Consumer Protection and Environmental Health Association.

Already approved is a second study that will cost $130,000 in counterpart funds and will last four years. This investigation will concern a suspected relation between use of the Pill and, in some users, diabetes.

Population research is an approved use for counterpart funds under Public Law 480.

The issue of a possible link between the Pill and cervical cancer flared into controversy last September, when it became known that a major—and still unpublished—study done in New York City had shown a higher rate of precancerous changes in the cervical tissue of women on the Pill than in controls using a diaphragm.

The FDA's Advisory Committee said last Nov. 1 that the data "do not confirm or refute a causal relation. . . ." The agency's hope is that the Yugoslav study—and another being planned in this country—will yield definitive answers.

THE PRESS ETHICS COMMITTEE

HON. W. C. (DAN) DANIEL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. DANIEL of Virginia. Mr. Speaker, elements of the news media have been most insistent that there be an ethics committee established for the House, the other body, and for the Supreme Court. The clear implication has been there is dire need for such a committee because of a handful of incidents of misconduct, at least as far as Congress is concerned.

Yet, the national and international news media has no such ethics guardian of its own. However, a group of journalists and writers, concerned over the one-sided and slanting reporting, is attempting to at least throw some light on the sickening and disgusting attempts to brainwash us.

These distinguished journalists and writers have formed a press ethics committee, and in the RECORD of May 26 I commended them for it. Yet, even before this committee could issue its first statement the subjective peddlers hastened to attack it, seeking to destroy it and leave it stillborn.

They did not accomplish this, however, and the press ethics committee has distributed its initial statement—one that hopefully will encourage the two-sided, objective coverage of the news so badly needed if the public is to have a sound basis for decisions.

I urge my colleagues to read this first statement of the press ethics committee carefully. I do not know what prominence it was given around the country, but I do say it deserves the full attention of every American at this crucial moment in our history. The statement follows:

THE PRESS ETHICS COMMITTEE

The Press Ethics Committe issued the following statement today:

News reporting against the ABM defense missile system for the U.S.A. has been so one-sided that the right of 200 million Americans to be defended has been largely ignored.

Typical of the extreme media attacks against minimal U.S. defense from the new Soviet 25 megaton war-heads is the following from the Washington Post of April 15, 1969:

"It is still far too small to knock out more than one (U.S.) ICBM site.

"It is instead a large war-head designed to destroy large 'soft' targets—such as cities—in other words a second strike weapon, and that is all."

On the Huntley-Brinkley TV-show, where the proposed anti-missile defense has been attacked very frequently, the ABM system was even assailed in the newscast on President Eisenhower's death. TV quiz programs and TV shows are loaded with ABM opponents. One of the favorite gadgets in what seems to be leading toward a TV "blitz" against defensive missiles is to emphasize their cost and follow this immediately with the need for funds for domestic poverty programs.

This cacophony has reached such a pitch that in Foreign Affairs magazine D. A. Brennan has spoken of lopsided reporting which causes lopsided thinking. Columnist William S. White has not criticized the Press but has charged that the anti-ABM lobby is operating "one of the most richly financed propaganda campaigns in recent history."

News reporting on the new "Safeguard" missiles has almost entirely by-passed the simple fact that—at the very worst—they are better than no defense missiles at all.

The Press Ethics Committee, on the basis of a volume of press reports and TV-casts, warns the public that its safety seems endangered by the increasingly one-sided and virulent reporting against a missile defense from the new Soviet aggressive rockets.

We urge each American to be alert to this dangerous propaganda barrage and to ponder any favorable, as well as adverse, reports respecting the proposed anti-Soviet rocket defense system.

Americans should keep in mind that—on the basis of full information—the present Republican President and his predecessor, a Democratic President, have both recommended a missile defense against new offensive missiles in the hands of Communist regimes.

MEMORIAL DAY, 1969

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. WOLFF. Mr. Speaker, last month we celebrated with the usual pagentry and holiday atmosphere Memorial Day, 1969. It is truly unfortunate that despite its name Memorial Day has lost its true meaning for millions of Americans and instead has become the unofficial beginning of summer. In a rush to the beaches and golf courses too many Americans forget why it is that there is a day away from work. It is not a day to celebrate, it is a day to mourn.

This point was brought home to me when, immediately after Memorial Day, I spoke with a constituent, Mrs. Andrew McCarthy, of Sea Cliff, N.Y., whose son had just been killed in Vietnam.

Mrs. McCarthy is a proud American. She was terribly sad, as only a mother in her situation could be. She was not angry at her country.

But Mrs. McCarthy was understandably distraught by our failure to observe Memorial Day for what it is—a day to remember our men of this and previous wars who have died in combat. She asked me, "Can we not have a real Memorial Day?"

Mr. Speaker, we should have a true and serious Memorial Day. Not a holiday weekend, but day in memory of tens of thousands we have lost in the history of our Nation. I would hope that in the future that Mrs. McCarthy could have her very small and very human request—a real Memorial Day.

POSTAL LABOR RELATIONS

HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. NIX. Mr. Speaker, the Postal Operations Subcommittee has concluded its hearings on the subject of labor relations in the postal service. During this past month and a half Members of this House have been aware of the delegations of postal unions from home who have made their presentations on the subject of labor relations by law in the postal service. Four days of hearings were held in response to this interest in which testimony was taken from all postal unions, the administration, and a large number of experts in the public employee relations field.

The hearing record will be kept open for a short time in order to accommodate Members of Congress and others who would like to go on record in this matter.

PRESIDENT KENNEDY'S LABOR RELATIONS PROGRAM

At the present time, labor relations problems in the Federal Government are governed by a program started by President Kennedy during his administration under an Executive order, which is an in-house Government regulation based on the authority of the President as the manager of the Federal Government. At the time President Kennedy signed Executive Order 10988, the present labor program, it was a great progressive step in the public employee field, an Executive order was the device used as authority for the program because many Federal managers were afraid that legislation would be passed by the Congress which would severely restrict their authority.

The effect of President Kennedy's Executive order was very worthwhile. The organization of Government employee unions expanded so that today there are more Federal union members outside the postal service than in postal unions. In the early 1960's the vast majority of Federal Government union members were in postal unions.

THE IMPASSE PROBLEM

President Kennedy's program though has outlived its usefulness because of the breakdown in employee contract negotiations. Federal personnel managers are able to decide what issues they will negotiate with unions about and what interpretation is to be placed on contracts once they are signed. The only appeal from these decisions is to the department head of the agency involved, whose orders personnel managers are following in the first place. In short, management sits as judge in its own case.

Postal unions during their 1968 negotiating sessions had this kind of experience with postal management. Post Office Department negotiators declared thousands of contract items nonnegotiable as management prerogatives, including many items that were in previous contracts. They did this because they felt that local department negotiators in previous negotiations had given up too much of management's authority. Negotiations reached an impasse in the spring and continued until the fall, when Postmaster General Watson declared that as far as he was concerned all items were negotiable. This decision of his may have prevented a postal strike, since contract negotiations had completely broken. This situation cannot be allowed to happen again. What is more, the ironic thing about the negotiations is this. Once a contract is signed it is not enforceable in the courts like any other contract. Today no neutral party can judge a dispute over contract terms between management and labor in the Federal Government. The courts have declared that an Executive order is nothing more than the personal policy of the President, it can be changed between breakfast and lunch and back again by dinner. It is no different than any other instruction a President issues, and the courts will not sit in judgment on the way the President runs the Government. Therefore, the only appeal from an adverse interpretation of the contracts worked out by the Post Office Department and postal unions is the Post Office Department itself. It sits in judgment in its own case. Therefore, in any new Federal program there must be access on the part of labor to the courts and arbitration for less important individual matters.

A NIXON EXECUTIVE ORDER?

Federal personnel managers realized that extensive changes had to be made in Executive Order 10988 if legislation was to be forestalled. Congress had been alerted to the breakdown in contract negotiations. The Wirtz committee made up of important Cabinet officers and assisted by their staffs, heard witnesses, took testimony and reported to President Johnson by mid-1968. Nothing was done with the report. Chairman Hampton of the Civil Service Commission convened a new committee to examine the possibilities of a new Executive order on Federal labor relations soon after the Nixon administration took office. Chairman Hampton's group has been meeting ever since. Newspaper columnists at the beginning of our hearings had stated that a new Nixon administration Executive order was expected by May 1, when the Civil Service Commission testified on April 25, their witness stated that a new Executive order would be issued within 60 days. A White House letter to the subcommittee dated in mid-May backed up this estimate. June 25 has come and gone and there is no Executive order, nor will there be for some time. There have been charges made by some Government union officials that this program is being studied to death.

I do not agree with that charge. The delay in issuing a new Executive order is brought about by the awareness on the part of those studying the problem that a new Executive order will not be helpful. The problem today is the enforcing of public employee contracts. A strike against the Government is a criminal act. There is no way to enforce these contracts in the courts because Executive orders have no more legal standing and are no more binding than a letter from the President. There is only one answer and that is legislation by the Congress. The long delays in action on an Executive order is I believe an admission that an Executive order at this stage of Government unionism will not give access to the courts where serious contract questions should be settled—*Manhattan Bronx Postal Union* v. *Gronowski*, 350 F. 2d 451, and *National Association of Internal Revenue Employees* v. *Dillon*, 356 F. 2d 811.

WHAT HAS CONGRESS DONE?

The Subcommittee on Postal Operations began its hearings on this problem and took up the consideration of the bills dealing with labor relations in the postal service. The consideration of bills was limited to the postal service because the postal service is the only Federal industrial operation with long standing and almost complete union representation. In addition, working conditions in the Post Office Department are terrible, and labor relations in the postal service have reached a critical point. What is more, the Postmaster General and his staff seem to realize more than other Government officials that something must be done and soon. They have suggested in their corporation plan the most far-reaching labor relations program ever suggested in Government circles, with direct reliance on the National Labor Relations Board. This is important because Federal personnel managers have always resisted using National Labor Relations Board cases as precedents, let alone using the services of the Board itself.

The bills taken up for study by my subcommittee were in general agreement on the need for access to the Federal courts, on the need for arbitration of disputes, on the need for mediation assistance from the Federal Mediation Service, on the need for the establishment of a Postal Labor Relations Board to sit on judgment in contract disputes. This is a large area of agreement. Both the Post Office Department and postal labor unions are in agreement on these items.

The bills supported by postal unions differ on the question of what types of postal unions should be represented before a postal disputes panel and share in the benefits of any new program. Some bills, for instance, exclude all but AFL–CIO craft unions from their provisions. This would be a death sentence for the industrial postal unions such as the National Postal Union and the National Alliance of Postal and Federal Employees. The National Alliance, for instance, has large numbers of minority group employees as members. Their problems are different from those of other employees. Yet these special problems would be ignored by their unions in some sections of the country because they are a smaller part of the work force than other groups.

The bills supported by the Post Office Department are unique in that they provide for collective bargaining on all issues including wages. These bills substitute the right to a form of arbitration through a Postal Labor Relations Panel instead of the right to strike, which would remain under Federal law a crime. In addition, the National Labor Relations Act would be binding in all matters not spe-

cifically set out in the bill. The setting of wage rates is sought by the Post Office Department so that they can exchange promises of wage increases in return for concessions on labor's part on working conditions and other matters. What concessions the Post Office Department seeks from postal unions remains to be seen. What is more, since a postal corporation would be self-sustaining, wage rates would be tied directly to postal rates and postal unions would find themselves directly pitted against the interests of large mail users. The administration bills do have great merit in that they recognize the need for binding contracts, arbitration, a Postal Labor Relations Board, and the application of as much labor law from the private sector as possible in a Government setting through the application of the National Labor Relations Act—title 29, United States Code.

H.R. 7916, a bill introduced by Congressman DULSKI, has much to recommend it. It provides for a complete postal labor relations program by including within its protection both craft and industrial unions, and both local and national unions. It does not include postal supervisors, but H.R. 4, introduced by Congressman DULSKI, which is the postal reform bill, does protect the postal supervisors union.

RECOMMENDATIONS

The subcommittee was able to obtain a wide range of agreement between all of the parties, including the Post Office Department. There is agreement that there must be legislation, that there must be access to the courts, a Postal Labor Relations Board which will decide contract cases, and arbitration procedures.

I believe that if we direct our attention to the main problem we have to face, which is the breakdown in contract negotiations, and provide the means for parties to settle as many problems as possible in negotiations between themselves in contract negotiations, we will have done the job that is necessary. For instance, grievances should be defined by contract and violations of contract provisions in regard to individuals should be settled by procedures set up by contract. Grievances, for instance, should be settled quickly on as low a level as possible, so that they do not pile up by the thousands at the Department level, with no decision one way or the other for long periods of time.

Applying the National Labor Relations Act to all matters involving postal employees where their situation is similar to workers in private industry would be helpful. If we avoid at the same time onerous regulation of Government unions by the National Labor Relations Act where it has not been proven necessary for Government unions. National Labor Relations Board cases could be useful in determining the fairness of election procedures, unfair labor practices, jurisdictional disputes and appropriate unit cases. The use of the National Labor Relations Act could if necessary be limited to specific matters and I know the committee would be open to suggestions on this point.

CONCLUSION

The postal labor jurisdictional disputes arising from the introduction of different bills has obscured the need for postal labor relations by law. The jurisdictional disputes raised by witnesses before the subcommittee have obscured the real body of agreement between all the parties, and the national president of the National Association of Letter Carriers, Mr. James Rademacher, pointed this out in his testimony.

The members of my subcommittee will meet at some future date to discuss the wide area of agreement among all of the parties so that we can discuss a new bill. A report on the subject of postal labor relations will be issued. There is a great opportunity to accomplish something of value here that we can all be proud of as Members of Congress. I would welcome additional written statements from Members of Congress and others. Our hearing record will be open for a short time.

DON JOHNSON NEW VA ADMINISTRATOR

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. SCHWENGEL. Mr. Speaker, on Monday Donald E. Johnson was sworn in as the Administrator of Veterans' Affairs.

As you know, Don is an Iowan, from West Branch, the hometown of the late President Herbert Hoover.

At the ceremony Monday, the Veterans' Administrator spoke eloquently about the role of the Veterans' Administration and his determination that the challenge it faces would be met.

We in Iowa are proud of Don Johnson. We are confident of his ability; assured by his determination. We know that under his leadership the challenge will be met.

Mr. Speaker, I place Don Johnson's remarks of Monday in the RECORD at this point:

REMARKS BY HON. DONALD E. JOHNSON

JUNE 23, 1969.

If some of you suspect there is a slight Iowa flavor today, you are entirely correct. We in Iowa are proud of our heritage and while we are compassionate people and people dedicated to the welfare of mankind everywhere, there are occasions when we do stick together and are, in fact, quite clannish. This ceremony today is certainly a time of celebration, but I find that celebration to be tempered by President Nixon's words of June 5 at the time he made the announcement of my appointment, and I quote:

"There is no agency that has greater impact on more Americans than the Veterans Administration. The veteran population from World War I, World War II, Korea, and now Viet-Nam, runs into the millions, and the Veterans Administration has the primary responsibility for dealing with the needs of all veterans."

As I heard those words that day and as I have re-read them on several occasions, I have been sobered by the responsibility that is now mine and so while we will celebrate today and commemorate this day, at the same time we will recognize the responsibility that lies ahead.

But I look forward to the challenge that is ours and that we are going to meet because I find the Veterans Administration to be a unique government agency. It is unique because it is the agency that does what the electorate wants it to do. The electorate recognizes an obligation to those servicemen—to those men and women—who answered the call of their country and who have served, suffered and sacrificed. I find, too, that the VA is unique because of a special partnership that exists between the Legislative and the Executive Branches of Government. It's the one agency in which there is close liaison at all times. We work together—and this we pledge—that this agency and those committees in particular on the Hill which have charge of veterans affairs will continue to work together. I think that it should be said that the House Veterans Affairs Committee in particular, with which we have more of our dealings, has for many years been led by a strong exponent of veterans rights, the Honorable Olin E. Teague of Texas.

The VA is also unique in another way. It is a Federal agency that maintains close liaison with the veterans' organizations and this, too, we pledge to continue and expand.

And lastly, the Veterans Administration is unique because it is an agency staffed by compassionate, dedicated and hard-working public servants. I have found this to be true in my past dealings with the agency and also during the past two weeks when I have been rather unofficially on the job. I look forward to joining the 170,000 VA employees.

I think, too, that this is a fitting day for this ceremony because this week marks the 25th anniversary of the first G.I. Bill of Rights. Since the President's announcement on June 5 of a special committee to look at the problems of the Viet-Nam veteran and the G.I. Bill of Rights, many words have been spoken and written on the adequacy of the present G.I. Bill. I am pleased, of course, about the assignment given me by the President to chair that committee and both as Administrator of the VA, and as chairman of that committee, I look forward to the assignment.

It is not my wish to pre-judge the work of that committee, but I want to tell you here that raw statistics do not always tell the story. In these days of a different sort of situation than we had in 1946 and 1947—with a gradual demobilization, with a high employment rate, and with many men completing their educational work before they are inducted into the services, there are, indeed, differences and we do, indeed, need to take a look at the problems that exist. But I can tell you that we will—this committee—find the answers to those problems.

In the interim, I want to pay tribute to the Veterans Administration for carrying out its mission. One of the things that we are specifically charged with in the formation of that committee is to reach out to the educationally disadvantaged. The VA "outreached" program to the educationally disadvantaged has been a success. VA achieved a 79% effectiveness in the big city target areas. One of the problems that exists is how we are to reach the men in the rural areas of America. This VA found to be difficult and even with the help of the veterans organizations we have only been able to reach 14% of them.

And so I think it is implicit in what I am saying, and I speak now to the veterans organizations represented here, that because your strength often lies in rural America, we need your help more than ever, and we cannot afford to wait for the outcome of this committee report. We need to have renewed efforts on your part and also the VA to reach these people we're seeking in rural America.

And so I would pledge to you that this

committee will find the answers. And I ask at this time for assistance from the Congress, from the White House, from the veterans organizations and from educators.

This new team looks forward to the assignments ahead. The President is determined that we recognize new problems in this different time frame in which we find ourselves. I ask for your advice and counsel. As Judge Whitney Guillilland indicated to you, the family Bible was open to what I think is one of the most beautiful Jewish prayers—it asks for wisdom to govern. I trust that wisdom will be given to us.

Finally, I know all of you join with me as I express the fervent prayer that efforts now underway under the direction of President Nixon will bring about the earliest possible termination of the present hostilities in Viet-Nam through a just and honorable peace.

As we look to the future, I know that I express the hope of all Americans as I pray that the day may come when there will be no Veterans Administration because there are no more wars, and that mankind the world over will have learned to live peacefully side-by-side in an enduring climate of mutual respect and compassion and trust.

Thank you for honoring me with your presence here today.

A NATIONAL COLLEGE FRATERNITY TAKES FIRM STAND ON CAMPUS DISORDERS

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. O'KONSKI. Mr. Speaker, disruption and violence on our college campuses is a matter on which a great deal of attention has been focused, and a matter which concerns us all.

Recently Sigma Tau Gamma Fraternity, which has chapters on 75 campuses—several of which are in my congressional district—issued a most refreshing position paper on "freedom and order" which I feel is of interest to my colleagues.

I would like to share their recent statement with you, and also point out that this statement has been supported by more than 3,000 undergraduate members of Sigma Tau Gamma Fraternity:

STATEMENT OF SIGMA TAU GAMMA FRATERNITY

ST. LOUIS, MO.—Sigma Tau Gamma, a national college fraternity with chapters on 75 campuses, has taken a firm stand on campus disorders in a statement release from its headquarters in St. Louis.

In a position statement on "freedom and order" adopted by college chapters and endorsed by a large majority of its more than 3,000 student members, the fraternity reaffirmed its commitment to the "maintenance of an academic environment conducive to learning and scholarly development."

Citing the intrinsic rights of free inquiry, the fraternity insisted that they must be exercised "in a manner which does not diminish, abridge, or destroy the rights of others."

"We cannot condone the disruptive influences and activities which contemptuously deny to others their freedom to pursue truth in an atmosphere which permits reflection, debate and study."

Dr. Ronald W. Roskens, president of the international organization, noted the inconsistency of students who insist upon being heard often deny the same privilege to others through vulgar and abusive clamor.

"It is paradoxical to me that certain members of the most educationally privileged generation in history would advocate destruction of the educative process which nourished their minds and enhanced their freedom," said Dr. Roskens, who is vice president for administration at Kent State University.

Many of the fraternity's collegiate chapters have inaugurated programs designed to foster constructive leadership on their respective campuses, according to Dr. Roskens.

TRUTH IN LENDING

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. MINISH. Mr. Speaker, one of the major accomplishments of the 90th Congress was the enactment of the landmark Truth-in-Lending Act. I am most proud of the key role played by the Democratic members of the Consumers Affairs Subcommittee, on which I am privileged to serve, in securing the first Federal truth-in-lending law in history—and a strong and effective one at that.

It is propitious that this measure which will give an additional dimension to our people's freedom and well-being goes into effect the week we celebrate the Fourth of July. But, as pointed out in an editorial in the Newark News of June 25, the value of the law will depend upon the extent to which consumers take advantage of the information that must now be made available to them. This perceptive editorial "Truth in Lending" is printed in full below:

TRUTH IN LENDING

A new federal law designed to improve customers' ability to compare credit terms will take effect next Tuesday. But its usefulness will be impaired unless consumers learn to take advantage of it.

Today, about one family out of two owes some kind of installment debt, totaling more than $90 billion. Yet few households have any clear idea of how much they pay in finance charges.

The law taking effect Tuesday, known as the Truth in Lending Act, was finally passed by Congress last year to make available to borrowers a clearer picture of the cost of credit. It does not regulate rates. It requires lenders to use uniform methods of stating

credit charges so consumers can compare deals.

An auto buyer, for example, finds it difficult today to find his way through a maze of unfamiliar terms when he borrows from a bank or sales finance company. One loan is described as add-on, another as discounted. One lender wants a service charge, another an investigation fee, a third demands credit life insurance premiums. But starting Tuesday, installment credit sources must disclose the total finance charge and the annual percentage rate or its equivalent, a yardstick by which different credit methods may be evaluated.

Full disclosure of credit costs will be of little help to consumers, however, unless the information is used. In addition to learning the amount of monthly payments, prospective borrowers should consider the length of time they'll have to pay, the annual percentage rate, the type of loan they choose and, perhaps most important, how much more it costs to buy on credit than to pay in cash.

MARINE MIDLAND COMMENDED FOR SERVICE TO PUBLIC

HON. HENRY P. SMITH III

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. SMITH of New York. Mr. Speaker, the Truth-in-Lending Act—Title I of the Federal Consumer Credit Protection Act—affects virtually everyone who issues credit. It requires the nearly half a million creditors in the United States to clearly and completely disclose all costs in a credit transaction and in every advertisement. Businesses as divergent as savings and loan associations, department stores, credit card issuers, credit unions, banks, automobile dealers, hospitals, consumer finance companies, plumbers, electricians, doctors and any other individuals or groups which extend or arrange for credit must comply with the legislation by July 1, 1969.

In an effort to inform the public as to the provisions of the "Truth-in-Lending Act," Marine Midland Banks, Inc., has launched what I consider to be a most commendable public service program.

In the June 25th edition of the American Banker, Marine Midland was recognized for its role in advising the public about the Truth-in-Lending Act.

The American Banker article follows:

MARINE MIDLAND MARKETS TRUTH-IN-LENDING THROUGH PUBLIC SERVICE PROGRAMS, MANUAL

BUFFALO, N.Y.—Communicating and interpreting the provisions of Truth-in-Lending to the many people and organizations affected by the legislation is a difficult and time-consuming undertaking which many banks have taken on as a responsibility and as an opportunity to create good will.

One of the many has been Marine Midland Banks, Inc., which has been conducting a public service Regulation Z program in the area served by the Marine Midland System.

When Federal Reserve Board Regulation Z, which implements the legislation, was issued on Feb. 10, 1969, with an effective date of July 1, 1969, Marine Midland assigned a team of three attorneys to study the legislation and the regulation, with special emphasis on the inherent consumer and commercial applications. From their studies a 76-page manual has been prepared that interprets, through narrative and sample forms, how Marine Midland Banks will comply with the law. The guide has been made available through Marine Midland personnel to other organizations and individuals to help them in establishing systems to comply with Truth-in-Lending. Marine Midland has also made sample forms available to other banking organizations for use as prototypes and has offered assistance in preparing forms when requested.

A series of fourteen (14) statewide seminars was conducted by the team of attorneys for all Marine Midland executives from the bank's 240 offices in 150 New York state communities to cover legalities and ramifications of Truth-in-Lending. William J. O'Connor, of the Buffalo law firm of Buerger and O'Connor, discussed the legislation's effects on Marine Midland's Master Charge, custom credit and time plan programs. Frank J. Laski and Waldron S. Hayes, Jr., of the Buffalo law firm of Phillips, Lytle, Hitchcock, Blaine and Huber spoke on the personal, commercial, farm and mortgage lending applications of the Consumer Credit Protection Act.

Marine Midland has informed its merchant customers of the new credit changes through a series of news bulletins during the past few months. In addition, the bank's employees have been informed, through a similar publication, of the new developments, so that they can help both merchants and consumers who are interested in credit with a full understanding of the meaning of the new legislation.

Marine Midland Banks have taken great care to inform customers about potentially confusing terms, such as the Annual Percentage Rate and the Finance Charge. The annual percentage and dollar and cents costs, which form the basis for comparison credit shopping, are explained in terms of computation and conform to the Trust-in-Lending credit-contract and agreement forms. Through a series of mailings, bill-stuffers and the like aimed at 750,000 persons, Marine Midland believes it has made it an easy matter for the credit purchaser to be preinformed about the new legislation, and to understand from the new invoices what he is being charged, how, why, and how much.

Financial and business editors of the press have been supplied with an information kit to help them interpret the complexities of the new information that consumers will be confronted with at the time of credit purchases and loans when they receive bills on and after July 1. Individuals, farmers and real-estate buyers will also benefit from the information that Marine Midland has so freely made available.

To further assist the average consumer who uses credit financing, Marine Midland has a program underway to provide leading credit spokesmen for television and radio interviews, as well as for meetings with community groups. These public service programs will be of great help in bringing the understanding of credit, what it costs and how it works to many thousands of individuals.

"The fourth generation may be descending on us quietly," Mr. Bradburn said. Its changes may seem relatively mild compared with yesterday's technical drama, he added, but under the surface lie the problems of an "industry in transition."

IMPROVING FOREIGN AID

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. BROWN of California. Mr. Speaker, America's commitment to less-developed nations should undergo major revision. Over the last few years, I have consistently voted against the current structuring of our aid program—not because I am opposed to assisting development in low-income countries, but because I feel our present attempts are patronizing and ill-conceived.

As long as the practice continues of including military aid in with economic assistance, I shall not support any foreign aid legislation. Congress must realize that massive military aid programs rarely are positive actions toward overall development in recipient countries. Military aid tends to reinforce misallocations of resources away from areas of infrastructural economic growth and into wasteful assemblages of military paraphernalia.

In addition, I believe that "tying" much of our aid to U.S. exports creates a situation in which certain projects may be approved not because they are of a high priority to a recipient country, but instead because they have a high import content.

I favor general reorganization of our aid programs, with much more emphasis on multilateral assistance, and with greater help in the key area of population and family planning.

A good introduction to the type aid approach I would like to see Congress approve was published in the June 22 Los Angeles Times. The distinguished UCLA economist Neil H. Jacoby wrote this important article, "A Better Way of Extending Aid," and I would like to place it in the RECORD at this point:

A BETTER WAY OF EXTENDING AID

(By Neil H. Jacoby)

(NOTE.—Neil H. Jacoby is professor and former dean of the Graduate School of Business Administration at UCLA. He is currently a Visiting Fellow at the Center for the Study of Democratic Institutions.)

Recent events raise hope for the realization of the long-desired American withdrawal from the war in Vietnam. They allow us to contemplate a reduction of the appalling burden of that conflict. We can at last begin to consider how to apply the released resources to more humane and valuable purposes. Among them is assistance to the poor countries of the world.

Thoughtful men everywhere are distressed by the deprivation in which most of the human community continues to exist. Malnutrition is the lot of 2 billion of the world's 3 billion people. Famine and epidemic disease stalk their lives. Their babies die with a frequency many times as high as in advanced nations. Those who survive receive little formal education. Their adult life span is little more than half that of Americans and northern Europeans. In 100 of the world's 125 nations, average income per person is less than $500 a year; for most people it is under $150 a year.

POPULATIONS HAVE EXPLODED

During the 25 years since World War II advanced countries have helped to change these somber conditions. Progress has been made, but at too slow a pace. A population explosion has cancelled out much of the anticipated increase in production per head.

The time required by traditional societies to move into the contemporary world has been grossly underestimated. Today, there is widespread frustration and disillusionment; foreign aid by advanced countries has been much reduced. It is timely to make a reassessment. What have we learned that can be applied to speed up the progress of peoples in the future?

One fact we have learned is that development is an extremely long and complex process, whereby a country changes from a static traditional mode of life into a modern dynamic society. It is a process that, even with substantial foreign aid, requires at least two generations to complete. This process can only be initiated and sustained by the government and the people of the poor country; development cannot be imposed upon them from the outside.

PHILOSOPHIES MUST CHANGE

We have found that development is far more than economics or politics. At its heart it calls for a change in the philosophic values of the people of a low-income country—a willingness to embrace new beliefs, habits of mind, and ways of life. Farmers must learn new methods. Landlords must often accept lower rents, higher taxes or land reforms. Businessmen must open up protected markets to new competitors.

Another lesson of history is that development requires a union of the governing group and the masses of the people. The Alliance for Progress has not succeeded because in too many Latin American countries the ruling elite have blocked essential economic and social reforms that threatened their privileged position. All segments of society must unite in purpose and action behind an orderly program of change if violent revolutionary movements are to be avoided.

History also demonstrates that external assistance, when effectively used, *can* produce self-sustaining progress, as the examples of Greece, Taiwan, Iran and the Philippines testify. The successful experience of these countries helps us to formulate a fresh philosophy and policy of development with external aid.

The concept of a partnership between the aiding agency (an advanced nation or an international body) and the low-income country is central to the attainment of faster progress in the future. Both partners commit something to the development venture; both hope to gain something of value in return.

The developing nation commits itself to make, according to a definite time schedule, necessary social and economic reforms that will increase domestic savings and make investment more efficient. The aiding agency commits itself over an extended span of years to provide capital goods, technology and modern skills. The aided country hopes to realize a better life for its people from this partnership, and the aiding agency seeks to attain a more prosperous and peaceful world environment. Development assistance is thus a partnership for mutual gain; and is neither charity, obligation, nor indemnity.

Even under the heaviest foreign aid programs, external assistance does not apply more than one-third of the capital needed for development. Hence it is vital that the poor country take strong self-help measures to increase the productivity of the capital it must itself generate. It can do this in many ways: by freeing markets from government regulation and improving the conditions of enterprise; by fostering basic and technical education of its people; by raising productivity in agriculture through land reform and adequate credit facilities; by installing an equitable tax system, and by managing its money to prevent price inflation.

Advanced countries can also help to speed progress of the poor countries by opening their markets to the latter's products. Expanded trade can be a substitute for foreign aid. Less developed countries prefer to earn their own way through rising exports. The advanced countries should therefore be prepared to lower their tariffs and quotas against products of low-income countries, with or without reciprocation.

Population control must be an essential policy in all future strategies for development. This is the clear lesson to be learned from our postwar experience.

When one examines the annual growth of real gross national production since 1950, one finds that the less developed countries as a group have expanded their economies as fast as the advanced countries—between 4.5% and 5% a year. But when one looks at growth of real GNP *per person*—a truer measure of betterment in the material conditions of life—one finds that during recent years, it has been expanding 3.8% a year in the advanced countries and only 2.6% a year in the low-income countries.

Population has been rising 2.5% a year in the poor lands versus 1.1% in advanced nations.

The conclusion is inescapable: A commitment to family planning should be *incorporated* into the partnership agreement between the aid agency and every aided country wherein excessive birth rates are impeding development. Population control measures should be a condition of eligibility for external assistance.

Another needed change in development policy is to "d-politicize" foreign aid—to extend most aid through international organizations supervised by the United Nations, thus preventing it from being a tool in the "cold war" between capitalist and Communist countries. Competition between the United States and the Soviet Union in seeking to mould developing countries in their own images has led to wasteful duplication of aid. It has led governments of poor countries to believe that aid is politically inspired to serve the interests of the granting country. Many play off the United States and the U.S.S.R. against each other.

The idea of competitive coexistence between Communist and capitalist powers offers a basis for specializing the functions of multilateral and unilateral aid.

SOCIETIES MUST COMPETE

Different social systems should be allowed to compete with each other, and be judged by the welfare they produce for people. If the people of a poor country desire state-owned and operated enterprises and central planning of their economy, they have a right to choose that system. If they believe that a competitive market economy based upon private enterprise is the most flexible and efficient means of satisfying society's wants, no one should interfere with that choice. Let time judge the performance of both systems. Americans need not fear the outcome, in the light of the superior performance of our own economy in recent times.

We propose, then, that external aid to provide social infrastructure (railroads, highways, communications, power facilities) as well as to develop human resources (education, training, research and technology) should be supplied multilaterally by the International Development Assn. and agencies of the United Nations. These are governmental functions in nearly all countries.

Aid to agricultural and industrial enterprises should be supplied unilaterally by the advanced countries, because in these sectors advanced countries with different economic systems have opportunities to apply their special expertise. If a poor country elects collectivized agriculture, Communist countries are best prepared to assist it. If it opts for private enterprise in agriculture and industry, capitalist nations are best qualified by experience to assist.

DIVIDING THE BURDEN

The annual net flow of developmental assistance from developed to poor countries has been $7.5 billion to $9 billion a year, including private investment. Assuming that the low-income countries take measures to improve the efficiency of their use of foreign aid, under the partnership concept, their total need for assistance can be estimated at about $13 billion a year. Of the total step-up of $5 billions, the U.S. share would be no more $2–2.5 billions—well within our capacity to supply.

In his inaugural address, President Nixon offered cooperation with other nations "to reduce the burden of arms, to strengthen the structure of peace, to lift the poor and the hungry." With the wisdom distilled from experience, let the United States lead all nations in a fresh cooperative effort to lift the world's poor and hungry up to a humane condition of life.

POLLUTION CONTROL

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. ZWACH. Mr. Speaker, I have introduced a very meaningful bill today to amend the Atomic Energy Act. This bill amends the act of 1954 to permit a State under the agreement provision with the Atomic Energy Commission, to establish standards for the discharge of radioactive material from an atomic-fueled powerplant.

This issue has developed in Minnesota on a proposal to build two atomic energy electrical supply plants on the Mississippi River. The citizens of Minnesota are proud of our 14,000 lakes and of the slogan that is often attributed to our area as being "The Land of the Sky Blue Waters." They have therefore promulgated emission standards within the Minnesota Pollution Control Agency that are much lower than the AEC level of tolerance. The builder of the proposed plants has received the permission to do this from the Atomic Energy Commission. However, the work is now delayed because our State believes that the rate of discharge allowed by the AEC is too high.

While I am not quarreling with the maximum tolerances of the AEC, I am convinced that if the people of a State believe in the need for more rigid regulations, then that State ought to have the right to be responsive to their citizens. I will grant further, that all this should be done within the safety guidelines as established by the AEC.

The bill simply states that no State shall be refused the right to enter into an agreement with the Atomic Energy Commission, simply on the basis of having developed standards that permit a lower level of discharge than presently set as the maximum levels by the AEC.

The Mississippi River originates in Minnesota. It is the source of much of the water needs for many great cities in central United States as it flows southward across our continent.

As we well know, much of our pollution problems are caused by a continued buildup of the wastes from mankind. Like many of the present plant pesticides and herbicides that are commonly used, the residue does not disappear. It stays in the water, the air, or the soil and accumulates. We have probably all read of the tragedy this week on the Rhine River.

In all fairness to the citizens in every State, and especially to those who live

in those States served by this great river, they should be allowed to develop those standards for plants located within their boundaries, in full compliance with the maximum tolerances as established by the Atomic Energy Commission.

SPORTS EDITOR HONORED FOR ATHLETIC EFFORTS

HON. JOHN J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. FLYNT. Mr. Speaker, one of my friends and constituents, Mr. Harley Bowers, sports editor of the Macon Telegraph, Macon, Ga., was recently selected to receive an award from the National Coaches Association for community service and promotion of high school athletics.

This honor for Mr. Bowers is of special note since he is the first newspaperman ever selected by this organization for such an award. But his record of achievements clearly reveals the National Coaches Association could not have made a better selection.

For years Mr. Bowers has provided outstanding coverage for all types of high school athletic events in the Macon area, a fact which has contributed greatly to enhancing the already excellent school athletic programs. He has been an active member of the Macon Recreation Commission. In recent months he has been greatly responsible for bringing to Macon the National AAU basketball tournament and the international tennis tournament.

Mr. Speaker, I think this award for Mr. Bowers is certainly deserved, and I extend my sincere congratulations to him. I would like also, Mr. Speaker, to include in the RECORD a short article about Mr. Bowers from a recent issue of the Macon Telegraph:

SPORTS EDITOR HONORED FOR ATHLETIC EFFORTS

Harley Bowers, Macon Telegraph Sports Editor, has been selected by the National Coaches Association to receive one of their eight annual district awards for community service and promotion of high school athletics.

Bowers, the first newspaperman in the country to receive the award, was selected for his record of high school athletic coverage and for his participation on the Macon Recreation Commission and work in importing the national AAU basketball tourneys and international tennis tourney.

The award, only given to one other Georgian, will be presented June 20 in San Francisco, Calif.

Bowers, Telegraph Sports Editor for 11 years, is a native of Moreland.

He graduated from Newman High School in 1938 and from the University of Georgia in 1942, after being named the outstanding graduate of the Journalism class.

Following college, he spent three and a half years in the Air Force and then returned to the University of Georgia for a year of graduate work.

Prior to coming to Macon, he was associated with the Atlanta Constitution, Columbus Ledger, and Albany Herald.

He resides with his wife Joyce and their three children, Cliff, Jack and Martha Claire, at 2644 Northwoods Drive. He is a Sunday School teacher at First Presbyterian Church.

STUDENT DISORDERS AND VIOLENCE ON CAMPUSES

HON. MARVIN L. ESCH

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. ESCH. Mr. Speaker, the questions of student disorders and violence on campuses throughout the Nation have occupied the attention of the news media, campus administrators, Government officials, the Congress, and the public for many months. The problem has been studied, talked about, and worried about. But, for the most part, there has been too little really constructive, forthright action to solve the problem.

Nearly 2 weeks ago I proposed that association of colleges and universities hold national and regional conferences directed solely at this problem and specific practical steps which might be taken to solve it. I urged that these conferences take place in cooperation with the administration and the Office of Education with Federal officials to serve as resource personnel. These conferences would be designed to develop a creative interchange of ideas on the procedures and approaches which had been successful on some campuses for dealing with the legitimate discontents of moderate students without bowing to the extremists and violence.

I do not envision the conferences to establish standard regulations or practices, since each college community is diverse and must be governed by its own environmental factors. I do envision these conferences as a means to open new channels of communication within the university community and between the university and the public.

I must make it absolutely clear that we cannot condone or tolerate violence either on our campuses or in our cities and I support efforts of National, State, and local law-enforcement officials to maintain law and order.

The American people are rightfully concerned with the violence on the campus, and it is my conviction that, unless the campus community takes constructive and immediate action to quell disorder and violence, repressive legislation and a drastic reduction in college funding will result. The educational community must take voluntary action now.

In line with this conviction, I was extremely pleased at the overwhelmingly favorable response which my proposal received from the associations of colleges and universities as well as from the Nixon administration. Both in personal conversations and letters, the associations have indicated to me their willingness to participate in conferences and their belief that such symposiums would serve a useful and constructive purpose. Assistant Secretary James Allen testified before the Education and Labor Committee last week in support of this concept and offered the cooperation and assistance of the Department of Health, Education, and Welfare in setting up such a program.

It seems to me, Mr. Speaker, that this response speaks clearly of the dedication and recognition of responsibility which the educational community has. I am confident that campus disorders can be brought under control and that channels of communication can be opened without direct and repressive Federal interference.

Under permission granted, I include my letter and the representative responses which I have received at this point in the RECORD:

HOUSE OF REPRESENTATIVES,
Washington, D.C., June 11, 1969.

DEAR SIR: I write to you, a leader in the higher education community, urging you to take immediate action which might contribute constructively to the problems associated with the present unrest on our college campuses.

Having served on the Education and Labor Committee and having visited college campuses during the past two months and having constant contact with the public constituency, I believe the time is fast approaching when every representative organization must reappraise its efforts in responding to student unrest. The problem on the campuses is more structured and of greater potential intensity than many of us are aware. The results of continuing disorders and the resultant publicity are finding a restive audience in the American people.

For some time politicians, columnists, the news media, professional observers, and government officials have been berating, commenting or praising the motives and actions of our campus youth. If nothing else, this inconsistency is creating a demanding and an active majority in the American people who want to know what is or is not acceptable behavior in their society. In time, if allowed to continue in this manner, campus disorders may well result in the appearance of restrictive state or federal legislation which will have the ultimate effect of controlling the operating procedures of our colleges and universities. Further, as evidence has shown, the public reaction will curb the expenditures of local, state, and federal funds used to support the finest educational system in the world.

I will not support, nor will I vote for repressive legislation nor do I believe that the majority of students should be penalized by the cutting back of operating funds in order to punish a few.

Currently under consideration before our Education and Labor Committee is H.R. 11941. While I believe that the role of this bill is laudable in that it attacks the major problems inherent in our college campuses today, I am nonetheless concerned that it may set an unhealthy precedent.

Therefore, at this time I am calling upon your Association and urging that you join with others and convene a series of national and regional conferences of college and university administrators. Such meetings can have a positive effect upon this growing crisis. They would help to create better communication and understanding on the part of the American people, aid administrators in developing practices regarding discipline and conduct of students and faculty, and establish new means of communication with students. The interface which could be obtained by such a meeting would be most valuable to college leaders in providing an experience base for dealing with student problems. It would provide suggestion for solidifying the support of the large silent majority on our campuses and ideas for isolating the behavior and motives of militant reactionaries.

In general their purpose would be to develop concepts which would replace the current atmosphere of disruption and disorder on our campuses with a new positive force of creative interchange. I do not envision the conferences to establish standard regulations or practices as each college and university community is diverse and unique and must be governed by the factors within its environment. The independent operating integrity of each institution must be protected. Voluntary efforts on the part of the educational community must begin now.

I also recognize the limitations of such a conference and that there is no panacea for today's unrest.

The leadership your Association has shown in developing informal and overt actions in regard to this problem is most assuredly recognized. However, the urgency of this crisis requires the efforts of a massive coordinated breakthrough to bring about positive results.

It is my opinion that the National Administration is concerned about protecting the operational autonomy of our colleges and universities and they will be willing to participate cooperatively in any voluntary effort toward this end. I have written the President and members of his staff requesting this support.

I urge your consideration of my proposal and await your urgent response.

Sincerely,

MARVIN L. ESCH,
Member of Congress.

AMERICAN COUNCIL ON EDUCATION,
Washington, June 19, 1969.

The Honorable MARVIN L. ESCH.
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE ESCH: I want to thank you for the concerns expressed in your letter of June 11. As your staff member, Mr. Bob Jones, doubtless told you last Friday afternoon I informed him of our Board of Directors' meeting to be held on Monday and Tuesday and the expectation that we would issue a statement, with copies to be circulated Tuesday morning to members of the Education and Labor Committee. In the event that your copy may have been misplaced, I am enclosing a second copy of it.

Now let me mention some of the things that the Council has been doing and is intending to do with regard to campus disruptions. In the spring of 1968 we conducted jointly with the University of Denver Law School a conference on "Legal Aspects of Student-Institutional Relationships." To this conference we invited a number of students, administrators, professors, and legal experts on the subject. The outcome was a special issue of the *Denver Law Journal* which we distributed without charge to all of our members. In addition to the *Law Journal* was widely circulated in the legal profession.

For the past year or two I and other members of the Council staff have been speaking in various parts of the country on varied aspects of this whole problem. For your information I am enclosing a copy of the several addresses I have given. They have all been published except the two papers I gave some weeks back at the University of Nebraska. These will appear in a book to be published by the University of Nebraska Press.

Also, I am enclosing a copy of a paper prepared by a former staff member of the Council, Otis A. Singletary, which we circulated to all of our members and to many others who requested it.

Our Office of Research is now conducting what is probably the most intensive empirical research being carried on anywhere with regard to this general problem. We expect to begin publishing results within a few weeks.

This afternoon we are having a meeting of the executive officers of many of the principal associations here in Washington in the field of higher education to get moving on our Special Committee on Campus Disruption. We have promise of some foundation funds to hold a number of regional conferences during the latter part of the summer, and likewise we may collaborate with some other agencies in facilitating large, national conferences to be held—possibly in Washington—during the early fall. In these conferences, let me say, we do not intend to engage in endless talk about such broad matters as the generation conflict, the malaise of our era, and so on. We expect to get down to particulars about how to uphold both freedom and order on the campus.

In closing, let me say that we very much appreciated your being present during dinner at the Hotel America on Monday evening.

Sincerely yours,

LOGAN WILSON.

(NOTE.—Also, I am including a statement issued as a result of a conference the Council held some weeks ago in Chicago.)

EXPLANATION OF "A DECLARATION ON CAMPUS UNREST"

This statement was formulated by a group of educational administrators, trustees, and foundation officers who met April 4–5, 1969 in Chicago under Council auspices. Those present were three Council officers—President Logan Wilson, Vice-President Kenneth D. Roose, and David C. Nichols II, assistant to President Wilson—and the following:

Louis T. Benezet, president, Claremont Graduate Center.

Landrum R. Bolling, president, Earlham College.

Herman R. Branson, president, Central State University.

Robert D. Clark, president, San Jose State College.

Fairfax M. Cone, trustee, University of Chicago.

Thomas H. Eliot, chancellor, Washington University.

Robben W. Fleming, president, University of Michigan.

David D. Henry, president, University of Illinois.

Theodore M. Hesburgh, C.S.C., president, University of Notre Dame.

James M. Hester, president, New York University.

Ralph Hetzel, trustee, Pennsylvania State University.

Roger W. Heyns, chancellor, University of California, Berkeley.

Joseph F. Kauffman, president, Rhode Island College.

William R. Keast, president, Wayne State University.

Malcolm Moos, president, University of Minnesota.

Mrs. Henry Owen, trustee, Washington State University.

Harvey Picker, trustee, Colgate University.

Alan Pifer, president, Carnegie Corporation of New York.

Wesley Posvar, chancellor, University of Pittsburgh.

Nathan M. Pusey, president, Harvard University.

John Ritchie, dean, Law School, Northwestern University.

John S. Toll, president, State University of New York at Stony Brook.

Edmund A. Stephan, trustee, University of Notre Dame.

F. Champion Ward, vice-president, The Ford Foundation.

Herman B. Wells, chancellor, Indiana University.

Charles E. Young, chancellor, University of California, Los Angeles.

Edwin Young, chancellor, University of Wisconsin, Madison Campus.

The statement was subsequently approved by the Council's Board of Directors, comprised of the following individuals:

Mason W. Gross, president of Rutgers-The State University, chairman.

Anne G. Pannell, president of Sweet Brair College, vice-chairman.

Gustave O. Arlt, president of the Council of Graduate Schools in the U.S., secretary.

Fred Harvey Harrington, president, University of Wisconsin.

Grayson Kirk, president emeritus, Columbia University.

Frederic W. Ness, president, Fresno State College.

Alan Simpson, president, Vassar College.

Thomas A. Spragens, president, Centre College of Kentucky.

Sharvy G. Umbeck, president, Knox College.

Kingman Brewster, Jr., president, Yale University.

G. Homer Durham, president, Arizona State University.

Samuel B. Gould, chancellor, State University of New York at Albany.

Darrell Holmes, president, Colorado State College.

Kenneth S. Pitzer, president, Stanford University.

Edgar F. Shannon, Jr., president, University of Virginia.

Joseph P. Cosand, president, Junior College District of St. Louis.

Theodore M. Hesburgh, C.S.C., president, University of Notre Dame.

Roger W. Heyns, chancellor, University of California, Berkeley.

Martha E. Peterson, president, Barnard College.

Calvin H. Plimpton, president, Amherst College.

Willis M. Tate, president, Southern Methodist University.

A DECLARATION ON CAMPUS UNREST

The unprecedented, comprehensive, and often unpredictable changes that are taking place in this age both disturb and alarm large segments of our society. Most of the changes and attendant alarms affect the operations of our institutions of higher learning. They are also related to the values, concerns, and behavior of our young people. In coming to grips with the compelling issues, all who would think seriously about them must recognize that present-day society—in America and in many foreign lands—is in serious trouble on many fronts. We see around us racial conflict, continued poverty, and malnutrition midst unparalleled prosperity and seemingly unlimited promise. We are confronted by pollution of our environment, decay of our cities, the continuation of wars and the threat of war, and everywhere a vague but widespread discontent with the general quality of life.

These problems affect all of society, not the university alone or the young alone. We must all be concerned to deal intelligently and responsibly with these problems that are neither the exclusive discovery, nor the sole responsibility of the young. Yet the depth of feeling among young people in many countries today about the issues, their general dissatisfaction with the slow-moving ways of society, and the extreme behavior of a small minority of students are evidence of the profound crisis that involves our entire society and, specifically, the university community.

The university itself has often become the immediate target of student discontent, sometimes couched as legitimate complaints about the deficiencies of the universities, sometimes devised as a softening-up exercise for assault on the wider society.

How to deal with campus crises arising from the widespread protests has become a major public issue and the cause of confused and angry debate. That there should be deep anxiety about the course of the conflict and its possible outcome is understandable. No social, racial, or age group that perceives itself and its values to be seriously threatened will fail to strike back. Increasingly there are backlash temptations to enact strong, often ill-considered, and largely futile measures to cope with a youth rebellion that

none of us fully comprehends, not even the youth themselves.

Certain balanced judgments are proper to make, however, as we search for understanding and solutions:

1. It is important for the public to understand that, despite the nationwide publicity given to student disorders, the great majority of American campuses have remained peaceful. On campuses where conspicuous disorders have occurred, educational programs generally have gone along their normal ways. Most students and faculty have continued to carry on their regular work. In the main, good teaching and good research, as traditionally defined, have been uninterrupted.

2. On the undisturbed campuses and among the majority of orderly students, however, there are widely shared discontents which extremists are at times able to manipulate to destructive ends. Moreover, even in the absence of violence, there has developed among some of the young a cult of irrationality and incivility which severely strains attempts to maintain sensible and decent human communication. Within this cult there is a minute group of destroyers who have abandoned hope in today's society, in today's university, and in the processes of orderly discussion and negotiation to secure significant change. Students and faculty are increasingly aware of the true nature of this group and are moving to deal with its destructive tactics. The necessity to deal with extremists, however, is placing an extraordinary burden upon the whole educational enterprise and upon those who man it. Consequently, universities are having to divert their energies and resources from central educational tasks in order to deal with student unrest in its various forms.

3. The spectacular events precipitated by the extremists should not be allowed to obcure the recent accomplishments of those students, faculty, and administrators who have serious interest in constructive changes in society and in the university. They have broadened the curriculum and improved teaching. They have moved toward a more open and participating pattern for university governance. And they have begun to make the work of universities more meaningful in dealing with the problems of society. Those efforts must continue. Reform and self-renewal in higher education are ongoing imperatives.

4. Meanwhile, the speed and scale of social change have imposed many kinds of demands upon educational institutions for which their programs, their capabilities, and their funding are not always adequate. Moreover, universities are increasingly asked to perform functions for society, particularly in reshaping the behavior, values, and lifestyles of the young, on which the family and other social institutions have already had major influence or lack of influence. Some of society's expectations for universities are quite unrealistic. Insofar as these expectations can be dealt with, they involve a sharing of responsibilities among diverse social institutions. Many of society's demands require new resources and fresh approaches to old and new problems.

5. Recognizing the right of and even the necessity for constructive dissent and allowing for inevitable arguments over what is in fact constructive—certain axioms must be accepted as basic to the operation of any university.

(a) Disruption and violence have no place on any campus. The academic community has the responsibility to deal promptly and directly with disruptions. If universities will not govern themselves, they will be governed by others. This elementary reality is increasingly understood by all components of the university community. Student and faculty groups, including the American Association of University Professors and the National Student Association, have recently joined in efforts to improve disciplinary procedures and to formulate clear and realistic codes for dealing with misconduct, and more particularly with violence and disruption. Also, by involving students and faculty effectively in the governance of the university, it can be demonstrated that there are better ways of getting views considered and decisions made than by disruption.

(b) The historic concern of the university community with academic freedom needs to be restated, reaffirmed, and vigorously defended against all, within or without the university, who would obstruct the right of scholars to investigate, teachers to teach, or students to learn. This reiteration is not to claim for the university special privileges that put it above the law or that free it from critical public appraisal—rather it affirms that the university must maintain a basic institutional integrity to function as a university.

(c) Violations of criminal law must be dealt with through the ordinary processes of the law—and universities must attempt to deal with disruptive situations firmly before they reach the stage of police action. Governmental attempts to deal with these problems through special, punitive legislation will almost certainly be counterproductive. Meanwhile, students and faculty whose consciences demand that they express dissent through law violation must be prepared to accept the due processes and the penalties of the law. They should not be encouraged to expect amnesty from the effects of the law. Such an expectation would be the ultimate use of the *in loco parentis* concept against which many young activists passionately protest. Nor should they expect amnesty from academic discipline, which is the most effective sanction in disruptive incidents.

6. The education community needs to undertake a far more comprehensive effort than ever before attempted to study the underlying bases of youthful discontent and alienation and the broad social problems to which they are related. As social critic, the university must help society understand and solve such problems.

7. All universities should give particular attention to a continuing search for ways, including new social inventions, by which the life of rationality and civility, share concern, and mutual respect must be supported and strengthened within the university community. The survival of the university and its long-term contribution to society depend upon the ability of the institutions to make their everybody life reflect that spirit and pattern.

ASSOCIATION OF AMERICAN COLLEGES,
Washington, D.C., June 19, 1969.

Hon. MARVIN L. ESCH,
U.S. House of Representatives,
Cannon House Office Building,
Washington, D.C.

DEAR MARVIN: Since receiving your letter of June 11th, members of our staff have been in touch with you and your office several times concerning information at least partially responsive to your inquiry and suggestions. Because of the urgency of affairs in the Committee on Education and Labor, we have all wanted to act as quickly as possible in any and all ways that might be helpful to you and other Committee members.

Meanwhile our giving attention to these matters has delayed this more formal response in writing to your letter itself. We are grateful for your constructive posture and ideas on the very complex questions of student unrest and related legislation. More specifically, your idea of timely conferences strikes a very responsive chord. It would be inappropriate and inefficient for us to proceed alone on this, and my understanding is that several other national associations are also giving active consideration to the idea. A number of us are meeting together this afternoon, and I believe the proposed conferences are one of the principal topics on our agenda. None of us wants to delay any action that promises to be of any assistance to the colleges.

With all good wishes.

Sincerely yours,

RICHARD H. SULLIVAN,
President.

THE ASSOCIATION OF AMERICAN UNIVERSITIES,
Washington, D.C., June 16, 1969.

Hon. MARVIN L. ESCH,
U.S. House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE ESCH: I wish to acknowledge with appreciation your letter of June 11, 1969 in which you express concern about current campus disorders and particularly for your desire to have order restored without resort to federal or state legislation which conceivably might be repressive.

With reference to your specific request that the Association of American Universities join with others in convening a series of national and regional conferences of college and university administrators, I shall refer this question to our Association's Executive Committee for consideration. You are aware, I am sure, that some conferences have been held already and it is my guess that if additional meetings are needed, the American Council on Education should take the initiative in convening them. I may say that in the case of the Association of American Universities, which meets semi-annually and is an organization of university presidents, I cannot recall a single meeting of the Association since October, 1964 when a great deal of consideration has not been given to these very matters which are of concern to you. These discussions and exchanges have been helpful to all of our members and will doubtless continue in the future, but I believe most if not all of our members firmly believe that remedial action can and should be taken at each institution by its own trustees, administrators, faculty and students. We are already encouraged to believe some institutions are proving the efficacy of this procedure.

I thank you again for your discerning letter which I know will be studied with care by the members of our Executive Committee and who may wish to comment upon it more extensively than I have.

Sincerely yours,

CHARLES P. MCCURDY, Jr.,

MADISON, WIS.,
June 17, 1969.

Congressman MARVIN L. ESCH,
501 Cannon Building,
Washington, D.C.:

As President NASULGC, I commend your positive approach to campus unrest problems outlined in letter of June 11. Understand you have talked with our Washington office. We offer continued assistance in your efforts to prevent repressive legislation. NASULGC will cooperate with American Council on Education in discussing proposed national conferences. We agree that broad support from national education organizations will be positive step towards preventing repressive legislation and solving the crisis. Your continued interests and efforts appreciated.

FRED H. HARRINGTON,
President, National Association of State Universities and Land Grant Colleges.

AMERICAN ASSOCIATION OF STATE COLLEGES AND UNIVERSITIES,
Washington, D.C., June 16, 1969.

The Honorable MARVIN L. ESCH,
Second District, Michigan,
U.S. House of Representatives,
Room No. 501, Cannon Office Building,
Washington, D.C.

DEAR MR. ESCH: In response to your letter of June 13th and in anticipation of the

House hearings this morning before the Committee on Education and Labor, I have taken the liberty of doing two things over the weekend.

Firstly, the American Association of State Colleges and Universities has asked Chairman Perkins if a member of our Board of Directors, Dr. Darrell Holmes, President of Colorado State College, might be allowed to testify this morning anent the concerns of your letter. Secondly, I have prepared, along with President Holmes, a statement which he will present if given the floor by Chairman Perkins. I enclose a copy of that statement along with material which the statement alludes to.

I trust this strategy on our part is adequate in terms of the intent of your letter, Mr. Esch.

If I may be of further assistance at any time in the future, please call on me.

Best regards.

Sincerely yours,

JAMES E. CIPRIANO,
Executive Assistant.

NEWS RELEASE BY THE AMERICAN COUNCIL ON EDUCATION

WASHINGTON.—The American Council on Education today (June 16) announced establishment of a Special Committee on Campus Disruption which will propose ways to strengthen procedures of self-regulation by colleges and universities.

In announcing the board action, Council President Logan Wilson said the committee "will focus on more effective decision-making, appropriate means of presenting grievances and proposing changes, clarification of due process and the use of campus and civil authority in response to disorder, and improved communication both within the academic community and between it and the public."

The action was taken by the Council's Board of Directors at its regular June meeting. As the nation's major coordinating agency for higher education, the Council has a membership of 1,538 colleges, universities, and education associations.

President Wilson said he is proceeding at once to name the chairman and members of the special committee in consultation with leaders of representative higher education associations.

A specific objective of the committee will be to formulate ways to deal effectively with campus disruption while protecting the academic or constitutional rights of members of the academic community and avoiding resort to repression or counter-violence.

The special committee will be asked to begin its work as soon as it is appointed and to report its findings to the Council's president and board at the earliest feasible date.

Establishment of the committee is one of a number of actions initiated within recent months by the Council in its concern about campus disorders and its historic interest in critical problems of campus governance.

In May 1968 the Council, acting jointly with the University of Denver Law School, sponsored, and distributed the proceedings of, a national conference on "Legal Aspects of Student-Institutional Relationships." The Council's Office of Research is conducting extensive research into the causes of campus unrest. In April the Council issued "A Declaration on Campus Unrest," a statement formulated by prominent educational administrators, trustees, and foundation officers. Most recently the Council published and distributed to its members the June 9 statement on campus disorder issued by the National Commission on the Causes and Prevention of Violence. In October the Council's Annual Meeting in Washington, will focus on "The Campus and the Racial Crisis."

Directors present at the June 16 board meeting were the following: Gustave O. Arlt, President, Council of Graduate Schools in the United States, *Secretary*; Mason W. Gross, President, Rutgers—*Chairman*; Theodore M. Hesburgh, C.S.C., President, University of Notre Dame; Roger W. Heyns, Chancellor, University of California (Berkeley); Darrell Holmes, President, Colorado State College; Grayson Kirk, President Emeritus, Columbia University; Martha E. Peterson, President, Barnard College; Kenneth S. Pitzer, President, Stanford University; Calvin H. Plimpton, President, Amherst College; Edgar F. Shannon, Jr., President, University of Virginia; Thomas A. Spragens, President, Centre College of Kentucky; Willis M. Tate, President, Southern Methodist University; Sharvy G. Umbeck, President, Knox College.

Unable to be present were: Kingman Brewster, Jr., President, Yale University; Joseph P. Cosand, President, Junior College District of St. Louis; G. Homer Durham, President, Arizona State University; Samuel B. Gould, Chancellor, State University of New York; Fred Harvey Harrington, President, University of Wisconsin; Frederic W. Ness, President, Fresno State College; Anne G. Pannell, President, Sweet Briar College, *Vice-Chairman;* Alan Simpson, President, Vassar College.

TRIBUTE TO EARL WARREN

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1969

Mr. SISK. Mr. Speaker, we have a saying in California, from a poem, "The Coming American," which says: "Bring me men to match our mountains."

As we reflect on the record of Earl Warren, we cannot help but feel that here, indeed, is a man who matches our mountains—he is and has been the fulfillment of California's need as attorney general and as Governor, and the fulfillment of the Nation's need as Chief Justice.

Most Americans will remember him as Chief Justice, but those of us from California will remember him as a great Governor who was many years ahead of his time. Many of the causes for which young men in this House are laboring today were advocated many years ago by Earl Warren. Prepaid health insurance, an adequate income for every family, fair employment and civil rights protection, equal educational opportunities, to mention but a few, were part and parcel of the legislative programs advocated by this great American.

Two particular virtues seem to me to be especially worthy of mention on this occasion.

The first of these is his readiness to joust the centers of power and authority for what he believes is right, irrespective of the odds against him or of the chances of success. In his mind, right is an absolute, not a relative, quality—a compass by which you can guide your life.

The second of these is his kindness and the humility he brought with him to every public task assigned to him. He is dignified without being pompous. He is considerate without being condescending. And as a politician, he understood the difference between party responsibility and partisanship.

I have been proud to know Earl Warren, and I am proud that as a Californian I can claim a share of credit for the many contributions he has made to this great country. I wish him and Mrs. Warren the very best of a happy retirement and I join millions of others in saying, "Well done, thou good and faithful servant."

HUE AND KATYN—LESSONS IN COMMUNIST TERRORISM

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. PUCINSKI. Mr. Speaker, the terrorism of the Communists in South Vietnam ranks with that of the Communists in Eastern Europe during World War II.

During the Tet offensive early in 1968, the Communist forces slaughtered thousands of civilians for alleged "crimes." Mass graves have been discovered near Hue, ancient capital of Vietnam and a city long known for its scholarship and devotion to the arts.

Hue was not a well-armed city. Its population consisted largely of teachers, poets, students, artists, and priests.

As the allied and South Vietnamese forces have pieced together information about the atrocities that were committed by the Communists during Tet, they have discovered that the overwhelming majority of the murdered civilians were guilty of no larger "crime" than living in the imperial city of Hue, itself.

The bodies of priests, nuns, Vietnamese civilians, teachers, foreign residents of the city—more than 3,000 of them—have been found in mass graves, their arms bound. It is obvious that many were forced to kneel before being shot in the back of the head. Hundreds were buried alive, their mouths filled with dirt or rags.

This crime against humanity ranks with the Katyn massacre in Poland in September of 1939 when 15,000 Polish army officers were slaughtered by the invading Communist troops.

The world community, though reluctant to learn the extent of Communist terrorism in South Vietnam, is now being compelled to hear the silent voices that call from beyond these mass graves.

Mr. James Cary of the Copley news service has written a stark and graphic description of the horror which took place at Hue last year. I call this chronicle of terrorism to the attention of my colleagues with the sincere hope that it will increase their awareness of the inevitable consequences of Communist domination of Southeast Asia.

Mr. Speaker, Mr. Cary's moving article follows:

MASSACRE AT HUE

(By James Cary)

WASHINGTON.—On the night of Jan. 30, 1968, reconnaissance elements of South Vietnam's crack 1st Division were on an area surveillance mission in the Viet Cong infested countryside southwest of the old imperial capital city of Hue.

A regional forces company was probing the area to their east.

Neither expected to find much evidence of Communist activity. The annual lunar new year or Tet truce was under way.

Suddenly, about 10 p.m., a large Communist force hit the regional forces company hard, brushing it aside and driving straight ahead into the inner walled portion of the city called the Citadel.

That was the beginning of the battle for Hue, highwater mark of Communist strength in the now famous Tet offensive of 1968.

It was not until 25 days later that the last Communist troops were forced out. And it is only now, after months and months of interrogation of prisoners and survivors, and the finding of mass graves, that the world is learning what happened in and around Hue during those 25 days.

The picture that is emerging is one of massacre, mutilation and terror.

Of 3,000 persons missing, bodies of more than 2,200 have been discovered in shallow trenches at more than 25 locations.

Some were buried alive, standing, eyes open. Some were beheaded. Many were bound and shot in the back of the head. Some had dirt or cloth stuffed in their mouths to stifle their screams.

There were at least three death marches. A number of victims were lined up and machine gunned.

Nationality, occupation or political background was no protection. Scores of Buddhists in Hue's strong, anti-government resistance movement were slaughtered. So too were American and German civilians, French priests, South Vietnamese government officials, anyone with relatives in the South Vietnamese army, village chiefs, political leaders, anyone who worked for the Americans, and particularly anyone who was known for his opposition to the Viet Cong.

The Communists have admitted responsibility for the killings. A Communist document, captured in the delta area last November, instructed Viet Cong units to punish "reactionary" South Vietnamese who fell into their hands, claiming:

"We paralyzed the enemy machinery when we killed 2,000 reactionaries in Hue."

Again on April 27, 1969, a Hanoi radio broadcast boasted that the bodies then being discovered in the Hue area were "Hooligan Lackeys who had owed blood debts to the . . . Hue compatriots and who were annihilated by the southern armed (Viet Cong and North Vietnamese) forces . . . (last) spring."

The agony of Hue began almost with the first shots that were fired. After the regional forces company was shattered by the Communist advance guard more and more North Vietnamese battalions, supported by Viet Cong guerrilla and local force units, poured into the city from the south and west.

At 3:40 a.m. two salvos of enemy rockets came shrieking down on the city, setting widespread fires.

By dawn, the Communists controlled all of Hue except their two prime objectives—the 1st South Vietnamese Army Division headquarters in the northern corner of the Citadel, and the American military assistance compound south of the Perfume River. Attempts to capture both were thrown back with heavy Communist losses.

For two days after that the Communists left the population alone. Then VC cadres began to move from door to door.

Some confiscated radio receivers. Others, working from prepared lists, sought out South Vietnamese Government officials and invited them to political indoctrination meetings. They never returned, but it is now known what happened to some of them.

At the Gia Hoi High School and in a field behind the Tang Quang Pagoda, 33 mass graves containing 200 bodies have been found.

A monk at the pagoda told South Vietnamese interrogators that during the first two weeks of February he heard Communist execution squads at work nightly. The victims cried out, pleading for mercy. A volley of pistol and rifle shots would follow. Then silence.

Nguyen Ngoc Ky, leader of the Vietnam Nationalist Party, was among the victims found here.

Another band of 80 to 100 civilians took refuge in the Redeptorist church in Hue. On Feb. 8 the Communists forced them to leave and started them marching east, across the Perfume river. Bodies of 20 of the group were found at Ap Lang Xa Con, a hamlet 4 kilometers from the church. National police said they had been buried alive with hands bound. The body of Tran Dien, one of five elected senators in the national assembly from Hue, was among them.

At the university of Hue, three German doctors on the medical faculty tried unsuccessfully to wait out the Communist occupation. The Viet Cong arrested them on Feb. 5 at their homes. On April 2, 1968, the bodies of Dr. and Mrs. Horst Gunther Krainick, and Dr. Raimand Discher and Dr. Aloi Altekoester were found buried in a common grave in a potato field behind the Tu Quang Pagoda, two kilometers south of Hue. Their arms had been bound with wire. All had been shot.

Two French priests at the Thien An Mission suffered a similar fate.

Their monastery was located on a hill top surrounded by pines. When fighting engulfed the area 3,000 to 4,000 peasants sought refuge there.

Communists troops suddenly appeared. Many of the peasants attempted to flee. Two pleaded with the Communists to spare the building, but as one Vietnamese priest who escaped said later:

"They took over the whole building, firing from the ground level at first, and then mounting into the upper stories."

The bodies of the two resident French priests, Father Urbain and Father Guy, were among 201 bodies found later on the slope of a scenic overlook above the Perfume river.

Father Urbain, 52, had been bound hand and foot and buried alive with 10 others. His body was identified by a laundry number on his underclothing and by his silver denture and bald head.

Father Guy, 48, was stripped of his cassock by the North Vietnamese, forced to kneel, and shot through the back of the head.

Americans suffered similar fates, A U.S. report to the International Committee of the Red Cross reveals.

Stephen H. Miller's hands were bound behind his back. He was shot in the back of the head.

Kermit J. Krause and Jeffrey S. Lundstedt were cornered by the enemy in the bedroom of their house. They were shot in the face. Their bodies were dumped in bathtubs.

Thomas M. Gompertz, Courtney Niles and Robert T. Little were shot in the back of the head, apparently executed. Niles' arms were bound.

It went equally hard with the South Vietnamese.

On Feb. 9 Viet Cong came to the home of Maj. Tu Ton Khan, commanding officer, provincial revolutionary development (pacification) cadres. They ordered his wife to tell her husband to report to VC authorities. They threatened to burn the house if she did not do so.

Frightened, Mrs. Kahn called her husband and two other revolutionary development workers who were hiding in the attic. Maj. Kahn was tied up and taken away with all his belongings. His body was found Feb. 28, pierced by 200 bullet holes.

There are many similar stories.

Tran-Hy, a popular forces member, was arrested by the VC on Feb. 20 and buried alive with 20 others near the An Ninh Ha bridge.

On the night of Feb. 18, a Viet Cong group appeared at the home of Ho Tan Sy, a teacher, and invited him to attend a meeting. He was shot and killed as he left his house.

On Feb. 10 Le Van Tru, chief of the Thua Thien program for Communist defectors, was arrested and shot near the Dong Ba gate.

Nguyen Van Dong, a resident of the Hue Citadel, was arrested Feb. 17 and buried alive at Gia Hoi.

Viet Cong soldiers broke into the home of Miss Hoang Thitam Tuy on Feb. 22, and led her to Gia Hoi high school with four other persons. They were buried alive in the same grave, arms and legs bound. Of 200 bodies found at the school, Vietnamese authorities estimated more than half were buried alive.

By mid-February, the fighting for Hue had turned decidedly against the Communists. The enemy commander had been killed and his replacement, it was learned later, had asked and been refused permission to withdraw. Now the killing became if anything even more vicious as the Communist grip on the city weakened.

A Vietcong unit assembled more than 200 South Vietnamese civilians and local administrators at the town of Ton Nam Duong. They were marched north along a canal toward the sea. Just outside Ap Tong Gi Tay, nine kilometers east of Hue, 75 of the captives were taken into nearby rice paddies and shot.

Other similar marches began.

Nguaen Tan Chau, of the South Vietnamese Army's Medical Corps, was in Hue visiting his family during the Tet holidays when the Communists attacked. He was captured and held with 30 other prisoners. They were started south, bound together in three groups of ten.

He told South Vietnamese investigators later that when the column halted for a rest, he freed his hands and slipped away in the darkness. From a hiding place he witnessed the following scene:

"The larger prisoners were separated into pairs, tied together back to back and shot. The others were shot singly. All were dumped into two shallow graves, including those who had been wounded but were not dead."

Winter and early spring rains washed away the more obvious signs of the slaughter but the bodies were found later in the Phu Thu district about 20 kilometers south of Hue.

A similar story is told by Phan Duy, a key official of Anha hamlet, seven miles east of Hue. He knew his name was on the Vietcong's execution list after the Communists seized Hue. He slipped away from the hamlet to a small house on the outskirts of Hue, hoping to escape detection. The ruse almost worked.

It wasn't until Hue was virtually recaptured by U.S. and South Vietnamese forces that enemy troops discovered him as they pulled back through the area where he was hiding.

On Feb. 28 five Vietcong entered Duy's house, bound his hands and marched him seven miles to a row of houses near an area of sand dunes east of the city. He and four other prisoners were locked in one of the houses for seven days. They were allowed outside only to relieve themselves. But this was long enough for Duy to realize that some 100 prisoners in the other houses were being systematically shot.

On the seventh night Duy and nine other men were lashed to a bamboo pole and marched for 300 yards. Their hands were untied. They were told to remove all outer clothing. As he was undressing Duy heard his guards talking to a group of Vietcong laborers.

"Did you dig the trench yet?" they asked.

"No, not yet, there are too many people and not enough time," the laborers replied.

Three of the guards left to help dig while the prisoners hands were retied. Duy managed to work his hands free, then made a run for it.

"I ran about 300 meters and I saw a pool," he said. "I fell into the water and covered myself with reeds."

Hours later, half frozen, he emerged and began walking toward the lights of the Hue radio tower beacon. He stumbled into the Phuvang district headquarters and reported what had happened.

Many others were not so lucky. So far 356 bodies have been found in the San Duen graves that Duy escaped. Investigators have reported the victims were killed in groups of 25 to 40. Cartridges from Russian-made AK47 rifles used by the Vietcong and North Vietnamese were found nearby. Some of those who died had been bludgeoned to death. Others had been shot.

Despite all these accounts the story of the Hue masssacres is still not complete. Hundreds of other case histories are already known and reports are still being collected at the combined interrogation center in Hue.

The investigation has pinpointed the location of many still-unopened mass graves. Consequently there is little hope for the 800 citizens of Hue who are still missing.

They, too, are believed to be a part of the grisly record the Communists left behind the one time they have occupied a South Vietnamese city.

TWO MARYLAND SERVICEMEN KILLED IN VIETNAM ACTION

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. LONG of Maryland. Mr. Speaker, Pfc. James O. Hall and Pfc. Charles G. Gray, two fine young men from Maryland, were killed recently in Vietnam. I would like to commend their courage and honor their memory by including the following article in the RECORD:

TWO MARYLAND SERVICEMEN KILLED IN VIETNAM ACTION

A Montgomery county Marine and a Charles county Army private first class have been killed in combat in Vietnam, the Defense Department reported yesterday.

They are:

Marine Pfc. James O. Hall, Jr., 20, of Wheaton, who was killed Saturday when his helicopter was shot down about 24 miles northwest of Da Nang.

Army Pfc. Charles G. Gray, 25, of Waldorf, Md., who was killed Saturday by small arms fire while on patrol in Long An province, southeast of Saigon. A 1967 graduate of the John F. Kennedy High School in Wheaton, Private Hall enlisted in the Marines last July after attending Montgomery County Community College for a year.

He had been stationed with a reconnaissance company of the 3d Marine Division near Da Nang.

An accomplished athlete, Private Hall filled a cabinet in the family living room with trophies he earned as a basketball player, golfer and bowler, a relative said yesterday.

He is survived by his parents, Mr. and Mrs. James O. Hall; a sister, Susan and his maternal grandparents, Mr. and Mrs. Virgil McCallister, of Virginia.

WITH 9TH INFANTRY

Private Gray had been stationed with the 9th Infantry Division since coming to Vietnam in May. He was drafted by the Army last October.

He is survived by his wife, Mrs. Doris Gray, of Waldorf, and his mother, Mrs. Annie L. Gray, of Brandywine, Md.

PHILADELPHIA ORCHESTRA IN ARKANSAS

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. ALEXANDER. Mr. Speaker, the quality of rural life has been under much discussion in recent weeks and months. For the consideration of my colleagues, I would like to give an example of the type of people who are contributing so much to improve the quality of life in Arkansas.

Miss Lily Peter, who is from Marvell in the First Congressional District of Arkansas which I represent, recently spent about $60,000 of her own funds to finance an appearance of the Philadelphia Orchestra in Little Rock. To do this, she mortgaged 4,000 acres of her plantation in eastern Arkansas.

The orchestra, which played to two sellout crowds on successive nights in Little Rock, premiered a three-movement suite which Miss Peter had commissioned by Pulitzer Prize-winning Norman Dello Joio.

It is this kind of selflessness, Mr. Speaker, which is helping to improve the quality of life in Arkansas. It is this spirit of dedication and determination which is making Arkansas a great place in which to live and work.

At this point I would like to include an article from the Jonesboro Sun written by Associated Press reporter, Robert Shaw, concerning the performance of the Philadelphia Orchestra and Miss Peter's contribution to it:

MISS LILY THINKS CONCERT WORTH ALL

(By Robert Shaw)

LITTLE ROCK, ARK.—The Philadelphia Orchestra played Miss Lily Peter's concert Tuesday night and she figures that it was worth the $60,000 she paid for it.

"It was worth every penny," Miss Lily, as her friends know her, said after the performance in Little Rock's Robinson Auditorium, jammed with 3,000 persons for the event.

"I know a good many adjectives, but none would fulfill this occasion."

The orchestra, which is to play tonight to a second sellout, premiered Pulitzer Prize-winning Norman Dello Joio's "Homage to Haydn," a three-movement suite commissioned for $8,900 by Miss Lily.

Miss Lily mortgaged 4,000 acres of her plantation in the rich Delta plain of Eastern Arkansas to commission the work and to bring the orchestra to Little Rock as part of the observance of Arkansas' 150th anniversary as a territory.

She will receive none of the money from the ticket sales. It is to go for music scholarships at Arkansas State University and the University of Arkansas.

Miss Lily, who admits to being past 70 "but not quite 100 yet," shared the spotlight Tuesday night with works from Wagner, Debussy and Brahms.

At intermission, she received a standing ovation when Mayor Haco Boyd called her to the stage to present her with a bouquet of roses. Lt. Gov. Maurice Britt then told her that Gov. Winthrop Rockefeller had designated Tuesday as a day to honor Miss Lily."

"I hope you will remember this to be one of the happiest memories of your life as it has been one of the happiest memories of mine," responded Miss Lily, blowing kisses at the audience.

"I hope you will go home and take with you the enrichment of this beautiful music."

Miss Lily, a sometime poet and photographer and fulltime farmer who sometimes clambers aboard one of her tractors, says she wanted the people of Arkansas to be exposed to good music.

"Miss Peter is a new lady in my life, but very close to my heart already," said orchestra conductor Eugene Ormandy. She "somehow became an idol in our eyes, an angel," he said.

Miss Lily stayed in the auditorium long after the concert greeting well wishers and accepting congratulations. "It is gorgeous," she said.

She had originally expected to spend about $45,000 for the orchestra's appearance here and $8,000 for Dello Joio's commission, but incidentals—such as buying her own ticket and those of many friends—brought the total to about $60,000. She also is now talking about asking the orchestra to record Dello Joio's work.

Is she spending a trifle too much?

"Oh, I had the most beautiful cotton crop this year," she says.

INDEPENDENCE DAY OF THE CONGO—KINSHASA

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. POWELL. Mr. Speaker, we take this opportunity to send warm felicitations to the Lt. Gen. Joseph Desire Mobutu of the Congo—Kinshasa—and the Congo's—Kinshasa's—Ambassador to the United States, Mr. Cyrille Adoula, on the occasion of the ninth anniversary of the Congo's—Kinshasa's—independence.

Since the Portuguese navigator Diego Cao first reached the mouth of the Congo River in 1482, the territory now encompassing the Democratic Republic of the Congo has symbolized for the Western World the vast unknown potential of Africa. The twisting turns of the 2,718-mile-long Congo River, the names of Stanley and Livingston, and landmarks such as the Mountains of the Moon have for the armchair traveler almost spelled Africa itself. Today, the Democratic Republic of the Congo is celebrating its ninth anniversary as an independent state in the family of nations. The desolate days of early independence when the state was on the verge of collapse and its people were caught in the violence of civil conflict are gone; a new mood of order and security now embraces the land and the Congo once again represents the tremendous potential of Africa for the development of a prosperous economic future and the creation of a stable and peaceful society.

The long strides toward stability taken by the Congolese Government under Gen. Joseph Mobutu are chiefly responsible for the new mood of optimism toward the Congo. Firmly in control of its own economic policy, the Government has launched a concerted effort to put the country on a sound financial footing. Monetary reform and other fiscal meas-

ures have contributed to the recent relative price stability and a foreign investment program has attracted new capital. Such American firms as Union Carbide, Continental Grain Co., and Pan American World Airways have demonstrated their confidence in the Congo by recently making large investments there. In 1969, more than 10 percent of the Government's budget will be devoted to infrastructural improvements which will strengthen the base of the varied Congolese economy. The hydroelectric project at Inga, financed by an international consortium, when completed will be the world's largest power complex. With 12 percent of the world's copper reserves, the Congo expects to increase its copper production in 1969 by more than 10 percent; in 1968 the Congo produced more than 330,000 metric tons of copper. Kinshasa, the Congolese capital, is one of Africa's fastest growing urban centers.

Political progress has also been made under the Mobutu government. A constitution has been approved by a national referendum and in 1970 national presidential and general elections are scheduled to be held. The Congo has been an active participant in inter-African affairs and in 1967 hosted the Organization of African Unity's conference for heads of state. Advancements in education have also been made as can be seen in the fact that while the Congo had only seven university graduates in 1960, today, 9 years after independence, half of her 22 Government Ministers and provincial Governors are university graduates.

On this anniversary of its independence, the Democratic Republic of the Congo is to be congratulated for its great progress in pursuit of its national goals. As one Congolese official has predicted, the Congo—once Africa's sick man—may become Africa's superman.

YOUTH PHYSICAL FITNESS

HON. JAMES A. McCLURE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. McCLURE. Mr. Speaker, every year the U.S. Marine Corps sponsors a youth physical fitness program in secondary schools throughout the Nation. This program, conducted in support of the President's Council on Physical Fitness and Sports, is based on the five-exercise physical fitness examination used in marine recruit training.

There are six regions and competition is conducted among high schools within these areas in order to determine who will compete in the national championships.

In this regard, I would like to commend a group of young men from Caldwell High School in Caldwell, Idaho. This team was one of 12 high school teams from the six regions who competed in the national championships last week. Team members include Jerry Shaffer, Marc Stone, Mike Collsen, Joe Baumer, Carl Koprowski, and Gary Marcus. The coach of the squad is Caldwell high's basketball coach, Sam Willard, who is well known around the State of Idaho for his fine handling of young athletes.

Idahoans and Caldwell, in particular, are proud of these fine representatives of our State.

The importance of physical fitness cannot be overemphasized. Sometimes in the hustle and bustle of our modern lives, we tend to neglect our bodily well-being. This program and the participation by the young men involved is a step in the right direction. The important thing for our young people to remember is that getting older and assuming different responsibilities does not diminish our need for exercise.

VATICAN SELLS TO ROCKEFELLERS

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. RARICK. Mr. Speaker, the recent announcement that the Vatican is selling its holdings which include the luxurious Watergate apartment complex overlooking the Potomac River in Washington, D.C., is only exceeded by the announcement that the purchaser was Rockefeller interests in New York City. Let us hope it is individually and not one of the tax-free foundations.

It seems that the Italian Parliament has declared that the Vatican must pay taxes on its earnings from investments.

Meaningful tax reform to U.S. taxpayers could likewise be achieved by taxation of church investments and businesses in the United States.

I include a clipping from the Washington Post, for June 19, and a report from Dixieland This Week magazine:

[From the Washington (D.C.) Post, June 19, 1969]

VATICAN SEEN SELLING SHARE IN WATERGATE

Several Italian newspapers reported yesterday that the Vatican is selling out its holdings in the Societa Generale Immobiliere that include the Watergate complex, the luxury apartment development overlooking the Potomac River here.

The firm, an international construction and real estate company, owned the site and financed construction of Watergate.

The Associated Press quoted Rome financial sources as saying the Vatican was negotiating the sale of its stock to Rockefeller interests in New York.

Aldo Samaritani, general manager of the Societa, left for the United States Friday for an extended stay, but the firm declined to discuss the purpose of this trip, the AP said.

The AP also quoted Msgr. Fausto Vallainc, press officer of the Vatican, as stating he had been instructed "from high up to reply with a 'no comment'" to queries about the reports.

Some sources linked the transaction to rumors that Bishop Paul Marcinkus, an American who recently became secretary of the Vatican's prefecture for economic affairs has inaugurated a plan in which the Vatican will liquidate many of its Italian holdings in favor of new investments in the United States and elsewhere.

Last year the Italian Parliament revoked a long-standing exemption and declared the Vatican must pay taxes on its earnings from its Italian stocks.

The size of the Vatican's holdings in the Societa Generale Immobiliere has never been made public, but it is estimated by some sources to be between 20 per cent and 25 per cent of the firm's outstanding stock.

[From This Week magazine, June 22, 1969]

AMERICA'S CHURCHES: BILLION DOLLAR BUSINESSES

(By Alfred Balk)

"Dropping, dropping, dropping, dropping, see the pennies fall," Sunday School youngsters used to sing as the offering plate was passed, and this image of the Church as a small-change enterprise persists. Some parishes, to be sure, are poor. But collectively America's religious community is rich—richer than any counterpart in recent history, richer than even most ecclesiastical leaders are willing to concede, and it is growing richer so rapidly that thoughtful churchmen are becoming alarmed.

Indeed, one of the nation's most eminent clerics, Dr. Eugene Carson Blake, General Secretary of the World Council of Churches, has warned

"When one remembers that churches pay no inheritance taxes (churches do not die); that churches may own and operate business and be exempt from the 52 per cent corporate income tax, and that real property used for church purposes (which in some states are most generously construed) is tax exempt, it is not unreasonable to prophesy that with reasonably prudent management, the churches ought to be able to control the whole economy of the nation within the predictable future."

Consider these points:

Contributions and bequests to churches (taxfree) now exceed $7 billion a year, about half of all U.S. charitable giving.

Though less than half of our populace attends church on an average Sunday, there now is one house of worship for every 600 Americans and at least $1 billion is spent on church construction annually.

Churches' "visible assets" (land and buildings), according to a study sponsored by Protestants and Other Americans United for Separation of Church and State, total at least $80 billion, almost double the combined assets of the nation's five largest industrial corporations. (Of this sum, about $45 billion is held by Roman Catholics; $28 billion by Protestants; and $7 billion by the Jewish faith.)

Denominational pension funds, mortgages, and annuities now total more than $2 billion, much of it invested in dozens of blue-chip corporations.

Through subsidiaries and feeder corporations, churches own myriad numbers of businesses, including hotels, office buildings, shopping centers, radio-TV stations, luxury apartments, industrial plants, even a brand-name women's undergarment firm.

Moreover, because churches, unlike most other nonprofit institutions, are not required to issue public financial accountings, the above estimates of their wealth probably are conservative. As the Rev. R. John Fry, former news editor of *Presbyterian Life*, has noted, most church officials and members still "share the fantasy that they are not an ecclesiastical business juggernaut."

One of the most conspicuous evidences of their wealth is their buildings. In suburbs in particular, the norm now is not only the upholstered but often the air-conditioned pew. Peter de Vries perhaps best depicted the prototype in *The Mackerel Plaza:* "the first split-level church in America," with an elaborate clinic for psychiatric treatment and an interior "convertible into an auditorium for putting on plays, a gymnasium for athletics, and a ballroom for dances. There is a small worship area at one end."

Nor is this "edifice complex" peculiar to suburbs. In Dallas, for example, a Baptist

church's property includes a seven-story parking and recreation building with a skating rink, gym, and four bowling lanes. In Florida, a complex called Bibletown, U.S.A. encompasses a 2,500-seat auditorium, two education buildings, employee quarters, parking lots, a motel used for retreats, mass dining facilities, and 15 acres of recreation area, including a swimming pool and tennis and shuffleboard courts.

So much church wealth now is devoted to property, a recent General Assembly of the National Council of Churches was informed, that U.S. Protestant and Orthodox churches now spend only $500,000,000 a year on services to those outside the churches, "only 41 cents a month for everyone who belong to a church in America."

Even more striking is the churches' accelerating involvement in profit-making business. Almost every commercial field now has church-owned components.

Christ's Church of the Golden Rule near Willits, California, for example, operates a $500,000 motel and other enterprises; the Mormon Church in Utah owns, among other properties, a Salt Lake City newspaper, a radio-TV station, a department store and the Hawaii tourist attraction Laie Village; the Self-Realization Fellowship owns a chain of Mushroomburger restaurants, and the Societa Generale Immobiliare, an Italian-based real estate firm in which the Vatican is said to be controlling stockholder, is financing the new $70,000,000 Watergate shopping center-hotel-apartment project near the Kennedy Center for the Performing Arts in Washington, D.C.

Possibly the most ecumenical portfolio, however, is that of the Ohio-based evangelical Cathedral of Tomorrow. It owns a shopping center, apartment building, electronics firm, wire and plastics company, even the Real Form Girdle Company, as *Women's Wear Daily* revealed under the headline "Rock of Ages on Firm Foundation."

"A church owns Real Form? This is preposterous!" the executive secretary of the Associated Corset and Brassiere Manufacturers exclaimed when informed of the purchase. But the pastor of Real Form's new parent organization cheerfully acknowledged the acquisition.

"There is nothing unusual about our owning business firms," he said. "What's the difference if it's a girdle company or an airplane company?"

Miscellaneous minority stock investments of religious organizations are almost beyond enumeration. The United Methodist Board of Pensions, for instance, recently reported assets of $257,000,000, most of it in corporate stock. The $300,000,000 portfolio of the Knights of Columbus, which includes the land under Yankee Stadium, holds similarly select stocks, and the Roman Catholic Jesuits reportedly own sizable shares of National Steel, Boeing, Lockheed, Douglas, Curtiss-Wright, the intercontinental DiGiorgio Fruit Company, and other firms.

Why have churches suddenly become active business entrepreneurs?

One reason is our tax laws. Since 1950, universities, secular charities, and most other nonprofit organizations have been discouraged from headlong commercial forays by a requirement that they pay taxes on all "unrelated" business income. Churches and church organizations, though, remain exempt from federal tax on *any* income property or business—*even if totally unrelated to their sacerdotal functions.*

A church, in fact, need not even amass a large down payment or procure specialized management talent. Because it is tax-exempt, through a "sale and leaseback" it can arrange a "bootstrap purchase"—that is, the business literally buys itself. The church simply pledges payment out of future tax-free profits, then leases the firm back to the original management, which not only receives a higher sales price than is available from taxpaying bidders but, along with this inflated capital gain, also retains its management status at an attractive salary.

Andrew D. Tanner, a Nashville attorney who conducted a study for the National Conference of Christians and Jews, estimates that a church can generally recover the entire cost of a property, plus interest, within 20 years.

Such exploitation of tax law, of course, severely affects taxpaying competitors. In Dayton, for example, one company complained that it had been underbid on an Air Force contract because the low bidder, a branch of the Roman Catholic Society of Mary, was tax-exempt. And in New Orleans, where a network TV station is owned by the Roman Catholic Loyola University, a spokesman for a taxpaying competitor laments:

"When I pay talent or buy feature film, I've got to use after-tax dollars. They use before-tax dollars. If they spend $100,000 on promotion during rating periods, I need $200,000 to match it. The university and its station are good citizens in our community, but I can't believe this is a fair thing."

Government officials are openly troubled about such situations. Stanley S. Surrey, until recently an assistant secretary of the Treasury, in 1966 asked Congress, at minimum, to eliminate exemptions for bootstrap purchases, and a bill to this effect was introduced by House Ways and Means Committee leaders, but it never reached a vote.

A National Council of Churchs study in 1965–66 found notable religious sentiment for taxing church business operations, and a Southern Baptist Study Paper declares: "Federal income tax exemption on unrelated business income tends to (1) encourage promotion of or participation in secular business to the detriment of the principal mission of the church; (2) encourage morally unjustified business arrangements with businessmen or companies to reduce their income taxes, and (3) discourage financial support of church activities by voluntary contributions of all members." The United Methodist Church, United Presbyterian Church in the U.S.A., American Lutheran Church, and Episcopal Guild of St. Ives have made similar policy declarations. Some groups have petitioned Congress for reform.

As property taxes have mounted, debate also has intensified over other church tax concessions. In Boston, about half of the city's real property valuation now is off the tax rolls; in Harrisburg, Pa., more than 40 per cent; in New York City, Pittsburgh, San Francisco, and other cities, at least one-third. And, according to one survey, in the state of Minnesota, tax exempt valuation is growing twice as fast as that of taxable property.

"This is serious," says Paul V. Corusy, executive director of the International Association of Assessing Officers. "The property tax base is being eroded."

As a stopgap, congregations in Cleveland, Des Moines, and several other cities have voted to make payments "in lieu of taxes" for police, fire protection, and other local services. Policy statements of United Methodist Church, Presbyterian Church in the U.S.A. and American Lutheran Church have urged other congregations to do likewise.

In New York City and Kansas City, Mo., former "rival" congregations now share facilities to avoid costly duplication of plant. Episcopal Bishop Horace W. B. Donegan, out of concern over "the whole urban crisis," has halted a $12,000,000 fund drive for completion of the immense Cathedral of St. John the Divine in New York City "until there is greater evidence that the anguish and despair of our unadvantaged people has been relieved." And the Most Rev. Fulton J. Sheen, upon becoming the Bishop of Rochester, N.Y., declared:

"There never should be a new church built here that costs more than, say, $1,000,000. If a diocese insists on spending more for a church, it ought to pay something like a 20 per cent tax for missions."

Christianity was founded by a poor man who spent His life among the underprivileged and admonished against privilege. Since then, His church has been weakest and most divided in precisely the periods of its greatest material success. Indeed, at times it has become so rich that governments have had to expropriate its properties, in France, Germany, Mexico and elsewhere.

This, then, is the challenge facing America's churches: to disengage from the trap of "earthly treasure." For, as Dr. Eugene Carson Blake has cautioned, "The economic power that will increasingly be wielded by ever richer churches threatens to produce not only envy, hatred or resentment of nonmembers, but also to distract from the purposes of the church members and leaders themselves."

ST. LAWRENCE SEAWAY: A DECADE IN PROGRESS

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. BROOMFIELD. Mr. Speaker, among the millions of words spoken and written this month in commemoration of the 10th anniversary of the St. Lawrence Seaway, there are the recurring themes of its broad acceptance as a basic fact of our economic life and of confidence in its future.

Amid these optimistic predictions and ambitious projects, it is difficult to recall that this link between the Atlantic Ocean and the heart of North America was ever the subject of doubt and derision.

Yet, it was a little more than a decade ago.

It took more than 50 years of troubled and often bitter debate to bring the 2,342-mile waterway into existence. More than anything else it was the resolute determination and faith of a few farsighted men that was responsible for the eventual creation of the seaway.

One of the most resolute and influential of these men was my mentor, my close friend, and my predecessor for 24 years in representing the 18th Congressional District of Michigan, the late Honorable George A. Dondero, of Royal Oak, Mich.

Among Mr. Dondero's many contributions to the progress and well-being of our Nation was his single-minded devotion and belief in the concept of the seaway as the water link between the industrial Midwest and the rest of the world.

He persisted in that steadfast dedication during the early years when the naysayers and doubters were in a majority. Those same qualities helped bring the concept of the seaway into being in the 1950's when Mr. Dondero served so capably as chairman of the House Public Works Committee.

Mr. Dondero never wavered during those years of skepticism. Critics contended that the concept was unfeasible from an engineering standpoint. Even if it were possible to create this vast ditch, they argued, it could never possibly be worth the immense cost.

The answers have long since been delivered as year after year the seaway, despite a number of built-in limitations and artificial restrictions, has regularly exceeded dollar and volume predictions of the experts.

In the 10 years since Queen Elizabeth II, then-President Eisenhower, and other dignitaries dedicated the seaway a great international partnership has been forged joining the States of Michigan, Illinois, Indiana, Minnesota, New York, Ohio, Pennsylvania, and Wisconsin with the Canadian Provinces of Ontario, Manitoba, and Quebec.

The seaway began slowly but traffic has increased steadily transforming cities such as Detroit, Milwaukee, Chicago, and Toronto into world ports to their own and to America's increasing benefit.

Not the least of the seaway's achievements is the opportunity it affords the United States and Canada to demonstrate once more what nations working together in friendship can accomplish for their common good.

The dividend from this international partnership can be defined in cultural and human as well as economic terms.

While the still-infant seaway has demonstrated its vigor and potential, its horizons are just beginning to take definite form. There is a long way to go.

Yet, for that potential to be realized fully the seaway must become less a regional facility and more of a truly international asset—a fully integrated part of the national transportation plan and development program.

It was in that image that men of Mr. Dondero's vision saw the fully matured seaway.

The need for such full and complete use of the seaway is self-evident.

In a speech in Detroit not long ago, former Secretary of Transportation Alan S. Boyd described it this way:

Transportation is one service which Americans need across the board. Without it, you can no more fight a war than you can mail a postcard—and there is little you can do in between.

America's system of transportation is by any standard mammoth. It represents an investment of some $500 billion. It meets needs as diverse as the 200 million people who use it. It accounts for one of every six dollars in the economy; provides jobs for nine million people; and unites a continent.

Yet the increasing demands on the system already strain its capacity in some areas, and the growth to come—compounded by concentration of that growth—could bring its near collapse. Take the year of 1975 as a yardstick for growth—a good year because it is so close you can almost reach out and touch it.

By then the number of private aircraft will have nearly doubled. Commercial air travel will have tripled. Automobile traffic will be up 40 percent. Railroads, which now haul 750-billion ton miles a year, will be hauling one-trillion ton miles. Trucks, now carrying 400-million ton miles will carry 50 percent more.

In fact, if the demand for transportation continues to match America's economic growth, we will have to double in less than two decades the capacity of a system that has taken the lifetime of a nation to build.

In reference to Secretary Boyd's remarks, Mr. Herbert P. Doan, President of the Dow Chemical Co. of Michigan added this:

Mr. Boyd * * * says to the people of midcontinent North America * * *: the St. Lawrence Seaway must play its role in the national transportation system; it cannot be stifled; it must be used and nurtured; it is a natural asset which we cannot afford to waste.

I am certain, Mr. Speaker, that the America which has produced men with the vision of George A. Dondero will not allow such waste to occur.

In commemorating the waterway's first decade, it is important to recall the qualities of men like Mr. Dondero, who fought so long to bring it into being.

It will require the same sort of undeviating devotion that Mr. Dondero brought to the project during his 24 years as a Member of this distinguished body for the seaway to realize its full potential and proper place in the national and international transportation network.

A PROGRAM TO PROTECT THE SENIOR CITIZEN AS A CONSUMER

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. BRADEMAS. Mr. Speaker, Members of the House and Senate will, I am sure, agree that few Americans have made more contributions toward helping solve some of the many domestic problems that face our country than the distinguished former Secretary of Health, Education, and Welfare, the Honorable Wilbur J. Cohen.

At present, Mr. Cohen is professor of education and dean-designate of the School of Education at the University of Michigan.

Under unanimous consent I insert at this point in the RECORD the text of a recent address by Mr. Cohen on "A Program to Protect the Senior Citizen as a Consumer," delivered on May 9, 1969, at the 22d annual Conference on the Aging Consumer at Ann Arbor, Mich.

A PROGRAM TO PROTECT THE SENIOR CITIZEN AS A CONSUMER

(By Wilbur J. Cohen, professor of education, dean-designate, School of Education, University of Michigan)

As we look toward the White House Conference on Aging we must move now into a bolder, broader, more dynamic program for all older Americans.

I propose the following program to protect our senior citizens:

1. IMPROVE SOCIAL SECURITY

Raise the general benefit level—by 50 percent and increase the minimum benefit from $55 a month to $100 a month for an individual and $150 for a couple—over the next four years thus moving over 4 million persons out of poverty.

An immediate 15% across the board increase with a minimum benefit of $80—thus moving over a million persons out of poverty.

Pay benefits based on average earnings over an individual's 5 or 10 consecutive years of highest earnings, rather than on his lifetime average.

Liberalize the retirement test for those individuals who must or want to work after age 65.

2. IMPROVE MEDICARE

Extend Medicare to cover part of the cost of prescription drugs where the patient has recurring drug needs.

Extend coverage of Medicare to all disabled social security beneficiaries.

Simplify the entire Medicare program by consolidating both the hospital and physicians' insurance parts and financing both of them from contributions from employer and employees and a matching grant from government during the working life of individuals so they will have a paid-up policy at age 65 on a non-cancellable basis.

3. REFORM THE WELFARE SYSTEM

Replace the present hodge-podge of 50 different State programs by a system entirely financed by the Federal government with eligibility determined on a national basis.

As a first step toward this goal provide a minimum budgetary standard in the Federal law of $150 a month for a needy aged person.

4. EXTEND ADULT EDUCATION

Provide for courses and institutes in elementary and high schools for adults in every community so that information and learning will be conveniently available to every older person.

Provide for institutes and training courses in gerontology in universities and colleges.

5. PROVIDE SERVICES WHERE AND WHEN THEY ARE NEEDED

Strengthen homemaker and home health services in urban and rural areas so that aged persons can have health services in their own homes and aid in reducing mounting institutional costs.

Organize community self-help and friendly visitor services to keep in touch with the home-bound and to aid aged persons in an emergency.

Establish local and state agencies in cooperation with professional health personnel to assure the availability and reasonable costs of nursing homes, intermediate care facilities, and other services for the chronically-ill aged which will provide the services they need at prices which are reasonable.

Expand housing programs to meet the needs of older persons.

6. STRENGTHEN FEDERAL CREDIT UNION SERVICES FOR LOW-INCOME PERSONS

Aid the low income aged person by encouraging saving of small amounts, credit at reasonable rates, and advice and counsel on consumer prices, products and services.

7. SIMPLIFY AND LIBERALIZE THE FEDERAL INCOME TAX PROVISIONS ON THE RETIREMENT CREDIT

Simplify and liberalize the Federal income tax provisions for the middle-income taxpayer and make it feasible to compute and obtain his full tax advantages.

8. REFORM THE STATE AND LOCAL PROPERTY TAX

Reduce the impact of the property tax by exempting aged persons with modest and low incomes.

Reduce the property tax for all persons by enacting state income taxes and closing the loopholes in the Federal tax structure.

9. STRENGTHEN CONSUMER PROTECTION SERVICES

The Federal Government should publish information on products and services which are developed through research paid for by the taxpayer.

Federal financial aid should be provided to strengthen State consumer offices, and to provide educational and legal services to stop practices that short-change low-income people and perpetuate antiquated and inequitable laws relating to contracts, sales, and credit.

Make available comparisons on the costs and benefits of all kinds of insurance so the consumer knows what he is buying and can

obtain adequate protection at reasonable costs.

Publish a U.S. compendium on presciption drugs which would give the brand and generic names with all pertinent information on each drug, including a supplement on prices, to be available in every post-office and social security office in the United States.

10. PROVIDE WIDER OPPORTUNITY FOR OLDER PERSONS TO BE USEFUL AND CREATIVE

Expand senior centers, recreational and cultural opportunities.

Expand the Foster Grandparent program so that the aged may assist children who need help.

Appoint broad-guaged retired persons on appropriate Federal, State, and local boards where they will help to overcome the generational gap by contributing their ideas with emphasis on idealism, altruism, and the future of our nation.

Enable individuals when they reach age 55 to have a 3 to 6 month sabbatical to determine how to plan their future.

MAKING HISTORY

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. EILBERG. Mr. Speaker, at the beginning of today's session, I spoke in defense of the faculty, students, and programs of Northeast High School in Philadelphia.

Northeast High is in my district, the Fourth, of Pennsylvania. It is currently being subjected to considerable scorn in a film "High School" being shown around the country. Sadly, Philadelphia Schools Superintendent Mark Shedd and the film's director-producer, Frederick Wiseman, refuse to show the film to our community.

From secondhand accounts received from around the country and from reports in the press, I have become convinced that the film is certainly a gross misrepresentation of the school's fine performance and program.

Indeed, it is becoming increasingly apparent that the filmmaker, in order to serve his own purposes, approached his project with singleminded preconceptions. This, of course, required that he show no evidence of the constructive, imaginative, and innovative work that goes on at the school.

The school abounds with exciting programs in counseling, advanced curriculum, individualized student programs, music, mathematics, child psychology; programs not found at most "typical, white middle-class schools," as Wiseman described Northeast.

One of these pioneering programs was a remarkable research project undertaken by history students at Northeast. Using original sources at historical societies and in city records, these teenage historians traced the history of Northeast Philadelphia from 1609 to 1854.

Now part of the fourth largest city in America, Northeast Philadelphia then was a loose quilt of separate townships and boroughs, churches and farms, in which crossroads served as commercial and community centers.

When the research was completed, the school's printshop published a handsome, spiral-bound 200-page illustrated book.

While I have not been given a chance to see the film, "High School," I have read this book. It is a remarkable achievement, one of the many conveniently overlooked by the filmmaker.

I applaud the work of Mrs. Cora Hurwitz, the teacher who coordinated this project, and Dr. Mabel Haller, principal of Northeast.

I must say I am impressed by the students who did the research, writing, illustrating, and printing of this book and I congratulate them. I enter in the RECORD an account of their achievement which appeared in the Philadelphia Evening Bulletin of Thursday, June 26:

TEENS TOP NE ROOTS, WRITE BIG HISTORY BOOK

(By Barbara Murphy)

In the minds of many people, Northeast Philadelphia is something new, something strictly post-World War II, something without deep roots in the distant past.

But a group of teen-age historians at Northeast High School have written a book which tells quite a different story about this community with all of its suburban subdivisions, supermarkets and super highways.

"If the book 'Old Northeast Philadelphia County, 1609–1854' has taught its writers one thing," said Mrs. Cora Hurwitz, who supervised the project, "It has shown them that instead of being a brand new section, this is an area with roots deep in the past."

CHURCH HERE SINCE 1711

"They have learned, for instance, that there is a church—Trinity Episcopal Church in Oxford—that has been here since 1711.

"They have learned that there is a house on Pine road, the Ury House, part of which was built by the Swedes as a fort in 1645.

"They have learned that the Society of Friends has two still-functioning congregations here that were started in the 1680's.

"They have learned that Washington's Army came through here on its way to Yorktown and that several skirmishes in the Revolutionary War were fought in the Northeast."

THE FIRST HISTORY

Mrs. Hurwitz said the students' book is the first history of the Northeast ever written as far as she knows.

She said credit for the original idea goes to Dr. Mabel Haller, principal of Northeast High School.

"Dr. Haller saw an historical map of some sort in one of the papers one day in the fall of 1967," Mrs. Hurwitz said, "and she suggested a history of the Northeast might be written as a class project."

Mrs. Hurwitz, who became the school's college counselor last February, was teaching American history at the time and she put the idea to one of her junior classes.

The pupils were enthusiastic and set to work. They divided into six communities. Two worked on the area as a whole and the four others on the individual townships and boroughs which made up the "Old Northeast County." They were Bridesburg, Frankford, Whitehall, Oxford, Lower Dublin, Delaware, Byberry and Moreland.

Mrs. Hurwitz explained that the title of the book refers not to a separate county since there never was a "Northeast County" per se, but to the Northeastern part of the old Philadelphia County which existed as a separate, much larger entity before the city and county consolidated in 1854.

"The students went everywhere looking for information," she said. "And in the process they learned an awful lot about research. They consulted unpublished manuscripts, and city records and interviewed people."

PICKED BEST PAPERS

When each of the committees had finished its work, the commttees exchanged papers and the class as a whole picked out the best papers in each group.

This was at the end of school year and Mrs. Hurwitz figured that was the end of the project.

"But some students were so interested," she said, "that they wanted to go on with the project. So all that summer this group came to my house in Frankford every Thursday night and rewrote and edited and organized the research into a single, coordinated work."

Last fall, the papers were mimeographed and presented as a completed project to Dr. Haller.

But that was not to be the end either.

GOOD ENOUGH TO BE BOOK

"Dr. Haller thought it was so good, we should make a real book of it," Mrs. Hurwitz said.

So the young people set to work again, doing more research, rewriting and editing and then turned over the project to the school print shop.

The result—published just before the end of the recently concluded school term—was a handsome, spiral-bound 200 page book, complete with introduction and illustrations.

WRITERS, EDITORS

Mrs. Hurwitz said the actual writing of the final version was done by Steve Aaronson, Howard Cobert, Louis Karchin, Arlene Levit, Neil Nameroff, Beverly Narod, Rhona Neremberg, Michael Pearlman and Michael Raitman.

The editors were Sally Battilana, Elizabeth Berryman, Larry Carson, Rosalyn Chanin, Lona Cogan, Barbara Cohen, Marjorie Gottshalk, Robert Lankins, Steven D. Morise and Anita Solow. Marc Cohen did the art work and Larry Carson the cartography. William Nell supervised the printing work.

NOT DRIED UP, AFTER ALL

In doing research for the work, Mrs. Hurwitz said, the students discovered some errors in existing books.

Some books for instance said Byberry Creek had dried up many years ago, she said, but a group of researchers went to see for themselves and discovered the creek is still there.

In another instance, she said, it was found that a map dated 1681 by most books could not possibly have been made then since it contained names of settlers who did not arrive until 1682.

By careful checking, it was discovered the map had been made in 1687, some printer having mistaken a 7 for a 1.

Mrs. Hurwitz, a veteran teacher who came to Northeast in 1957, said she has been in charge of a lot of involved student projects, but this, she said, "is the first one ever put out for the world to see."

ONE HUNDRED COPIES FOR PUPILS

She said 100 copies of the 200 printed went to pupils involved in the project.

Most of the others, she said, will be placed in local libraries.

"But we are interested," she added, "in suggestions as to how we can make this available to people who might have an interest in the history of the Northeast."

Those with suggestions are asked to call Mrs. Hurwitz at Northeast High.

GUN CONTROL

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. DINGELL. Mr. Speaker, the District of Columbia's firearms registration

law recently went into full effect. The deadline for registration of firearms by residents of the District has passed, and what is the result? The Washington Evening Star of June 19, 1969, carried an editorial entitled, "This Is Gun Control?" which answers this question fully. So that my colleagues may be advised of results of the District's firearms registration drive, I include the text of the Star's editorial at this point in the RECORD:

THIS IS GUN CONTROL?

At the last report the formal deadline for registering firearms under the District's new gun-control law has passed with less than a third of the estimated number of weapons in the city signed up.

So what does the city government intend to do now? Launch a house-to-house search, perhaps, for the missing items? The silence from the District Building on the subject is quite deafening.

No doubt the exceedingly cumbersome and time-consuming requirements of the new ordinance contributed in large degree to the poor statistical performance, for the Washington public is not this contemptuous of any reasonable law. The basic failure, however, results from an erroneous premise that this regulation might prove to be of productive help in keeping firearms out of the hands of criminals.

Obviously no such ineffective law can be left unattended, and we await with interest the inventiveness of the city government as to what comes next. As to crime deterrence, however, the City Council should, as a first step, shift its focus on guns from registration to the support of some means of imposing really strong penalties upon anyone who actually uses a gun in the commission of a crime.

ADDRESS BY CAPT. FRANK A. MANSON, U.S. NAVY, RETIRED, DIRECTOR OF NATIONAL SECURITY AND FOREIGN AFFAIRS FOR THE VETERANS OF FOREIGN WARS, BEFORE THE DEPARTMENT OF MARYLAND'S 49TH VFW CONVENTION IN BALTIMORE

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. HOGAN. Mr. Speaker, I recently had the pleasure of addressing the department of Maryland's 49th annual convention of the Veterans of Foreign Wars in Baltimore.

Capt. Frank A. Manson, U.S. Navy, retired, director of national security and foreign affairs for the Veterans of Foreign Wars, also addressed this convention. Captain Manson discussed his observations and suggestions following a 27,000-mile factfinding trip around the world. While many of Captain Manson's points are his subjective opinions, I think they warrant the attention of my colleagues. I am therefore setting forth his speech.

ADDRESS BY CAPT. FRANK A. MANSON, U.S. NAVY, RETIRED

Ladies and Gentlemen. I am honored to present the greetings of our Commander-in-Chief, Richard Homan, to the state of Maryland whose membership in the Veterans of Foreign Wars continues to grow at a fantastic rate. You are noted for your champions in football and baseball and now you are membership champions in the VFW!

Your membership growth speaks for many things. It means you have attractive ongoing programs. It means that you have many workers. It means that you have imaginative and dedicated leaders. It means that you are looking at the future of our country as well as the present and past which should never be forsaken.

On a material basis you will be pleased to know that the V.F.W. has had a steady membership growth for 17 consecutive years. The V.F.W. is the only veterans organization that can make this claim and, in fact, I know of no other national organization that has established such a record.

Maryland represents one of our nation's best V.F.W. organizations and I compliment you on your record of achievement.

In this convention, I read your resolutions for the coming year, and I can see why your membership continues to grow. It is because you stand for, and you support, a strong, stable and harmonious country.

All of your resolutions would serve as models on a national basis, but I would especially like to commend you on Resolution No. 3. This resolution supports our Secretary of Defense and all those in authority in their efforts to continue religious training in character guidance to service personnel. I would like to read this resolution. Quote: "Supporting Secretary of Defense, and all others in authority, in their efforts to continue religious training in character guidance programs to service personnel."

This matter become a hot issue only a few months ago when a group was trying to force God out of the Army training manuals. This issue represents the heart of America's greatness, the heart of our Armed Forces. This issue represents the difference between America's leading the world as a nation under God or America competing as a secular power with material things representing the power of persuasion.

We pledge allegiance to our flag under God.

Our constitution is based on a national faith in God.

The V.F.W. derives its strength from a faith in God.

The Secretary of Defense made the decision in favor of God.

The V.F.W. helped expedite the decision.

The reason why it is so difficult to deal with the Soviet Union is because that government does not recognize the existence of God nor does it recognize the Bible as a rule book for man's conduct on earth.

Without basic agreement on right and wrong, what then is good and evil?

America must keep faith with its idealism, with its flag, and its constitution which guarantees freedom and justice for all.

After completing a 27,000 mile fact-finding trip around the world, visiting 14 countries, including three of the most sensitive areas—the Far East, Southeast Asia and the Middle East, and after talking with those in high places and the man on the street, I am convinced the most obvious threat to the United States' national security is the production of Soviet armaments and the deployment of those armaments, along with trained military and technical personnel, to any area or country which shows promise for increased communist influence.

A more subtle threat, and in the long view probably more effective, is the continuing export of communist agents, trained subversive revolutionaries, trained in teaching, killing, psychology, theft, and all the other talents required to completely disrupt the harmony and stability of a society.

Mr. Herbert Rainwater, our VFW Junior Vice Commander-in-Chief, and I traveled completely around the Sino-Soviet periphery. We found the Sino-Soviet split to be real and the split seems to be deepening and widening. But both the Red Chinese and the Soviet government continue to export trained killers, people trained to kill village chiefs, trained in the use of the firing squad, and trained in torture and terrorism. The Soviet Union continues to export heavy military armaments on a massive scale to those countries where marginal chances for their use and influence exist.

For example, North Korea receives a continuous supply of first-line MIG aircraft, tanks and small, fast boats. The North Korean Navy has been recently supplied with high-speed diesel engines which make it possible for North Korea to build infiltration boats capable of speeds between 35 and 40 knots, faster than any surface craft the U.N. forces have in that part of the world. This new high speed boat resembles a fishing trawler until it starts to move. I suppose if the new boat is capable of carrying armed agents into South Korea, it is also capable of carrying automatic guns, mines, bombs and small rockets. In any case, the ambitions of North Korea's aging Kim Il Sung to dominate South Korea still exists. His ambition continues to be fed by the supply of arms from the Soviet Union.

South of the DMZ the Republic of South Korea's free enterprise system is making rapid economic development. The mayor of Seoul told us that he expects to completely eliminate slums in Seoul within the next three years. Every 90 days he builds new high rise apartment buildings, places 400 slum-dwelling families in each and charges each family $7.00 per month rent. The new apartment buildings are complete with swimming pools, recreation facilities and modern in all respects. This is truly a revolution in urban development programs. It is taking place in a civilized manner under a free enterprise system operating in an open society.

Almost everyone who goes to Vietnam makes a report. So I will be no exception. South Vietnam and her allied helpers, including the United States, South Korea, Thailand, Australia, New Zealand, and the Philippines have a preponderance of power. North Vietnamese Army regulars forces could not hope to gain a battlefield victory under present circumstances. South Vietnam and the United States, Thailand and South Korea have made heavy national commitments. For example, Thailand sent 1/3 of her total armed forces into battle when that country entered the conflict. The allied powers have lost thousands of young men in their struggle to give the ballot privilege over the firing squad as a means of governing the Republic of South Vietnam.

I believe the formula for allied victory has at last been found. I refer to the pacification program of destruction and construction, cleansing the villages of communist agents and replacing them wtih responsible human beings from South Vietnam who are now being trained in vast numbers to administer to their individual community needs with dignity and just and justice. South Vietnam's ability to self-determine, self-govern and self-sustain is improving with each new day.

Now, if North Vietnam persists in her tactics, it may be necessary for our armed forces to organize "surprise" tactics such as the U.S. used in World War II. In that war, the surprise department was known as "Dirty Tricks", but it worked.

Let us all hope that the cause for humanity can persevere at the peace table and that South Vietnam can follow in the footsteps of the Republic of South Korea, a government and a people we can be proud to stand alongside. South Vietnam is now miraculously built up with new harbors, new port facilities, new airports, new training facilities and equipment of all kinds which stagger ones imagination. The military structure is now built for the transformation of South Vietnam into one of the strongest economic nations in Southeast Asia. It would be an utter

shame to permit all the death and human suffering in this land, all the new harbors and buildings built by the world's greatest builders, America, to be lost in a web of communist political dialogue. The Commander-in-Chief of the Veterans of Foreign Wars, Richard Homan, has frequently urged President Nixon, in view of the continued shelling of civilians in South Vietnam to continue to reevaluate all of his options for bringing about a peaceful and prompt settlement of the conflict. I am sure President Nixon knows as well, if not better than anyone in the world, that peace will be achieved through unity and strength here at home. Communist leaders understand strength and unity.

But the Soviet government and the Red Chinese have problems of their own and they have problems with each other.

If the communist powers are going to continue to exploit the problems we have, then I say we should explore their problems. If they continue to pour sand into the machinery of our society then I feel it is only fair that we do some pouring of sand ourselves. One only has to look at our sand pouring talents among ourselves on domestic issues to know we can be the international champions.

The Soviet Union has some real weaknesses from within. She has boundary disputes with China. Some of the Soviet colonies don't like colonial rule, and some are saying so publicly. Some of the communist parties don't like the life of a parrot. Some of them like to say what they think and none of the communist nations except the Soviet Union seem to like what is now happening to Czechoslovkia. Many millions of people inside the Soviet Union don't like to speak Russian. Many of the Soviet people want to speak their own native language. Many want to worship their own God. Many want to publish books criticizing those in power. Many want the right to vote for a choice. Many want less poverty and more food.

The point I wish to leave with you is this: Life in the Soviet Union is not all vodka and caviar. Red China has problems, too. These problems may get worse because they each lack the spiritual base which America has.

The thing we must do is to keep our faith, believe in ourselves, work to the limit of our talents and I know we will remain America the beautiful, America, the symbol of justice and freedom and compassion for all men . . . everywhere.

TRIBUTE TO JOSEPH McCAFFREY

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. RHODES. Mr. Speaker, on the anniversary of his 25 years as a Washington correspondent, Joseph McCaffrey is deserving of a special tribute, not only from his listening public but particularly from the Members of the Congress. He is fair and factual in his presentations, and is very knowledgeable of the workings of Congress. He does a real service in keeping our fellow citizens well informed.

We are all well aware of the power of the communications media, and of the capabilities which it possesses in shaping the opinions of our citizens. The responsibility of reporters of the news, then, bears great significance on the future course of our country, and demands that nothing but honest, unbiased reports be presented.

Joseph McCaffrey is such a reporter. He does honor to his profession, for he has never had to resort to sensationalism nor distortion to retain the interest of his listeners, and he is most deserving of the great respect he enjoys. I wish to express my warm congratulations to Joseph McCaffrey, and my appreciation for the great service he has rendered.

EXPLANATION IN ORDER ON RELAXING NURSING HOME STANDARDS

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. DULSKI. Mr. Speaker, my attention has been called to the relaxation in standards for nursing homes which are serving medicaid patients.

If there is validity to the charges made by the head of the National Council of Senior Citizens, Inc., it seems to me that an investigation is in order by the Congress as well as a reassessment of the situation by the Health, Education, and Welfare Department.

Congress has sought through legislation to give assistance and consideration to our senior citizens. We have an obligation in this regard. A reduction in standards represents a backward step that merits prompt investigation.

Mr. Speaker, following is the text of the statement making the charge by the head of the senior citizens' organization:

NEW MEDICAID REGULATIONS REPRESENT GIVE-AWAY TO NURSING HOME OPERATORS

WASHINGTON, D.C., June 25.—A senior citizens' spokesman today denounced the new Medicaid nursing home regulations as "a give-away of Federal funds to the nursing home industry."

Nelson H. Cruikshank, President of the 2,500,000-member National Council of Senior Citizens, said "Congress set up Medicaid to help the needy and not to guarantee huge profits for private nursing home operators—the most predatory of health care suppliers."

The cutback in Medicaid nursing home standards was announced by the Department of Health, Education and Welfare Monday through publication of the reduced standards in the Federal Register.

Medicaid is the three-year-old Federal-State program of health care for the needy.

Cruikshank accused the American Nursing Home Association of putting heavy pressure on officials of the Department of Health, Education and Welfare to get them to order a relaxation of care standards for large numbers of men and women receiving nursing home care paid for under Medicaid.

The senior citizens' spokesman said: "The main concern of the American Nursing Home Association is to increase profits of its members and it is unfortunate that Department of Health, Education and Welfare officials caved in under this pressure."

Until today, Medicaid regulations required that a nursing home receiving funds under Medicaid have one registered professional nurse in charge on one shift and that licensed practical nurses who have graduated from State-approved nursing schools be employed on other shifts.

The new regulations allow employment in nursing homes receiving Medicaid funds of nurses who have never attended nursing school and are licensed regardless. This is called licensing by "waiver."

Cruikshank said delegates to the National Council of Senior Citizens' recent annual convention in Washington had protested the undue influence of the nursing home industry on Medicaid administrators.

The resolution condemned "actions of Federal Medicaid administrators in employing a paid representative of the nursing home industry to write regulations for nursing home participation in the Medicaid program."

Newspapers have reported that Harold G. Smith, a nursing home consultant, was hired to help draft the Medicare nursing home regulations.

Cruikshank urged that humanitarian organizations concerned with problems of the elderly protest this surrender by Medicaid administrators to the nursing home industry."

Cruikshank declared: "It is a sham and a fraud for the Federal Government to pay for skilled nursing home care, then permit untrained nurses to provide the care.

"This will prolong the widespread disregard of professional standards of nursing home care and continue the exploitation and neglect of unfortunate nursing home patients."

NEW JERSEY ISSUES TEMPORARY INJUNCTION AGAINST INTERNATIONAL MAGAZINE SERVICE OF THE MID-ATLANTIC, INC.

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, in further reference to the subject of deception and misrepresentation in the sale of magazine subscriptions, I would like to call attention to a temporary injunction issued yesterday against one magazine sales company doing business in New Jersey.

Superior Court Judge Alexander P. Waugh yesterday granted a preliminary restraining order against International Magazine Service of the Mid-Atlantic, Inc., to prohibit the sales company from continuing certain sales practices which the New Jersey attorney general contends violate New Jersey laws.

The order directs IMS to refrain from misrepresenting that certain magazine subscriptions are free when in fact they are not, that monthly payment amounts were less than they turned out to be, and from failing to reveal the total contract price until after the consumer had signed a contract.

Judge Waugh set a final hearing on the case for October. The New Jersey attorney general has asked that at that time the court order IMS to stop all operations in New Jersey, to rescind all contracts, to return all money obtained through misrepresentation, and be fined $100 for each illegal transaction. Nineteen consumers were identified in the complaint.

The preliminary restraining order is expected to be made effective by July 2. It represents a significant step to wipe out unscrupulous sales practices where they exist in the magazine sales industry.

The Easton Express, an Easton, Pa., newspaper, deserves a great deal of

credit for the uncovery of magazine sales misrepresentation through its public service feature, "Action! Express." Complaints received by the newspaper from New Jersey readers led to the attorney general's action to seek an injunction.

I invite my colleagues' attention to the account of yesterday's decision as reported in the Easton Express:

NEW JERSEY COURT CURBS MAGAZINE SERVICE

(By F. Alan Shirk)

MORRISTOWN, N.J.—Superior Court Judge Alexander P. Waugh today decided to issue a preliminary restraint against International Magazine Service of Mid-Atlantic Inc. to prohibit it from continuing certain sales practices which the New Jersey attorney general says are in violation of the state consumer laws.

Judge Waugh reached the decision on a show cause order of the attorney general as to why an interlocutory injunction should not be granted against IMS to suspend certain operations in the state.

The case was heard in the Morris County Courthouse here.

The action against IMS resulted from consumer complaints mailed to the attorney general by Action! Express, a public service column of the Express. These and other complaints have prompted a nationwide investigation of the magazine subscription sales industry.

The restraint expected to go into effect by next Wednesday, will prohibit IMS from misrepresenting that certain subscriptions are free when in fact they are not, that monthly payment amounts are less than they turn out to be, and that the total contract price is not revealed until the consumer signs the contract.

Judge Waugh set a final hearing on the matter for October. The attorney general in the final action wants IMS to stop all operations in New Jersey and rescind all contracts and return all money obtained through misrepresentation. He also asks that IMS be fined $100 for each illegal transaction.

The hearing today was continued from last Friday when it was adjourned on a legal technicality concerning the rules of evidence.

IMS contested the attorney general's action on the basis that the court did not have the jurisdiction because IMS was a Maryland based corporation with independent franchises doing business in New Jersey.

Douglas J. Harper, deputy attorney general, contended this morning the franchise agreement between IMS and the independent franchises proved that the defendant had too much control and therefore the state's complaint was proper.

Harper said that IMS controlled the independent franchises because it had the right to accept or reject subscriptions, could alter commissions, could make cash advances to the franchises, provided that all contracts automatically became the property of IMS, issued the monthly payment booklets and ran all subscriptions through a central collection agency.

Harper also said the contracts carried the name of IMS.

DEFENDS FRANCHISE PLAN

Barry Mowrer, attorney for IMS, argued that the violations charged by the attorney general were committed by the independent franchises and not by IMS.

"The independent franchises are just that—not employes or agents," Mowrer said.

He also argued that the contract language was not misrepresentative, but the oral portion of the salesmen's talk might have been.

Judge Waugh said the arrangement between IMS and its franchises was "merely a facade," and that the franchising agreement was unusual because IMS did have so much control.

He said that in the correspondence and letters sent to consumers who signed contracts, the name IMS appeared frequently.

"Based upon your showing before me, there is not this independent franchise between defendant and Bernstein to insulate the defendant from restraint," Judge Waugh said. The Judge referred to Stanley Bernstein, one of the independent franchisers mentioned in the complaint.

The judge said he reached his decision primarily on the basis of Harper's argument about the close relationship between IMS and the independent franchisers and also on a state statute regarding habitual violation of a state law.

HANOI VISITOR REFUTES CLAIM THAT BOMBING HALT IS HELPING UNITED STATES

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. PUCINSKI. Mr. Speaker, we are deeply indebted to Mr. Andrew Borowiec, foreign correspondent for the Washington Star, for his recent dispatch from Paris in which he quotes a recent visitor's visit to Hanoi.

Mr. Borowiec points out that the bombing halt has not reduced tensions in the North as some observers have recently indicated in the American press and that on the contrary, the North Vietnamese seem to have profited from the halt of the air war to improve their production techniques and transportation system.

I have seen naive statements in some publications that the bombing halt has created great morale problems in Hanoi because since the bombing attacks have stopped, Ho Chi Minh is having difficulty maintaining a war spirit among his people.

Mr. Borowiec offers us the first authoritative report on the situation in Hanoi and from his article we immediately see how misleading are those who insist the bombing halt has in some way helped our war effort.

The Communists continue to keep their people in a state of permanent tension by warning that America will resume its bombings. I am deeply concerned that the bombing halt has obviously given Hanoi an opportunity to build up its defenses and as the article points out, should the raids ever resume, North Vietnam would be in a much better position to cope with them.

While it is true that Mr. Borowiec points out there is little damage to be seen from the bombing, I think it should be remembered that more than a year has elapsed since we started the bombing pause and the Communists have had ample opportunity to repair the damage.

The article by Mr. Borowiec follows:

HANOI VISITOR SAYS REGIME STIRS TENSIONS

(By Andrew Borowiec)

PARIS.—Communist authorities in North Vietnam are keeping the country in a state of permanent tension, warning that the "Americans may attack any time."

This was reported by a highly placed neutral observer who visited North Vietnam recently. The visitor asked to remain anonymous.

He said the state of tension was apparently aimed at preventing the population from lapsing into apathy, harming the war effort.

Thus, air raid alerts are sounded periodically, although the United States has stopped bombing the North. While certain emergency measures have been relaxed, industry, schools and all governmental activity remain highly decentralized and on a permanent war footing.

"The war is not over, keep fighting until final victory," is the main theme of official propaganda.

NO SLACKENING

The visitor, who toured large portions of North Vietnam, said he had not noticed any signs of slackening vigilance. The country remains in the grip of a powerful and all-embracing Communist machine, he said, and it would be highly premature to speculate on any slackening of the war effort due to the halt of U.S. bombing.

On the contrary, he said, the North Vietnamese seemed to have profited from the halt of the air war to improve their production techniques and transportation system.

"Should the raids ever resume, they would be in a much better position to cope with them," he said.

BOMBING MINIMIZED

The visitor appeared unimpressed with the results of the bombing. It failed to disrupt life and industrial activity in the North, he said.

"One sees comparatively little damage as one travels through the country," he said. "The North Vietnamese like to capitalize on attacks on civilian targets but they are often quite close to military objectives. Invariably, the military targets seemed to have suffered less."

While, on the whole, impressed with the organization, determination and loyalty of the North Vietnamese, the visitor saw "staggering examples of inefficiency."

Thus, he recalled, at one stage during the air war, factories and some port installations of Haiphong were dismantled and hastily evacuated. Even today, specially formed teams are looking for various components.

Boilers, machinery and other pieces of equipment can be seen literally strewn in the fields, unguarded by anybody, he said.

He was unable to determine the impact on the population of the losses suffered by North Vietnamese regulars in the South. However, he did see large numbers of young men in the cities and villages and concluded that North Vietnam is not faced with any dramatic manpower shortage at this time.

TRUMAN WARD—A GREAT LOSS TO THE CONGRESS

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. PHILBIN. Mr. Speaker, all of us were greatly shocked and saddened by the passing of our dear, esteemed friend, Mr. Truman Ward, who as majority clerk for so many years served the House and its Members with such outstanding efficiency, fidelity, and cheerfulness.

His loss is indeed a great one to all of us, and in a real personal sense, especially those of us who knew Truman well during his long years of faithful service and looked up to him and relied upon

him to perform tasks for us which he always did so effectively and well.

Truman Ward was respected, admired, and loved by all who knew him. He was an honorable, God-fearing man, devoted to his church, his family, his friends, and his very important work on this historic Hill.

Indeed, these are the things that really were his life, and he centered his attention upon them.

I had no inkling that Truman was seriously ill, and therefore the shock of his passing came upon me with special impact, shock, and deepest grief.

My heart goes out to his devoted wife and family, who have sustained such an irreparable loss, which all of us prayerfully share.

I join them in mourning Truman's passing. He will be missed here in the Congress, where he rendered conspicuous assistance to the Members of the House for so many years far beyond the call of duty.

He will be missed wherever he was known for his amiable personal qualities, his loyalty to his friends and his country, the skill and conscientious effort that he put into his work, and his warm friendship that was so deeply appreciated by so many people.

A great American has passed from the earthly scene, from these honored Halls, where he spent so many years of his life, from his friends and dear ones to his eternal, heavenly reward.

I express my most heartfelt sympathy to Mrs. Ward and her family and hope and pray that the good Lord will bring them reconciliation and peace in their most sorrowful bereavement.

Truman's memory will always remain with us. He has left us a real legacy of loyalty, hard work, the meanings of friendship and attention to duty that will endure for many years.

May he find happiness, peace, and rest in his heavenly home, and may his dear ones be sustained and helped by the mercy and compassion of the living God to bear their truly grievous loss with true fortitude, faith, and courage.

BATTLE KILLS GLEN BURNIE MARINE

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. LONG of Maryland. Mr. Speaker, Cpl. William M. Stone, Jr., an outstanding young man from Maryland, was killed recently in Vietnam. I would like to commend his courage and honor his memory by including the following article in the RECORD.

MARINE DESCRIBES BATTLE DEATH OF GLEN BURNIE MAN

"The North Vietnamese troops threw a grenade, and he jumped on it to try to save everyone else from getting hit. He tried to jump on it, but he missed it and the fragments just tore him up.

"We had two guys wounded by the grenade besides him. He was a real good guy."

That is how a Marine described the death of his friend, Lance Cpl. William M. Stone, Jr., 18, of Glen Burnie, whose death was announced yesterday by the Defense Department.

SQUAD AMBUSHED

The friend, Cpl. Emmet D. Close, of Brooklyn Park, said their squad was ambushed June 17, about four miles south of the Demilitarized Zone.

"The genade was thrown from a tree line just in front of us. . . . Just before he died he asked me to come over and see him [in Glen Burnie], and I told him I would, but he died right there on the spot," said Corporal Close.

"He couldn't understand why we were fighting there," said the Brooklyn Park Marine who was the dead man's squad leader.

Corporal Close, who is home on an emergency leave, said he was nominating his friend for a silver Star. The two had known each other for the past 10 months only in Vietnam, even though their houses were but four miles apart.

SURVIVORS NAMED

According to Corporal Stone's mother, Mrs. William M. Stone, Sr., he enlisted in the Marine Corps last year after working at several odd jobs. He had dropped out of high school in the ninth grade.

Besides his mother, he is survived by his father; a brother, James A. Stone; and two sisters, Donna Lynn Stone, and Beverly Ellen Stone, all at home.

PRINCE GEORGES COUNTY CHAMBER OF COMMERCE SPEAKS OUT AND TAKES ACTION ON PROBLEMS OF EDUCATION AND EMPLOYMENT

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. HOGAN. Mr. Speaker, I call to the attention of my colleagues an example of clear thinking on some of today's problems by the Prince Georges Chamber of Commerce. I commend the members of the Prince Georges Chamber for their conscientious concern as responsible citizens to help find solutions to some of our perplexing problems.

I could not let the occasion pass without bringing this fine program to the attention of my colleagues, so I am setting forth a letter from Mr. Charles Belinky, president of the Prince Georges Chamber of Commerce:

HYATTSVILLE, MD., *May 13, 1969.*

HON. LAWRENCE J. HOGAN,
Longworth House Office Building,
Washington, D.C.

DEAR CONGRESSMAN HOGAN: As a result of the recent discussions between our Executive Committee and yourself, the Board of Directors of the Prince Georges Chamber of Commerce on May 5, 1969 gave special consideration to the problems arising from vociferous persons advocating the seizure and control by force and violence of some of our public and private institutions. We coupled with this discussion our concern regarding current activities reaching from the college campus to the ghetto where violence is employed to accomplish ill-conceived objectives. This letter is being written at the direction of our Board and with the unanimous approval thereof.

We do not believe that the solution to these problems will result from either a single or simple solution. On the other hand, we are not dismayed by the belief that such problems have no solution at all. We feel that democratic capitalism is not only a political-economic system which is good for this country, but which can and will work effectively in the interest of all of our citizens. We are indeed anxious to contribute our part and are pleased with your efforts and your concern for making our political-economic system more viable and appealing to all.

There are obviously large numbers of people in our community who, with justification, feel that they are out of the main stream of our economy and who feel that they do not have a reasonable opportunity to promote their own economic and political well being. If our system is to work properly, such people must be given the incentive and encouragement to feel that they do have a welcome place and an important role to play. It is quite obvious that the dream of Henry Ford in manufacturing goods that his own workers could afford contributed greatly towards setting the high and prosperous pace of our society. We who are more successful in our personal lives can obviously expect to gain if we can transfer citizens from welfare rolls into productive employees who bear their own share of taxes and who become paying customers and avid consumers.

With this spirit, the Chamber of Commerce has established a Committee for Opportunity which is intended, as the name implies, to provide opportunities for those who sincerely wish to better their economic well being. It is hoped to provide opportunities in the fields of both education and employment.

On the other hand, we feel that it is imperative for the preservation of our society that certain fundamental standards of conduct be clearly recognized, that all our citizens be encouraged to abide by these standards, and if they fail to do so, that the law deal firmly, swiftly, justly and equally with such deviations. Obviously inciting to riot, advocacy of violence and use of violence is included within such standards. In short, respect for law, settlement of controversies by the Courts and modification of law through orderly legislative processes is an uncompromising essential element of democratic capitalism and to domestic peace and prosperity. These principles we are prepared to defend against all those who would seek to ignore, disregard or overturn them.

The Prince Georges Chamber of Commerce is prepared and, indeed; is actively engaged in providing opportunities for those who wish to better themselves and who are willing to comply with the simple standards of recognition of the rights of other persons to the security of their person and property. we are, indeed, anxious to do more for our County, State and Country within the framework of these principles and we are encouraging you and others to suggest what else we may do.

Very truly yours,

PRINCE GEORGES CHAMBER OF COMMERCE, INC.,
CHARLES D. BELINKY, *President.*

LAW AND ORDER EVERYONE'S CONCERN

HON. WALTER FLOWERS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. FLOWERS. Mr. Speaker, I am pleased to offer for inclusion in the

RECORD remarks made by an outstanding public servant of the State of Alabama recently. Sheriff Mel Bailey, of Jefferson County, was speaking to a meeting of the Blount County Democratic Women's Club, and the text of his address is as follows:

LAW AND ORDER EVERYONE'S CONCERN

"In our nation where peace under law is a cherished way of life, all agencies and officers of law enforcement face a challenge of paramount importance.

"The problem of crime in our streets and in our cities has reached unprecedented proportions, and law enforcement must find a way to discharge its basic responsibility: The protection of society.

"The ability of law enforcers to do this depends in large part upon the cooperation and support of law-abiding citizens; and unfortunately, that ability has been hampered to some extent in recent years by misunderstanding or deliberate distortion of the facts.

"Some people have tried to make the phrase 'law and order' somehow synonymous with prejudice or repression, and this is not an honest position.

"Enforcement of the law and maintenance of order are essential if justice is to be assured all citizens. If any citizen's rights are violated by a law enforcement officer, then that officer is not enforcing the law. He is exceeding and abusing the power of his office, and he should be disciplined appropriately.

"I have emphasized this ever since I became sheriff of Jefferson County.

"On February 28, 1967, I formally reaffrmed the policy of the Sheriff's Department.

" 'The state law imposes the duty to effect a legal arrest where the situation warrants it.' " I said then, " 'and reasonable and necessary force may be legally used to prevent the escape of a felon, to effect his arrest or to protect citizens and in defense of the life or safety of the officers.' "

"I also made it clear that any deputy who was wanton in his use of force would be subject to disciplinary action commensurate with the findings of any investigation establishing that fact. That remains the Jefferson County Sheriffs Department's policy.

"So does the following, also quoted from my 1967 statement:

" 'The policy of the Sheriff's Department is to enforce the laws of the State of Alabama fairly and impartially without regard to race, color or situation in life.

" 'In the carrying out of this policy, our deputies are expected to be courteous in the performance of their duties and are so instructed. A lack of courtesy on the part of an officer is construed as a weakness and will not be tolerated by this department. No deputy shall willfully mistreat any person, prisoner or otherwise, and shall not use profanity or derogatory language in the discharge of his duties.'

"I think that says it as clearly as it can be said.

"Lest there be any doubt whether this still represents the policy of this department, I restated it, as reported in the newspapers, only last week.

"If any citizen or any member of the Jefferson County Sheriffffs Department still has any question, then I reaffirm here and now that even-handed, impartial, professional enforcement of the law and equal protection of the rights of all citizens of whatever race or social status or persuasion are the criteria by which I expect to be judged and by which the deputies assigned to this department will be judged.

"Now, let me repeat here that there is another side to his coin, and that is the side of public responsibility to give the law enforcement agencies full support in the performance of their duties.

"Even with the notable advances in police efficiency and scientific crime detection, law enforcement agencies cannot grapple alone with the crime problem and hope to succeed.

"Lawmen must be aware of our responsibility to the people we serve. But we also have a right to expect and get the respect and the support of those same people.

"Without that kind of cooperation and mutual respect, the lawless minority will continue to prey on the honest, law-abiding majority of all races and economic classes. No one's rights, property or life itself will be safe.

"Good law enforcement comes down finally to the men who are charged with providing it, of course: But it begins with You and all citizens who believe in a just and lawful society.

"Furthermore, there is a responsibility on the part of the city, county and state governments to make as diligent an effort to help prevent crime as police agencies are expected to make in apprehending and prosecuting criminals.

"Too often there can be found in the three levels of government and in their various departments a lack of attention to the needs of the poor, in such areas as welfare, food stamps, school and parks, housing and health, and so on.

"Out of this sometime lack of diligence in tackling social problems have come street demonstrations, campus unrest, rioting and, consequently, additional pressure on police forces.

"All systems and levels of government must do their part to provide and maintain social stability and peace in the community.

"It is not good enough to leave one segment—the law enforcement agencies—to face the brunt of attack because of failure of other departments of government to do their part of the job.

"So I hope you can see that if we are to enjoy peaceful, lawful communities in which the rights of all citizens are secure, we all—law enforcement agencies, other government departments and private citizens and organizations—have to shoulder a part of the responsibility.

"I can tell you, and all other interested citizens, that the Sheriff's Department of Jefferson County intends to accept its share of the load.

"I expect from my men high standards of professionalism and, above all, moral integrity. They and I in return expect the understanding and support of the community.

"I can think of no better way to end this than to quote one more paragraph from my 1967 statement:

" 'It is the sworn duty of every member of the Sheriff's Department to protect the rights of every citizen. It is the duty of every citizen to cooperate with an officer when he is carrying out his sworn duty.' "

"Neither the situation nor this department's policy has changed since then."

CUTTING OF FUNDS FOR PORT OF NEW YORK AND NEWARK BAY

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 25, 1969

Mr. DELANEY. Mr. Speaker, I strongly protest the administration's discriminatory proposal which singles out New York-New Jersey Port projects to absorb a grossly disproportionate share of the cutback in harbor improvement projects.

Of the $13.7 million reduction in funds, the ports in our area are cut $5.4 million, or 39 percent. At the same time eight seaport projects sustained no cuts at all.

The value of the Port of New York's oceanborne foreign trade in 1967 amounted to nearly $13 billion, divided almost equally between exports and imports. In addition, a total of some 786,000 passengers entered and departed the port by ship in that year. This commerce was carried by nearly 23,000 vessel trips, which in turn generated over $816 million in customs revenues—about 30 percent of the total customs revenues for the entire Nation for both air and sea transportation.

A port's ability to function successfully is in no small measure controlled by the adequacy of its piers and docks, and the waterways leading to them. This is not to minimize other port handling, transportation, and administrative services. However, unless a ship can enter a harbor safely, and load and unload its cargo efficiently, there will be no traffic and commerce to support these other services.

From 1946 through 1965, private terminal operators and waterfront industry in and around New York Harbor, together with the city of New York and the Port of New York Authority, spent nearly one-half billion dollars to build and rehabilitate marine facilities to accommodate this area's massive oceanborne commerce. More recently, the city and port authority have agreed to construct a long-needed $60 million modern passenger ship terminal on the North River waterfront.

The magnitude of ocean commerce handled by the New York Port, and the local self-help improvements instituted by New York City Port interests, calls for most careful consideration of any cutbacks in port projects which might have an adverse effect on the continuing economic progress in this area.

I strongly urge that full funding of New York Port projects be favorably considered.

ON THE EDGE OF THE MOON

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. TEAGUE of Texas. Mr. Speaker, Mr. Harry LeVine, Jr., of the General Electric Co., recently brought to my attention several articles in a special section of the London Times of June 3, 1969. Because of their significance and the indication of international interest in our Apollo program, I am including these outstanding articles in the RECORD. I commend the reading of these articles to Members of Congress and to the public:

[From the London Times, June 3, 1969]

1,800 YEARS OF SPACE TRAVEL: FROM DREAM TO REALITY

Man has been traveling to the moon for centuries; to dig the gold, eat the cheeses, explore the forests or wrestle with Dan Dare's

Mekon. His transport has been romantic, ingenious, foolish and brilliant; chariots of swans, giant guns, artificial clouds and enormous metal springs; even rockets.

These journeys, dreams that ranged between ludicrous fantasy and prophetic imagination, are not recorded much before the second century A.D. But later, as writers discovered science fiction and the appetite men had for it, the stories proliferated.

At times, either by luck, reasoning, knowledge of science, or uncanny inspiration, they foresaw details of voyages like Apollo 10's and that planned for next month.

In 1646 Cyrano de Bergerac, accomplished wit, swordsman and satirist, imagined himself lifted towards the moon in a flying machine propelled by rockets. But tales of space travel can be traced back at least as far as 160 A.D., when the Greek satirist, Lucian of Samasota, wrote *Vera Historia* (True History), which had all the basic ingredients of space travel fiction: the outward journey, the moon landing, a description of the moon, and the journey home. It set the pattern for many that followed.

Lucian's hero found himself on the moon by accident. His sailing ship was caught in a violent whirlwind that snatched it from the sea and carried it through space. On the moon the traveler found lunar inhabitants called Hippogypi, who rode on three-headed vultures with wings that were "bigger than the mast of a ship".

Until the end of the middle ages apparently little was written of man's dream. Then in the sixteenth and seventeenth centuries works by Kepler, Copernicus and Galileo started what has been described as a "veritable astronomical revolution". Johannes Kepler's work, *Somnium* (The Dream), a space fantasy, spoke of transportation by demons who abhorred the sunlight and could travel only by night. Travellers were given an anaesthetic potion as protection against the ill effects of rarefied air.

Another weird fantasy was that of Francis Godwin, a seventeenth-century bishop of Hereford. His *Man in the Moone* travelled by a chair-like device drawn by 25 geese. Like modern man, he used an animal for the test flights—a lamb. He found on the moon a "huge and mighty sea", "herbes, bestes and birds", but none was like anything he had seen on Earth.

Cyrano de Bergerac in one of his schemes "planted my selfe in the middle of a great many glasses ful of dew, tied fast about me; upon which the Sun so violently darted his rays that the heat, which attracted them, as it does the thickest clouds, carried me up so high that at length I found my selfe about the middle region of the air". The voyage was a failure—Cyrano landed not on the moon but in Canada.

His next attempt, by a rocket-powered "machine", was also a failure. Firecrackers were tied to a large wooden box, the fuses were lit and Cyrano jumped on board. He swept through the clouds to a great height but the fireworks went out and he plunged back to Earth.

David Russen in *Iter Lunare* (Voyage to the Moon), writing at a time when space travel was becoming increasingly popular, imagined a giant launching spring constructed on the top of a mountain. Other writers bizarrely devised great ladders.

CAPSULE SHOT FROM A GUN

However, ideas for leaving the Earth were changing. Readers were becoming more aware of science, and writers were becoming more sophisticated as they struggled to make their fiction more realistic. Some machines were fitted with "anti-gravity" devices; space travellers even tried balloons.

Jules Verne in *De la terre à la Lune* was as scientifically accurate as knowledge at the time permitted. His scheme to shoot a capsule at the moon from an enormous gun was not feasible because its occupants would have been crushed by the acceleration. However the story was good enough to excite his readers into wondering whether it was a possibility.

Columbiad, the name Verne gave his spaceship, was fired from a place called Stone Hill, Florida, little more than 100 miles from what is now Cape Kennedy. It was 9 ft. wide and 15 ft. high. Made of aluminum, it was luxuriously furnished and had gas to provide light and heat. There was an ingenious system for smoothing the impact of take-off, and a chemical plant to produce oxygen.

H. G. Well's great science fiction works—including *War of the Worlds*, published first as a magazine serial in 1897—came at the end of the long line of fiction that had searched for a method of leaving the Earth. Towards the end of the nineteenth century fantasy was increasingly overtaken by reality—the rocket engine was the solution. Although the dreams of space travel did not falter, science began to dictate terms to the writers.

The exact date of the rocket's invention is lost in history. Stories and legends suggest it was in use before the thirteenth century, but these are hard to confirm. Most authorities point to 1232 when the Chinese were besieged in the town of Kai-Feng by Mongols. They tied rockets, apparently used by them for signalling, to flaming arrows.

Certainly in 1258 a war rocket was used at Cologne, Germany. The Paduans apparently employed them to attack the town of Mestre, near Venice, in 1379. Two years later Bologne, which was under siege, was destroyed by a "fearful device".

In following centuries rockets were continually used as battle weapons. Spewing fire in all directions, they at least caused severe psychological damage. But they were inaccurate. Unless the gas flow from a rocket's tail were directed straight backward, it would curve in flight wide of the target. Guns were much more effective, and impatient military inventors tended to concentrate on these.

The potential of the rocket first began to fascinate European military strategists in the late eighteenth century, mainly because it was being used effectively by their oriental enemies to resist the encroachment of imperialism.

Troops of the Indian state of Mysore had used rockets on British colonial troops in the battles of Seringapatan, in 1792 and 1799. Weighing between 6lb. and 12lb., their casing was made from iron piping and they had a large stick attached for stability. They had a reported range of up to a mile.

Accounts of these battles differ, but one young officer named Bayly wrote: "So pestered were we with the rocket boys that there was no moving without danger from the destructive missiles." He added: ". . . every illumination of blue lights was accompanied by a shower of rockets some of which entered the head of the column passing through to the rear, causing death, wounds, or dreadful lacerations from the long bamboos of 20 or 30 feet which are invariably attached to them."

Passed over by the military, the reaction rocket gradually took shape in the minds of scientists around the turn of this century. Its potential for space travel was realized independently by three men: Konstantin Eduardovitch Tsiolkovsy, of Russia, Robert Hutchings Goddard, of the United States, and Hermann Oberth, of Germany.

Tsiolkovsky, born in 1857, was of humble origin. He showed an early talent for mathematics and physics, and had an inventive mind. The germ of the idea of interplanetary travel occurred to him while he was still in his teens. Most of what he learnt in the early days was self taught. In 1878 he became a "people's school teacher" and moved to Borovsk. In a home laboratory he started experimenting. On the basis of papers he later produced he was elected to the Society of Physics and Chemistry in St. Petersburg.

In 1903 Tsiolkovsky published in the journal *Naootchnoye Obozreniye* (Scientific Review) an article entitled "The probing of space by means of jet devices". The first to understand and develop the use of rockets in space travel, he created the mathematically precise theory of rocket propulsion.

The spaceship that Tsiolkovsky planned was to be powered by heated gases produced by mixing liquid oxygen and liquid hydrogen—the basic chemical formula that powered the upper stages of the Saturn 5 rocket and enabled it to send nearly 50 tons to the moon.

Tsiolkovsky's theories on escaping from the Earth's atmosphere and gravitational field place him, in the view of many historians, at the head of all rocket scientists. But he confined himself mainly to the conception and development of theories.

Robert H. Goddard devoted most of his work to the practical application of rocket propulsion. Born 25 years after the Russian, his interests in rocketry also started in his youth. From the age of 16 Goddard started keeping notes of his ideas. Though his work almost certainly had enormous influence on the rocket research, he did not receive the recognition due him until after his death in 1945.

IT MIGHT COST A MILLION DOLLARS

Until 1920 most of his research was devoted to powder and solid propellants. His most famous work, published in 1919, was "A method of reaching extreme altitudes." In it Goddard speculated that it would be possible to send a rocket to the moon with enough magnesium powder for the impact to be visible from the Earth through telescopes.

After a great deal of calculation and initial experimenting, Goddard launched on March 16, 1926, the world's first liquid fuel rocket. It rose 41 feet from the ground at a maximum speed of 60 m.p.h. and was in the air for about 2½ minutes.

Three years later he told Charles Lindbergh, the aviation pioneer that it was possible to send a multi-stage rocket to the moon. "But he smiled a little bit and said it might cost a million dollars—and of course that was out," Lindbergh recalls. The 1969 budget for the Apollo programme will be many times Goddard's estimate.

During the Second World War Goddard worked under contract with the U.S. Navy Bureau of Aeronautics and the Army Air Corps. The principles he developed were applied to missiles used by the Navy.

After his death Goddard received a number of honours and awards. In 1960 the United States Government paid the Guggenheim Foundation and Mrs. Goddard $1m. in settlement for government use of more than 200 of the pioneer's patents.

Hermann Oberth's interests in space travel started at the age of 11 when his mother gave him Jules Verne's famous books. It set him on a series of experiments into weightlessness and propulsion. In one he even went to the extent of taking drugs, to deaden his nerves, and immersing himself in water. The feeling of weightlessness, he concluded, would at first be very frightening.

His interest in combat rockets drove him to propose to the German war department, in 1917, the development of a liquid-propelled, long-range bombardment missile.

Oberth's first book, *Die Rakete zu den Planetenraumen* (The Rocket into Planetry Space) was published in Munich in 1923. It became a classic. He discussed thoroughly almost every aspect of rocket travel, including the effects of pressure and weightlessness on the human body. The book, only 92 pages of text, was packed with reasoned thought: how a rocket could operate in a void, that it

could move faster than the velocity of its own gases, and that it could launch a payload into orbit.

Six years later Oberth published a 423-page expansion of The Rocket into Planetary Space. Retitled The Road to Space Travel, it earned for Oberth what is believed to be the first international astronautics prize, instituted by Robert Esnault-Pelterie and Andre Hirsch.

During the Second World War Oberth worked on rocket developments including the V–1 and V–2 at Peenemünde and Reinsdorf. After the war, before retiring, he worked for a few years in the United States with Wernher von Braun, his erstwhile pupil and the man who completed the bridge between the early rockets and today's giants like Saturn 5.

Tsiolkovsky, Goddard and Oberth did much more than is recorded, however. Their work inspired many to follow, and the impetus provided by their publications attracted numerous scientists and engineers to rocket and space travel research.

Space travel, like rockets and rocketry, owes much to fear and war. Had there been no Second World War, no east-west arms race and no nuclear weapons, it is doubtful that man would have achieved so much so soon.

If there is one other man whose name is likely to loom as large in space history as those of Oberth, Goddard and Tsiolkovsky, it is Dr. Wernher von Braun. Now 57, he lives and works in America, where he is Director of the Marshall Space Flight Centre. It was he who turned Hermann Oberth's idea of long range bombardment missiles into reality. Luckily for Britain and the rest of Europe his V–2 was not ready until the end of the war. In spite of successes at Peenemünde, Hitler could not be persuaded of the value of von Braun's weapon.

Nevertheless, southern England and the Continent were to experience the horrors of rocket warfare in 1944 and 1945. Some 4,000 V–2s, each carrying a one-ton warhead, were fired during those two years. Traveling at speeds faster than sound, they gave little or no warning of their approach.

Both Russia and the United States were quick to realize the value of the V–2. As they invaded Germany at the end of the war they competed in capturing rockets, plans and the men who designed them.

Von Braun went to the Americans.

Though it was probably the Americans who won this scramble for German minds and machinery, it was Russia that was first off the mark in the space race.

Sputnik 1 went into orbit on October 4, 1957. It caused bitter disappointment in America, and recriminations in Washington. The U.S. Army had planned to put a satellite into orbit in September but apparently red tape had prevented it. The world marveled at Russian technology.

A month after Sputnik 1, the Russians launched the dog Laika in Sputnik 2 and demonstrated that life in a spaceship was possible.

America launched Explorer 1 three months later but by this time Russia's success had made a jarring impact on the West. Americans and Europeans were thinking of space as an advantage in the battle for nuclear superiority . . . and Russia seemed to have that advantage. It seemed that the man with superiority in space had superiority in missile power. Many people envisaged the Russians planting the hammer and sickle on the moon and declaring it their own. The Russians would dominate the world. They would be able to aim a rocket at the earth and they would be invincible.

We now know that in a nuclear war the time it takes a missile to reach its target is critical. A missile launched from the moon would probably arrive when the war was over.

Somewhere in the race that followed Sputnik 1, the Russians adjusted their sights. Whether they raised them from the moon to the planets or kept them on the moon but fell behind in shooting capacity we may know only when the Russians land elsewhere in the solar system.

FIRST GLIMPSE OF THE DARK SIDE

If, as now seems certain, the Americans are the first to step on to the moon's barren surface, it will not mean that the moon is American. Thanks to an agreement signed by some 60 nations in 1967, the moon is international territory.

In 1961 President Kennedy set the target for a moon landing "within the decade", but it was not until the mid-60s that the Americans seemed to be catching up.

On September 13, 1959, Russia's Lunar 2 crashed into the moon's surface. A month later Lunar 3 provided the first glimpse of the moon's dark side. On April 12, 1961, they put Yuri Gagarin into orbit. One month later the Americans put Alan Sheppard into space, but it was a short, 15-minute, sub-orbital flight. The Russians sent back the first television pictures in August, 1962. In 1963 they achieved a flight of over 100 hours, in 1964 they put three cosmonauts up together, and in 1965 they made the first space walk.

But by 1965 the Americans were only a few months behind, and midway through their Gemini programme they started to take the lead. They managed a successful docking—the linking of two space vehicles—essential for reaching the moon by the American method of separate "excursion module".

By 1967 the space commentators were saying that America was ahead. The two-man Gemini flights had been such a success that there was even an air of over-confidence. It may well have contributed to the disastrous fire of January, 1967.

Three astronauts, Edward White, the first American to walk in space, Virgil Grissom, who had made two flights, and Roger Chaffee were doing a simulated countdown for the first manned Apollo flight. At this time the Americans were using pure oxygen for the atmosphere of their space craft.

A small spark from the electrical system is thought to have started the fire: the men were sealed in the capsule and had no chance of escape. They died within seconds.

Apollo underwent sweeping design changes. The atmosphere was changed and new, quick-opening hatches were fitted. The added weight ran into hundreds of pounds and the work on reducing this put the programme back.

Apollo 7, the first Apollo flight, flew in October, 1968. It stayed up for more than 260 hours, making 163 Earth orbits. Two months later Frank Borman, James Lovell and William Anders piloted Apollo 8 on two Earth orbits and 10 moon orbits. They came within 70 miles of the moon's surface and travelled farther from Earth and faster than any man before.

They demonstrated that man could travel through space, and that the dreams of Lucian of Samasota, Kepler and Verne—of going to the moon and of looking back at the Earth—were not to remain dreams forever.

Man has been to the moon, the next problem was to land on it.

For this task, the Americans developed the lunar module, a spidery-looking vehicle which, like a flying bedstead, cannot glide. When tested in the Earth's gravitational pull, six times stronger than the moon's, it proved to be one of the biggest stumbling blocks in the whole Apollo project.

The Russians had decided on a jumping-off platform in Earth orbit. The Americans, after years of debate, had chosen to have their platform circling the moon. Thousands of millions of dollars made the decision irreversible. No wonder those who were sniffing the first hints of victory were shocked when the lunar module, crashed repeatedly during Earth tests and seemed uncontrollable. But its designers stood by it and were vindicated by the inflight trials of the Apollo 9 and 10 missions.

Man is expected to stand on the moon's surface in little more than a month. He will owe much of his achievement to the science fiction writers and the rocket men. But it will not be the end of the dream. Fiction tells too of journeys to Mars, Venus, and to other solar systems. The men who devoted themselves to the science of space travel looked on the moon only as a first step.

[From the London Times, June 3, 1969]

HOW TWO MEN WILL WALK ON THE SEA OF TRANQUILLITY

The perilous journey to the moon of Apollo 11's marvelous ironmongery began, at a grinding speed of less than half-a-mile-an hour, while Apollo 10 was blazing a triumphant trail in space.

Since superlatives are inseparable from space pioneering, it was the world's largest tracked vehicle, "the crawler", that carried the 3,000 tons of Saturn 5 rocketry from its lofty assembly building to launchpad 39A. It took some six laborious hours, the most laggard progress it is likely to make.

Apollo 11 makes its thunderous, fiery exit from Earth at teatime on July 16 with its three-man crew: Mr. Neil Armstrong, a civilian who is destined to be first on the moon, Lieutenant-Colonel Edwin Aldrin, who will walk the surface with him, and Lieutenant-Colonel Michael Collins, who will stay in the orbiting command module.

Following the flight of Apollo 10, the lunar voyagers will orbit the earth one-and-a half times before firing their third stage Saturn 4B rocket that shoots them on to their moon course.

Ninety-eight hours into the flight the 16-ton lunar module will extend four spidery legs, and part from its mother craft to begin its descent to the moon. Its two-man crew, held only by a safety harness, will stand at the controls, peering through canted triangular windows.

For a quarter of an orbit Apollo 11 and its offspring will fly cautiously in formation a few hundred feet apart, in case a quick rescue is necessary. The two moon-walkers will be in the lunar module's upper, or ascent stage. The lower, descent stage will become a launching pad from which they will take off after their 22-hour stay.

The module will take an hour to drop to 50,000 ft. (eight nautical miles). Its descent engine will be fired and in eight minutes it should land on a chosen site in the Sea of Tranquility.

To the men on the previous mission, the spot, from a distance less than twice the height of Everest, looked firm enough. According to Colonel Tom Stafford, the Apollo 10 commander: "There's plenty of holes there. The surface is actually very smooth like a very wet clay . . . with the exception of the bigger craters."

Automatic radar will continuously measure the angle, speed, altitude and range as the lunar module approaches. The pilot takes over, manually, only in the final seconds. He can hover, if he wishes, and take it up again without landing, if necessary. Pads on the module's legs take the touchdown impact.

The module must land cleanly and evenly if it is not to jeopardize its take-off later. As soon as they are down. Mr. Armstrong and Colonel Aldrin will spend two hours checking the module's systems. Then they will stop for a meal, and a four-hour rest. They will eat a second meal before they depressurize their craft and open its hatch for the first time. In fact they will have been on the moon for 10 hours before Mr. Armstrong ventures outside, and into the world's history books.

Wearing a bulky space suit and a special thermal garment over it to protect him from radiation. temperature extremes and parti-

cles of meteroids, and carrying a life support system on his back, Mr. Armstrong will climb down the ladder attached to one of the module's legs.

Colonel Aldrin will televise and photograph the moment from the module before following Mr. Armstrong down the ladder 31 minutes later. Because of the moon's curvature, the astronauts standing on the surface will be able to see only two miles, rather than the 20 they could see on Earth. Under a cloudless black sky the landscape will glare whitely.

They will set up a television camera to send pictures of the module back to Earth. Then the astronauts will rig a solar wind collector—which they are to take back with them—and seismic equipment and a laser reflector which will be left behind.

The wind collector, developed and paid for by the Swiss Government, is a thin sheet of aluminum on a frame like a window screen. It will trap rare gases like argon, helium and xenon from the sun's rays.

The 100 lb. seismic station will collect power from the sun which it will use to radio volcanic movement or lunar activity below the surface back to Earth for perhaps a year.

The reflector, which weighs 70 lbs., will reflect laser beams directed from Earth. These will enable the distance between the Earth and the moon to be measured with great accuracy and any variation to be recorded. Measurements will be repeated several times a day for a year or more. This should enable scientists to refine their knowledge about the shape and size of the moon.

Perhaps the greatest prize awaited from the journey is the 50 lbs. of lunar rock and soil the astronauts are expected to gather for international distribution to scientists.

When Mr. Armstrong first descends the ladder it will be to familiarize himself with the surface and its stability. He will climb back then for a contingency sample bag into which a handful of rock or soil can be thrust quickly in case they need to leave in an emergency.

The astronauts' life support systems allows them four hours air. They will work for three, with an hour in hand as a precaution. Though the moon's gravity is one-sixth of the earth's, movement in their enveloping suits and equipment will be slow and awkward.

Simulation tests have improved ways in which they can go about it. One astronaut, for instance, will carry both experimental packages because his balance is improved, in the same way as when a suitcase is carried in either hand. The packages have to be moved about 70 ft. from the lunar module and on the Earth weight a total of some 160 lb. Special design has made them relatively simple to set up. Lanyards are pulled, releasing springs holding the instruments together as a parcel.

Adjustments are then made to solar panels capturing the sun's rays to provide electrical power for both pieces of experimental equipment. Radio aerials connected to the units will be adjusted so that they send a continuous stream of information back to earth. The equipment starts to operate as soon as the panels are unfurled.

The astronauts will have three prospecting tools for collecting samples. One is a scoop to gather loose soil, another is a pair of tongs for picking up rocks, and the third is a boring instrument. This is hammered into the ground to take a 12 inch core sample, which it automatically ejects into a container. It will give scientists material uncontaminated by man or rocket exhaust. While they are on the surface the astronauts will stay within 300 ft. of their craft.

At 7:32 a.m. on July 21 Colonel Aldrin and Mr. Armstrong will climb back into the lunar module. They will eat two more meals, with a rest of nearly five hours between before blasting off from the moon at 5 p.m. The lower half of their craft, which now becomes a launching pad, remains on the moon. It may be useful to subsequent visitors for fuel or spare parts.

The ascent stage, just 12 ft. high, weighs under a ton on the moon. The astronauts must fire themselves into an elliptical orbit between 15 and 36 miles high and then make this circular with another burn. The lunar module will be travelling in a lower, and therefore faster, orbit than the command module. They will narrow the gap for two hours before they dock.

The two spacecraft must equalize pressure before the hatches are opened for the two moon-walkers to return to the command ship. The lunar module will then be jettisoned.

The mothership will circle the moon twice while preparations are made for the return. To leave lunar gravity its speed must rise from 3,600 m.p.h. to about 5,400 m.p.h. to begin the long journey home and the dangerous reentry procedure.

Apollo 11 is due to splash down at 5:52 on July 24, eight epoch-making days after they set out. But their personal welcome by an incredulous world will be delayed. They will go into isolation for 21 days from the time they left the moon to be minutely examined by scientists.

Before they leave their spacecraft they will even vacuum clean the inside to prevent possible contamination of the earth by particles from the moon, which may be dangerous. As soon as the astronauts emerge from the spacecraft they will don isolation garments and be sponged off with organic iodine.

[From the London Times, June 3, 1969]

What the Scientists Are Hoping To Learn From the Moon

If the engineering of the Apollo project passes its final test with the flight of Apollo 11 in July, the National Aeronautics and Space Administration planners will have the moon in their grasp. In deciding what to do with it, their first goal will be to explore the lunar terrain. The results of this may be crucial to the longer term schemes envisaged by enthusiasts for man's role in space, such as manned lunar bases, the construction of telescopes and the use of the moon as a launching pad for flights to the planets.

The geology of the moon is not only of great interest in its own right but will also help in reconstructing the early history and structure of the Earth. This is not just because two planetary bodies will be easier to understand than one. Whatever the origin of the moon, its crust may still retain the fossil evidence, long since vanished from Earth, of events that occurred at the dawn of the solar system. The geological forces that continually remould the face of the Earth have destroyed all but the vestiges of its primordial crust and left a gap in the record from time of the Earth's formation, some 4,900 million years ago, until the appearance of the first sedimentary rocks nearly 2,000 million years later.

The scale of geological activity on the moon has been much smaller, and the moon's surface, perhaps not greatly altered since the time of its formation, may help to make good the pages missing from the early history of the Earth. Nonetheless, the occasional eruptions seen in lunar craters and the volcanoes spotted by the Apollo 10 astronauts suggest that the moon may not be the fossil planet it is sometimes supposed.

The astronauts of Apollo 11 will spend 2½ hours outside their landing module, long enough to set out a package of instruments and scoop up some samples of lunar soil. Ten more flights are planned with existing Apollo equipment or slight adaptations of it, the pattern of which will be to allow progressively more time on the lunar surface.

Apollo 12 will allow two excursions of 2½ hours each, and the astronauts of Apollo 13 will have up to three days on the moon. But short excursions, even at different landing sites, will bring back diminishing returns. In further flights the lunar module will be equipped with extra oxygen tanks so as to prolong the stay to a week, together with some kind of transport which will give the astronauts a range of five to 10 miles from the module.

One proposal, still very much in the air, is to combine the payloads of two Apollo flights. The lunar module of the first would be replaced by an unmanned capsule capable of landing some 7,000 lb. of logistic support for the astronauts who would arrive on the second flight. The extra equipment would probably include shelter and life systems for a fortnight's stay, and a roving vehicle to explore the surface.

The flights after Apollo 11 will probably be interspersed with unmanned flights designed to reconnoiter the best spots for manned landings. The first landings are planned for sites along the moon's equator. These are easier to attain than polar landings and the orbit of the spacecraft is least at risk there from disturbances by the curious gravity anomalies of the moon. But unmanned spacecraft suggest that the lunar poles may promise more surprises for the explorer.

Just how interesting the moon turns out to be will determine the rate at which it is explored and exploited after the first Apollo landings. If President Kennedy had not made the landing of men on the moon before 1970 a national goal it is unlikely that the scientific aspects of the mission alone would have commanded the necessary funds—the return tickets for the two Apollo 11 astronauts will have cost some $10,000m. each.

After Apollo, space flight will have to be justified by scientific rather than political considerations, and in present circumstances scientists will choose to devote a large slice of what funds may be available to making unmanned flights to the planets. But priorities could change overnight if the moon were to yield any big surprises, such as if, for example, an astronaut were to pick up a fossil skull from the lunar soil.

Apart from exploration, the other possible uses of the moon will depend on the tempo of space activity, and particularly on the demand for manned flights around the solar system. It requires very much less energy to launch a planetary probe from the moon than from Earth, and the economics of doing so might become attractive if rocket propellants such as hydrogen and oxygen could be extracted from the moon. This is why advocates of manned space flight, and science fiction writers before them, have pointed out the advantages of maintaining a manned lunar base which, it is hoped, would be largely self-supporting and need only a minimum of supplies to be ferried from Earth.

Nobody envisages that a manned base would be set up on the moon before the 1980s, but even this date may be too optimistic if the Apollo landings fail to find water, which is the key to any large-scale exploitation of the moon. Water can be separated by electrolysis into oxygen and hydrogen and these three substances between them would provide the bulk of the material needs of a lunar colony. But does water exist on the moon? One possibility is that there is a layer of frozen water, like the permafrost of Siberia, a few feet below the lunar surface. Another is that water molecules may have been trapped in the permanently shaded craters at the poles of the moon and over millions of years have grown into glaciers perhaps 100 ft. deep.

Even if both these suggestions are proved false, and there is no positive evidence to support them, it may conceivably be economic to extract oxygen from the lunar rocks for the benefit of a lunar colony.

A lunar base, which would be an economic alternative to more than a certain number of individual return trips, would be manned by some 20 to 60 people living in prefabricated aluminum chambers. A small nuclear power station, machinery for exploiting lunar water, and a hydroponic farm would be the essential supports of the colony's existence. Geological exploration would be a major part of the colony's role, but there might also be opportunities to construct an observatory, for which the moon offers several unique advantages. The moon has no ionosphere and its far side is the only place in the solar system that is permanently shielded from man-made electromagnetic disturbances by 2,000 miles of solid rock, which makes it an ideal site to pitch a radio-telescope.

X-ray observations, which at present can be made only from balloons and rockets launched to the top of the Earth's atmosphere, could be carried out on a more permanent basis from the surface of the moon. Optical astronomy would also benefit. Without the interference of an atmosphere telescopes could be designed and operated to the theoretical limit of their resolution. Their structure would be far less massive than on Earth because of the smaller pull of the moon's gravity. The 200-inch reflector on Mount Palomar weighs 500 tons whereas a 200-inch telescope constructed on the moon's surface would probably weigh only 10 tons.

An observatory on the moon would be able to reach farther out into space than Earth-based telescopes, with incalculable advantages for astronomy. The counting of various types of very distant stars might help to resolve the debate about the origin and structure of the universe. The precision of astronomical measurements would be extended so as to put the determination of stellar distances on a much firmer basis. A lunar telescope might also be able to detect the planets of the nearer stars. Nevertheless the benefits to astronomy would afford only a marginal justification for a lunar base because many of the advantages offered by lunar sites can be gained far more cheaply by telescopes put in orbit round the Earth.

The costs of running a lunar base have been estimated at around $1,000 million a year for a 20-man base. Labour costs on the moon are expected to work out at nearly $100,000 an hour, and the price of transporting supplies from Earth to moon would be of the order of $10,000 per kilogram. If these estimates are even approximately correct, it is clear that a manned lunar base will be justified only as part of a space programme much larger than what is envisaged for the immediate future, and too large, perhaps, for the resources of any one nation.

But this has not stopped Mr. Barron Hilton, for example, from putting forward his ideas for a three-floor hotel beneath the lunar surface, or Mr. Arthur Clarke, who predicted communications satellites some 20 years before the event, from giving a warning that in two centuries conservationists will be trying to save what little is left of the lunar wilderness.

SALUTE TO AMERICA

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. BROWN of California. Mr. Speaker, one of my constituents, Mr. Robert M. Freedman, has composed a "Salute to America," which he feels should be adopted to replace the Pledge of Allegiance to the flag. I place Mr. Freedman's salute in the RECORD at this point for the interest of my colleagues:

SALUTE TO AMERICA

This is my country and, as an American, I shall defend it with my life. I will never lose sight of my heritage. I will stand with the giants of this land, for no one country, no one person, near or far, shall deprive us of God's will, for man to be free.

THE NATIONAL COMMITMENTS RESOLUTION

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. ROBISON. Mr. Speaker, as you know, earlier this week the other body voted—70 to 16—in favor of the advisory, sense-of-the-Senate resolution which, though ambiguous and presumably without force of law, is being regarded as an attempt by the other body to reassert some of its constitutional prerogatives in the field of foreign policy to the possible effect that future Vietnams might be avoided.

Whether or not this would prove to be the case is, I suggest, somewhat conjectural and one can rather easily imagine that, resolution or no resolution, American Presidents will probably go on conducting American foreign policy largely as they see fit as long as the Constitution—vague and ambiguous though it, too, may be in this same respect—seem to make that possible and practicalities, especially in a nuclear age, are deemed to make it necessary.

The debate on this matter in the other body makes for some interesting reading but will probably leave constitutional scholars still pretty much in the dark as to what, exactly, was accomplished by this bill's passage—on which, of course, the House does not have to act. There can be no question, however, but that this action springs from our unfortunate experience in Vietnam. And there can equally be no question but that this entire matter ought to be explored further and, in my judgment at least, some better approach sought for putting Congress—both Houses thereof—more actively back in the arena where far-reaching foreign policy decisions are to be made.

I have been interested in this problem for a long time—as I know a goodly number of my colleagues have, too. Recently, I ran across two items in the same general area that are worth consideration. The first of these is a rather lengthy discussion of the so-called national commitments resolution, as written by Arlen J. Large and appearing in the June 20 edition of the Wall Street Journal and, under leave granted to do so, it is now included as a part of these remarks:

SENATE WEIGHS U.S. GLOBAL COMMITMENTS

(By Arlen J. Large)

WASHINGTON.—Congress has never voted directly on the merits of waging the kind of war that ultimately evolved in Vietnam. Indirectly it endorsed a much smaller military effort by voting for the 1964 Gulf of Tonkin resolution. And indirectly it sustained the ballooning conflict by voting arms appropriations for it.

Now the Senate is once again acting indirectly, debating the merits of an intervention U.S. foreign policy that produced the unhappy experience of Vietnam. It's being done in the guise of considering a fuzzy sense-of-the-Senate resolution that attempts to define a "national commitment." The resolution says the Senate doesn't want U.S. troops sent abroad to back up future defense commitments that haven't been specifically approved by Congress.

The ambiguity probably attracts votes for the resolution, with different Senators supporting it for different reasons. There is always some automatic support for anything asserting Congressional prerogatives in rivalry with the Executive Branch. The Nixon Administration, which opposes the resolution, at one point seemed content to let it pass unnoticed as a meaningless exercise in Senate parochialism. Now its resistance is stiffening, with Senate GOP Leader Everett Dirksen trying to persuade the sponsors to change the wording to something less offensive to the Administration. The debate could easily deteriorate into a partisan scrap between the Democratic Senate and the Republican White House.

A NATIONAL WEARINESS

But there are Senators in both parties who want to debate the resolution at a deeper level of meaning, symbolizing some measure of national weariness with the U.S. global role since World War II.

A view of America over-committed diplomatically and over-extended militarily around the world is held by the resolution's principal backers, Foreign Relations Committee Chairman William Fulbright of Arkansas and Majority Leader Mike Mansfield of Montana. Sen. Fulbright explains the resolution would "inhibit the President from making politically significant foreign commitments solely on his Executive authority, with any foreign country or organized force without the prior and explicit authorization of Congress."

The whole thing "smacks of neo-isolationism," says Democratic Sen. Gale McGee of Wyoming, who is an unreconstructed Vietnam hawk and an advocate of strong Presidential authority over foreign policy. Sen. McGee thinks many of his colleagues are bemused by the legalistic arguments over Senate foreign-policy prerogatives, failing to see the more subtle assault on U.S. policy itself. "This may not be the hottest issue going, but it could be one of the most important," he says.

The gap between the viewpoints represented by Sens. Fulbright and McGee was widening well before President Nixon himself denounced the "new isolationists" two weeks ago. The national commitments resolution was first introduced in 1967 and directed against the Johnson Administration, which also opposed it. Then as now, it was offered in terms of a stale dispute in Constitutional law, with the Senate wanting to reclaim treaty-ratifying and war-declaring powers it feels have been surrendered to the Executive. But then as now, it was an indirect reflection of growing unhappiness with the nation's global role.

For much of the post-World War II era it was an agreeable role for Americans. It conferred the title of "leader of the free world" on Presidents, and allowed Congressmen to boast of creating the most powerful nation on earth. Literally millions of American citizens have gone abroad since the late '40s to serve in the armed forces or in diplomacy,

and for a lot of them—where there was no shooting—it was fun.

Congress and the public soured on offshore adventures only when the going got tough. It was inevitable that the going would get tough. Mixing deeply into other peoples' political disputes means bumping some day into some locals who care more deeply about the outcome than most Americans do. Endless casualties in Korea and Vietnam produced demands that policymakers show clearly that the foreign enemy was indeed a threat to citizens at home. The Administrations in office at the time could not do it, at least to the satisfaction of millions of voters.

It would be different if light had burst through the entire length of the Vietnam tunnel in, say, the summer of 1966, with the other side shriveling in discouragement. There would be no "national commitments" resolution pending in the Senate today. Global policing, having worked cheaply, would remain high adventure and the military-industrial complex would be as popular as a paycheck.

Instead there's a backlash against both the diplomatic and military establishments of the Executive Branch. Sen. Fulbright's Foreign Relations Committee, in a report explaining the "national commitments" resolution, takes an unaccustomed swipe at the diplomatic profession, complaining in effect that the U.S. has become saddled with *too much* foreign policy, made by too many policymakers.

It's doubtful that, by itself, the resolution would have much impact on Presidential foreign policymaking. The turgid language would have no force of law, merely expressing the Senate's opinion that: "A national commitment by the United States to a foreign power necessarily and exclusively results from affirmative action taken by the Executive and Legislative branches of the United States Government through means of a treaty, convention or other legislative instrumentality specifically intended to give effect to such a commitment."

The Foreign Relations Committee's report mentions Thailand, Israel and Spain as nations that have no such ironclad, Congressionally sanctioned U.S. defense pledge. But oral promises of support by Executive-branch officials or the presence of U.S. military bases, or both, inspire the committee's fears that defense obligations to these countries have been created without anyone's asking Congress.

Cutting Congress into defense commitment decisions, it's theorized, would help avert U.S. involvement in marginal foreign quarrels. A defense treaty presumably would be ratified only when a broad cross-section of Senators agreed a commitment was vital, ultimately justifying U.S. battle casualties. Such nations as Israel, Biafra and Rhodesia, for example, all have passionate friends in Congress, but each rooting section could prove too small to pass a "legislative instrumentality" that would put GIs into troopships.

AN UNACCEPTED DARE

The problem is that this is no guarantee against U.S. involvement in wars that later become unpopular. Congress after all did pass a "legislative instrumentality"—the Gulf of Tonkin resolution—authorizing Lyndon Johnson to use armed force to defend South Vietnam. Sen. Fulbright and others bitterly claim they were misled, but they never accepted President Johnson's dare to repeal it. The North Atlantic Treaty, ratified by the Senate two decades ago, could still trigger U.S. defense of the military government in Greece.

Thus if the Senate passes its "national commitments" resolution, it will be primarily a symbolic act—a complaint against the unsuccessful Vietnam war and a warning against more of the same. Sen. Fulbright himself has conceded that "neither Senate resolutions or any organizational or procedural devices are likely to restore Congressional authority in foreign affairs. The restoration of Constitutional balance will depend on decisions of a more fundamental nature, decisions as to the kind of country we want America to be and the kind of role we want it to play in the world."

"A veritable army of foreign-policy experts has sprung up in government and in the universities in recent years," contributing greatly to our knowledge and skill in foreign relations but also purveying the belief that foreign policy is an occult science which ordinary citizens, including Members of Congress, are simply too stupid to grasp," says the committee report. There is a trenchant reminder to the State Department that:

"Foreign policy is not an end in itself. We do not have a foreign policy because it is interesting or fun, or because it satisfies some basic human need; we conduct foreign policy for a purpose external to itself, the purpose of securing democratic values in our own country."

At least some Senators who have been turned off by the Vietnam war believe Americans can remain global-minded in terms of trade and travel, but should leave the guns at home. Marlow Cook, Kentucky's new Republican Senator, openly applauds a national mood of "neo-isolationism," which he defines as "not economic or cultural but military." The new mood, he said in a speech, "is born of a frustration with excessive militarism, whether it takes the form for costly missile systems which increase international insecurity or ill-advised unilateral intervention in foreign countries which take the lives of thousands of young Americans."

IDEOLOGICAL ARGUMENT

Whether there is "excessive militarism" depends upon an assessment of the threat to Americans from Russia, China, the Vietcong or whomever. The argument tends to be heavily ideological, often with side quarrels over diversion of arms money to civilian uplift, but not always. Here are two Democrats, both domestic liberals, assessing the world around them in recent speeches:

Sen. Stuart Symington of Missouri: "I am confident every American would agree that, when Mr. Stalin was alive, the cold-war aspect of our foreign relations was far more serious than today. Then there was a monolithic structure behind the Iron Curtain, and a man running things whom we all know was interested in taking over the world. That is far from true today."

Sen. Thomas Dodd of Connecticut: "We are now heading into the most perilous period in the history of our republic. . . . If we succumb to the neo-isolationism and anti-militarism that have become so prevalent in our society, if we appear to lack the will to defend ourselves and our allies, then I truly fear for the future."

Not surprisingly, Sens. Symington and Dodd are more or less on opposite sides in discussions of Vietnam and the anti-ballistic missile. But it's a sign of the ambiguity of the "national commitments" resolution that both of them voted for it in the Foreign Relations Committee.

Mr. Speaker, as you will note, it is Mr. Large's conclusion that passage of this Senate resolution is "primarily a symbolic act—a complaint against the unsuccessful Vietnam war and a warning against more of the same."

And, then, Mr. Large goes on to quote from the chief sponsor of the resolution, and we find him coming more or less to the same conclusion but adding:

The restoration of Constitutional balance will depend on decisions of a more fundamental nature, decisions as to the kind of country we want America to be and the kind of role we want it to play in the world.

Precisely so, Mr. Speaker—but, then, how do we go about injecting the congressional influence more than it has been into the arena where those kind of decisions are made?

The answer does not come easily, but one of the most intriguing suggestions along these lines is that made by the respected columnist, Roscoe Drummond, in a recent issue of the Christian Science Monitor. And Mr. Drummond's suggestion—which I consider most worthy of developing further—is for Congress to match the National Security Council, the President's major instrument for achieving a coordinated global view of foreign policy, military policy, and domestic policy, with a joint Congressional Security Committee of its own.

The Drummond column, under leave also granted, is now set forth as a part of these remarks, and I would hope that my having brought it to the attention of others will give this idea the consideration it so richly deserves:

HOW CONGRESS CAN RECLAIM ITS POWER

(By Roscoe Drummond)

WASHINGTON.—Congress is always fretting about its loss of power and initiative to the President and the Supreme Court.

It should. Something needs to be done and can be done. The time is ripe for Congress to repair the balance.

But, first, it needs to be understood that Congress has not lost powers because anybody has taken anything from it, but because Congress has failed to exercise powers it possesses.

Every activist president from Franklin Roosevelt to Lyndon Johnson has enlarged the role of the executive by using more decisively the powers the Constitution gives him—a process enhanced by the focus which radio and television give to the White House.

Congress has lagged behind.

In two landmark decisions—public desegregation and the one man, one vote ruling providing for reapportionment of state legislatures—the Supreme Court has done more to change the face of the nation than anything Congress has done in two decades.

It was always open to Congress to act in these two areas. It failed to do so.

What can be done? What should be done?

One thing is sure: what Congress is presently trying to do won't work. It is trying to increase its powers by attempting to decrease the president's.

This was the stated objective of the original draft of the Fulbright resolution which prescribed that the president as commander in chief must not use the armed forces outside the United States without prior approval by the Senate. That would have meant that President Kennedy couldn't have acted, as he did successfully, to get the Soviet missiles out of Cuba. That would have meant that President Eisenhower could not have acted promptly in sending United States troops to Lebanon. That would mean that no president could act quickly, as needs require in this uncertain and turbulent world.

But the resolution has been so watered down that it is nearly meaningless, except that it cannot fail to plant doubts in the minds of America's allies and adversaries that the president is losing his freedom of initiative. He isn't, in reality, because no resolution by Congress can amend the president's constitutional powers.

They are broad and, in my judgment,

have been used prudently. I know of no foreign policy or foreign military commitment which has not had Senate approval. SEATO (the Southeast Asia Treaty Organization) was overwhelmingly ratified by the Senate. Every military action which President Johnson took in Vietnam had explicit authorization in the Tonkin resolution, also overwhelmingly approved.

There are valid reasons why Congress should recover the powers and initiative which it has lost through neglect. It can do this by effectively using the great powers it possesses—the power of the purse, the power of scrutiny and review, the power of congressional advocacy.

But it can do this only when it is willing to organize and equip itself with the means to do the job.

For years the initiative has always been with the president in part because he has in his hands the means to achieve a coordinated global view of foreign policy, military policy, and domestic policy. The instrument is the National Security Council.

Congress urgently needs the same kind of instrument so it can look at the whole of United States policy, not merely at its separate parts. What is needed is a joint congressional committee on national security to match the work of the National Security Council.

At the present time, at least six different committees in each House—12 in all—examine the bits and pieces of foreign, political, and military commitments and defense spending, and no single committee of Congress ever looks at the whole.

No wonder Congress falters in its job.

No wonder Congress accomplishes so little in supervising and controlling defense spending despite the fact that its powers are great. It deals separately with symptoms, not with causes.

When Congress matches the National Security Council with a joint congressional security committee, it will galvanically recover powers it has long allowed to erode.

Now is the time. It's needed.

KREMLIN-WATCHERS DOUBT ARMS TALKS' VALUE

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. PUCINSKI. Mr. Speaker, the Washington Star carried an excellent article by Mr. Henry S. Bradsher which should be read carefully by those who want to set aside development of America's defense capability until after Mr. Nixon meets with the Soviet leaders to discuss arms control.

Mr. Bradsher has performed a commendable public service with his penetrating analysis on the futility of trying to deal with the Communists.

His excellent article follows:

[From the Washington (D.C.) Evening Star, June 25, 1969]

KREMLIN-WATCHERS DOUBT ARMS TALKS' VALUE

(By Henry S. Bradsher)

A sampling of Sovietologists shows skepticism about the usefulness of arms limitations talks which the Nixon administration hopes to open with the Soviet Union this summer.

Traditionally favoring strong defenses, the Kremlin now has to worry about a potential Chinese danger in considering any weapons agreements, the American experts on the Soviet Union say.

They estimate that the Soviets are spending about $60 billion a year on all aspects of defense, a figure equal to or greater than this country's non-Vietnamese military spending. Yet the Soviet economy is only half as large as the American one.

Kremlin decision-makers—who, the experts emphasize, are Communist party careerists rather than military men—appear willing to continue bearing a big defense burden. The Soviet public is simply forced to accept it.

TIGHTEN DISCIPLINE

Beyond the arms talks, the experts saw the Soviet Union currently engaged in an effort to tighten internal discipline, but they said it is wrong to characterize this as a turn back to Stalinism. Focusing narrowly on a small group of dissident Soviet intellectuals and generalizing from their harsh treatment might give too dark an impression of the overall Soviet situation.

These observations were given by eight specialists on the Soviet political system, economy and military machine. They testified Monday and yesterday before the Congressional Joint Economic Committee's subcommittee on economy in government.

The topic was "the economic basis of the Russian military challenge to the United States," but questioning ranged far afield.

In fact, the chairman and only committee member to sit through all nine hours of the hearing, Sen. William Proxmire, tried to lead several witnesses into expressing opinions on the controversial question of Soviet first-strike capabilities. He got only cautiously hedged answers.

DIMMEST VIEW

The dimmest view of basic Soviet receptivity to fruitful arms control talks came from an expert within the administration, which has set a July 31 target for beginning the strategic arms limitations talks (known as SALT talks).

He was David E. Mark, deputy director for research of the State Department's bureau of intelligence and research. Mark warned that "it will take many years" before Soviet thinking shifts from basic hostility toward the West to one of common interests.

The Kremlin cannot understand substituting law for force, Mark said, and so it believes in keeping a powerful military machine.

Although SALT prospects are better than before, the Soviets still hesitate to launch into an unknown field, Mark said. Previous East-West agreements like nuclear non-proliferation and a limited test ban did not touch so directly on Soviet strength as will the SALT talks.

PRESSURES ABSENT

Prof. William R. Kintner of the University of Pennsylvania, an expert on Soviet strategic thinking, saw no pressure on the Kremlin to make SALT talks productive, while on the contrary a Soviet fear of rising Chinese strength might argue against it.

"The SALT talks will be far more complicated than either the nuclear tests or nonproliferation talks," Kintner warned. "And those took two or three years apiece."

A specialist on the Soviet armed forces, Thomas W. Wolfe of the RAND Corp., thought that bureaucratic pressure would tend to keep Soviet military spending about the same despite the talks. Both countries can see the need for arms limitations, he indicated, but he was pessimistic of the Soviets agreeing, Wolfe said.

Merle Fainsod and Alex Inkeles, both Harvard professors, said the Soviets want to talk but neither held out any assurances that talking would be fruitful.

The estimate that Soviet military expenditures in 1968 were about $60 billion was vaguely ascribed to "the U.S. intelligence community," including the Central Intelligence Agency and other analysts of secretive Soviet budgetary practices.

"Some observers have concluded that the defense share of the Soviet gross national product must come to 15 percent, rather than the American 10 percent," Mark said.

The $60 billion estimate, higher than a generally used one of $50 billion by the British Institute for Strategic Studies, includes all Soviet space activities, militarized border guards and other elements besides defense research, production and pay.

IMPACT ON FARMS

Prof. Holland Hunter of Haverford College, an academic rather than intelligence community expert on the Soviet economy, quoted the announced Soviet defense budget for 1968 as $25.3 billion. Hidden items run it higher.

Investment in inefficient and backward Soviet agriculture is suffering from military demands, and both general investment and consumer needs are expendable when the Kremlin thinks weapons are needed, the experts said. This enables the Soviet Union to keep its more primitive economy going while matching U.S. weapons.

Wolfe cautioned Proxmire that it would be a mistake "to look for a rational tie" between Soviet military spending and Soviet world policy. The Soviet military-industrial complex had a momentum of its own.

And it has failures of its own, too, it was noted. He cited an early Soviet missile that had to be scraped.

Mark quoted former Premier Nikita S. Khrushchev's complaints about failures in the Soviet armaments industry and cited the abandonment of what possibly was an early 1960's anti-ballistic missile system.

"I don't forsee any domestic unrest" in the Soviet Union, Mark said, "that would cause any difficulties for the defense industry."

UNREST ISOLATED

"Unrest is isolated, small-scale, intimidated, worrisome in terms of breaking conformity since the leadership likes conformity, but not of serious concern to them."

Mark and Fainsod emphasized that there has not been a return to Stalinism in the full sense of the terror and bloodshed which the Soviet Union once suffered.

"What I see, rather," Mark said, "is an effort by the leadership to tighten up discipline, to keep the young in line with the objectives of the regime, to restrict contacts with the West, to restore the morale of the repressive agencies like the KGB—the secret police—to give some continuity to Soviet history so that Stalin plays an important part.

"All these things are happening," Mark added. "But they don't necessarily have any connection with Soviet foreign policy."

DISSENT CITED

Fainsod said there is, "to a degree unparalleled in the Stalin period, a degree of dissent manifest in the intellectual and scientific community. It's underground."

There is today, Fainsod said, "a very, very different society of the one of Stalin prison camps and absolute limitations on the freedom of movement.

"We are beginning to see a new generation in the Soviet Union, a generation that has lost its fear, that didn't know Stalinism."

A person with contacts among the dissidents who sees the police moving in on them "might be tempted to say that Stalinism is back in full flower." Fainsod added "but no one who knew Stalinism is likely to make that statement."

Inkeles, a sociologist who has long studied Soviet society, said the current evidence could not be carried so far as to "deny that we

have been a shift to a new, more complex system of reaching decisions" in Soviet society compared with simple Stalinist degrees.

Wolfe added to the discussion that "in the long term, it won't de-evolve into Stalinism. And it's not going to evolve into a democratic society, either, but a pluralism that, hopefully we will be able to deal with better than a dictatorship.

COMMUNISTS POUR ABUSE ON NIXON DURING FRUITLESS SESSION IN PARIS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. PUCINSKI. Mr. Speaker, the very distinguished writer for the Washington Post, Mr. Murrey Marder, reports from Paris this morning of the insults and abuses being heaped upon President Nixon by the Vietcong and North Vietnamese negotiators.

Mr. Marder quotes U.S. Ambassador Henry Cabot Lodge as stating glumly: "They don't negotiate."

I am placing Mr. Marder's remarks in the RECORD today and renew my demand for an explanation on how much longer does the United States intend to let this charade in Paris continue while American boys are being needlessly killed in Vietnam.

President Nixon has made the Communists a most generous offer on several occasions to bring the hostilities in Vietnam to an end.

Mr. Nixon has made a whole series of concessions in his honest and determined effort to bring this war to an end.

Everyone of his proposals has been swept aside by arrogance and insults from the Communist spokesmen.

Mr. Speaker, President Nixon has previously stated that the United States will have to reappraise its position if this needless suffering continues.

We are now on the verge of seeing the death rate among American soldiers killed in Vietnam since the bombing pause exceed the number of Americans killed in Vietnam from 1961 until March 24, 1968, when the bombing pause began.

The intensity of the suffering has increased. We need only look at the huge punishment being hammered at our American soldiers and at South Vietnamese troops in the battle at Ben Het.

I have suggested here on this floor that we serve notice upon the Communists that if an effective cease-fire is not effectuated by noon, August 1, 1969, the United States will have to take two steps to bring this war to an end.

First, in order to placate American concern about our high rate of casualties, we should withdraw all of our combat troops from South Vietnam as quickly as possible.

Second, to impress upon the Communists that our withdrawal does not mean any victory for them, we should consider resuming bombing of the North and assist the South Vietnamese in whatever other military steps they wish to take to bring this war to a successful conclusion.

Current reports from Paris clearly indicate the Communists have no intentions of ending this conflict in that they are counting on the fact that the United States will be forced to abandon its program of assistance to the South Vietnamese.

I believe that after due warning, resumption of bombing will convince the Communists that while we have placated American concern about the high rate of casualties among our ground troops by withdrawing these ground troops, the resumption of bombing means a long haul of suffering for the Communists in the North.

It is my firm belief that only when the Communists realize their suffering and damage from bombing will continue indefinitely in the North, will then agree to start making some meaningful progress toward ultimate peace.

It is perfectly clear that right now the North Vietnamese have no reason to agree to any kind of peace terms because under the present bombing pause, the tide is on their side.

Mr. Marder's excellent article follows:

COMMUNISTS POUR ABUSE ON NIXON DURING FRUITLESS SESSION IN PARIS

(By Murrey Marder)

PARIS, June 26.—North Vietnamese and Vietcong negotiators heaped unusual personal abuse on President Nixon today, charging him with "brazen falsehood and deception" in blaming the Communist side for intensifying and prolonging the war.

A secondary target of theirs was the South Vietnamese government of President Thieu. But even when they assailed Saigon the burden of their attacks was directed at Mr. Nixon personally, for his refusal to disavow the entire "Thieu-Ky-Huong administration."

At the end of one of the most fruitless sessions in the five months of expanded peace talks, U.S. Ambassador Henry Cabot Lodge said, glumly, "they don't negotiate."

Saigon's chief delegate, Pham Dang Lam, said that in light of the Communist demands for "the monopoly of political power in South Vietnam," and the total unconditional withdrawal of American troops, "What is there to negotiate?"

No new ingredients were added to the diplomatic mix today by either side. Lodge, who returned to Paris last night after a three-week absence, concentrated on trying to accentuate the positive.

He repeatedly said he saw "common ground" in the positions of the two sides. But he told newsmen afterwards, "There's got to be some mutuality in it (the negotiating process), and I regret to say there was no sign of it today."

The Hanoi-Vietcong position in today's meeting of nearly five hours confirmed what was foreshadowed by North Vietnamese Politburo member Le Duc Tho in an interview here Sunday with The Washington Post.

That is that, for the present, the Communist side is standing firm and discrediting all talk of compromise in order to put maximum pressure on President Nixon to change the military-diplomatic policy of his Administration.

There is no evidence here that any such shift is coming especially in U.S. support of the Saigon government. Lodge told his adversaries, "As President Nixon made clear in his press conference on June 19, we categorically reject your demand that we 'replace' the legitimate government of the Republic of Vietnam."

Both Ha Van Lau, acting chief of the North Vietnamese delegation, and Mrs. Nguyen Thi Binh, newly designated Foreign minister of the recently formed Provisional Revolutionary Government that represents the Vietcong, zeroed in today on President Nixon's latest, controversial comments on troop withdrawals.

ATTACKS NIXON

Mrs. Binh attacked Mr. Nixon for what she called his "ambiguous statement" in his June 19 press conference to the effect that he "hoped" to withdraw considerably more American soldiers from South Vietnam, beyond the 25,000 whose withdrawal was announced at the Midway conference June 9.

Lau said the "hope that Mr. Nixon expressed" exemplifies his "ambiguous and perfidious statements" that "are merely a scene of the play staged by Mr. Nixon to appease and deceive public opinion in the United States and the world . . ."

Lodge reiterated President Nixon's view that the withdrawal of 25,000 troops represents "a significant step," and that "further reductions" will take place.

But Lodge avoided any direct reference whatever to the President's declared hope that the United States "will be able to beat" the timeable proposed by former Defense Secretary Clark M. Clifford, which touched off the controversy. Clifford called for a pull-out of "about 100,000" troops this year, and the withdrawal of all American ground combat forces by the end of 1970.

The U.S. delegation here has avoided any such projection like the plague, on grounds it would undermine their entire negotiating position.

SPOKESMAN PRESSED

When pressed as to why Lodge avoided any reference to President Nixon's hope of topping the Clifford proposal, American spokesman Harold Kaplan said:

"There was no particular reason for that. The disposition of forces on our side remains, so long as there is no real negotiation here in Paris, a problem between us and our allies."

Kaplan was asked to explain how the disposition of allied forces in the South can be a "military housekeeping" problem for the allies, and simultaneously a door-opening move toward peace.

If the recall of 25,000 American forces is only a "replacement" of them by South Vietnamese forces (terminology that Saigon has insisted upon in place of "withdrawal") Kaplan was asked, will the total remain unchanged?

"It is perfectly true that as our forces are replaced by the South Vietnamese and other allied forces there, the total strength on the allied side does not change," Kaplan replied. "But the fact remains," he said, "that the withdrawal of non-South Vietnamese forces should, if the other side is disposed to go down the road, constitute an opening, a possible invitation. . . ."

Saigon delegation spokesman Nguyen Thieu Dan, when asked what he believes the Communist side thinks of gradual U.S. troop withdrawals, said:

"They don't like it—and I may say they also fear it, because it represents a strengthening of our capacity for defense." But if the allied reduction is succeeded by a reduction in North Vietnam troops, said Dan, "that would be the beginning of de-escalation, mutual de-escalation. . . . There won't be any unilateral de-escalation."

The Communist side also came in for its share of hard questioning from newsmen in the post-conference briefings. The Hanoi-Vietcong program calls initially for replacing the entire Saigon government with a provi-

sional coalition government, but even before that, the Communist side says, a "peace cabinet" should replace the existing regime.

The Hanoi-Vietcong negotiators, however, have avoided formally demanding, as part of their official program, the total removal of the Saigon government as a precondition. One reason, presumably, is to avoid the charge of making such a sweeping demand; instead they call for initial ouster of "Thieu-Ky-Huong" or the "Thieu-Ky-Huong administration."

When pressed by newsmen today, Vietcong spokesman Duong Dinh Thao spent more than 15 minutes stressing this distinction.

The net result was that he said the Provisional Revolutionary Government supports the demand of the "urban population" for replacing the present Saigon government with a "peace cabinet," and will not be drawn into "maneuvers" for holding elections of the so-called constitution of Thieu-Ky-Huong administration" or "under the threat of the (American) bayonets. . . ."

A PRAIRIE ACROPOLIS IN ILLINOIS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1969

Mr. PUCINSKI. Mr. Speaker, a few weeks ago the Krannert Center for the Performing Arts was opened at the University of Illinois in Urbana.

The center consists of theaters and halls that will be used to educate and train young people interested in the performing arts. It will also serve as a cultural center of great distinction for the Midwest.

The donors of this $21,000,000 center—Mr. and Mrs. Herman C. Krannert—wanted to make a permanent and edifying addition to the University of Illinois campus. With the opening of this great center for the arts in mid-America, Mr. and Mrs. Krannert have earned distinguished positions in the cultural heritage of the United States.

Mr. Speaker, information describing the Krannert Center in detail follows:

[From the Chicago Sun-Times, Apr. 19, 1969]

A PRAIRIE ACROPOLIS IN ILLINOIS—A GIFT OF GREAT MERIT

The opening today of the Krannert Center for the Performing Arts at the University of Illinois Urbana campus is an event of importance both to students and others devoted to music, drama and the dance.

The $21,000,000 complex of theaters and halls will be employed both as a center of training in the performing arts and as a major cultural center.

It will be, as university President David D. Henry said, important at a time "when we seek answers to how to enhance the quality of life."

The center bears the name of the principal donors—Mr. and Mrs. Herman C. Krannert of Indianapolis. Krannert, a University of Illinois alumnus, is founder and chairman of the board of Inland Container Co. The Krannerts also were major donors for the University of Illinois Krannert Art Museum, dedicated in 1961.

The university and its students—all Illinois in fact—owe a debt of gratitude to the Krannerts. The opening of the new center today indeed will be a great stride toward enhancing the quality of life.

[From the Chicago Tribune, Apr. 19, 1969]

A MAGNIFICENT HOME FOR PERFORMING ARTS

After years of preparation, the Krannert Center for the Performing Arts is being dedicated today in Urbana. In the Great hall, the University of Illinois Symphony orchestra opens a month-long festival in celebration of the university's adding to its physical plant a new 21-million-dollar fine arts complex. At a bound, Urbana acquires facilities for mounting concerts and theatricals such as have few if any equals elsewhere.

Thanks to the princely generosity of the principal donors, Mr. and Mrs. Herman C. Krannert, the stunning new center for the performing arts belongs to present and future generations of the state university community—and to the citizens of Champaign-Urbana, the region and state of which that city is a part, and beyond. Innumerable Chicagoans will find or make occasion to appear on the stages and in more than 4,400 theater seats of the Krannert center.

The intent of the design is that "the arts of music, drama, and dance can operate both in training and in performance as interrelated and complementary to each other," at a single site. The center is both a performing and a teaching instrument. Its theaters accommodate audiences as large as 2,100 and as small as 150. Here both individual beginners and professional operatic and orchestra companies will find the means to function with a minimum of handicaps and a maximum of access to tangible and intangible supports of every sort.

Private generosity has made the Krannert center possible. To appropriate tax money to build an installation so expensive, and one without which the university has been able to reach its present distinction, could hardly be justified. Yet the fine arts have much to offer university students and everyone else. The Krannerts have acted in the best tradition of patronage of the arts, in which people of wealth provide the means for people of artistic talent and genius to do their work and find their audiences.

[From the Christian Science Monitor, May 9, 1969]

A PRAIRIE ACROPOLIS—ABRAMOVITZ'S NEW ARTS CENTER IN ILLINOIS

(By Robert C. Marsh)

CHAMPAIGN-URBANA, ILL.—For David D. Henry, the university of today requires not merely classrooms, libraries, and laboratories but a home for the artist at work. It was this idea, seconded by the generosity of Mr. and Mrs. Herman C. Krannert, that led to the Krannert Center for the Performing Arts on the Champaign-Urbana campus of the University of Illinois.

President Henry, the Krannerts, and architect Max Abramovitz gave seven years to the planning and construction of the project, which brings a major cultural center to the center of the state and offers the music, drama, and dance departments of the university a facility for instruction and performance that rivals (or surpasses) professional working conditions anywhere in the world.

Krannert Center places first emphasis on education. It is a place for students and teachers, not transient performers, although it is hoped that visitors will work with students whenever possible to maintain a constant link between active professionals and the classroom.

This was shown in the first concert when violinist Tossy Spivakovsky played the Bartok Concerto No. 2 with the University of Illinois Symphony Orchestra, Bernard Goodman conductor, and later held a master class for student string-players.

That event, April 19, was the beginning of a month of festival performances to dedicate the new buildings, events which were planned to present a cross-section of student and faculty achievement as well as the work of leading professionals such as the Philadelphia Orchestra and the American Ballet Theater.

UNIFIED FOR USE

Krannert Center is a tightly unified architectural composition in which four public halls are linked by a large and handsome lobby and share a complex of rehearsal rooms, scenery shops, and other facilities essential for their activities.

The buildings are a pleasure to see. Abramovitz has called them "a prairie Acropolis," and it is an apt phrase. Rising from the street in terraces, the central building conceals its vast interior space and draws the eye to a skyline in which strong, redbrick forms stand out from green plantings against a blue Midwestern sky.

Approaching Krannert from the campus the eye first sees the façade of Great Hall, a concert room of 2,100 seats where the dedicatory concert was held. It is a handsome auditorium finished in traditional materials, hard plaster for the ceiling, warm golden wood for the walls and floor, and is very resonant—so much so that some dampening may be needed. Slightly above street level in the center of the composition is a Grecian amphitheater with places for 560, an inviting outdoor facility with uses for music, drama, and dance.

The high point of the center is the 97 foot stage tower of the Festival Theater, an intimate hall for drama with music or dance events. The philosophy of the design is shown in the seating capacity, 985 rather than a couple of thousand. The reason, of course, is that the student voice is not fully developed, and student productions, to be seen and heard at their best, should be placed in an appropriate frame. The large halls required by the high payrolls of professional shows are not a relevant criterion.

SMALL HALLS

Continuing the same approach, the Playhouse, a theater for the spoken word with elaborate electronic equipment for special effects, is limited to 678 seats. One need not be a 19 century tragedian to project a line to the back of the house.

Much of the important work of the center will probably be done in the smallest hall of all, the Studio Theater, a large, flexible room with overhead lights which normally will hold about 150 persons. Here the emphasis is flexibility. The location and size of the stage can be adjusted to any requirement; the seating can flow into all the available space.

Many cultural centers have faced the problem of creating facilities without the additional planning required to fill them with audiences and performers. The Krannert Center avoids this, since the university community is the prime source of both performers and audiences and, even more important, the new buildings are simply a further step in the development of programs of instruction in the performing arts. These are already well established on the campus, despite past difficulties with inadequate classrooms and theaters.

Important as well is the impetus Krannert Center may give to a fresh look at Midwestern culture in general. For there is nothing at all strange about a major artistic center such as this flourishing in central Illinois. Quite the contrary, it is characteristic of a region in transition from a provincial, rural past to a cosmopolitan future.

SENATE—*Monday, June 30, 1969*

The Senate met at 12 o'clock noon and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Thou sovereign Lord of men and nations, make us a people great enough and good enough to be trusted with our own destiny. Teach us both to work and to pray; to work as though everything depends upon us and to pray as though our only trust is in Thee. Forbid that we should ever substitute prayer for hard thought and diligent work, or for asking Thee to do for us what we ought to do for ourselves. In the ongoing processes of history help us to find Thee not only in the mighty moments but in the discharge of daily duties. Help us, O Lord, to see beyond our tangled ways and confused days the divine pattern toward which all events move, and in the end to be found faithful to our high calling in Thee. Amen.

MESSAGES FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate of June 26, 1969, the Secretary of the Senate, on June 27, 1969, received messages in writing from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received on June 27, 1969, see the end of proceedings of today, June 30, 1969.)

MESSAGE FROM THE HOUSE RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate of June 26, 1969, the Secretary of the Senate, on today, June 30, 1969, received a message from the House of Representatives, which announced that the House had passed, without amendment, the joint resolution (S.J. Res. 122) to provide for a temporary extension of the authority conferred by the Export Control Act of 1949.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Vice President laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, announced that the House had agreed to the amendments of the Senate to the bill (H.R. 4229) to continue for a temporary period the existing suspension of duty on heptanoic acid.

The message also announced that the House had agreed to the amendment of the Senate to the bill (H.R. 4297) to amend the act of November 8, 1966.

The message further announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 8644) to make permanent the existing temporary suspension of duty on crude chicory roots.

The message also announced that the House had passed a bill (H.R. 7906) to regulate and foster commerce among the States by providing a system for the taxation of interstate commerce, in which it requested the concurrence of the Senate.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

The message further announced that the Speaker had affixed his signature to the following bills and joint resolution, and they were signed by the Vice President:

H.R. 265. An act to amend section 502 of the Merchant Marine Act, 1936, relating to construction-differential subsidies;

H.R. 4229. An act to continue for a temporary period the existing suspension of duty on heptanoic acid, and to continue for one month the existing rates of withholding of income tax; and

S.J. Res. 122. Joint resolution to provide for a temporary extension of the authority conferred by the Export Control Act of 1949.

HOUSE BILL REFERRED

The bill (H.R. 7906) to regulate and foster commerce among the States by providing a system for taxation of interstate commerce, was read twice by its title and referred to the Committee on Finance.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, June 26, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

WAIVER OF THE CALL OF THE CALENDAR UNDER RULE VIII

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the call of the calendar of unobjected-to bills under rule VIII be waived.

The VICE PRESIDENT. Without objection, it is so ordered.

TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nomination on the Executive Calendar.

There being no objection, the Senate proceeded to consider executive business.

CHAIRMAN, JOINT CHIEFS OF STAFF

The VICE PRESIDENT. The clerk will state the nomination on the Executive Calendar.

The bill clerk read the nomination of Gen. Earle Gilmore Wheeler, Army of the United States, to be Chairman of the Joint Chiefs of Staff for an additional term of 1 year.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

Mr. MANSFIELD. Mr. President, I move that the President be notified of the confirmation of the nomination.

The motion was agreed to.

LEGISLATIVE SESSION

Mr. MANSFIELD. I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

GREAT PLAINS CONSERVATION PROGRAM

Mr. MANSFIELD. Mr. President, I move that the Committee on Agriculture and Forestry be discharged from the further consideration of H.R. 10595 and that the Senate proceed to its immediate consideration.

The VICE PRESIDENT. Without objection, the committee is discharged from the further consideration of the bill. The clerk will state the bill by title.

The LEGISLATIVE CLERK. A bill (H.R. 10595) to amend the act of August 7, 1956 (70 Stat. 1115), as amended, providing for a Great Plains conservation program.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, I ask

unanimous consent that all after the enacting clause of H.R. 10595 be stricken and that there be substituted therefor the full text of S. 1790, as amended by the committee amendment.

The VICE PRESIDENT. Without objection, it is so ordered.

The amendment was agreed to.

The bill was ordered to a third reading, was read the third time, and passed.

The VICE PRESIDENT. Without objection, the title will be appropriately amended.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate reconsider the vote by which S. 1790 passed the Senate on Thursday, June 26, 1969.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that S. 1790 be indefinitely postponed.

The VICE PRESIDENT. Without objection, it is so ordered.

STATEMENT BY SENATOR MANSFIELD AT ANNUAL DEMOCRATIC CONGRESSIONAL DINNER

Mr. KENNEDY. Mr. President, I had the distinct privilege at the annual Democratic congressional dinner at the Washington Hilton Hotel on June 26, 1969, to introduce the distinguished majority leader. Senator MANSFIELD, as always, delivered a most cogent and timely address. His message that evening reflected the perspective that has become his trademark. I ask unanimous consent that the statement of Senator MANSFIELD as well as my introduction of the distinguished majority leader be printed at this point in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

Senator KENNEDY. Tonight I have the honor to introduce a man of greatness. Spare and lean, a man of the west, with all of the strength and conviction that comes from the tall timber and open space.

To you and me, he is the majority leader of the United States. To foreign powers, he is a voice to listen to, to Presidents he is a wise counselor, to members of the Senate he is the boss.

Back in Montana, in Butte, in Missoula, in Eureka and Sydney, he is Mike.

There have been others from the West who came East to lead us. With the firmness of William Borah, the integrity of George Norris, the skills of Carl Hayden—these are the talents that built a nation. But among all the West has produced, no man is more honored or respected, or loved as Mike Mansfield.

He has been a member of every branch of the military service. He has been a mucker in the coppermines of Montana.

As a lad, he was a roustabout—but made up for it by receiving a high school diploma and a college degree in the same year. He went on to become a noted professor.

And, in 1943, with his wife Maureen, and young daughter Ann, he drove from Montana to Washington as a man newly elected to Congress; arriving in an old campaign car still wearing his Marine boots.

He has never left us since. But he has never left Montana either

In September of 1963, President Kennedy made his last visit to Montana. He stopped in Great Falls to pay his respects to the late Patrick Mansfield, the father of the majority leader. And when the President came back, he told me of the thousands of people who crowded the roads from the airport to town. And the amazing thing was that Mike Mansfield could greet each and everyone of them by their first names. "That," President Kennedy said, "is the mark of a leader."

As a soldier, he learned devotion. As a teacher, he gained the gifts of calm and patient leadership. And as a laborer in the pits, he developed his sensitivity for the weak, the innocent and those who toil with their hands.

There is a phrase that only those who have been in the mines of Montana know. They use it when the sticks of dynamite have been put in place, in the drift, and the time has come to cap them for the explosion.

Whenever Mike Mansfield bids farewell to a Montana friend, he uses this phrase, and says "tap'er light".

This is Mike Mansfield's style. This has been the tone he has brought to the United States Senate. Others may speak more loudly, and others may speak in greater length, but when the leader stands in the well of the Senate, other voices fade before the authority of his presence.

In his own quiet way, he has moved this country toward what it should be—toward the American dream. In his own quiet way, he has made each of us proud to be Democrats in the United States Senate.

And I am proud to stand here tonight before friends of a great party and give to you the majority leader of the United States Senate—my leader—Mike Mansfield of Montana.

STATEMENT OF SENATOR MANSFIELD

Senator MANSFIELD. A decade is drawing to a close. It began in a Republican Administration. It ends in a Republican Administration. In between, the Democratic Party has aimed at raising the nation's standard of living and at putting into practice, the Constitution's promise of equal treatment for all citizens.

In this decade, there has emerged from a Democratic Congress an expanded housing program and legislation to provide for the better education of the nation's young people.

A Democratic Congress has opened the door to adequate medical and hospital care for the long-neglected and made a commitment to end a persistent poverty amid affluence in this nation.

A Democratic Congress brought to fruition the 100-year effort to strike down legal and other barriers to equal treatment of all Americans.

These and other legislative achievements carry the hallmark of President Kennedy and President Johnson. They are written into the journals of the Democratic 87th, 88th, 89th, and 90th Congresses.

Yet, these beacons of process—let us face it frankly—were overshadowed last November. A decade of social advance was buried in the avalanche of public bitterness, revulsion and frustration which is Viet Nam. Years of national achievement sank out of sight in the tide of violence, unrest and anxiety which engulfed the nation.

The grim war continues in Viet Nam. Fear still stalks the streets of the nation's towns and cities. The uncertainties over the future are undiminished.

To be sure, the primary responsibility in this situation no longer adheres to the Democratic Party. To be sure, national leadership has passed to the Republican Party. But there can be no comfort for us in this changeover. If Democrats mean to retain a significance for this nation, there is no refuge in the shift of responsibility along with the Presidency to the Republican Party. On the contrary, we will acknowledge our own responsibility for the past and we will accept our share of responsibility for the present.

We will face frankly the twin tragedies of these times—the tragic conflict abroad and the tragic clashes at home and we will look for the means of their resolution. As the party of opposition, we will question the priorities and policies, the attitudes and the approaches of the Republican Administration in dealing with these and other national issues. We will do so responsibly, offering with our criticisms, constructive alternatives.

In the Congress—in the Senate—we will join with the President in an effort to end the war in Viet Nam. As far as conscience permits, we will uphold the President's hand in that situation; he is the President of all Americans—Democrats no less than Republicans. But we cannot and we will not acquiesce in the indefinite absence of peace.

We will sustain the President in a foreign policy of discerning internationalism; that is what the realities of the world demand, as the 20th century moves into a final quarterm. But we cannot and we will not endorse a costly and indiscriminate involvement abroad merely because it is put forth under the label of internationalism.

We will vote necessary expenditures for the military defense of the nation. But we will not sign blank checks for billions at the sound of the bugle of fear. Rather, we will seek a balance, to the end that the nation may meet the urgent needs for stability within, no less than the demands for security from without.

As a political party, we will face the fact that the great and automatic national majority which was enjoyed for many decades is no more. It is not only that we have made our share of mistakes and suffered the consequences. It is also because issues have changed and attitudes have changed. The great constituency upon which the Democratic Party rested for four decades is now less clearly defined for us. In my judgment, it is there nonetheless. It is waiting to respond to new perceptions and to a rededicated political leadership which addresses itself not only to those who are satisfied with things as they are but which reaches out to those who are not.

It is no longer enough to extoll our contribution to the building of the nation as it is. The Democratic Party must look to what it can contribute in the building of the greater nation which we can become. In short, it is for us to rekindle the people's faith in the Democratic Party by searching out and pursuing the direction to a new unity at home and, in the world, to the building of a more durable peace. That is the quest on which we set forth tonight.

A LETTER TO A DAD ON FATHER'S DAY

Mr. DIRKSEN. Mr. President, there is a staff member of the Senate whose son has done extremely well. At any early age, he has been assuming a real responsibility. He wrote to his father on Father's Day, and I thought his letter was rather interesting. He wrote:

FATHER'S DAY 1969.

DEAR DAD: (On Your Day) I remember way back when we were just little rascals running all over the house and yard getting into everything and how you use to punish us to teach us right from wrong. I remember the fun we had with the horses, the chickens, the pig, the duck you caught while fishing, and the rabbits which we had. I remember the times when you provided plenty of work to keep us busy like raking leaves, painting, mowing the lawn, helping you with the garden, splitting wood, putting up the fence, and the many other little things that had to

be done which helped us grow up. I remember watching you repair the many things, water pumps, water pipes, washers, dryers, the furnace, lawnmowers and many others from which I learned most of what I know today. I remember that someone who used to get up many mornings to help me with my paper route, when I was late or it was raining or just because he wanted to. I remember when you use to rush home just to watch us swim in races and how you helped me with my chickens and the 4–H projects. Oh yes I remember the unpleasant times when you seemed to forget your role as a father for what ever reasons they came about. But what I remember most far outweighs those times.

I will always remember the trips we took on the weekend to go fishing, at Point Lookout, the weekend trips to Nags Head, The trips to Orange County and into the Shenandoah Valley for swimming. The drive in movies and the Saturday trips to the office with you provided many hours of fun. Then there were the trips to what was then the far away places like New York and Coney Island, Florida with its Key West, Clearwater, and the Marathon Key. Then there was Mexico where we took the sail boat ride around the island, went iguana hunting, and where I first tried to water ski. If you stop to think about it, we sure went to a lot of places. I still can remember Bermuda. The trip over on the sea plane when you played cards, the large turtles on the beach, the cave fish in the dark cave which I didn't see the fish because it was so dark, and the trip over in the boat to the aquarium, and finally the finger bowl incident at the hotel. More recently, I remember the efforts made to allow me to be a Page in the House and to work at the Post Office and the Highway Dept. Then there was the time you helped me buy my first car, and the car at high school graduation.

I remember the many times which I may have disappointed you with my actions and also the times when I should have thanked you and didn't. So at a time when I cannot think of any material gift for you on your day, I give you this letter and say thanks, Dad, for all the things that you have done to make my life what it is today.

Your son,

BOB.

That is a very fitting tribute to his father from a son who made good.

JURISDICTION OF U.S. COURTS—NONAPPROPRIATED FUND ACTIVITIES

Mr. KENNEDY. Mr. President, I move that the Senate proceed to the immediate consideration of Calendar No. 259, S. 980.

The VICE PRESIDENT. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 980) to provide courts of the United States with jurisdiction over contract claims against nonappropriated fund activities of the United States.

The VICE PRESIDENT. The question is on agreeing to the motion of the Senator from Massachusetts.

The motion was agreed to; and the Senate proceeded to consider the bill which had been reported from the Committee on the Judiciary with amendments, on page 2, line 22 after "(a)" strike out "The" and insert "In addition to granting jurisdiction over suits brought after the date of enactment of this Act, the"; in line 25, after the word "actions" strike out "initiated" and insert "dismissed before"; and in the same line, after the word "on" strike out "or after"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 1346(a)(2) of title 28, United States Code, is amended by adding at the end thereof the following new sentence: "For the purpose of this paragraph, an express or implied contract with a nonappropriated fund activity of or under the United States or a department or agency of the United States shall be considered an express or implied contract with the United States.".

(b) The first full paragraph of section 1491 of title 28, United States Code, is amended by adding at the end thereof the following new sentence: "For the purpose of this paragraph, an express or implied contract with a nonappropriated fund activity of or under the United States or a department or agency of the United States shall be considered an express or implied contract with the United States.".

(c) Section 1302 of the Supplemental Appropriation Act, 1957 (70 Stat. 694; 31 U.S.C. 724(a)), is amended by adding immediately before the period at the end thereof the following new proviso: *"Provided further,* That any judgment or compromise settlement against the United States arising out of an express or implied contract entered into by a nonappropriated fund activity of or under the United States or a department or agency of the United States, shall be paid in accordance with this section and sections 2414, 2517, and 2518 of title 28, United States Code, and such activity shall reimburse the United States for a judgment or compromise settlement paid by the United States to the extent the Comptroller General of the United States determines that a reimbursement may be made without unduly jeopardizing the operation of such activity.".

SEC. 2. (a) In addition to granting jurisdiction over suits brought after the date of enactment of this Act, the provisions of this Act shall also apply to claims and civil actions dismissed before or pending on the date of enactment of this Act if the claim or civil action is based upon a transaction, omission, or breach that occurred not more than six years prior to the date of enactment of this Act.

(b) The provisions of subsection (a) of this section shall apply notwithstanding a determination or judgment made prior to the date of enactment of this Act that the United States district courts or the United States Court of Claims did not have jurisdiction to entertain a suit on an express or implied contract with a nonappropriated fund activity of or under the United States or a department or agency of the United States.

SEC. 3. The provisions of this Act do not apply to a contract entered into by a nonappropriated fund activity of or under the United States or a department or agency of the United States which is subject to suit in its own name under any other provision of law.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 268), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF AMENDMENTS

Amendment No. 1 makes clear that the provisions of the act are intended to have both a prospective application as outlined in the first section and section 3 of this act, and a retroactive application of limited duration as expressed in section 2.

Amendment No. 2 deletes the words "initiated" and "or after" as being superfluous in that, unless otherwise expressed, the provisions of a bill, upon enactment, have an immediate prospective effect. The words "dismissed before" are inserted to assure that the provisions of section 2 are applicable to cover past claims and civil actions whose operative facts occurred not more than 6 years prior to the date of enactment of this act.

NEED FOR LEGISLATION

S. 980 will fill a gap in the Tucker Act's waiver of immunity of the United States to claims based upon contracts with departments or agencies of the Government. The United States is liable in the Court of Claims of the United States and, in appropriate cases, in the district courts of the United States, to suits "upon any express or implied contract with the United States * * *." 28 U.S.C. 1491; 28 U.S.C. 1346(a)(2). The courts have repeatedly held, however, that the Federal Government's liability to suit under these sections only exists with respect to contract obligations to be paid out of appropriated funds. See, e.g., *Kyer* v. *United States,* 369 F. 2d 714 (Ct. Claims 1966); *Pulaski Cab Co.* v. *United States,* 157 F. Supp. 955 (Ct. Claims 1968); *Keetz* v. *United States,* 168 Ct. Claims 205 (1964); *Bordon* v. *United States,* 116 F. Supp. 873 (Ct. Claims 1953).

The injustice and inequity worked by this Tucker Act "loophole" have been recognized often. See, e.g., *Borden* v. *United States,* 116 F. Supp. 873, 878–880 (Ct. Claims 1953). Indeed, a judge of the Court of Claims has declared "this is a matter which sorely needs congressional correction." See *Kyer* v. *United States,* 369 F. 2d 714, 719 (Ct. Claims 1966).

Nonappropriated fund activities are at present an anomaly of the law. When States have attempted to tax or regulate their activities these activities have successfully argued that they are immune from taxation and regulation as instrumentalities of the United States. See e.g., *Park Davis* v. *G.E.M., Inc.,* 201 F. Supp. 207 (D. Md. 1962); *Falls City Brewing Co.* v. *Reeves,* 40 F. Supp. 35 (W.D. Ky. 1941). When nonappropriated fund activities have been sued outside the United States they have successfully argued that, as instrumentalities of the U.S. Government, they are not liable to suit on contract in foreign courts. See, e.g., *Wuliger* v. *Headquarters, 7480th Supply Group (Special Activities) Labor Court,* Weisbaden, October 8, 1958, unreported. Courts have held, see, e.g., *United States* v. *Holcombe,* 277 F. 2d 143 (4th Cir. 1960); *Daniels* v. *Chanute Air Force Base Exchange,* 127 F. Supp. 920 (E.D. Ill. 1955), and the Justice Department has supported the ruling (letter dated July 13, 1960, from George Cochran Doub, Assistant Attorney General, 243 AF JAG Reporter, 15 (Aug. 1, 1960), that employees of nonappropriated fund activities, when performing their official duties, are employees of the United States and that the United States is liable under the Federal Tort Claims Act for injuries caused by their negligence. The United States has even sued in its own name to enforce contracts entered into by nonappropriated fund activities. See, e.g., *United States* v. *Howell,* 318 F. 2d 162 (9th Cir. 1963).

Despite this consistent identification of the nonappropriated fund activity with its parent department or agency and the United States, contractors with such activities have found it impossible to get a "day in court" when they allege breach of contract by such activities. Your committee believes that there is no rational reason to continue the immunity from contract suit presently afforded nonappropriated fund activities. The Defense Department, parent of the greatest number of these activities (military post exchanges, ships stores, etc.) has agreed that "no policy grounds [justify] nonappropriated

fund instrumentalities in continuing to claim absolute immunity from suits on their contracts when Congress has waived such immunity in suits on contracts with the Federal Government itself." (See letter dated May 20, 1968, from Thomas H. Nielson, Assistant Secretary of the Air Force, to Hon. James C. Eastland, chairman, Committee on the Judiciary, U.S. Senate, reprinted at the conclusion of this report.) This position is buttressed by the fact that nonappropriated fund activities have become an important part of our national economy. The Armed Forces post exchange system—a prime example of a nonappropriated fund activity—is now the third largest department store chain with annual sales of over $3.5 billion exceeded only by Sears, Roebuck & Co. and J. C. Penney Co.

LEGISLATIVE HISTORY

On March 14, 1968, Hon. Joseph D. Tydings, a Senator from Maryland, introduced S. 3163, a bill to provide courts of the United States with jurisdiction over contract claims against nonappropriated fund activities of the United States. The bill was referred to the Committee on the Judiciary and to its Subcommittee on Improvements in Judicial Machinery. That subcommittee held hearings on S. 3163 on May 8 and 21, 1968. Witnesses before the subcommittee included: Hon. Hervey G. Machen, U.S. House of Representatives; Aaron Goldman, president, the Macke Corp., Cheverly, Md.; William E. Magee, Esq., Washington, D.C.; Dean Ralph C. Nash, professor of law, the George Washington University School of Law; Hon. Wilson Cowen, chief judge, U.S. Courts of Claims; and Col. Donald A. Williams, Office of the Judge Advocate General, Directorate of Civil Law, Litigation Division, Headquarters, U.S. Air Force. All witnesses heard favored enactment of S. 3163. The Department of the Air Force for the Department of Defense submitted a favorable report (May 20, 1968) on the bill, suggesting a number of technical and one substantive amendment. The Department of Justice submitted a report favoring S. 3163 in principle, but suggesting two amendments. (See letter dated Aug. 14, 1968, from Deputy Attorney General Warren Christopher to Hon. James O. Eastland, chairman, Committee on the Judiciary, U.S. Senate, reprinted at the conclusion of this report.) The National Aeronautics and Space Administration and the Department of Agriculture submitted reports favoring the bill in principle. (See letter dated May 21, 1968, from Robert F. Allnutt, Assistant Administrator for Legislative Affairs, and letter dated Oct. 3, 1968, from Secretary of Agriculture Orville Freeman to Hon. James O. Eastland, chairman, Committee on the Judiciary, U.S. Senate, reprinted at the conclusion of this report). The House of Delegates of the American Bar Association approved S. 3163 in principle at the association's annual meeting in Philadelphia, August 28, 1968. (See letter dated Feb. 28, 1969, from John P. Tracey, assistant director, to Hon. Joseph D. Tydings, chairman, Subcommittee on Improvements in Judicial Machinery, U.S. Senate, reprinted at the conclusion of this report.)

On February 7, 1969, Senator Tydings introduced S. 980 which included several substantive changes from S. 3163 of the 90th Congress. These changes embodied in S. 980 were made on the basis of testimony received at last year's hearings. The first modification deleted the words "a department, agency, or armed force" contained in subsections (a), (b), and (c) of the first section of S. 3163 of the 90th Congress, and the words "the United States or a department or agency" were inserted in lieu thereof in subsections (a), (b), and (c) of the first section of S. 980. This change conformed the language of S. 980 to the breadth of the problem to be resolved and deleted the superfluous term "armed force" in S. 3163. Nonappropriated fund activities take on many organizational forms, some of which might not be included in the term "of or under a department, agency or armed force of the United States" as used in S. 3163 of the 90th Congress. However, the term "of or under the United States or a department or agency" in S. 980 brings within the scope of the bill all nonappropriated fund activities of the United States not specifically excepted. The Armed Forces of the United States, are, of course, departments or subdepartments of the United States and thus are included in the term "department or agency" as used in S. 980.

The second difference, reflected in section 2 of S. 980, clarified the limitation upon the retroactive effect of this legislation, making it the same as the general statute of limitations upon contract claims against the United States as stated in 28 U.S.C. § 2501(a), and prohibited the assertion of the defense of *res judicata* or other similar pleas to jurisdiction. The subcommittee hearings clearly demonstrated that there exists at least a small number of contractors with nonappropriated fund activities for whom there was no forum to hear their claims of contract breach. Some of these contractors bore the cost of litigation only to find access to the court barred by the judiciary's interpretation of the Tucker Act. Justice and equity dictate that the courts should be made available to those individuals whose claims first brought the immunity anomaly to light, and that, as to these actions, the Government should be precluded from raising the defense of their previous determination. Those determinations, it should be noted, were based solely on jurisdictional and not substantive grounds.

Another change in S. 980 was the addition of a new section 3 to the measure. Its language was intended to limit the application of the bill to contracts of nonappropriated fund activities which have not already shed their immunity to suit under other provisions of law. Examples, for instance, of nonappropriated fund activities already subject to suit in their names include the American Red Cross (36 U.S.C. § 2) and the Tennessee Valley Authority (16 U.S.C. § 831(c)).

The subcommittee held a hearing on March 4, 1969, in order to hear testimony on these changes in S. 980. The two witnesses heard were: Hon. Louis Spector, Commissioner of the U.S. Court of Claims; and Mr. Loren K. Olson, an attorney in Washington, D.C. Commissioner Spector, who was chairman of the section of public contract law of the American Bar Association when it considered an endorsed S. 3163 at the association's convention last August, testified that the ABA's endorsement of S. 3163 would equally apply to S. 980. Similarly, Mr. Olson concurred with the several modifications reflected in S. 980.

STATEMENT

Your committee believes that S. 980, as amended, is consistent with the public policy of the United States clearly expressed in the Tucker Act, that the sovereign immunity of the United States to contract suit should be waived when complaints are filed in an appropriate forum. S. 980 will provide contractors with nonappropriated fund activities of or under the United States or departments or agencies of the United States with the same contract remedies available to those who contract directly with those departments or agencies in furtherance of activities supported by appropriated funds. In so doing, S. 980 will erase an anachronistic and baseless distinction between suits on contracts of the United States to be paid out of appropriated funds and those to be paid out of nonappropriated funds. Your committee believes that equity, sound public policy, and efficient operation of nonappropriated fund activities demand favorable action upon S. 980.

AMERICAN POLICY TOWARD CHINA AND THE ESTABLISHMENT OF DIPLOMATIC RELATIONS WITH MONGOLIA

Mr. KENNEDY. Mr. President, recently the press carried a number of reports that are disturbing to many of us who favor a more enlightened policy by the United States toward Asia. According to these reports, the Secretary of State informed the President that it would be in the national interest for the United States to recognize the Mongolian People's Republic and establish diplomatic relations with that nation. These same reports also state, however, that the President has failed to act on this recommendation because of objections raised by the Chinese Nationalist Government on Taiwan, and especially by President Chiang Kai-shek.

If these reports are accurate, they demonstrate very clearly the heavy price that the United States continues to pay for our failure to establish a realistic China policy. Last March, in an address before the National Committee on United States-China Relations in New York City, I urged the administration to take a number of steps toward a more enlightened policy on mainland China, including new efforts to establish diplomatic relations with the Peking regime.

It is tragic enough that our mistaken China policy requires us to maintain the palpable fiction that the Nationalist Government on Taiwan is the Government of all China, and prevents us from establishing diplomatic relations with the actual Government on the mainland. It is even more tragic, however, that we compound the damage to our national interest by allowing the Nationalist regime to prevent us from establishing diplomatic relations with other nations in Asia like Mongolia, a land that is larger than France and Germany combined.

As a nation, the United States has no difficulties with Mongolia. For many years we have carried out modest contacts with Mongolia through trade and travel. Mongolia has been a member of the United Nations since 1961, and participates actively in a number of international organizations affiliated with the U.N., such as UNESCO and the World Health Organization. It now has diplomatic relations with 39 nations, two-thirds of whom are non-Communist, including Great Britain, France, Canada, and Australia.

In recent years, the Government of Mongolia has consistently indicated that it would welcome diplomatic contacts with the United States, including the establishment of diplomatic relations and the exchange of ambassadors. Indeed, as recently as last month, the Premier of Mongolia, Yumzhagiin Tsedenbal, stated in an interview with a distinguished American journalist that Mongolia was dedicated to the principle of diplomatic, cultural, and economic contacts with Western nations, especially the United States. The Premier indicated that Mongolia has been prepared to establish diplomatic relations with the United States ever since 1961, when the first contacts on the question were made, but

that no further progress could be made without action by the United States.

The irony of our present policy of nonrecognition is especially clear in light of the fact that during the interview, the Premier of Mongolia spoke warmly of his trip to the United States in 1967, his visit to Niagara Falls, and his meeting with President Johnson at the time of the President's conference in Glassboro, N.J., with Premier Kosygin of the Soviet Union.

I believe that the establishment of diplomatic relations with Mongolia at the present time might well be of major value to the United States, especially in light of Mongolia's intimate involvement in one of the most momentous political phenomena of the decade, the Sino-Soviet dispute. For far too long, the United States failed to note the development of this dispute and the enormous dimensions it was assuming.

We can no longer afford to forego the opportunity to establish a diplomatic mission in Mongolia. Such a mission would enable us to become better informed about relations between China and the Soviet Union, and might well be a significant first step toward recognition of Peking. Equally important, the existence of diplomatic relations with the United States might enable Mongolia to adopt a more independent posture toward the Soviet Union, with whom Mongolia has long coexisted under circumstances of heavy political and economic dependence.

I therefore urge the administration to accept the recommendation of the State Department, and to initiate contacts with the Government of Mongolia in order to establish diplomatic relations at the earliest available opportunity.

Mr. President, because of the importance of these questions, I ask unanimous consent that a news report and editorial discussing the matter be printed in the RECORD, as well as the press interview with Premier Tsedenbal that I mentioned.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 13, 1969]

NIXON SAID TO BAR UNITED STATES-MONGOLIA TIE—ROGERS REPORTED IN FAVOR, BUT TAIWAN OPPOSED

(By Peter Grose)

WASHINGTON, June 12.—Diplomatic sources said today that President Nixon was resisting a proposal by Secretary of State William P. Rogers to open diplomatic relations with Mongolia, a key listening post between the Soviet Union and Communist China.

Opposition from the Chinese Nationalist Government on Taiwan was said to be the crucial factor in the President's inaction on the proposal, which went to the White House last month from the State Department.

Once before, in 1961, the United States was on the verge of recognizing Mongolia, but backed off in face of Chinese Nationalist objections.

The Mongolian People's Republic, historically Outer Mongolia, is an ally of the Soviet Union in the struggle with Communist China, but the Chinese Nationalists under Generalissimo Chiang Kai-shek claim the territory still as part of China.

TIE WITH PEKING FEARED

Taiwan's objections were understood to repeat that claim, and also cast the proposal in the context of United States policy toward Communist China. Recognition of Mongolia, in the Chinese Nationalist view, would be regarded as the first step toward recognition of Peking.

Advocates of recognition of Mongolia do not deny that they regard the move as part of the broader question of improving relations with Communist China. The specific proposal that was sent to the President from the State Department, however, did not link the Mongolian question with a review of policy on China ordered by Mr. Nixon's national security aide, Dr. Henry A. Kissinger.

The State Department contends that there is no longer a valid reason for withholding recognition from Mongolia, a member of the United Nations and a country with which the United States has no legal or historical grievances.

It is felt that as a practical matter the presence of a United States mission in Ulan Bator would provide valuable contacts and information about the sensitive Soviet-Chinese border area.

Unlike the Chinese Communists, the Mongolians have welcomed whatever tentative gestures the United States has made in recent years. Premier Yumzhagiin Tsedenbal has often said that he would welcome diplomatic relations with the United States.

[From the New York Times, June 14, 1969]

MR. NIXON ON MONGOLIA

Secretary of State Rogers' proposal to the President that this country recognize Mongolia reveals his understanding of the fact that the United States has much to gain from official ties with Ulan Bator. Wedged in between the Soviet Union and China, Mongolia is now one of the more strategic countries in the world, a useful listening post for diplomats anxious to get daily readings on the storms now raging between Moscow and Peking. This country has no disputes with Mongolia, and early in the decade accepted Mongolia's independence as real by helping win that nation's admission to the United Nations.

The failure of President Nixon to act on Mr. Rogers' recommendation is apparently based on objections from Chiang Kai-shek. Ironically, Chiang's thus-far successful veto of a Washington-Ulan Bator relationship comes at a time when the Taiwan regime is having increasingly open contacts with Moscow, whose antipathy to Mao Tse-tung matches that of the Generalissimo.

By a rational calculation, it is to this country's interest to be represented in Ulan Bator and to enjoy the political and informational benefits such representation would bring. Mr. Nixon's failure to act raises the ominous possibility that in the future he may let similar objections from Taiwan block efforts to improve Washington-Peking relations when new possibilities arise for thawing that presently frozen area of American foreign policy.

[From the New York Times, May 21, 1969]

MONGOLIAN, IN INTERVIEW, VOICES FEAR FOR ASIAN PEACE

(By Harrison E. Salisbury)

ULAN BATOR, MONGOLIA, May 19—Premier Yumzhagiin Tsedenbal has expressed deep concern over the maintenance of peace in Asia, particularly in view of the continuance of the war in Vietnam, tensions over Korea and the Soviet-Chinese conflict.

Mr. Tsedendal, who has headed Mongolia for 17 years, made his remarks in one of his rare personal interviews. He gave prepared answers to a series of questions and then, in a lengthy conversation, outlined in some detail his views on the Soviet-Chinese dispute. The Premier granted the interview on the eve of a state visit by President Nikolai V. Podgorny of the Soviet Union, whose swing to North Korea and Mongolia was believed to be connected with tensions in Korea and along China's frontiers.

The Mongolian leader took the view that Soviet-Chinese border clashes on the Ussuri River in March were the total responsibility of the Chinese.

CLASHES HELD DELIBERATE

He emphatically rejected the theory that the fighting could have occurred because of trigger-happy Chinese frontier guards. It was, in his opinion, organized and ordered from above—at a high level in the Chinese Government—and was a deliberate act of aggression. To his mind it simply fitted a pattern of steadily heightening chauvinistic acts flowing from Mao Tse-tung, the Chinese leader himself.

Mr. Tsedenbal said that China had attempted by every means to split Mongolia from the Soviet Union. But the Soviet-Mongolian association, he said, has endured 50 years and Mr. Mao's efforts will not be successful.

The Premier said Mongolia with the aid of the Soviet Union had demonstrated her ability to defend her frontiers. Before World War II, he recalled, Japanese forces were stationed in Manchuria only a few hundred miles from Ulan Bator. Later hostile forces of the Chinese Nationalists were strung out along the Mongolian frontier. But, with Soviet aid, Mongolia managed to beat off all challenges and is prepared to do so again, he said.

The Mongolian Premier characterized Mr. Mao as a "great-power chauvinist" and said he felt the Chinese leader had lost all connection with Marxist-Leninist principles and traditions.

"Clashes such as those on the Ussuri are impossible between genuine Marxist-Leninists," Mr. Tsedenbal said, "There is nothing in common between Mao's policies and those of a genuine socialist state."

The Mongolian has had many dealings with Mr. Mao and said he saw no hope of change in China's policies so long as the present Chinese leader remained in power.

Mr. Tsedenbal spoke with sarcasm of a Maoist charge that Mongolia was both a "Soviet puppet" and an "American pawn."

"This shows how far things have gone," he said.

The Premier did not discuss China in his prepared responses, except for a peripheral reference to mongol minorities in China. He expressed the hope that they would be accorded the same rights that Mongols in Mongolia and in the Soviet Union received.

The Premier's concern over Vietnam was expressed both in his formal repsonse to questions and in conversation. He said he supported the peace program offered by the Vietcong in the Paris talks and considered it a basis for serious negotiation.

Mr. Tsedenbal said he was also concerned about Korean tensions and he accused the United States of "provocative" actions in its intelligence-gathering flights off the North Korean coast.

Although the Premier spoke critically of United States foreign policy in Vietnam and Korea, he emphasized Mongolia's dedication to the principle of diplomatic, cultural and economic relations with Western countries and specifically the United States.

Any progress on the question of diplomatic relations, he said, is up to the United States. Mongolia has been prepared since the first contacts on the subject in 1961 to go forward to normal diplomatic relations, he said.

The Mongolian recalled with warmth his visit to the United States in 1967 at the time of the conference of Premier Aleksei N. Kosygin of the Soviet Union and President Lyndon B. Johnson at Glassboro, N.J.

Premier Tsedenbal said he had a pleasant chat with Mr. Johnson at that time and he remembered with enthusiasm his visit to Niagara Falls.

Domestically, the most critical Mongolian problems are in agriculture, he said, particularly in measures to protect livestock against heavy losses in winter.

Mongolia lost two million head of livestock last winter and another two million the previous winter. These losses are from a herd of 22 to 23 million head.

Soil erosion from new plowed grain areas is also a problem, but Mr. Tsedenbal said he was confident of resolving it.

INTERVIEW EXCERPTS

Following are excerpts from the interview with Premier Tsedenbal:

"Q. What are the prospects for the development of relations between the United States and the Mongolian People's Republic?

"A. As you know, in 1961 on the initiative of the American side, the question of establishing diplomatic relations between our two governments was discussed. At that time we expressed our positive approach to this question, but the United States halted the conversations, referring to certain developments in the international situation. The Government of the M.P.R., as always, stands for development of normal relations among states with different social political systems on the basis of the principle of peaceful coexistence.

"Q. What is Mongolia's view of the current international situation, in particular in Asia?

"A. As a result of aggressive policies of imperialist forces in different parts of the world, tension continues to exist, causing serious concern for all peace-loving nations. This is borne out by the aggressive war of the United States in Vietnam and the dangerous situation in the Middle East.

"Convinced of the necessity to solve disputes peacefully through negotiations, we in Mongolia watch with attention the four-sided talks on Vietnam taking place in Paris. The Mongolian people and Government are convinced that in order to settle the Vietnam problem the first thing that must be done is the stopping of the aggressive war of the United States in Southeast Asia, withdrawal of its troops and military personnel and arms from South Vietnam, and the granting to the Vietnamese people the opportunity to determine their destiny independently. The Government of the M.P.R. supports the new proposal of the National Liberation Front of South Vietnam.

"As to the crisis in the Middle East, we firmly stick to the view that it must be settled in accordance with the United Nations resolution of Nov. 22, 1967, on the basis of withdrawal of Israeli troops from occupied Arab territory.

"In these days the peoples of the world watch with concern the situation created in the Far East in connection with the concentration of American naval and air forces off the shores of Korea and the continuing provocative actions by the American military against the Korean Democratic People's Republic.

"Public opinion in Mongolia resolutely demands that the U.S.A. should stop the dangerous provocations aggravating tensions in this area.

"Q. What is the future of Mongols living in Mongolia, in the Soviet Union and in China?

"A. To my mind it is hard to find a state in the world whose population will be uniform regarding national origin or status. As is known Communists have the fairest approach to the solution of the national problem. They are guided by the principles of equality, mutual respect, friendship and cooperation of different peoples and national minorities. These principles are fully realized in Mongolia as in the Soviet Union. We have always supported the idea that all nationalities in all states, whether in China, the U.S.A. or another country, live in friendship and complete equality without humiliation, discrimination or exploitation.

"Q. What are the recent achievements and prospects of development of Mongolian industry and agriculture as well as education, science and culture?

"A. With every new year, the Mongolian people gain new successes in development of the national economy and culture, in the improvement of its standard of living. Our industry develops persistently its role and importance in the economy of the country. Backed by the cooperation and aid of the Soviet Union and other socialist states we built tens of new industrial enterprises in recent years and started construction of new industrial centers.

"A. Industry accounts for 30 per cent of the gross national product and its share in joint agricultural-industrial production is greater than 50 per cent. We shall further develop fuel and energy, metal processing, light and food industries, construction materials and other branches of industry.

"Much work was done to strengthen the material basis of agriculture, in particular in the mechanization of preparing fodder for livestock, watering of tens of millions of hectares of pasture, construction of sheds for livestock, and so on. Mongolia now fully provides herself with grain and flour.

"We have a compulsory seven-year program of education. We have 165 students for every 10,000 people, one physician for every 600 people.

"Q. Is there any possibility of expansion of trade and cultural ties of Mongolia, especially with the United States?

"A. With every new year, our trade and cultural relations with different countries grow on the basis of equality and mutual profit. These relations may be established with the United States as well.

"Q. How can Mongolia's experience in economy and social life be followed in other developing countries?

"A. The Mongolian people within a short historical period made a transition from feudalism to socialism passing by the capitalist stage of development and, having overcome the backwardness of centuries, gained important successes in creation and development of a new economy and culture. The experience of M.P.R. shows that the noncapitalist way of development is the shortest and most efficient road to quick social and economic progress."

S. 2507—INTRODUCTION OF THE VOTING RIGHTS ACT AMENDMENTS OF 1969

Mr. DIRKSEN. Mr. President, as a prelude to the introduction of the administration's amendment to the Voting Rights Act of 1965 I shall present the letter from the Attorney General to the Vice President of the United States, and then follow it with the bill because the letter pretty well spells out the additional authority that is developed under the bill, the question of presidential vote when a person has lived in an area from September 1 on, and a few other matters. But the literacy test is the important matter and to that provision I wish to address my remarks.

Mr. President, 114 years ago, when the stream of immigration from Europe began to swell, Irish immigrants showed a preference for Connecticut and Massachusetts. Public officials of that day were unhappy about it and hit upon the idea of imposing a literacy test as a qualification for voting. This meant that they had to prove that they could read, write, and understand. The purpose, of course, was to disqualify the Irish voters. The authors of that political handiwork should be here now and survey the result of their efforts.

Came then the Civil War and after that the 14th and 15th amendments to the Constitution. The 14th amendment forbade any State from abridging the privileges and immunities of citizens of the United States, and the 15th amendment provided very specifically that the right of citizens of the United States to vote shall not be abridged or denied either by the United States or by any State on account of race, color, or previous condition of servitude.

But literacy tests were imposed and enforced in many States. Today there are still 20 States which prescribe literacy tests as a qualification for voting. In some States they are ignored or simply not enforced. This includes seven Southern States where the application of a literacy test is suspended by the provisions of the Voting Rights Act of 1965. It was in 1957, when a new conscience made itself felt in the United States, resulting in the creation of a Civil Rights Commission to explore the whole question. Later came the Civil Rights Act of 1960 and the broader act of 1964. These were followed by the Voting Rights Act of 1965.

The Commission on Civil Rights consisted of outstanding talent and it made a thorough examination of the matter. Its voluminous report rather clearly indicates that the use of the literacy test made voting something of a farce in certain areas. A person with little education would be asked to read the first 10 amendments to the Constitution and then explain what they meant.

When the committees of Congress came to deal with the voting rights problem there was, therefore, a vast body of material available to aid in a viable, feasible solution. They finally agreed on a formula. In those States which had literacy tests, if 50 percent of those old enough to vote were either not registered or did not vote in the November 1964, election, the literacy test was suspended. These tests could be reimposed if the State or county could show that the tests were not used for purposes of discrimination.

Gaston County, N.C., undertook to do this very thing by coming before a three-man U.S. district court in the District of Columbia, as provided by the 1965 Voting Rights Act, and showed that there was no discrimination. The court went into the matter in depth. Let me interpolate to say that they really did go into it in great depth and they examined into the segregation problems in that county over a long period of time. They also went into the matter of education and whether the schools for Negroes were decidedly inferior to the schools that were maintained for white people, and out of all this there came a conclusion. They finally came to the conclusion that the use of literacy tests in Gaston County was discriminatory because the county, as a result of its segregated schools and its inferior schools for colored people, had thereby deprived Negro citizens of equal educational opportunities—and this is the important thing: an equal chance to pass a literacy

test. The U.S. Supreme Court sustained that decision.

It is now proposed in the new legislation which I introduce to ban all literacy tests until January 1, 1974, and to authorize the President to appoint a National Voting Advisory Commission to study further that matter of discrimination and corrupt practices.

Mr. President, I think this is a timely and restrained approach to this problem. Under the provisions of the bill, all of the literacy tests are suspended and certainly cannot be reimposed until after January 1, 1974—and not even then if Congress finally concludes, in supplementary legislation, that it should not be done.

It is a difficult matter, to say the least, but now we have geared the Voting Rights Act of 1965 into the 1964 election and I am of the opinion that this whole matter must be brought up to date.

Mr. President, today, therefore, I introduce for appropriate reference the bill which has been developed to cover the various points. In a general way, I think it is a good bill and merits the expeditious action of the Judiciary Committee and the Senate.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2507) to amend the Voting Rights Act of 1965, and for other purposes, introduced by Mr. DIRKSEN, was received, read twice by its title, and (by unanimous consent) referred to the Committee on the Judiciary.

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the RECORD the letter to the Vice President from the Attorney General, to which I have referred.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C.

The VICE PRESIDENT,
U.S. Senate,
Washington, D.C.

DEAR MR. VICE PRESIDENT: Enclosed for your consideration and appropriate reference is a legislative proposal to insure that there is no arbitrary or discriminatory denial of the voting franchise. This proposed act would be known as the "Voting Rights Act Amendments of 1969."

Experience during the last four years with the 1965 Act has shown that denial and abridgment of the right to vote as guaranteed by the Fifteenth Amendment are not limited to any geographical section of the nation, to any group, or to any category of community. The 1965 Act has worked well in the areas within its jurisdiction; it is now time to make the statute effective nationwide.

Accordingly, the bill transmitted herewith extends the Voting Rights Act of 1965 by prohibiting any State from utilizing a literacy test or any similar test or device at any time until January 1, 1974. At the same time, the measure maintains and extends to all States the authority of the United States to designate examiners when necessary to enforce the guarantees of the Fifteenth Amendment, and strengthen the authority of the Attorney General to arrange for observers to assist in the enforcement of these constitutional guarantees. Provision is also made for the Attorney General to have nationwide authority to initiate voting rights law suits and to request court orders freezing discriminatory voting laws and practices.

The bill also creates a Presidential Commission to study the effects of literacy tests and other restrictive activities upon the use of the franchise, and the impact of fraud or mission would make recommendations to the corrupt practices on voting rights. This Commission would make recommendations to the President and Congress by January 15, 1973.

Another major section of the bill provides that a citizen otherwise qualified to vote under the laws of a State cannot be denied his right to vote for President and Vice President in that State if he has resided in the State since September 1st next preceding the election. If he changes his residence subsequent to September 1, his vote is protected in the State from which he moved.

It is strongly recommended that the Congress promptly consider and enact this legislation.

The Bureau of the Budget has advised that enactment of this legislation would be in accord with the Program of the President.

Sincerely,

JOHN N. MITCHELL,
Attorney General.

ORDER FOR ADJOURNMENT UNTIL 11 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 11 o'clock tomorrow morning.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR CRANSTON TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the prayer and reading of the Journal tomorrow, the distinguished Senator from California (Mr. CRANSTON) be recognized for not to exceed 1 hour for the purpose of a number of the Members delivering tributes to former Chief Justice of the United States, Earl Warren.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

KEEPING AN EYE ON EAVESDROPPING

Mr. BYRD of Virginia. Mr. President, the Wall Street Journal, on Wednesday, June 25, published a thoughtful editorial on the issue of wiretapping.

It discusses the Justice Department's recent assertion that it may eavesdrop on certain groups without court approval.

The Journal feels, and I fully concur, that continued court approval of eavesdropping by Government is essential to preserve necessary perspective between protecting society and the assumption by Government of unwise powers.

Wiretapping is a dirty business and must be authorized only under carefully controlled conditions.

When the Omnibus Crime Control Act of 1968 was before the Senate, I supported the amendment offered by the distinguished Senator from Michigan (Mr. HART) which would have tightened the restrictions against Government wiretapping. This amendment failed by a vote of 37 to 44.

I have been strongly opposed to wiretapping except in national security cases or perhaps where organized crime is involved.

If wiretapping is to be permitted, however, most certainly it should not be permitted until an order from competent court jurisdiction is obtained.

I invite the attention of the Senate to the Wall Street Journal editorial captioned "Keeping an Eye on Eavesdropping." I ask unanimous consent that the text of this editorial be published in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KEEPING AN EYE ON EAVESDROPPING

The Justice Department's recent assertion that it may eavesdrop without court approval on domestic groups who attempt to use unlawful means to "attack the existing structure of government" must be regarded with suspicion.

New technology makes electronic eavesdropping a potential menace to society to be used only with the greatest care. The present dangers which eavesdropping might reduce hardly seem of a magnitude to justify the potentially increased threat to the privacy of innocent citizens.

Court approval is the central issue. For the Justice Department has claimed for the Executive branch the power to judge whether the groups to be surveyed are in fact a threat to Government, as well as to eavesdrop on them. Under the Crime Control Act passed last year, Federal agents as well as other law officers must obtain a warrant from a Federal judge in order to eavesdrop, requiring them to prove the likelihood that the eavesdropping will produce information relevant to past or future crimes.

The Crime Control Act did exempt from its provisions eavesdropping conducted with the President's approval to investigate threats to national security. But disturbingly, a Justice Department spokesman explains that the recent move to seek new powers is not an attempt to claim that exemption. Rather, the department hopes to establish that the President has a Constitutional power to authorize electronic surveillance of groups which threaten the Government. Authorizing such surveillance, the department said, "properly comes within the competence of the Executive and not the Judicial branch."

Legally recognizing such power might be justified as an emergency measure if our society were on the brink of a revolution. In the absence of such extreme conditions, however, it seems a dangerous action. In the hands of the wrong Government leaders, the power could lead to the harassment of lawful dissenters. Disclosures that Federal agents in the past have routinely eavesdropped on such moderate protesters as Martin Luther King do little to allay such fears.

Indeed, the circumstances of the Justice Department's claim suggest a loss of perspective. The assertion of new power to eavesdrop was included in papers filed in the Chicago trial of antiwar activists in-

dicted for inciting riots at last summer's Democratic Convention. The implication is that the Justice Department considers the antiwar, black and student militants a threat which justifies this new authority.

The department argues, for example, that since the President has had to call out Federal troops to quell domestic disorders, eavesdropping is justified to gather "intelligence" on groups that might hope to foment disorders.

Though the rhetoric and actions of some militant groups are often outrageous, the form of "revolution" they usually seem to favor—and in any event, the only form for which they can attract wide support—is cultural rather than political. Instead of seizing Washington by force and ousting the President and Congress, they hope to effect, by whatever obscure means, a sweeping change in human values. Whether or not this is desirable or possible, it should hardly be seen as a threat to viable democratic government.

Undeniably, violence and other illegal activity figures in the plans and policies of some militant groups. But surely existing state, local and Federal laws provide ample basis for its control. By asking for special power based on the presumed threat from these organizations, the Justice Department does them the favor of assuming they are far more powerful than they now seem.

The Government clearly has a responsibility to protect society from violent and destructive dissenting groups, a job to which eavesdropping may be important. There is nonetheless danger in letting the obsession with protection become the excuse for assuming unwise powers. Continued court approval of eavesdropping, no matter what the circumstances, should do much to preserve this necessary perspective.

Mr. BYRD of Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

TEMPORARY SUSPENSION OF DUTY ON CERTAIN COPYING SHOE LATHES

Mr. MANSFIELD. Mr. President, on behalf of the distinguished chairman of the Committee on Finance, the Senator from Louisiana (Mr. LONG), I ask unanimous consent that the bill H.R. 5833, as amended, be recommitted to the Committee on Finance with instructions to report back forthwith the bill with a new amendment, in lieu of the committee's amendment to such bill as previously reported, which would:

First, suspend the operation of section 1903(e) of the Social Security Act until July 1, 1971. The July 1, 1975, deadline now in section 1903(e) would be extended to July 1, 1977;

Second, assure that where a State reduces or eliminates a medicaid benefit it continues to spend in subsequent years at least the same amount of non-Federal funds as it did in the year prior to the reduction or elimination of a benefit. Where a State makes a cutback the Governor must certify and the Secretary must find that the State is fully employing controls on utilization and costs of services called for by Federal statutes and regulations;

Third, prohibit any savings resulting from a cutback in benefits to be used without the specific approval of the Secretary to increase the formula or other basis of payment to those providers of medical services whose services would still be covered under the program; and

Fourth, correct, through a technical amendment, section 1902(c) so as to conform it to the legislative intent expressed in the Finance Committee and Ways and Means Committee reports on the provision at the time of its original enactment.

The PRESIDING OFFICER (Mr. ALLEN in the chair). Is there objection to the request of the Senator from Montana that the bill be recommitted with instructions?

The Chair hears none, and it is so ordered.

Mr. MANSFIELD. Mr. President, now that the bill has been recommitted, I report the bill with an amendment.

On behalf of the chairman of the Finance Committee, I ask unanimous consent that the Senate proceed to the consideration of H.R. 5833, as reported.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 5833) to continue until the close of June 30, 1972, the existing suspension of duty on certain copying shoe lathes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana to proceed to the consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Finance with an amendment, to insert at the proper place in the bill:

SEC. 2. (a) Section 1903(e) of the Social Security Act is amended (1) by striking out "1975" and inserting in lieu thereof "1977".

(b) The provisions of section 1903(e) of the Social Security Act shall not apply for any period prior to July 1, 1971. In performing his functions under title XIX of the Social Security Act, the Secretary of Health, Education, and Welfare shall issue regulations and give advice to the States consistent with the preceding sentence.

(c) Section 1902(c) of the Social Security Act is amended by striking out "aid or assistance (other than so much of the aid or assistance as is provided for under the plan of the State approved under this title)" and inserting in lieu thereof "aid or assistance in the form of money payments (other than so much, if any, of the aid or assistance in such form as was, immediately prior to the effective date of the State plan under this title, attributable to medical needs)".

(d) Section 1902 of the Social Security Act is amended by adding at the end thereof the following new subsection:

"(d) Whenever any State desires a modification of the State plan for medical assistance so as to reduce the scope or extent of the care and services provided as medical assistance under such plan, or to terminate any of such care and services, the Secretary shall, upon application of the State, approve any such modification if the Governor of such State certifies to the Secretary that—

"(1) the average quarterly amount of non-Federal funds expended in providing medical assistance under the plan for any consecutive four-quarter period after the quarter in which such modification takes effect will not be less than the average quarterly amount of such funds expended in providing such assistance for the four-quarter period which immediately precedes the quarter in which such modification is to become effective,

"(2) the State is fully complying with the provisions of its state plan (relating to control of utilization and costs of services) which are included therein pursuant to the requirements of subsection (a)(30), and

"(3) the modification is not made for the purpose of increasing the standard or other formula for determining payments for those types of care or services which, after such modification, are provided under the State plan,

and if the Secretary finds that the State is complying with the provisions of its State plan referred to in clause (2); except that nothing in this subsection shall be construed to authorize any modification in the State plan of any State which would terminate the care or services required to be included pursuant to subsection (a)(13). Any increase in the formula or other standard for determining payments for those types of care or services which, after such modification, are provided under the State plan shall be made only after approval thereof by the Secretary."

Mr. LONG. Mr. President, pursuant to the motion which has just been agreed to, I report the bill H.R. 5833 as amended and ask unanimous consent for its immediate consideration.

Mr. President, the present amendment to H.R. 5833 modifies the amendment originally approved by the Committee on Finance which would have suspended the operation of section 1903(e) indefinitely until such time as the Congress lifted the suspension.

Section 1903(e) is a provision which requires States to constantly expand the benefits provided and the people eligible for coverage under their programs, so that by 1975 they would be providing comprehensive services to all the medically indigent and indigent in their States.

As Senators are well aware, virtually every State in medicaid has problems with the programs. These include catastrophic costs, fraud, abuse, poor controls, and so forth. The original committee amendment was designed to give Congress and the States an opportunity to thoroughly review the medicaid program and develop appropriate means of coping with its problems—including eliminating or reducing benefits. The committee amendment provided for an indefinite suspension. The compromise, worked out with the active participation of the AFL–CIO provides for a suspension for a period certain—2 years. The compromise meets with their approval and ours in view of the fact that it will still give reasonable time for thorough evaluation of medicaid. If more time becomes necessary, Congress could act to extend the suspension.

The second part of the amendment is designed to assure that States intend to maintain the non-Federal expenditures level under their medicaid programs. This is to avoid a State using these amendments as an excuse to simply cut back on its program indiscriminately. On the other hand, the amendment does not force States to increase their expenditures.

Another provision provides that a State desiring to cut back services must

certify—and the Secretary of the Department of Health, Education, and Welfare must find—that it is actually employing effective controls on the costs of care and utilization on the various services provided. Additionally, the State must also certify that it will not use savings resulting from a cutback to further enrich payments to those providers whose services are still covered. In other words, if a State cut out a dental care benefit, it could not increase its schedule of payments to doctors without first getting the specific approval of the Secretary of Health, Education, and Welfare.

The services of optometrists are important in bringing necessary eye care to welfare recipients. For that reason we would expect that where a State removes optometric services generally from its program it would still continue to cover those services of an optometrist which is licensed to perform, to the extent that the program specifically continues to cover those services if rendered by a physician.

A further provision conforms the language of section 1902(c) to the contemporaneous expression of intent found in the Finance Committee report at the time of medicaid's consideration in 1965.

Section 1902(c) is a maintenance of effort provision which was intended to prohibit a reduction by a State in cash assistance payments to the indigent in order to finance its medicaid program. The Department of Health, Education, and Welfare has misinterpreted this section and applied it to a prior level of medical assistance, as well as cash. The present amendment makes the necessary technical correction of section 1902(c) to conform it with congressional intent.

In essence the compromise is a recognition that neither the States nor the medicaid beneficiaries are responsible for the sharply rising costs of medical care in this country. It provides a mechanism through which the States can get relief by indicating that they are tightening up their cost control procedures and will not use the savings from their cutback to underwrite larger fees to physicians and other providers of services. These certifications—except for the one relating to cost controls—involve before-the-fact expressions of the States' good faith and intentions that they will keep the welfare of their medicaid beneficiaries in the forefront of their minds as they map a retrenchment of their medicaid plan.

Mr. ANDERSON. Mr. President, I am pleased that we were able to work out a compromise of my original amendment. Quite simply my purpose in offering the amendment was to relieve my State of New Mexico of virtually unbearable fiscal pressure. In fact, our Governor was forced to declare a state of emergency so as to free funds for medicaid. The regular appropriation had run out.

New Mexico, like many other States, simply cannot cope with the enormous dollar pressures of medicaid as it now stands.

What I hope will result during this period of suspension of section 1903(e) and the amendment of section 1902(c) to conform to congressional intent, is that New Mexico and other States as well as the Congress will have adequate time to make those in-depth statutory and administrative changes necessary to bring this multi-billion-dollar program under reasonable control. We simply cannot afford to have medicaid continue at this current breakneck, bankrupting pace.

I must say that after I introduced my first bill on this subject, S. 1849, a number of my colleagues, including Senator GORE of Tennessee, joined in the fight for this vitally needed breathing room because of the situation existing in their own States.

Again, I support the compromise and will do all I can to see to it that the purposes of the amendment are fulfilled during the next 2 years.

Mr. HARRIS. Mr. President, the amendment as originally reported was to purportedly clarify 1902(c) and to suspend 1903(e) of title XIX. I opposed this amendment because I thought it would frustrate the purpose of title XIX.

The purpose of title XIX is to provide the financial base for an upgrading of the medical assistance offered to the needy. Federal funds are made available to States participating in medicaid with certain conditions attached thereto which will insure that medical assistance to the needy will at least remain at the same level when a State enters the program and will thereafter be continually improved until comprehensive services are offered. To abandon this objective and take regressive steps would be most unfortunate.

But, I also shared with the distinguished senior Senator from New Mexico (Mr. ANDERSON) concern for the financial difficulties of several States in meeting the requirements of the act. However, I felt this problem could be solved without sacrificing the goals of title XIX. Fortunately, the amendment as re-reported with the new language can give some relief to the States facing financial difficulties, and at the same time retain the goals to title XIX.

The amendment to 1902(c) as originally reported will not be changed. However, a new subsection (d) will be added which will permit States to reduce services only upon the conditions: that they maintain the same level of cash payments for medical assistance as in the previous year; that any proposed payment increases to vendor be submitted to the Secretary for approval; and most importantly that States undertake a program of cost control. With the new subsection (d) to 1902, the amendment will be affirmative in nature, since it will require the States seeking relief to implement cost-control procedures.

Rather than suspend 1903(e) indefinitely, the goal of comprehensive services will be postponed until July 1, 1977, and the enforcement of the provision will not begin until 1971.

It is with regret that we take this action. The financial difficulty some of the States are apparently experiencing has not resulted from 1902(c) or 1903(e), but has been due to accelerated and unanticipated increases in the cost of medicaid. While costs of all other items were up 11 percent between 1965 and 1968 on the Consumer Price Index, physicians fees rose 21 percent and hospital charges increased by 52 percent. Instances of vendor abuse are uncovered almost daily and the lack of effective cost controls are evident to all.

I am encouraged by the Finance Committee hearings which are scheduled this week on the medicaid and medicare programs and the study the Finance Committee staff has been making on cost controls. This is the proper approach to take in answering the financial difficulties facing the States, not further modification of the goals or extension of the deadlines of title XIX. I am most hopeful that our efforts in this regard will permit us to move toward comprehensive health services and accomplish this with less financial stress on the States. As we move to implement cost controls, the amendment which has been rereported today, should be enacted.

Mr. KENNEDY. Mr. President, on behalf of the Senator from Connecticut (Mr. RIBICOFF), I ask unanimous consent that a statement prepared by him relative to H.R. 5833 be inserted in the RECORD.

There being no objection, the statement by Senator RIBICOFF was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR RIBICOFF

Mr. President, I supported H.R. 5833 as amended following recommittal to the Committee on Finance. The new Committee amendment now before the Senate meets many of the basic objections voiced by several Senators including myself to the original Committee amendment.

H.R. 5833, as it now stands, strikes a better balance between efforts to attain the national goals of the Medicaid program and the need to meet the acute financial distress being faced by several states with operating Medicaid programs. While recognizing this fiscal crisis, the new amendment now retains the required emphasis on the national program to provide better health care for the needy.

Four years ago, the 89th Congress highlighted its great domestic record by passing the historic Medicare and Medicaid laws. This legislation set forth, in clear and unmistakable terms, our national commitment to better health for those who could not afford it on their own. This commitment remains valid today.

In 1965 no one expected our aims to be achieved without a struggle. But regrettably, our efforts have been increasingly burdened by an unprecedented rise in the cost of medical care. This inflationary trend combined with some abuses and lax administration of federal programs have caused the price of Medicaid to soar far beyond our original estimates.

As a result some states have found themselves close to being overburdened by the costs of the program.

In these circumstances, Mr. President, our purpose must be to control these rising costs and to tighten up program administration without sacrificing our national goals and without penalizing the recipients of medical assistance. We must continue to recognize the soundness of our original commitment to the American people. We cannot abandon the basic aims of Medicaid in order to deal with a financial crisis which will be but a temporary situation if the Congress takes the necessary steps to control costs.

In this respect I am pleased to note the set of hearings scheduled to begin tomorrow in the Finance Committee on the overall ad-

ministration of the Medicare and Medicaid program. These hearings will be the beginning steps in what must be a concerted effort to control health costs in America, and I commended the Senators from Delaware (Mr. WILLIAMS) and Louisiana (Mr. LONG) for their leadership in this field.

The purpose of controlling health costs is to protect the national commitment to health care for the needy—not to reduce it. To cut services drastically in the face of rising costs would be charging the needy for sins of medical service vendors. The beneficiaries of improved administration will be the very people who are now unfortunately left out of many programs because of our inability to finance them properly.

It is for this reason that we have insisted that any amendments to the title XIX program must recognize the continuing national effort to provide this urgently needed care and the need to expand available services to greater numbers of the poor. Therefore, under the revised amendment no state will be able to reduce its present financial commitment to Medicaid. In order to modify its program of services in any way, a state must certify that it has an ongoing cost control program in effect. Additionally, the Secretary of HEW must review and approve any further increase in unit payments. Finally, this amendment retains legislative requirements to provide comprehensive health care for the needy by a date certain. The goal, because of fiscal necessity has been moved back to 1977. While it would have been preferable not to tamper with the original date of 1975 circumstances do not permit this luxury. A goal of 1977 is better than none at all.

Mr. President, our efforts in this area must continually be directed at the requirements of our citizens who bear the double burden of poverty and illness. Our vigilence over the Medicaid program must be predicated on the effort to seek continuing progress toward this goal. I believe H.R. 5833 now reflects this commitment and it has my support.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the committee amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

If there be no further amendment to be proposed, the question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed, and the bill to be read a third time.

The bill (H.R. 5833) was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I just want to make certain that there are no questions and that there will be no motion to reconsider or to table, and that this matter has been cleared all the way around.

TO MAKE PERMANENT THE EXISTING TEMPORARY SUSPENSION OF DUTY ON CRUDE CHICORY ROOTS—CONFERENCE REPORT

Mr. MANSFIELD. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 8644) to make permanent the existing temporary suspension of duty on crude chicory roots. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of June 26, 1969, pp. 17473–17474, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. MANSFIELD. Mr. President, there were two Senate amendments to the House-passed bill. The first repealed the limitation on Federal participation in aid to families with dependent children. The second amendment extended a program of aid to repatriated U.S. nationals for 2 years. The House conferees agreed to accept both Senate amendments without change.

My colleagues will remember that the limitation on Federal participation in aid to families with dependent children, called the "AFDC freeze," was first incorporated in the House version of the Social Security Amendments of 1967. The House bill recommended a major new approach to the reduction of the dependency in the program of aid to families with dependent children by providing an opportunity for training and other services leading to employment. To insure that States would rapidly implement this major new program, the House placed a limitation, effective January 1968, on Federal participation in aid to families with dependent children.

In the Committee on Finance, we endorsed the basic approach of the House bill, but we proposed a broader and more comprehensive work incentive program which we felt made the aid to families with dependent children freeze unnecessary. We therefore deleted the limitation in the Senate. The House conferees were unwilling to accept outright repeal of the limitation, but they did agree to postpone the effective date to July 1, 1968. Last year the effective date was postponed until July 1, 1969.

The basic purpose of the original House limitation was to provide a strong incentive for the States to move rapidly to implement the work incentive program. Neither the Federal administrators nor the States have done so. Implementation of the program has been so slow that the new administration was able to reduce the budget request for the work incentive program by $35 million simply on the grounds that the funds could not be used. We expect to review the operation of the work incentive program carefully.

In addition, Supreme Court decisions have had a major impact on the welfare programs. A decision of the Court last year would not permit States to declare families ineligible for assistance because of the presence of a man in the house who is not married to the mother of the family. Another decision this April would force States to eliminate eligibility requirements based on length of residence. Last year's decision affected 18 States; this year's would affect some 40 States.

The Department of Health, Education, and Welfare has estimated than an increase in the AFDC rolls ranging from 200,000 to 400,000 recipients might result from the elimination of the man-in-the-house rule; another 100,000 to 200,000 AFDC recipients might be added to the rolls as a result of the elimination of duration-of-residence eligibility requirements. For the most part, under present law there would be no Federal participation on behalf of the children added to the rolls as a result of these court decisions.

It was against this background that the Senate voted and the House conferees agreed to repeal the limitation on Federal participation in aid to families with dependent children.

The second Senate amendment relates to a provision in the Social Security Act authorizing temporary assistance to U.S. citizens who return to this country because of war, invasion, destitution, illness, or similar crisis, and are without available resources.

Under this program, the Federal Government may pay for reception, care, and temporary assistance when these individuals reach the United States. This program was originally authorized in 1961, and has been extended several times. The Senate amendment, which the House conferees agreed to, will extend the program for 2 years, until June 30, 1971.

This statement was delivered in behalf of the distinguished chairman of the Committee on Finance, the Senator from Louisiana (Mr. LONG).

Mr. DIRKSEN. Mr. President, on behalf of the Senator from California (Mr. MURPHY) I ask unanimous consent to have printed in the RECORD a statement he had prepared on the conference report.

There being no objection the statement by Senator MURPHY was ordered to be printed in the RECORD, as follows:

Mr. MURPHY. Mr. President, I support the conference report on H.R. 8644, which includes a very important provision repealing Section 403(d) of the Social Security Act, the so-called AFDC "freeze." I strongly supported the Senate action, and I congratulate the Senate conferees for seeing to it that the Senate provision prevailed in conference.

The repeal of the AFDC "freeze" carries out the recommendations of President Nixon and Secretary Finch and will be welcomed news in my state of California. The repeal was urgent prior to the Supreme Court's decision outlawing state residency requirements for welfare benefits. That decision has been described by Governor Reagan as the proverbial "last straw" insofar as its impact on state and local governments is concerned.

With many state and local governments already desperately struggling to keep fiscally afloat, allowing the AFDC "freeze" to continue could be the fatal blow. If the "freeze" had been allowed to stand in California, it would have cost the state $39 million annually. According to information supplied to me by the state for fiscal years 1969 and 1970, federal action, not including the Supreme Court's decision in the residency matter, added $61.7 million to California's cost. When we include the Supreme Court's decision, the figure reaches $80 mil-

lion, $22.8 million of which would fall on the property taxpayers in California's fifty-eight counties.

Mr. President, I share the country's concern over rising welfare costs. There is little question that the present system needs a major overhauling. It has tended to perpetuate poverty not end it. We must find new methods and incentives to break the poverty cycle and move those who are able into productive employment. In other words, we must transfer these people from the public rolls to the payrolls. This is not only essential to reduce the rising welfare costs, but also for the dignity of the individuals involved.

Various experiments and approaches are being tried and tested across the country. The Department of Health, Education and Welfare is reviewing the present welfare system and hopefully will have constructive recommendations to improve the situation in this Congress. I certainly intend to join in the search for a new and better approach in this area.

Mr. President, I certainly want to thank President Nixon and Secretary Finch for their realization of the adverse effect that the AFDC "freeze" would have on state and local resources and for recommending its repeal. The federal government must simply realize the consequences of pulling the rug out from under state and local programs.

Mr. HARRIS. Mr. President, I want to commend the conference committee on H.R. 8644 and our chairman, the distinguished Senator from Louisiana (Mr. LONG), for adoption of the amendment to repeal the AFDC freeze.

The action taken by the conference committee will surely be applauded by the Governors and directors of welfare programs throughout the Nation, most of whom have been critical of the freeze. They have been critical because the freeze on AFDC payments, if permitted to take effect, would have created an intolerable situation for the States. The impending freeze would have forced States to make a choice between spreading already inadequate benefits to greater numbers; raising additional money themselves; or barring families from the welfare rolls. We can all share in the relief that this unfortunate measure has now been finally repealed and there is no longer the possibility that 300,000 children could have been dropped from AFDC rolls.

But, relief is not satisfaction. We cannot be satisfied until we begin to take forward steps, rather than retracing former steps. I would hope that this repeal of the freeze signifies that we are now ready to undertake substantial reform of our welfare system during this session of Congress.

THE PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

LITERACY TESTS IN GASTON COUNTY, N.C.

Mr. ERVIN. Mr. President, the Greensboro Daily News of Greensboro, N.C., carried an editorial in its issue of June 4, 1969, entitled "Literacy Tests in Gaston," which comments with much wisdom upon the decision of the three-judge court in the District of Columbia, and the decision of the Supreme Court of the United States in the case in which Gaston County sought to obtain exemption from coverage under the Voting Rights Act of 1965.

As the editorial writer comments:

By endorsing the far-fetched reasoning of U.S. District Judge Skelly Wright in the Gaston County literacy test case, the Supreme Court has in a small but significant measure armed its critics and disarmed its defenders.

Both the opinion of Judge Wright and that of the Supreme Court in effect amend the act of Congress by adding to it requirements not constituting a part of the act. Since every informed person in North Carolina knows that the election officials of Gaston County have not been guilty of discriminating against any person qualified to vote on the ground of his race, color, or previous condition of servitude in violation of the 15th amendment, the decision of the three-judge District court, and the decision of the Supreme Court in the Gaston County literacy test case does nothing to enhance the confidence of informed North Carolinians in the national judiciary.

The result of this case, which under the Voting Rights Act of 1965 had to be tried before Judge Skelly Wright and two other judges of the District of Columbia instead of before the Federal courts of North Carolina where witnesses were readily available, demonstrates that the provision of the Voting Rights Act which nailed shut all the Federal courts in the Nation, except the District Court of the District of Columbia, was and is a rather shabby form of due process of law.

I ask unanimous consent that the editorial to which I have referred, be printed at this point in the body of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

LITERACY TESTS IN GASTON

By endorsing the far-fetched reasoning of U.S. District Judge Skelly Wright in the Gaston County literacy test case, the Supreme Court has in a small but significant measure armed its critics and disarmed its defenders.

The least of the questions here is the fairness or unfairness of literacy tests per se. None of the judges or justices who considered the Gaston case felt that the county had deliberately used the test to exclude Negro voters from the rolls. The issue, rather, is to what lengths the courts will go, in interpreting an act of Congress, to achieve what they feel to be—what may in fact be—a desirable result. The running criticism of the federal judiciary has been that it is "result-oriented"—that is, amenable to bending the laws and the Constitution to achieve politically-desirable ends. In general, this criticism is far-fetched; in the Gaston case it may not be.

Recently Gaston County, following the provisions of the 1965 Voting Rights Act, applied to the U.S. District Court in the District of Columbia to be released from the sanctions of the act. In Gaston, under the law, the literacy test has been automatically suspended because fewer than 50 percent of its residents had voted in the presidential election of 1964—the more or less arbitrary guideline Congress adopted.

Under the 1965 act, a county so proscribed has to demonstrate that it has not for five years used the test discriminatorily. And even Judge Wright, who wrote the district court decision, agreed that the test had not been used "for the purpose" of racial discrimination.

Why not, then, release Gaston County from sanction?

That is where Judge Wright's ingenious reasoning came in. Judge Wright found that the literacy test in Gaston County had had the "effect," deliberate or not, of discrimination because during the minority of some living potential voters Gaston County schools had been segregated and the Negro schools presumably unequal.

This reasoning is questionable on several grounds. In the first place, most illiterates are made over the years in North Carolina by dropping out of school, not by having to attend an inferior school. Moreover, it is clear that Congress in 1965 refused to abolish literacy tests outright. The effect of this decision notwithstanding, is to abolish them outright in any county that ever had segregated schools. Judge Wright also ignored the fact that until 1954 the "separate but equal" doctrine had been the law of the land for 56 years.

When it endorses Judge Wright's reasoning—and by a vote of 7 to 1 at that—the Supreme Court seems to be visiting the sins of the fathers on the current generation. It is saying to Gaston County, and any county in the same fix, "You are to be penalized under the law of the land, circa 1969, for taking advantage of the law of the land, circa 1898."

The case may seem a bit academic, especially since the literacy test is in increasing disuse in Piedmont, North Carolina. But it involves a basic principle—the principle that if the intent of Congress is clear and there is no conflict with the Constitution, a piece of legislation should be applied as Congress wrote it, and not as the judges embellish it.

It is such decisions that pave the way, in public sentiment, for "strict constructionists."

JONES AGAINST ALFRED H. MAYER CO.: JUDICIAL ACTIVISM RUN RIOT

Mr. ERVIN. Mr. President, the Vanderbilt Law Review for April 1969 published an article by me entitled "Jones v. Alfred H. Mayer Co.: Judicial Activism Run Riot."

I ask unanimous consent that that article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JONES V. ALFRED H. MAYER CO.: JUDICIAL ACTIVISM RUN RIOT

(By SAM J. ERVIN, JR., U.S. Senator from North Carolina, chairman of the Senate Judiciary Subcommittee on Constitutional Rights)

I. INTRODUCTION

Those who make it their business to follow closely the work of the Supreme Court have noticed its tendency to save the most controversial decisions of the term for the last days in June, just before the Court recesses for the summer. One sometimes gets the impression that the Justices wish to be far away from the summer storms produced by these decisions, returning to Washington in the quieter days of the fall.

Thus it was not surprising that the Court saved its decision in *Jones* v. *Alfred H. Mayer Co.*[1] until June 17, 1968, and then promptly left town. The *Jones* case is a glaring example of the Court's habit of effecting constitutional revision by judicial fiat. In this case, a majority of the Justices engaged in a transparent exercise of rewriting history and gave an ancient and limited civil rights statute an interpretation that not even ar-

Footnotes at end of article.

dent defenders of the Court's activism thought warranted.

In a seven-to-two decision the Court held that the Civil Rights Act of 1866 had been intended to and did prohibit private racial discrimination in the sale or rental of housing. Reversing the option of the Court of Appeals for the Eighth Circuit,[2] which had affirmed the district court opinion,[3] the Court held that the plaintiffs, a Negro husband and his Caucasian wife, who had attempted to buy a home in a housing subdivision and who alleged their effort had ben refused solely because of the husband's race, were entitled to federal relief. Justice Stewart, who wrote the opinion of the Court, was joined by the Chief Justice and Justices Black, Douglas, Brennan, Fortas and Marshall, with Justice Douglas writing a brief concurring opinion. Justice Harlan wrote a dissenting opinion, in which Justice White joined.

The statute applied by the Court provides:

"All citizens of the United States shall have the same right, in every State and Territory, as is enjoyed by white citizens thereof to inherit, purchase, lease, sell, hold and convey real and personal property." [4]

These words were originally a part of the Civil Rights Act of 1866.[5] The chief proponents of the Act of 1866 claimed that Congress had acquired the power to adopt it under the thirteenth amendment, which had been ratified in 1865. The thirteenth amendment reads as follows:

"Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

"Section 2. Congress shall have power to enforce this article by appropriate legislation."

The purpose of the thirteenth amendment was to abolish slavery as it existed before the Civil War.

II. THE HISTORIC CONTEXT

The Civil Rights Act of 1866 was designed to make the newly-freed slaves citizens of the United States and to compel each state or territory to treat them as equals of their white citizens rather than as aliens in respect to the fundamental civil rights specified in the Act. A citizen had the legal capacity to acquire property from a willing vendor, while an alien had either a severely limited or a total lack of such capacity. Almost all historians and legal scholars agree that freedmen were treated as aliens before the passage of the Civil Rights Act of 1866.[6]

A slave had no rights. He could not own property, either by purchase, inheritance, or gift. He did not have the capacity to contract; he could not make a valid bond or lease of property, nor could he be held to his promise in writing even after he became free. Of course, he had no right to sue or be sued and no right to serve as a juror or witness in court. In short, before the law, he was for the most part an "unperson."

At least in legal theory, and apparently in fact, in the early 19th Century the inability to hold property, to contract, and to have other property rights was a disability of slavery rather than race or color. As a general rule, the free Negro in the South was entitled to own real and personal property and to contract. But by the 1840's, the fear of slave rebellions and unrest caused the slave-holding states to begin legislating strictly in regard to free Negroes with the result that, while their right to own property might not have been abrogated, their enjoyment of the right was limited. Strict patrol and police regulations governing travel were enacted, requiring each Negro to have a pass to travel outside his immediate locale; some states required free Negroes to select a guardian who would stand as patron for them, contracting and entering into legal arrangements for them.[7]

Of course, the Negro hardly fared better in the North at the time. Many northern states prohibited free Negroes from emigrating into them, and most denied them suffrage, the right to sue, the right to serve as jurors, and the right to be witnesses in court.[8] Most of these disabilities, it must be emphasized, were considered to be withholding of political rather than civil rights, and congressional sponsors of civil rights legislation time and again disclaimed any intention to interfere with laws of a purely political nature.

Many of the contemporary supporters of the 1866 Act entertained serious doubts regarding the constitutionality of the measure under the thirteenth amendment. They doubted that the thirteenth amendment prohibition against "slavery" or "involuntary servitude" could be stretched so far as to include protection of all the rights included in the 1866 Act.[9] In fact, this doubt played a major role in the drafting of the first section of the fourteenth amendment, which actually incorporates the major provisions of the 1866 Act. This was done to insure the constitutionality of the Act and to forestall the repeal of its provisions by a subsequent congressional majority.[10]

A. The civil rights bill of 1866: Legislative history

After the conclusion of the Civil War, Congress approved the thirteenth amendment, which was ratified in 1865. Subsequently, based upon the constitutional authority contained therein, the 39th Congress passed S. 60, an amendment to the Freedman's Bureau Act,[11] to strengthen the resources of the recently established Freedman's Bureau and to protect the civil rights of freedmen in the states which had attempted to secede. Section 7 of S. 60 provided that when any state which had been in rebellion denied to Negroes any civil right belonging to a white person "in consequence of any State or local law, ordinance, police, or other regulation, custom or prejudice," [12] the President had a duty to extend military protection to such person. The section defined "civil rights" to include these rights: to make and enforce contracts; to sue, be parties and give evidence; to inherit, purchase, lease, sell, hold and convey real and personal property; and to have full and equal benefit of all laws. Section 8 made it a misdemeanor punishable by agents of the Bureau for any person acting "under color of any State or local ordinance, police, or other regulation or custom" [13] to subject or cause to be subjected any Negro to the deprivation of any civil right secured to any white persons.[14]

S. 60 was premised upon the power of Congress to treat the seceding states as conquered provinces; it was operative in a period when the defeated South was under the rule of military governments having virtually unlimited powers. While it is of little value to engage in a semantic argument regarding the interpretation of the terms "custom or prejudice" in section 7 of the bill, it might be noted that "custom" was generally considered to be behavior legitimated by state or community sanction, something more than general prejudice. Moreover, since the term "prejudice" was not included in section 8, providing criminal sanctions, it seems to be fairly clear that S. 60 was designed primarily to deal with state action, despite the circumstances surrounding its passage.

Following the passage of S. 60, the 39th Congress turned to the Civil Rights Bill of 1866. In order to engage in a meaningful discussion of its legislative history, special attention must be given to relevant portions of its original text:

"Section 1. That all persons born in the United States and not subject to any foreign power, excluding Indians, not taxed, are hereby declared to be citizens of the United States; and such citizens of every race and color, without regard to any previous conditions of slavery or involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall have the same right, in every State and Territory in the United States, to make and enforce contracts, to sue, be parties, and give evidence, to inherit, purchase, lease, sell, hold and convey real and personal property; and to full and equal benefit of all laws and proceedings for the security of persons and property, as is enjoyed by white citizens, and shall be subject to like punishment, pains, and penalties, and to none other, any law, statute, ordinance, regulations, or custom, to the contrary notwithstanding.

"Section 2. That any person who, under color of any law, statute, ordinance, regulation, or custom, shall subject, or cause to be subjected, any inhabitant of any State or Territory to the deprivation of any right secured or protected by this Act, or to different punishment, pains, or penalties on account of such person having at any time been held in a condition of slavery or involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, or by reason of his color or race, than is prescribed for the punishment of white persons, shall be deemed guilty of a misdemeanor, and, on conviction, shall be punished by fine not exceeding one thousand dollars, or imprisonment not exceeding one year, or both, in the discretion of the court." [15]

As noted above, there were those in the 39th Congress who felt that Congress did not have the power to pass the Civil Rights Bill, and such doubts played a major role in the subsequent drafting of the fourteenth amendment.[16] Therefore, following the ratification of the fourteenth amendment, when Congress enacted the Civil Rights Act of 1870, protecting the rights of suffrage, it provided for the reenactment of the 1866 Act. This reenactment was felt to be of no consequence by the majority in *Jones*, despite the unarguable fact that it is hardly an everyday occurrence for the Congress to feel the need to reenact one of its own laws verbatim.[17]

The record clearly indicates that the Civil Rights Act of 1866 was designed to protect limited rights. It was not considered to be all-encompassing and was not drafted to reach private action. Rather, by prohibiting all state legislatures from enacting and enforcing statutes that treated one citizen differently from another, it was directed toward establishing equal legal status and capacity in clearly defined areas for those recently emancipated from slavery.

Certainly there are many ambiguities in the debates, but when they are read in their entirety, in the context of the period, the dominant theme is concern with *state*, not individual, action, either by those entrusted to enforce the law or by a private citizen acting under color of law. Either falls under the traditional state action requirement. When combined with the apparent meaning of the statute itself and construed according to the rules of statutory construction, this theme clearly indicates that the majority decision of the Supreme Court in *Jones* is based upon wishful thinking that can be substantial only by violating all the standard rules of statutory construction, by ignoring the history of the times, and by placing upon the meaning of both the words and the history an interpretation that is clearly unreasonable.

A clear distinction between "civil" and "political" rights was drawn at the time the Civil Rights Act was passed, a distinction based on the privileges and immunities clause of article IV, section 2, of the Constitution. The most commonly-quoted explanation of the difference is found in the opinion of Justice Washington in *Corfield v. Coryell*, which reads:

Footnotes at end of article.

"We feel no hesitation in confining these expressions to those privileges and immunities which are, in their nature, fundamental; which belong, of right, to the citizens of all free Governments; and which have, at all times, been enjoyed by the citizens of the several states which compose this Union, from the time of their becoming free, independent and sovereign. What these fundamental principles are, it would perhaps be more tedious than difficult to enumerate. They may, however, be all comprehended under the following general heads: protection by the government; the enjoyment of life and liberty, with the right to acquire and possess property of every kind, and to pursue and obtain happiness and safety; subject nevertheless to such restraints as the government may justly prescribe for the general good of the whole. The right of a citizen of one state to pass through, or to reside in any other state, for purposes of trade, agriculture, professional pursuits, or otherwise; to claim the benefit of the writ of habeas corpus; to institute and maintain actions of any kind in the courts of the state; to take, hold, and dispose of property, either real or personal; and an exemption from higher taxes or impositions than are paid by the other citizens of the state; may be mentioned as some of the particular privileges and immunities of citizens, which are clearly embraced by the general description of privileges deemed to be fundamental." [18]

Reliance on this definition was virtually universal among members of the 39th Congress, including Senator Trumbull of Illinois, Chairman of the Judiciary Committee and author of the Civil Rights Bill, who, after quoting the above passage, was asked to interpret the term "civil rights." He responded:

"The first section of the bill defines what I understand to be civil rights: the right to make and enforce contracts, to sue and be sued, and to give evidence, to inherit, purchase, sell, lease, hold, and convey real and personal property, and to full and equal benefit to all laws and proceedings for the security of person and property. These I understand to be civil rights, fundamental rights belonging to every man as a free man, and which under the Constitution as it now exists we have a right to protect every man in.

"Mr. McDougall. Do I understand that it is not designed to involve the question of political rights?

"Mr. Trumbull. This bill has nothing to do with the political rights or status of parties. It is confined exclusively to their civil rights, such rights as should appertain to every free man." [19]

Subsequently, in response to the claim of opponents of the bill that it was all-encompassing, Trumbull said:

"The bill is applicable exclusively to civil rights. It does not propose to regulate the political rights of individuals; it has nothing to do with the right of suffrage, or any other political right; but is simply intended to carry out a constitutional provision, and guarantee to every person of every color the same civil rights. That is all there is to it." [20]

Both the Freedman's Bill (S. 60) and the Civil Rights Bill (S. 61), introduced by Senator Trumbull on January 5, 1866, were based upon the second section of the thirteenth amendment, a section which Trumbull repeatedly asserted gave Congress the power to reach state action. For instance, in discussing the Freedman's Bill, Senator Trumbull said:

"I have no doubt that under this provision of the Constitution we may destroy all these discriminations in civil rights against the black man. . . . If in order to prevent slavery Congress deem it necessary to declare null and void all laws which will not permit the colored man to contract, which will not permit him to buy and sell, and to go where he pleases, it has the power to do so. . . . That is what is provided to be done by this bill. Its provisions are temporary; but there is another bill on your table, somewhat akin to this, which is intended to be permanent, to extend to all parts of the country, and to protect persons of all races in equal civil rights." [21]

Later, during the Civil Rights Bill debate, he declared that the abstract declaration embodied in the thirteenth amendment was of little value "if in the late slaveholding States laws are to be enacted and enforced depriving persons of African descent of privileges which are essential to freemen. . . . It is the intention of this bill to secure those rights." [22]

In the House of Representatives, where the bill was managed by the Chairman of the House Judiciary Committee, Representative Wilson of Iowa, the emphasis was also on state action. Representative Wilson saw a need to eradicate the Black Codes. In discussing such Southern legislation, he said:

"It will be observed that the entire structure of this bill rests on the discrimination relative to civil rights and immunities made by the States on 'account of race, color, or previous condition of slavery'." [23]

Another active participant in the debate, Representative Shellabarger of Ohio, asserted that the whole effect of section 1 was:

"[T]o require that whatever of these enumerated rights and obligations are imposed by State laws shall be for and upon all citizens alike without distinctions based on race or former condition in slavery. . . .

Self-evidently this is the whole effect of this first section. It secures—not to all citizens, but to all races as races who are citizens—equality of protection in those enumerated civil rights which the States may deem proper to confer upon any races." [24]

The Court makes much of the relation between sections 1 and 2 of the original Civil Rights Act and interprets section 1 as applying to both state and private action, while asserting that the criminal penalties embodied in section 2 apply only to those acting under color of state law. However, the drafters of the legislation evidently took the view common in legislative draftsmanship, namely that section 1 expressed those "fundamental rights" sought to be guaranteed by the bill and section 2 provided the penalties for violating or interfering with those rights. Senator Trumbull indicated that section 1 of the bill stated the "great fundamental rights," but that it would be of little value without machinery designed to give effect to those rights, saying:

"[T]he only question is, will this bill be effective . . . for the first section will amount to nothing more than the declaration in the Constitution itself unless we have the machinery to carry it into effect. A law is good for nothing without a penalty, without a sanction to it, and that is to be found in the other sections of the bill." [25]

Obviously, this means that those penalized by section 2 (those acting under color of state law) are the only ones prohibited from interfering with the "great fundamental rights" outlined in section 1.

The Court strains the boundaries of legal reasoning to arrive at its conclusion. In order to show that section 1 applies to private acts of discrimination, the majority opinion is forced to disassociate that section from the second section in which there is reference to "color of law." The Court's legal reasoning consists simply of the bare assertion that "if Section 2 had been intended to grant nothing more than an immunity from governmental interference, then much of Section 2 would have made no sense at all." and that section 2 was "carefully drafted to exempt private violations of section 1 from the criminal sanctions it imposed." [26] The sole support for this broadside assertion is a lengthy and highly speculative footnote containing quotations from a discussion on the floor between Congressman Loan of Missouri and Congressman Wilson of Iowa, the floor manager, regarding the reason for the reference to "color of law" in section 2 in view of its absence in section 1. Wilson's failure to reply directly to this question constitutes the sole textual support for the Court's argument.[27] This reasoning, to say the least, is not very lawyer-like; indeed, it is pure conjecture and not very convincing at that, especially in view of other representative statements by Congressman Wilson and Senator Trumbull indicating that the measure was intended only to prohibit acts perpetrated under color of law.

Reliance on floor debates to determine statutory meaning is always a delicate task, requiring the exercise of utmost objectivity. The pitfalls that await the careless are evident when one compares Justice Stewart's reading of history with that of Justice Harlan. The immediate impression is that the two Justices used entirely different debates. However, it becomes clear from Justice Harlan's gentle reproofs that the majority scholarship was faulty, if not deliberately selective. At best, the Court has chosen to read only those few parts of the congressional debates which, when taken out of context, will bolster its desired result. Moreover, the Court refers to sections of the debate, which, when checked, reflect positions almost diametrically opposite to the Court's position.

For example, in footnote 33, the Court refers to CONG. GLOBE, 39th Cong., 1st Sess. 1758, 1785 (1866).[28] When one checks these references, he finds Senator Trumbull asserting that:

"If an offense is committed against a colored person simply because he is colored, in a State where the law affords him the same protection as if he were white, this act neither has nor was intended to have anything to do with his case, because he has adequate remedies in the State courts; but if he is discriminated against under color of State laws because he is colored, then it becomes necessary to interfere for his protection." [29]

On page 1758, Trumbull says that everything done by the Southern dissidents was perpetrated under state laws, clearly indicating that the remedy must be directed against those laws and the persons acting under color thereof.[30] Looking further, one finds Senator Stewart saying:

"Although I am a strong advocate for local government, and extremely anxious that these matters should be attended to by the States as early as practicable, still I believe that it was the intention of those who amended the Constitution, as plainly indicated by that amendment, to give the power to the General Government to pass any necessary law to secure to the freedmen personal liberty. . . . I fully concur with the opponents of the bill that it would be much more desirable that the States should do it themselves; and I am anxious that propositions should be held out whereby they do it, and perhaps it would have been well if we had done that in the first instance. . . It passed today, it has no operation in the State of Georgia . . . and the other States can place themselves in the same position so easily that I do not believe they ought to complain. . . . He must do it under the color of a law. If there is no law or custom in existence in a State authorizing it, it will be impossible for him to do it under color of any law. This section is simply to remove the disabilities existing by laws tending to reduce the Negro to a system of peonage. It strikes at that; nothing else. It strikes at the renewal of any attempt to make those whom we have attempted to make free slaves or

Footnotes at end of article.

peons. That is the whole scope of the law. Now, if you listen to the act of Georgia you will see that they can have no law there under the color of which an offense of this kind can be committed. The second section of the act of the State of Georgia is precisely similar to the first section of the civil rights bill, taken from it almost in the precise language." [31]

Indeed, one begins to wonder if the Court accidentally cited the wrong page, for it seems odd indeed to direct the reader's attention to such damaging evidence.

The majority in *Jones* expends much effort in discussing opposition to the bill, and views the feeling of some of the opponents that the measure extended to private acts, an area constitutionally within the exclusive control of the states, as evidence that the bill *did* in fact extend to such acts. It is standard practice for opponents of any legislation to picture it as the grossest of all possible evils and generally to exaggerate its effects as a means of dramatizing an alleged problem, thereby obtaining support for their position. It is naive, to say the least, to assert that the verbiage of the opponents lends strength to the Court's position. However, under the construction given to the 1866 bill by the 1968 Supreme Court, the most rash of its opponents might well be designated true oracles in retrospect. Senator Saulsbury of Delaware, an opponent of the bill, stated:

"I regard this bill as one of the most dangerous that ever was introduced into the Senate of the United States, or to which the attention of the American people was ever invited." [32]

Finally, nowhere in the entire congressional debates was it ever suggested that private discrimination by refusal to sell or rent housing would be prohibited by the bill. In fact, nothing could have been further from the minds of the drafters, who would have considered such legislation to be tyrannical governmental intrusion on individual freedom.

B. Text of the Civil Rights Act of 1866

To support its ruling that the provisions of the Civil Rights Act of 1866, now embodied in 42 U.S.C. section 1982, are really an open occupancy law applicable to individuals not acting under color of state or territorial law, the Supreme Court does two unprecedented things. First, it assigns to the language of the Civil Rights Act of 1866 a meaning it does not have and a purpose it is not intended to achieve. Second, it divorces 42 U.S.C. section 1982 from 18 U.S.C. section 242 and 42 U.S.C. section 1983, the only laws which provide any sanctions for its violation.

There is, in truth, no relationship between the open occupancy concept and the Civil Rights Act of 1866, the presently relevant words of which merely specify that "all citizens of the United States shall have the same right, in every State and territory, as is enjoyed by white citizens thereof to inherit, purchase, lease, sell, hold, and convey real and personal property." This language is simply designed to secure to all citizens of all races the equal protection of the laws at the hands of states and territories in respect to rights in property. In other words, its sole purpose is to make all the citizens of each state and territory equal before the law in respect to rights of property, and not to subject the rights of property of one individual to the demands of any other individual of any race.

A person has a right when the law authorizes him to exact from another an act or forbearance. Since, a white person's right to purchase or lease property has always been subjected by state and territorial law to the condition that its owner must be willing to sell or lease the property to him, the Court distorts the plain words of the Civil Rights Act of 1866 from their true meaning in holding that they confer upon a Negro the legal right to compel an unwilling owner of private property to convey or lease it to him. Furthermore, a white person does not have a right to compel an owner of real property to convey it to him, or even to lease it to him for a substantial term, unless such owner has bound himself to do so by a written contract or memorandum sufficient to satisfy the Statute of Frauds of the state or territory in which the real property is located.[33]

As Senator Trumball pointed out during the debates on the Civil Rights Act of 1866, "a law is good for nothing without a penalty, without a sanction to it, and that is to be found in the other sections of the bill." [34] By this statement, Senator Trumbull referred to section 2 of the Act, which made its sole sanction a criminal penalty. Section 2 of the Act is now codified as 18 U.S.C. section 242, and its language plainly shows that the provisions of the Civil Rights Act of 1866, now embodied in 42 U.S.C. section 1982, are limited in their application to persons acting under color of State or territorial law.[35]

For some strange reason, the Court in *Jones* takes no note of the fact that in 1871 Congress added a civil sanction to section 1 of the Civil Rights Act of 1866.[36] This civil sanction is now codified as 42 U.S.C. section 1983 and constitutes the only civil remedy available to citizens for deprivation of the property rights secured to them by 42 U.S.C. section 1982. Section 1983 reads as follows:

"Every person who, under color of any statute, ordinance, regulation, custom or usage, of any State or Territory, subjects, or causes to be subjected, any citizen of the United States or other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution and laws, shall be liable to the party injured in an action at law, suit in equity, or other proper proceedings for redress."

This statute makes indisputable the invalidity of the Court's ruling in *Jones* that section 1982 is applicable to private acts of discrimination.[37]

C. Precedents relating to the Civil Rights Act of 1866

In reaching its decision in *Jones*, the Supreme Court was forced not only to strain statutory language, misread legislative history, and misunderstand the context of the times, but also to overrule a long line of precedents which, without exception, held that Congress had intended only to reach state action by the 1866 Act. The Court disposed of these cases in a few short paragraphs, without pausing long enough to give them a decent burial.

In the *Civil Rights Cases*, the Court discussed the scope of the 1866 Act and its application to purely private actions in the following terms:

"[I]t would be running the slavery argument into the ground to make it apply to every act of discrimination which a person may see fit to make as to the guests he will entertain, or as to the people he will take into his coach or cab or car, or admit to his concert or theatre, or deal with in other matters of intercourse or business." [38]

A few pages earlier, the Court had considered the theoretical distinction between a state's power to abridge a citizen's civil rights and an individual's ability to impair their enjoyment:

"[C]ivil rights, such as are guaranteed by the Constitution against State aggression, cannot be impaired by the wrongful acts of individuals, unsupported by State authority . . . The wrongful act of an individual, unsupported by any such authority, is simply a private wrong, or a crime of that individual; an invasion of the rights of the injured party, it is true . . . but if not sanctioned in some way by the State, or not done under State authority, his rights remain in full force, and may presumably be vindicated by resort to the laws of the State for redress. An individual cannot deprive a man of his right . . . to hold property, to buy and sell . . . he may, by force or fraud, interfere with the enjoyment of the right in a particular case . . . but, unless protected in these wrongful acts by some shield of State law or State authority, he cannot destroy or injure the right . . ." [39]

It was this distinction, still valid today, which the Court ignored when it gave the 1866 Act such an imaginative reading in *Jones*. Even the first Justice Harlan, who argued long and often that private discrimination is a "badge" or "incident" of slavery, would have limited prohibitory legislation to "discrimination practiced by corporations and individuals in the exercise of their public or quasi-public functions." [40]

Later under the version then extant of section 2 of the 1866 Act the Court, in *Hodges v. United States*,[41] reversed the conviction of several men for terrorizing Negroes to prevent them from exercising contracts of employment as guaranteed by section 1 of the 1866 Act. Acknowledging that one of the disabilities of slavery was the lack of power to contract and that the men in this case had deprived the Negroes of that right, the Court nevertheless concluded that "no mere assault or trespass or appropriation operates to reduce the individual to a condition of slavery," [42] and only conduct that actually enslaves can subject one to punishment under any legislation enacted to enforce the thirteenth amendment.

Then in *Corrigan v. Buckley*, the Court was called upon to determine whether the courts of the District of Columbia might enjoin prospective breaches of racially restrictive covenants under the immediate predecessors to section 1982. The Court answered negatively saying:

"[T]hey like the Constitutional Amendment under whose sanction they were enacted, do not in any manner prohibit or invalidate contracts entered into by private individuals in respect to the control and disposition of their own property." [43]

In *Hurd v. Hodge*, the issue again was racially restrictive covenants, and the Court said of the predecessor of section 1982:

"We may start with the proposition that the statute does not invalidate private restrictive agreements so long as the purposes of those agreements are achieved by the parties through voluntary adherence to the terms. The action toward which the provisions of the statute under consideration is [sic] directed is governmental action. Such was the holding of *Corrigan v. Buckley*. . . ." [44]

Manifestly, the precedents are opposed to the present Court's view of this legislation. The seven Justices of the majority discarded an unbroken line of Supreme Court cases, dismissing most of them by mere footnote references.

Before the Court handed down its decision in *Jones*, the President signed into law the Civil Rights Act of 1968,[45] Title VIII of which provides the only open occupancy law ever enacted by Congress. For reasons stated by Justice Harlan in his dissent, the Court should have refrained from making any decision and dismissed the writ of certiorari under which it acted as improvidently granted.[46]

D. The thirteenth amendment

To sustain the constitutionality of its distorted construction of the Civil Rights Act of 1866, the Court invokes the thirteenth amendment, and in so doing attributes to it a meaning and purpose wholly unrelated to its history and language.[47]

Section 1 of the thirteenth amendment does two things, and only two things. First, it outlaws slavery, and second, it outlaws involuntary servitude except as a punish-

Footnotes at end of article.

ment for crime.[48] Section 2 of the thirteenth amendment empowers Congress to enforce section 1 by "appropriate legislation." It is manifest that this grant of legislative power merely authorizes Congress to enact laws making effective the proceding section's outlawry of slavery and involuntary servitude. It does nothing more than this. There is not a syllable in the thirteenth amendment which authorizes Congress to bar private discrimination based on race or to subordinate the contract or property rights of one free American to the demands of another free American of any race. Despite this, *Jones* expressly holds that the power of Congress to enforce the limited objectives of the thirteenth amendment vests in Congress the unlimited power to regulate the contract and property rights of all Americans in order to prevent them from practicing private discrimination against Negroes, regardless of whether there be any state involvement and regardless of what other constitutional provisions may declare.

This holding is not only repugnant to the words of the thirteenth amendment, but it is also repugnant to the sound precedents interpreting those words. As the Court delared in *Hodges* v. *United States:*

"The meaning of this [the thirteenth amendment] is as clear as language can make it. The things denounced are slavery and involuntary servitude, and Congress is given power to enforce that denunciation. All understand by these terms a condition of enforced compulsory service of one to another. While the inciting cause of the Amendment was the emancipation of the colored race, yet it is not an attempt to commit that race to the care of he Nation. It is the denunciation of a condition and not a declaration in favor of a particular people. . . . Slavery and involuntary servitude of the Chinese, of the Italian, of the Anglo-Saxon are as much within its compass as slavery or involuntary servitude of the African.[49]

And as the Supreme Court held in *Corrigan v. Buckley:*

"The 13th amendment denouncing slavery and involuntary servitude, that is, a condition of enforced compulsory service of one to another, does not in other matters protect the individual rights of persons of the Negro race." [50]

III. CONCLUSION

The implications of *Jones* are disquieting to those who believe that the Constitution means what it says, and not something else, and that it is desirable for our country to remain a free society. A free society must confer equality of legal rights upon all its people. But when it goes beyond this and undertakes to confer economic and social equality upon them, it ceases to be free.

Although it cites the *Civil Rights Cases,*[51] the majority opinion in *Jones* fails to note that the rulings in these cases are diametrically opposed to what it says and holds. Moreover, it ignores the observations made by Justice Bradley in the *Civil Rights Cases* about "running the slavery argument into the ground." *Jones* runs "the slavery argument into the ground." It does this by a series of assertions, some of which are surcharged with a passion somewhat incongruous for a Court which is supposed to decide legal controversies with what Edmund Burke called "the cold neutrality of the impartial judge."

Jones asserts, in substance, that the thirteenth amendment endows the Negro with various rights in addition to the one its words give him—the right to be free from enforced compulsory service to another; that among the additional rights the thirteenth amendment confers upon the Negro is: the right to have a dollar in his hand "purchase the same thing as a dollar in the hands of a white man;" the right "to buy whatever a white man can buy;" and "the right to live wherever a white man can live." Further, the Court holds that section 2 of the thirteenth amendment empowers Congress to enact all laws necessary to prevent or counteract any private discrimination based upon race which interferes with the Negro's enjoyment of these or any other undefined additional rights conferred upon him by the amendment.

In reaching these conclusions and making their adjudication in *Jones,* the majority of the Justices perform remarkable intellectual acrobatics. They misread and misinterpret the history of the Civil Rights Act of 1866 and, by so doing, impute to the Senators and the Representatives who passed the Act a purpose their minds did not entertain and their words did not express. Moreover, they assign to the Act and the thirteenth amendment meanings incompatible with their language.[52]

When all is said, *Jones* illustrates judicial activism run riot. It is, indeed, enough to make historical, linguistic, and constitutional angels weep.

[33] The Court does not allude to either of the conditions upon which the right of a white person to purchase real property depends. Nevertheless, its decision nullifies the Statutes of Frauds of all the States in cases coming within its ambit, and thus robs owners of real property in such cases of the protection from fraud and perjury which they enjoyed under these statutes. Moreover, it makes an oral refusal to convey or lease tantamount to a contract to sell or lease.

[40] *Id.* at 43.
[41] 203 U.S. 1 (1906).
[42] *Id.* at 18.
[43] 271 U.S. 323, 331 (1926).
[44] 334 U.S. 24, 31 (1948).
[45] 82 Stat. 73 (1968).
[46] 392 U.S. at 478; *see* Bell v. Maryland, 387 U.S. 226 (1964); Rice v. Sioux City Mem. Park Cemetery, 349 U.S. 70 (1955); Magnum Import Co. v. Coty, 262 U.S. 159 (1923); Layne & Bowler Corp. v. Western Well Works, Inc., 261 U.S. 387 (1923).
[47] The distorted construction placed upon 42 U.S.C. § 1982 in the *Jones* case finds no support in either the thirteenth or the fourteenth amendments. When properly construed, however, the statute finds support in the equal protection clause of the fourteenth amendment. "Both the Civil Rights Act of 1866 and the joint resolution which was later adopted as the Fourteenth Amendment were passed in the first session of the Thirty-Ninth Congress . . . . It is clear that in many significant respects the Statute and the Amendment were the expressions of the same general congressional policy. Indeed, as the legislative debates reveal, one of the primary purposes of many members of Congress in supporting the adoption of the Fourteenth Amendment was to incorporate the guaranties of the Civil Rights Act of 1866 in the organic law of the land. Others support-

ed the adoption of the Amendment in order to eliminate doubt as to the constitutional validity of the Civil Rights Act as applied to the States." Hurd v. Hodge, 334 U.S. 24, 32–33 (1948).

[48] The word "slavery," as used in the thirteenth amendment, means a condition of enforced, compulsory service of one to another, slavery being defined by Webster as a "state of entire subjection of one person to the will of another." Hodges v. United States, 203 U.S. 1, 17 (1906). The words "involuntary servitude," as used in the amendment, include something more than slavery in the strict sense of the term. "They include also serfage, vassalage, villanger, peonage, and all other forms of compulsory service for the benefit or pleasure of others." *Ex parte* Drayton, 153 F. 986, 990 (D.S.C. 1907), *quoting and adopting definitions in* Slaughter-House Cases, 83 U.S. (16 Wall.) 36 (1873).

[49] 203 U.S. at 16–17.

[50] 271 U.S. at 323.

[51] 109 U.S. 3 (1883).

[52] The language of the two short sections of the thirteenth amendment is clear and free from ambiguity. Hodges v. United States, 203 U.S. 1 (1906); Slaughter-House Cases, 83 U.S. (16 Wall.) 36 (1873). As a consequence, the Court had neither the right nor the authority to resort to construction to attribute to the framers of the amendment a purpose not manifest in its language. Wright v. United States, 302 U.S. 583 (1938); United States v. Sprague, 282 U.S. 716 (1931). Despite this, the Court ignores the natural meaning of the language of the amendment and stretches the limited purposes of its framers to abolish slavery and involuntary servitude into an unlimited purpose to ban all private discrimination against Negroes because of their race, even though such discrimination does not involve in any way any enforced compulsory service of one person to another. The Court reaches its conclusion by a process which offends reason. It holds that the power given Congress by section 2 to enforce the provisions of section 1 empowers Congress to legislate in areas beyond the compass of section 1. 392 U.S. at 428.

FEDERAL EMPLOYEE RIGHTS

Mr. ERVIN. Mr. President, Saga magazine for June 1969 contained an interesting article entitled "Inquisition by Insanity," which discusses some of the tyrannies practiced upon American citizens and Federal employees by the Federal Government.

I ask unanimous consent that this article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INQUISITION BY INSANITY

(By Andy Sugar)

Until SAGA's authoritative report, "Uncle Sam's 13 Secret Concentration Camps" (April 1969), there had been only a rumor that these internment centers were in existence. But with that expose, it became known that the Federal Government now has the old Jap W.W. II camps ready, waiting . . . and even expecting victims in some future mass arrest of American citizens.

It was a frightening disclosure when taken in context with the Internal Security Act of 1950, called the McCarran Act, which can be interpreted as a "concentration camp" law. It provides that a man can be jailed without a court proceeding and without the Government having to furnish any proof of his guilt.

However, even with "Operation Concentration Camp" ready to go on short notice, the Government has all-along been silencing critics and dissenters—without public detection. It has a weapon which not only strips a man of many of his constitutional rights, but peels away his dignity as a human being as well as putting him in the position of damning himself, whether he cooperates with the authorities, or tells them to go to hell.

That weapon is the Psycho Ward, a simple and direct method of removing a troublesome individual from the public eye and one which forces the burden of proof on the accused and not on the accuser.

As a lawyer explained it: "When a man is arrested for a crime, no matter if it's for a minor theft or a murder, everyone from the arresting cop up to the police commissioner is worried about violating his constitutional rights.

"The suspect is offered legal advice from the beginning and no prosecutor would dare question him without having an attorney present to witness it or having the suspect waive his rights.

"There are no lengthy interrogations. No third degree where a confession is beaten out of a man. No 'truth serums' are administered. No lie detector tests. No nothing!

"And if the accused isn't officially charged within a specified length of time, he can obtain his release on a court order.

"But a man whose sanity is being challenged doesn't enjoy this kind of protection.

"First of all, he may be confined in an asylum for weeks before a friend or relative could track him down and take the legal steps necessary for his release and during that time, anything could happen.

The victim could be drugged or given harsh shock treatments that could destroy his otherwise healthy mind and turn him into a paper shell of his former self.

"If he refused to talk to anyone without his lawyer being present, that refusal could be used against him to demonstrate to a judge how sick he really was. Or if he cooperated, he could ruin his chances to get out by making truthful and innocent answers to a set of questions psychologically designed to make him look insane.

"Even if a man survived the so-called 'examination' and would be released as 'sane and competent,' he'd still have trouble because he'd carry the stigma of once having his mental stabiltiy in doubt and no matter how valid his complaints or charges against his accusers would be, no one would take him seriously.

"He would be effectively silenced by this country's overwhelming fear of psychiatry and that's all his accusers were after in the first place. They wanted him to stop making those waves everybody fears and any method that worked would be condoned."

That fear of psychiatry was not exaggerated by the attorney as shown after the last election when the noted newspaper columnist Drew Pearson, reported that President Nixon had consulted a well-known New York psychiatrist when he was Vice-President

Within days, the story had been blown out of all proportions, with denials and counter-charges on both sides making headlines and although it was never positively determined just why the President had been seeing the doctor, the abrupt, vehement and somewhat frightened reactions of the Nixon camp illustrates how damaging it thought the insinuation would be to the President.

A Big Brother type of government knows how to use a public phobia, twisting and bending it to fit any pattern or framework it wants, and in this country, the Federal Government has used the fear of challenging a man's sanity many times in the past to silence critics or dissenters. For example:

A young Naval officer questioned whether the Gulf of Tonkin incident really happened as officially reported by the Government and he was ordered to undergo a psychiatric examination.

A civil service employee commits the horrible "crime" of saving the taxpayers $250,000 by ordering improvements on delivery methods and is labeled a "chronic paranoid" by a psychiatrist who sees him for only a half-hour.

A clerk in the Pentagon becomes upset when he learns his brother had been killed in Vietnam, a perfectly natural reaction, and in his anguish, he sends a postcard to the Chiefs of Staff: "Add another notch to your gun; my brother was killed in Vietnam." Instead of their ignoring the normal outburst, he is immediately shipped out to a psychiatrist.

There are many other cases where civil servants have been forced to keep their mouths shut, or go into early retirement. One informed source, who requested his name not be used for obvious reasons, said, "There are about 3,000 cases like this on record and who knows how many thousands more buckled under and played the game."

And if you think that you're immune from this pressure just because you are not a Federal employee, here is the unnerving truth:

Sen. Sam J. Ervin of North Carolina has gone on record as saying that whatever happens to the civil service worker *eventually happens to the rest of the population.*

"If 3,000,000 Federal employees and their families can be forced to surrender their liberties without any recourse to the courts, then they can be surrendered by millions of state and local employees," he said.

"Since the attitudes and practices of the Federal Government are emulated by private industries and organizations, the injustices and tyrannies against employees ignored by Congress today will spell the destruction of basic liberties tomorrow."

And the tentacles of Big Brother have already reached out of its own bureaus and departments and grabbed some civilians in the semi-death grip of the mental hospital as illustrated by the case of Edwin A. Walker, a retired major general of the Army.

The 59-year-old Walker, a West Point graduate and much-decorated combat veteran had been a spokesman for the conservative end of the political spectrum for years and his views had not only made him an irritating barb in the side of mainstream America, but they had also gained him news headlines.

In 1961, he resigned from the Army after he had been reprimanded for sponsoring conservative-slanted indoctrination courses when he commanded the 24th Division in Germany. The following spring, he testified before a Senate subcommittee that anti-communist speeches made by military men were being censored and he continued hitting the newspapers with his speeches, charges and viewpoints.

Now, Walker's opinions may be strong, dogmatic, even debatable, but as an American citizen, he has every right to whatever political philosophy he wants and every right to voice it. His views, like those of many millions of people in this country, may not be shared by a majority of citizens—but that does not make them insane.

Yet, it was Walker's record and an erroneous news report that helped put him in a mental hospital where his sanity was challenged by the Government without a qualified psychiatrist even having spoken for him.

Walker's tussle with Big Brother started when the Federal Government ordered the University of Mississippi to admit the first Negro, James Meredith, to the school in 1962.

At first, Walker protested the move but made it clear that he wouldn't go to Oxford campus unless Federal troops were ordered in.

"I repeatedly stated that on radio and TV and in the newspapers," Walker told SAGA. "After all, you can put any kid—black or white—in any school with 50 men and having troops on the campus is, in my opinion, unconstitutional."

But President Kennedy called up the National Guard and Walker went to Oxford as he had promised.

A riot developed on September 30th and two people were killed as well as scores injured in the fighting. During the melee, Associated Press reported that Walker had "assumed command" of the rioters and that he "led a charge of students against" Federal marshals protecting Meredith.

The next day, Walker was arrested and charged with insurrection, seditious conspiracy to impede and injure officers of the United States and assaulting, resisting and impeding officers. Later that same day, a Federal court, upon request of the Justice Department, ordered Walker to be held for psychiatric examination.

According to one of his lawyers at the time, Clyde J. Watts, the Federal court had no jurisdiction in ordering Walker to be committed and that he was held against his will as well as having been denied his right to make bond.

Watts added that the court had found Walker was so mentally incompetent as to be unable to understand the proceedings against him or properly assist in his own defense.

And the decision to challenge Walker's mental stability *was reached without a qualified psychiatrist examining, asking questions or even talking to Walker.*

"I never talked to a doctor before they sent me to the mental hospital," he said.

Instead, the order to commit him was granted on the basis of an affidavit from Dr. Charles E. Smith, the chief psychiatrist of the Federal Prison Bureau who said he based his findings on Walker's medical history that included, it was assumed, his Army records, news accounts of his actions in the riot, and his appearance before the subcommittee when he testified to the speech-tampering charge.

Dr. Smith was quoted as saying that some of the "reported behavior reflects sensitivity and seemingly bizarre outbursts of the type often observed in individuals suffering with paranoid mental disorders."

On the basis of this "long-distance" diagnosis, Walker was flown to the psycho ward of the Federal Prison in Springfield, Mo., where he spent five days until his attorneys could obtain his release.

During that time, many people protested the Government's treatment of Walker and another one of his lawyers, Robert Morris (a one-time council to the Senate Internal Security subcommittee and a former judge), called his client "the United States' first political prisoner.

"One would think we're in Havana or Budapest from the way General Walker has been treated," he added.

"I've never seen anything like this—violating due process and the Bill of Rights."

Morris had also said that Dr. Smith should be discharged.

"For Dr. Smith to conclude on the basis, as he puts it, of news reports that General Walker's mentally disturbed and paranoid is most unprofessional behavior and one more shred of evidence that General Walker is being lynched."

On advice of his attorneys, Walker refused to talk to any of the psychiatrists at the hospital. "I just gave them my name, rank and serial number, like any prisoner of war," he said.

Finally, on October 6th, Walker was freed on $50,000 bond after he agreed to report to the Southwest Medical Center in Dallas, for a psychiatric examination to be conducted by Dr. Robert Stubblefield of the center and a psychiatrist to be named by the Government.

The subsequent examination proved Walker to be mentally sound and it was ruled that he was competent to stand trial.

However, those charges were dismissed after a Federal grand jury adjourned without indicting him, but Walker wasn't finished with the incident. He sued Associated Press for the story which was instrumental in having him committed because he claimed the report had made "false statements" and that AP's "suppression of the truth was motivated by malice and a desire to hurt and harm him in his reputation and blacken his good name."

But Walker didn't blame AP alone and he said the wire service acted in collusion with the Government.

"President Kennedy committed some 23,000 troops to Oxford," he explained, "and he had planned a world premiere to show the Government's position. It was also intended, I believe, to insure no opposition to that position ever after.

"Because of his tremendous commitment, he was in a ridiculous position and only violence would have saved his neck—and the violence that did come was too minor.

"The Government had to have opposition which they had to build at any price, even to alleging a crime and questioning sanity to hold up the allegation.

"There was another wire service report from United Press International which told the truth about my activities in Oxford, but Dr. Smith said he had never seen that news report.

"In fact, when he was asked if he would have seen it, would it have made any difference in his diagnosis and he said, 'No, I don't think it would have.'

"So AP, no doubt, played the game with the administration to save JFK's neck.

"I believe that there are many people like me in Springfield hospital and a check there would probably turn up other 'political prisoners.'"

Walker won judgments against AP in both Texas and Louisiana, but those decisions were later overturned by the U.S. Supreme Court because it felt that public figures, people who are in the news but don't hold public office, can be subjected to derogatory criticism even when based on false statements.

So because he was well-known and considered a public figure, Walker lost his lawsuits, but by the same reasoning, his reputation is what probably saved him from an extended stay in the mental hospital. He was too well-known and there was too much public outcry to keep him sealed up in some lonely room.

But what about the man who doesn't have a national reputation, the individual who doesn't have the money or power to fight back as Walker did? These people are also victims of Big Brother's weapon.

"The case of Charles F. Olson is typical of a whole series of cases which happen almost on a daily basis in the Federal Government, especially in areas where conscientious Federal Employees discover waste of Government money through 'contracting out' of services and goods," John F. Griner, President of the American Federation of Government Employees, recently told a House subcommittee.

"An employee of the U.S. Army's ammunition procurement and supply agency in Joliet, Ill., Mr. Olson touched a sensitive nerve in the Defense Department by questioning the costs of defense contracts.

"So far as one can establish, his superiors were nervous about Congressional probes of waste, inefficiency and potential fraud in the Pentagon's multibillion dollar spending programs.

"Advised not to scrutinize these contracts so closely in the future, he did not 'go along' and suddenly, in November 1966, he was dismissed on charges of being 'absent without leave.'"

Griner added that Olson fought the dismissal and after long hearings before the Civil Service Commission, he was vindicated and reinstated.

"But the Defense Department now wielded its most dreaded instrument of punishment and reprisal," Griner testified. "It charged him with mental instability.

"Sent to a Government-paid psychiatrist, he was questioned only a half-hour and was promptly found to be a 'chronic paranoid.'

"Apprised of this 'rush job,' Senator Ervin wrote the Civil Service Commission Chairman, John W. Macy, Jr., observing that 'the speed with which Mr. Olson's agency attempted to obtain a psychiatric disability retirement—after the Civil Service Commission *restored* him to his position—suggests the Commission inspectors might look into the management problems in this office.'"

And what did Olson do that was so terrible to cause him so much trouble?

He merely saved the Army, and the taxpayers, some $250,000 by having a defense contractor make some improvements that would speed up the manufacturer's deliveries to Vietnam.

But by doing so, he apparently stepped on some bureaucratic toes and when he wouldn't let up, he got the reputation of being a "troublemaker." Also, after his reinstatement, he claimed he was threatened with bodily harm and had been returned to a job without any work to do as well as being railroaded by the mental-instability charge.

Eventually, after several prominent senators were notified of Olson's problems and began helping him, the stigma of the "chronic paranoid" was removed by the Commission's Board of Appeals and Review, but by that time, Olson had gone deeply into debt and was having trouble meeting normal financial obligations.

Last November, Olson received an official apology from the Army and was ordered placed in the same position at his former post or its equivalent. Officials also requested him to write a paper designating those who had threatened him and why and to propose procedures for getting rid of the clique.

So for doing his job, Charles Olson went through hell, and he is only one of many people who have been abused, institutionalized, or frightened into playing the game lest they be branded "psycho." And many times, a petty, tyrannical supervisor can destroy a subordinate, or make him cower in fear, by holding the psychiatric examination over his head, and for no other reason than to assert his power.

Another case in which Senator Ervin, Chairman of the Subcommittee on Constitutional Rights of the Senate Judiciary Committee, was involved was one where the victim, a woman secretary, was carted out of the Department of Agriculture and forcibly taken to St. Elizabeth's Hospital, a mental institution in Washington.

"That was a Miss Jones," the Senator said. "She was one of my constituents and they took her out to the hospital and nobody learned anything about it for over a week.

"That is another field that we need to look into in the Federal Government. They have a habit, which my subcommittee has corrected several times as a result of individual protests, of ordering psychiatric examinations where there is some incompatibility between a supervisor and an employee.

"This results in a forced retirement on psychiatric grounds, as they tried to do in that case. Miss Jones is a perfectly rational person."

Other abuses include that of a woman who was an expert in Supply Procurement and had received numerous awards for outstanding performances in her job. She became ensnarled in a personality clash with new people brought in through a reorganization and on the pretense of a medical exam, she was sent out on what turned out to be a psychiatric interview.

She later received a notice that she was being retired and she requested another interview with the same psychiatrist.

His conclusions were far different from the ones he had had the first time and after clearing her he also told the Civil Service Commission that he would decline to diagnose any other cases on a one-time visit basis.

As these abuses continue to mount, filling file drawer after file drawer, and as Congress is beginning to investigate these charges, many influential people are finally starting to take action.

Marcia MacNaughton, a professional staff member of Ervin's subcommittee, said that the American Psychiatric Association is now studying the problem—looking into its members' actions as publicized by recent Congressional inquiries. Also, Senator Ervin will again propose a bill to protect the constitutional rights of Federal employees. (Last year the same bill failed to pass before Congress adjourned and Senator Ervin intends to re-introduce it in the 91st Congress.)

However, even if the bill is passed and signed into law, the threat of psycho-ward lock-up will continue to be held over everyone's head and only a public outcry against this injustice will make matters better.

Until the entire nation stops fearing the psychiatrist and starts demanding legal protection of all people, the tentacles of the insane-asylum will reach out, ready to grab at anyone—including you.

John Griner of the AFGE, summed it up perfectly when he said: "History has shown that the freedom of the people as a whole is highly vulnerable in the societies and in those situations where the individual liberty and professional freedom-of-conscience of the nation's civil service has already been undermined or destroyed.

"The lessons of modern industrial dictatorships, such as fascism, Nazism and Communism, reveal that the attack on the freedom of the people as a whole succeeded only after the earlier erosion of the freedom and professional status of the national civil service system.

"Thus, it is clear that ultimately the freedom of every American citizen, even of those who are not now and may never be Federal employees, may well be affected by the manner in which Congress enables Federal employees to obtain effective protection for their constitutional rights."

ORDER OF BUSINESS

The PRESIDING OFFICER. Is there further morning business?

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDING OFFICER laid before the Senate the following letters, which were referred as indicated:

PLANS FOR WORKS OF IMPROVEMENT UNDER PROVISIONS OF THE WATERSHED PROTECTION AND FLOOD PREVENTION ACT

A letter from the Acting Director, Bureau of the Budget, transmitting, pursuant to law, plans for works of improvement which have been prepared under the provisions of the Watershed Protection and Flood Prevention Act, as amended (with accompanying documents); to the Committee on Agriculture and Forestry.

REPORT OF THE ADVISORY COMMISSION ON INFORMATION

A letter from the Chairman, U.S. Advisory Commission on Information, transmitting, pursuant to law, the 24th Report of the U.S. Advisory Commission on Information, dated May 19, 1969 (with an accompanying report); to the Committee on Foreign Relations.

REPORT OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the opportunity for savings if the Government follows the practice of many private businesses and consolidates its small freight shipments, Department of Defense, General Services Administration, dated June 30, 1969 (with an accompanying report); to the Committee on Government Operations.

PROPOSED VOTING RIGHTS ACT AMENDMENTS OF 1969

A letter from the Attorney General of the United States, transmitting, pursuant to law, a draft of proposed legislation to amend the Voting Rights Act of 1965, and for other purposes (with an accompanying paper); to the Committee on the Judiciary.

REPORT OF THE PACIFIC TROPICAL BOTANICAL GARDEN CORPORATION

A letter from the Counsel, Pacific Tropical Botanical Garden Corporation, transmitting, pursuant to law, a report of audit for the Corporation for the calendar year ended December 31, 1968 (with an appropriate report); to the Committee on the Judiciary.

PLANS FOR WORKS OF IMPROVEMENT UNDER PROVISIONS OF THE WATERSHED PROTECTION AND FLOOD PREVENTION ACT

A letter from the Acting Director, Bureau of the Budget, transmitting, pursuant to law, plans for works of improvement which have been prepared under the provisions of the Watershed Protection and Flood Prevention Act, as amended (with accompanying documents); to the Committee on Public Works.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDING OFFICER:

A joint resolution of the Legislature of the State of Maine; to the Committee on Finance:

"JOINT RESOLUTION MEMORIALIZING CONGRESS TO REVISE THE PRESENT SYSTEM OF ADMINISTERING FEDERAL GRANTS

"We, your Memorialists, the House of Representatives and Senate of the State of Maine in the One Hundred Fourth Legislative Session assembled, most respectfully present and petition your Honorable Body as follows:

"Whereas, the Federal Government's preeminence in the income tax field has led to a greater need for unrestrictive sharing of such revenue with state and local governments by means other than its complex system of categorical grants-in-aid; and

"Whereas, the over development of categorical grant-in-aid programs has imposed stringent restrictions and conditions which are contrary to the needs and requirements of this State; and

"Whereas, the complexity of federal grant-in-aid programs creates administrative difficulties at the state and local level because of different matching, administrative, planning and reporting requirements; and

"Whereas, unless the trend toward restrictive categoric federal grants is reversed, these grants will so entwine themselves that the state's freedom of movement will be significantly inhibited; and

"Whereas, there is a need and justification for consolidation, simplification and revision of grant programs which will allow the State and its municipalities more opportunity to express their own initiative and reflect their specific needs and preferences; now, therefore, be it

"Resolved: That We, your Memorialists, most sincerely recommend and urge the Congress of the United States to enact legislation designed to consolidate, simplify and revise the existing system by which grants-in-aid are made available to the states by replacing the numerous individual categorical grants with fewer but more flexible tax-sharing programs or block grants which impose no qualifying conditions as to use, thereby restoring to the State and its municipalities the ability to more effectively meet its primary responsibility through the exercise of independent judgment and freedom to determine the needs of its people; and be it further

"Resolved: That a copy of this Resolution, duly authenticated by the Secretary of State, be transmitted by the Secretary of State to the Honorable Richard M. Nixon, President of the United States, and to the Senate and House of Representatives in Congress and to the members of the Senate and House of Representatives from this State.

"In Senate Chambers, read and adopted, June 12, 1969.

"Sent down for concurrence, ordered sent forthwith:

"JERROLD B. SPEERS,
"Secretary.

"House of Representatives, read and adopted, June 13, 1969.

"In concurrence:

"BERTHA W. JOHNSON,
Clerk.

"Attest:

"JOSEPH T. EDGAR,
"Secretary of State."

Resolutions of the Legislature of the Commonwealth of Massachusetts; to the Committee on Finance:

"RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION PROVIDING FOR A SUBSTANTIAL INCREASE IN SOCIAL SECURITY PAYMENTS TO ELDERLY PERSONS

"Whereas, According to the June 10, 1969 edition of the Wall Street Journal, the National Administration has decided to put restraints on Social Security payments by endorsing only a seven per cent rise in Social Security outlays next year, compared to the ten per cent recommended by the prior Administration; and

"Whereas, The Secretary of Health, Education and Welfare, Mr. Finch, is quoted therein as saying: 'I'd like to see a great chunk of resources put in at the lower end of the age spectrum and hold spending at the top level'; and

"Whereas, Current runaway inflation exerts a most severe impact on the elderly, who are forced to struggle on fixed incomes; and

"Whereas, Every humane impulse and appeal to reason dictates that all possible assistance be given our aging citizens; and

"Whereas, The comfort and health of the aged should not be sacrificed to the expansion of programs for young children, but both should receive necessary and equal priority attention; now, therefore be it

"Resolved, That the Massachusetts Senate opposes any such elderly versus young collision course at the federal level; and be it further

"Resolved, That the Massachusetts Senate favors a rise in Social Security outlays much in excess of the reported seven per cent; and be it further

"Resolved, That copies of these resolutions be sent to the President of the United States, the Secretary of the U.S. Department of Health, Education and Welfare and to the

members of the Congress from the Commonwealth.

"Senate, adopted, June 19, 1969.

"NORMAN L. PIDGEON,
"Clerk.

"Attest:

"JOHN F. X. DAVOREN,
"Secretary of the Commonwealth."

A concurrent resolution of the Legislature of the State of Texas; to the Committee on Finance:

"HOUSE CONCURRENT RESOLUTION 173

"Whereas, The Congress of the United States has under consideration several proposed plans which would limit the exempt status for income tax purposes of interest paid on bonds issued by state and local governments; and

"Whereas, Among those suggestions under consideration by the Congress are proposals which would (1) include interest paid on state and local bonds in the base income for a proposed minimum income tax, (2) require allocation of deductions between taxable income and income from interest paid on state and local government bonds, (3) include interest paid on state and local bonds among income which would have tax preference limitations, and (4) provide a guaranty subsidy in exchange for the surrender of all or part of such traditional tax exemption; and

"Whereas, It has long been considered unconstitutional for the Federal government to tax a state or local government; and

"Whereas, Any of the foregoing plans or any other plan which would directly or indirectly tax interest paid on state or local government bonds would be an impairment of such constitutional immunity; and

"Whereas, Any limitation on tax exemption of interest paid on state and local bonds would result in higher interest rates to be paid by state and local governments in their borrowing; and

"Whereas, Any increase in cost of borrowing is paid directly by the taxpayers of the community borrowing or by the users of publicly owned facilities; and

"Whereas, Any limitation on tax exemption of interest paid on state and local bonds would limit the market for such bonds; and

"Whereas, Any limitation of the market in which state and local bonds are sold would handicap state and local governments in providing funds for urgently needed public improvements; now, therefore, be it

"Resolved by the House of Representatives of the 61st Legislature, the Senate concurring, That the Texas Legislature by this Resolution expresses its opposition to any plan by the Congress of the United States that would in any way limit the tax exempt status of interest paid on bonds issued by state or local governments; and, be it further

"Resolved, That upon adoption of this Resolution, the Secretary of State is requested to deliver forthwith copies of this Resolution to the President of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, and each member of Congress from the State of Texas.

"BEN BARNES,
"Lieutenant Governor.
"———— ————,
"Speaker of the House.

"I hereby certify that H.C.R. No. 173 was adopted by the House on May 30, 1969.

"DOROTHY HALLMAN,
"Chief Clerk of the House.

"I hereby certify that H.C.R. No. 173 was adopted by the Senate on May 30, 1969.

"CHARLES SCHNABEL,
"Secretary of the Senate.

"Approved: June 18, 1969.

"PRESTON SMITH,
"Governor."

A letter, in the nature of a petition, from John W. Oliver, of Irwin, Pa., praying for a redress of grievances; to the Committee on Armed Services.

A resolution adopted by the Monterey County, Calif., Board of Education, urging support of title II of the Elementary and Secondary Education Act; to the Committee on Finance.

A resolution adopted by the Greene County, N.Y., County Legislature, remonstrating against the inclusion of municipal bonds within the present tax reform proposal; to the Committee on Finance.

A resolution adopted by the 72d annual convention of the American Federation of Musicians of the United States and Canada, AFL–CIO, praying for the enactment of legislation relating to general revision of the copyright laws; to the Committee on the Judiciary.

A resolution adopted by the Rotary Club of Plant City, Fla., praying for the enactment of legislation relating to implementing prompt and aggressive prosecution and punishment of all persons guilty of violation of the laws of the United States and the several States of the United States or any political subdivision thereof; to the Committee on the Judiciary.

EXCUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports of nominations were submitted:

By Mr. STENNIS, from the Committee on Armed Services:

Harry P. Mahin, and sundry other officers, for temporary promotion in the United States Navy;

Gen. Howell M. Estes, Jr. (major general, Regular Air Force), U.S. Air Force, and Gen. Raymond J. Reeves (major general, Regular Air Force), U.S. Air Force, to be placed on the retired list in the grade of general; and

Lt. Gen. Keith C. Compton (major general, Regular Air Force), U.S. Air Force; Lt. Gen. Stanley J. Donovan (major general, Regular Air Force), U.S. Air Force; Lt. Gen. Robert A. Breitweiser (major general, Regular Air Force), U.S. Air Force; and Lt. Gen. Charles H. Terhune, Jr. (major general, Regular Air Force), U.S. Air Force, to be placed on the retired list, in the grade of lieutenants general.

Mr. STENNIS. Mr. President, from the Committee on Armed Services, I also report favorably sundry nominations in the Air Force. Since these names have previously appeared in the CONGRESSIONAL RECORD, in order to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they be ordered to lie on the Secretary's desk for the information of any Senator.

The VICE PRESIDENT. Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

Donald D. Adams, and sundry other officers, for promotion in the Regular Air Force.

BILLS INTRODUCED

Bill were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. CRANSTON:

S. 2506. A bill to reduce the number of semester hours that a veteran must carry at an institutional undergraduate course offered by a college or university in order to qualify for full-time benefits under chapter 34 of title 38, United States Code (to the Committee on Labor and Public Welfare.

(The remarks of Mr. CRANSTON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. DIRKSEN:

S. 2507. A bill to amend the Voting Rights Act of 1965, and for other purposes; to the Committee on the Judiciary (by unanimous consent).

(The remarks of Mr. DIRKSEN when he introduced the bill appear earlier under the appropriate heading.)

By Mr. CRANSTON:

S. 2508. A bill for the relief of Antonio Reno Tessuti; and

S. 2509. A bill for the relief of Santina Lena Pinasco; to the Committee on the Judiciary.

By Mr. BENNETT:

S. 2510. A bill to amend the Internal Revenue Code of 1954 to establish the fair market price in connection with certain sales of articles subject to excise tax; to the Committee on Finance.

(The remarks of Mr. BENNETT when he introduced the bill appear later under the appropriate heading.)

By Mr. YOUNG of North Dakota:

S. 2511. A bill to extend the provisions of section 403(b) of the Internal Revenue Code of 1954 to employees of public hospitals; to the Committee on Finance.

By Mr. TYDINGS:

S. 2512. A bill for the relief of Gerasimos Antzoulatos; to the Committee on the Judiciary.

By Mr. PACKWOOD:

S. 2513. A bill to provide for the mailing of absentee voting matter free of postage; to the Committee on Post Office and Civil Service.

By Mr. PACKWOOD (for himself and Mr. HATFIELD):

S. 2514. A bill for the relief of Arline Loader and Maurice Loader; to the Committee on the Judiciary.

By Mr. METCALF (for himself and Mr. MANSFIELD):

S. 2515. A bill to amend the Social Security Act to provide that certain payments made by the Tribal Council of the Confederated Salish and Kootenai Tribes not be regarded as income or resources for purposes of determining need for aid or assistance under certain public assistance programs; to the Committee on Finance.

By Mr. DIRKSEN (for Mr. MURPHY):

S. 2516. A bill to terminate Naval Petroleum Reserve No. 1, to establish certain submerged lands under the Santa Barbara Channel as Naval Petroleum Reserve No. 5, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 2517. A bill to amend the Federal Food, Drug, and Cosmetic Act to include a definition of food supplements, and for other purposes; to the Committee on Labor and Public Welfare.

By Mr. HARTKE (for himself, Mr. ALLEN, Mr. BAYH, Mr. BIBLE, Mr. BOGGS, Mr. BURDICK, Mr. BYRD of West Virginia, Mr. CANNON, Mr. CHURCH, Mr. CURTIS, Mr. DIRKSEN, Mr. DODD, Mr. DOMINICK, Mr. EAGLETON, Mr. EASTLAND, Mr. FANNIN, Mr. FULBRIGHT, Mr. GORE, Mr. GRAVEL, Mr. HART, Mr. HATFIELD, Mr. HOLLINGS, Mr. HRUSKA, Mr. HUGHES, Mr. INOUYE, Mr. JACKSON, Mr. JAVITS, Mr. KENNEDY, Mr. MAGNUSON, Mr. MCCARTHY, Mr. MCCLELLAN, Mr. MCGEE, Mr. MCGOVERN, Mr. MCINTYRE, Mr. MILLER, Mr. MOSS, Mr. MURPHY, Mr. MUSKIE, Mr. NELSON, Mr. PASTORE, Mr. PELL, Mr. PERCY, Mr. PROUTY, Mr. RANDOLPH, Mr. SCOTT, Mr. SCHWEIKER, Mrs. SMITH, Mr. STEVENS, Mr. THURMOND, Mr. TYDINGS, Mr. WILLIAMS of New Jersey, Mr. YARBOROUGH, Mr. YOUNG of North Dakota, Mr. YOUNG of Ohio, and Mr. MONDALE):

S. 2518. A bill to amend title II of the

Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disablity insurance benefits thereunder; to the Commttee on Finance.

(The remarks of Mr. HARTKE when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 2506—INTRODUCTION OF A BILL REGARDING THE VETERANS EDUCATIONAL PROGRAM

Mr. CRANSTON. Mr. President, I introduce, for appropriate reference, a bill to amend chapter 34 of title 38, United States Code, regarding the veterans educational program. This bill would lower from 14 to 12 the minimum number of semester hours required for an eligible veteran to be considered to be enrolled in a full-time course of undergraduate higher education for purposes of receiving a full-time educational assistance allowance.

The existing statutory requirement is that such an eligible veteran must be taking a minimum of 14 semester hours or its equivalent in order to qualify for a full-time allowance while enrolled in an undergraduate college or university course. This requirement is a carryover from the World War II GI bill. As far as I can determine, it was not specifically reconsidered when it was enacted as part of the Korean conflict and the cold war GI bills.

Given the marked changes in our educational system over the last two decades, it is not surprising to learn that the 14-semester-hour minimum requirement no longer appears to comport with the structuring of undergraduate courses of instruction at many colleges and universities.

I have particular reference to the community college, State college, and university system in the State of California, where I am advised a student is considered to be in full-time attendance when he is enrolled for 12 or more semester hours.

Certainly, we should not continue to apply 20-year-old standards if they are no longer reasonably reflective of the situation confronting a veteran pursuing a higher education.

It is our obligation to review continually the full system of veterans benefits and services in order to insure its appropriateness and timeliness. Only in that way can the Nation's obligations to its veterans be discharged in a meaningful and socially productive way.

Although the present minimum requirement does indeed appear to be obsolete in terms of the California higher education system, I wish to make clear that I do not yet know whether the same is true on a nationwide basis—although there are indications that it is indeed a national problem. I am reserving judgment on that question until we hold hearings before the Veterans Affairs Subcommittee. I plan to call such hearings in the near future.

My main purpose in introducing this measure at this point, therefore, is to focus attention upon this question in an official congressional context in order to determine whether or not a 14-semester-hour requirement continues to be the appropriate definition of a full-time course of study in today's system of higher education.

Thank you, Mr. President.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2506) to reduce the number of semester hours that a veteran must carry at an institutional undergraduate course offered by a college or university in order to qualify for full-time benefits under chapter 34 of title 38, United States Code, introduced by Mr. CRANSTON, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

S. 2510—INTRODUCTION OF A BILL TO ESTABLISH THE FAIR MARKET PRICE IN CONNECTION WITH CERTAIN SALES OF ARTICLES SUBJECT TO EXCISE TAX

Mr. BENNETT. Mr. President, I am today introducing a bill to amend the constructive price provisions of the excise tax law to clarify the application of section 4216(b)(1)(C) in the case where a manufacturer, producer, or importer sells to a related sales corporation which, in turn, sells to one or more retailers in arm's-length transactions.

This matter has been discussed at considerable length with the Internal Revenue Service over the past year. Although I am advised by the staff of the Joint Committee on Internal Revenue Taxation and the staff of the Senate Finance Committee that the congressional intent is clear, it is my understanding the Internal Revenue Service, nevertheless, is unwilling to give effect to this intent without further legislation.

Present law—section 4216(b)—provides for a constructive sales price, as distinct from the actual sales price, as the base for the various ad valorem manufacturers' excise taxes in four different cases, one of which is where the article is sold at less than fair market price if the transaction is not at arm's length. A sale between related companies is per se "not at arm's length" for purposes of section 4216(b)(1)(C). Consequently, the Service in the case of sales to a selling affiliate of the manufacturer or importer must frequently determine whether such a sale is at "less than fair market price" and, if so, it must ascertain an appropriate constructive price.

So the manufacturers' excise taxes may be imposed as nearly as possible on a uniform basis, Congress since the Revenue Act of 1932 has provided that the determination of "fair market price" in such a situation should be made, if industry data are available, with reference to the prices for which others in the same industry at the same level of distribution sell similar articles rather than by looking to the prices at a different level of distribution at which the related selling company sells to independent retailers.

Despite this obvious language of the statute and its legislative history, the National Office of the Internal Revenue Service has recently taken the position that it will not look to selling practices and prices of others in an industry in determining whether a sale between related parties is at less than fair market price. Instead, it insists upon applying an arbitrary rule that any intercompany price which is less than 90 percent of the price at which the affiliated sales corporation sells outside the corporate family is automatically below fair market price. This arbitrary rule appears to be applied even though the industry facts are not in dispute and are directly contrary to the IRS determination.

The bill I am introducing makes it clear that "fair market price" for purposes of section 4216(b)(1)(C) shall be measured with reference to the prices at which comparable articles are sold in the ordinary course of trade or business by others in the same industry at the same level of distribution.

The specific problem with which the bill deals is the case of an industry where the normal practice is for the manufacturer or importer to sell to independent wholesale distributors, but one or more members of the industry depart from the normal practice and use an affiliated sales corporation to handle the wholesale distributor's function.

Under such circumstances, instead of applying its arbitrary 90-percent rule, IRS will be required to determine whether the sale by the manufacturer or importer to the related sales company is below fair market price by comparing the normal industry markup between wholesale distributors and retailers with the markup realized by the related sales corporation on its sales to retailers.

Furthermore, in those cases where industry data are available, if this comparison indicates that sales are being made between affiliated companies at less than fair market price, it would be anticipated that the Commissioner's constructive price determination under section 4216(b) would utilize the normal markup experience in the particular industry, rather than his present arbitrary 90-percent rule.

The amendments, since they are clarifying in nature, are made applicable to articles sold after December 31, 1963. I have selected this date because I understand the first quarter of 1964 is the first excise tax period in which the Service is insisting upon applying its arbitrary rule of thumb despite industry proof to the contrary.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2510) to amend the Internal Revenue Code of 1954 to establish the fair market price in connection with certain sales of articles subject to excise tax, introduced by Mr. BENNETT, was received, read twice by its title, and referred to the Committee on Finance.

S. 2518—INTRODUCTION OF A BILL TO LIBERALIZE PROVISIONS OF DISABILITY INSURANCE LAW FOR BLIND PERSONS

Mr. HARTKE. Mr. President, since becoming a Member of the U.S. Senate, I have introduced many measures to aid blind people in their valiant struggle to

achieve a normal life, and no actions I have taken since becoming a Member of this distinguished body have given me greater satisfaction than knowing that some of my measures are now Federal law, and beneficially affecting the lives of our sightless fellow citizens.

Mr. President, today I am again introducing a bill to liberalize the provisions of the Federal disability insurance law for blind persons.

The two proposals contained in my measure are identical to two of the three proposals of S. 1681, which I introduced in the 90th Congress in association with the cosponsorship of a majority of my colleagues.

S. 1681 was approved by the Senate Committee on Finance when that committee was considering the then pending social security amending bill. When conferees met on H.R. 12080, in the fall of 1967, they adopted one provision of S. 1681, establishing the generally accepted definition of blindness—20–200, and so forth—as the standard for visual loss under the disability insurance program.

Now, Mr. President, today, I am introducing the two remaining provisions of S. 1681, with the hope that this Congress will transform them into Federal law.

In summary, this bill would:

First, reduce from 20 of the last 40 to 6 anytime earned the number of quarters, a blind person must be employed in social security-covered work to qualify for disability benefit payments.

Under existing law, a disabled applicant must work for 5 of the last 10 years in social security-covered work to be eligible for disability payments.

Second, the "earnings" test in disability insurance would be entirely eliminated for blind persons applying for or receiving disability insurance payments.

Under existing law, any appreciable earnings—$140 monthly—disqualifies disabled persons from receiving or continuing to receive disability insurance payments.

For a more detailed consideration of my bill, Mr. President, for a fuller exposition of the issues this bill raises and the arguments in support of its proposals, I ask unanimous consent to print in the RECORD at the conclusion of my remarks the text of the bill, followed by an explanatory fact sheet.

Let me add here one final point of legislative history and prospect. This eminently worthy measure was approved by the Senate in three previous sessions but was lost in conference committee owing to insufficient support in the House of Representatives. This year, however, thanks to extraordinary efforts on the part of my good friend John Nagle, chief of the Washington office of the National Federation of the Blind, no fewer than 131 identical bills have been introduced in the other body, including 10 by members of the Committee on Ways and Means.

I believe, therefore, Mr. President, that the many supporters in this Chamber of improved disability insurance for the blind can look forward with real confidence to a successful conclusion to this long struggle on behalf of our sightless fellow citizens.

I ask unanimous consent that the text of the bill and an explanatory fact sheet be printed in the RECORD following my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and the fact sheet will be printed in the RECORD.

The bill (S. 2518) to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder, introduced by Mr. HARTKE, for himself and other Senators, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 2518

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the first sentence of section 222(b)(1) of the Social Security Act is amended by inserting "(other than such an individual whose disability is blindness, as defined in section 216(i)(1)(B))" after "an individual entitled to disability insurance benefits".

(b) Section 223(a)(1) of such Act is amended—

(1) by amending subparagraph (B) to read as follows:

"(B) in the case of any individual other than an individual whose disability is blindness (as defined in section 216 (i)(1)(B)), has not attained the age of 65,"; and

(2) by striking out "the month in which he attains age 65" and inserting in lieu thereof "in the case of any individual other than an individual whose disability is blindness (as defined in section 216(i)(1)(B)), the month in which he attains age 65".

(c) That part of section 223(a)(2) of such Act which precedes subparagraph (a) thereof is amended by inserting immediately after "(if a man)" the following: ", and, in the case of any individual whose disability is blindness (as defined in section 216(i)(1)(B)), as though he were a fully insured individual,".

(d) Section 223 (c)(1) of such Act is amended—

(1) by inserting "(other than an individual whose disability is blindness, as defined in section 216 (i)(1)(B))," after "An individual"; and

(2) by adding at the end thereof (after the sentence following subparagraph (B)) the following new sentence: "An individual whose disability is blindness (as defined in section 216 (i)(1)(B)) shall be insured for disability insurance benefits in any month if he had not less than six quarters of coverage before the quarter in which such month occurs."

(e) Section 223 (d)(1)(B) of such Act is amended to read as follows:

"(B) blindness (as defined in section 216 (i)(1)(B))."

(f) The second sentence of section 223 (d)(4) of such Act is amended by inserting "(other than an individual whose disability is blindness, as defined in section 216 (i)(1)(B))" immediately after "individual".

SEC. 2. The amendments made by this Act shall apply only with respect to monthly benefits under title II of the Social Security Act for months after the month following the month in which this Act is enacted, on the basis of applications for such benefits filed after the date of enactment of this Act.

The fact sheet, presented by Mr. HARTKE, is as follows:

FACT SHEET: IMPROVED DISABILITY INSURANCE FOR THE BLIND

A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder.

HISTORY

Offered in 88th Congress by Senator Humphrey as floor amendment to H.R. 11865 (Social Security bill); adopted by voice vote without a dissent, lost when Social Security Conference ended in deadlock.

Offered in 89th Congress by Senator Hartke, as S. 1787; 41 cosponsors; adopted as floor amendment to H.R. 6675 by 78 to 11 roll call vote.

Offered in 90th Congress by Senator Hartke, as S. 1681; 57 cosponsors, including nine of the 17-member Committee on Finance; adopted by Committee on Finance as amendment to H.R. 1280; one provision approved in House-Senate Conference, making the generally accepted definition of blindness (20/200, etc.) the standard for visual loss under the Disability Insurance Program.

PROVISIONS

Allows qualification for disability benefits under the above definition if the blind person has worked six quarters in Social Security-covered work, rather than twenty of the last forty quarters as presently required to be eligible, as in all other disabilities; continuation of benefits irrespective of earnings so long as blindness lasts, rather than cutting off benefits if the blind person earns as little as $140 a month as provided in existing law.

WHAT CHANGES WOULD DO

The Disability Insurance for the Blind bill would transform the Disability Insurance Program providing only subsistence income to longtime employed but presently unemployable blind persons into a system providing short-term employed blind persons with insurance income to off-set the economic consequences of blindness—diminished earning power, greatly diminished employment opportunities, greatly increased costs of living and working, blind, in a sight-directed economy and society.

WHY CHANGES NEEDED

To many blind persons, able to work, although blind, but unable to secure work because they are blind—or unable to secure work of long and steady duration, because they are blind—to these people the requirement of employment for a year and a half in Social Security-covered work, instead of the five of the last ten year requirement in existing law, is much more realistic and reasonable under the special and adverse circumstances facing blind persons.

It is much more realistic, when considering the misinformed or uninformed attitudes, the adverse and prejudicial practices which confront blind people when they seek work, when they are qualified by talent and training for work, when they are skilled and able to operate successfully with blindness, yet, are not hired because they are believed to be incompetent and incapable.

Making disability insurance payments available when a blind person has worked six quarters in Social Security-covered work is much more reasonable than the five years' requirement, for it would make such payments more readily available to more persons when the disaster of blindness occurs, when the need for the security provided by regularly received disability insurance payments is greatest in a workingman's life.

This bill recognizes that a person who tries to function, sightless, in our sight-structured world, functions as a financial disadvantage.

For whatever a blind man would do, whatever employment or activity he would pursue, he has the need for sight to assist him.

Sighted family members and friends may be helpful, when the inclination moves them to be helpful, but the blind vending stand operator, the blind lawyer or teacher, the blind piano tuner, even the blind housewife

soon discovers that sight which is hired is more reliably available than sight which is given from kindness.

So the blind person who would function self-dependently, the blind person who would earn a living, who would live self-responsibly, must not only pay the usual daily living costs which has sighted fellows pay, but he must also pay the extra, the burdening expenses of blindness—the expenses incurred in hiring sight.

By allowing a blind person to draw disability insurance payments so long as he continues blind and irrespective of his earnings, this bill would provide to such blind person, a regular source of funds to pay for sight, and it would thus help to reduce the economic disadvantages and inequalities of blindness in his life.

REFERRAL OF THE VOTING RIGHTS ACT AMENDMENTS OF 1969 TO THE COMMITTEE ON THE JUDICIARY

Mr. DIRKSEN. Mr. President, earlier today I introduced the Voting Rights Act Amendments of 1969. That is a good title. It contains a number of provisions.

I ask unanimous consent, since the Committee on the Judiciary handled the proposal, that the measure be referred to the Senate Committee on the Judiciary.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTION

S. 15

Mr. PEARSON. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Alaska (Mr. STEVENS) be added as a cosponsor of the bill (S. 15) to provide incentives for the establishment of new or expanded job-producing industrial and commercial establishments in rural areas.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 897

Mr. KENNEDY. Mr. President, I ask unanimous consent that, at the next printing of the bill (S. 897) authorizing the construction of certain improvements on the Blue River, vicinity of Kansas City, Mo., and Kans., in the interest of flood control, water quality control, recreation, and fish and wildlife enhancement the name of the Senator from Kansas (Mr. PEARSON) be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2360

Mr. MATHIAS. Mr. President, at the request of the Senator from Arizona (Mr. GOLDWATER), I ask unanimous consent that at its next printing, the name of the Senator from Colorado (Mr. DOMINICK) be added as a cosponsor of the bill (S. 2360) which proposes to enlarge the boundaries of the Grand Canyon National Park in the State of Arizona.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2470

Mr. SCOTT. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Minnesota (Mr. MONDALE), the Senator from Colorado (Mr. ALLOTT), the Senator from New York (Mr. JAVITS) and the Senator from Missouri (Mr. EAGLETON) be added as consponsors of the bill (S. 2470) to amend the Food Stamp Act of 1964 to authorize elderly persons to exchange food stamps under certain circumstances for meals prepared and served by private nonprofit organizations, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

S.J. RES. 85

Mr. MATHIAS. Mr. President, at the request of the Senator from Arizona (Mr. GOLDWATER), I ask unanimous consent that at its next printing the name of the Senator from Pennsylvania (Mr. SCOTT) be added as a cosponsor of the resolution Senate Joint Resolution 85 providing for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week."

The PRESIDING OFFICER. Without objection, it is so ordered.

ENROLLED JOINT RESOLUTION PRESENTED

The Secretary of the Senate reported that on today, June 30, 1969, he presented to the President of the United States the enrolled joint resolution (S.J. Res. 122) to provide for a temporary extention of the authority conferred by the Export Control Act of 1949.

ESTABLISHMENT OF CAPITOL REEF NATIONAL PARK, UTAH—AMENDMENT

AMENDMENT NO. 55

Mr. MOSS submitted an amendment, intended to be proposed by him to amendment No. 17, intended to be proposed by him, to the bill (S. 531) to establish the Capitol Reef National Park in the State of Utah, which was referred to the Committee on Interior and Insular affairs and ordered to be printed.

EXTENSION OF ECONOMIC OPPORTUNITY ACT—AMENDMENT

AMENDMENT NO. 56

Mr. NELSON. Mr. President, I am today submitting an amendment intended to be proposed by me, to the Economic Opportunity Amendments of 1969—S. 1809—the bill which I introduced on April 15 to extend the Economic Opportunity Act. This amendment is designed to assure that the facilities and equipment which have been used by the Job Corps at centers for rehabilitating and training deprived youth will be put to further good use in the future by making these facilities and equipment available for use in carrying out such suitable purposes as youth programs and educational programs by State agencies, educational agencies, and other governmental, and private agencies.

Many of these facilities were built or substantially improved by the Job Corps and many are on land owned by the Federal Government, for example, on Forest Service land.

My amendment does not propose the transfer of title or the sale of any Government land or property. All it does is to assure that the facilities and the equipment are made available for use by agencies which have the programs and the resources to carry out youth and vocational training programs.

Many pieces of valuable equipment have been placed in these facilities by the Job Corps. For example, in my own State, the Job Corps camp at Clam Lake, Wis., has almost $1 million worth of buildings and equipment. In this camp, and the other camps as well, the buildings and equipment should be kept intact for use in public service programs.

I am concerned about reports that pieces of equipment at the various Job Corps centers are about to be taken out and sold off. To break up the camps and sell off the buildings and equipment would be a tragic waste. I urgently request the administration to delay disposing of the equipment until other agencies have been offered the opportunity of using the centers—with buildings and equipment intact.

I ask unanimous consent to have the amendment printed in the RECORD following my remarks, as well as a paper entitled "Ownership and Disposition of Job Corps Centers Scheduled To Be Closed," prepared for the Subcommittee on Employment, Manpower, and Poverty, of which I am chairman.

The PRESIDING OFFICER. The amendment will be received, printed, and appropriately referred; and, without objection, the amendment and paper will be printed in the RECORD.

The amendment (No. 56) was referred to the Committee on Labor and Public Welfare, as follows:

On page 8, following line 8, add the following new section:

"USE OF CLOSED JOB CORPS CENTERS FOR SPECIAL YOUTH PROGRAMS

"Sec. 10. (a) The Director of the Office of Economic Opportunity shall establish procedures and make arrangements which are designed to assure that facilities and equipment at Job Corps centers which are being discontinued will, where feasible, be made available for use by State or Federal agencies and other public or private agencies, institutions, and organizations which have satisfactory arrangements for utilizing such facilities and equipment for conducting programs, especially those providing opportunities for low-income disadvantaged youth, such as—

"(1) special remedial programs;

"(2) summer youth programs;

"(3) exemplary vocational preparation and training programs;

"(4) cultural enrichment programs, including music, the arts and the humanities; and

"(5) training programs designed to improve the qualifications of educational personnel, including instructors in vocational education programs.

"(b) In carrying out this section, the Director of the Office of Economic Opportunity shall consult with and, to the extent appropriate, utilize the services of the General Service Administration, the Department of Agriculture, the Department of the Interior, and the Department of Labor."

The paper presented by Mr. NELSON is as follows:

OWNERSHIP AND DISPOSITION OF JOB CORPS CENTERS SCHEDULED TO BE CLOSED

Ownership of the land, facilities and personal property, and the alternative means of disposition vary with the different types of centers.

CIVILIAN CONSERVATION CENTERS

The land on which most Civilian Conservation Centers are situated is owned by the U.S. Department of Agriculture or the U.S. Department of the Interior. The facilities and personal property, with some exceptions, are owned by the Job Corps.

In disposing of personal property, the Job Corps will be required to follow the procedures of the Federal Property and Management Act. Initially, the remaining Civilian Conservation Centers would have first opportunity to acquire the property to be disposed of. Then, the remaining Men's Centers and Women's Urban Centers would have opportunities to pick up the property. Other Office of Economic Opportunity units, such as VISTA, CAP, etc., would be next in line. Any personal property not picked up within OEO would then be turned over to GSA, which would attempt to dispose of it through general circulation.

All facilities in Civilian Conservation Centers are the property of the Job Corps with the exception of a small number that are state owned. The disposition procedure to be followed with regard to the Job Corps facilities would be to return them to the agency that owns the land on which they are located. This poses several problems. Facilities on state-owned land would presumably be accepted by the states. Those on USDA and Interior land, however, may or may not be accepted. Interior and USDA might refuse to accept them because it would then become incumbent upon them to provide maintenance and security, which requires a minimum of five people per center. Also, it may very well be that the agencies' appropriation authorization will not permit them to expend funds for this purpose. Refusal cannot extend beyond the remainder of this fiscal year and the next fiscal year, however. During that period the Job Corps would be responsible for maintenance and security.

Last year, several centers and their facilities were returned to USDA and Interior. As an example of the procedure that might be followed: the Department of Interior took over the Iroquois Center located at Medina, New York, and it was converted into a Drug Rehabilitation Center operated by the state of New York. But in turning facilities over to the state, one consideration is that the use of the facilities, if they are located on Government land, are subject to approval of the Departments of Agriculture and Interior. The attached list shows the names of the Civilian Conservation Centers to be closed and the present owners.

MEN'S CENTERS

The land on which the two Men's Centers to be closed are located is owned by the GSA and the Department of Army for Kilmer and Parks, respectively. The Parks Center simply involves turning the property over to GSA and having them attempt to dispose of it through sale. The Kilmer center would be returned to the Department of the Army which reportedly is eager to have its facilities back. Until such time as disposition is actually made, the Job Corps continues to be responsible for security and maintenance. It should be noted that four Men's Centers closed in 1968 are still being maintained by the Job Corps because GSA has not yet disposed of the property. The procedure for disposing of the personal property and facilities is similar to that to be followed by the Civilian Conservation Centers.

WOMEN'S URBAN CENTERS

All of the Women's Urban Centers are operated by non-governmental contractors. Closing these centers would require a notice of termination, which is 90 days, and a review of each contract to determine the terms and conditions governing disposition of the real and personal property.

Personal property would probably revert to the Job Corps and disposed of in accordance with the procedure described above for the Civilian Conservation Centers. But disposition of real property is a clouded issue in connection with some of these centers scheduled for closure. The contracts may call for the real property, which in most cases has been substantially improved by the Job Corps, to revert to the private contractor.

Attached is a listing of the Women's Urban Centers scheduled for closure and their private contractors.

USE OF CLOSED FACILITIES

Every effort will be made to interest the States in assuming responsibility for operation of the facilities scheduled for closure. This was done in 1968, with some small success. Interior's and USDA's use limitations tend to dampen the interest a State might have in these facilities.

In addition to actual State use of at least two facilities as Drug Rehabilitation Centers, other possibilities are: camping sites; summer camps; migratory labor housing; rest homes; sanatoriums; training facilities; and continuation, under State auspices, as a Job Corps-type center.

OWNERSHIP OF CIVILIAN CONSERVATION CENTERS SCHEDULE FOR CLOSURE

U.S. Department of Agriculture

Centers and Landownership

Alder Springs, Calif., Forest Service.
Alpine, Ariz., Forest Service.
Anthony, W. Va., Forest Service.
Blue Jay, Pa., Forest Service.
Cedar Flats, Idaho, Forest Service.
Cispus, Wash., Forest Service.
Clam Lake, Wis., Forest Service.
Clear Creek, Nev., Forest Service.
Dickinson, N. Dak., former Radar site. Use permit from GSA.
Fenner Canyon, Calif., Forest Service.
Five Mile, Calif., Forest Service.
Frenchburg, Ky., Forest Service.
Grants, N. Mex., Forest Service.
Hodgens, Okla., Forest Service.
Hoxey, Mich., Forest Service.
Los Pinos, Calif., Forest Service.
Luna, N. Mex., land purchased from State, OEO has ownership at present.
Lydick Lake, Minn., Forest Service.
Mountainair, N. Mex., Forest Service.
New Waverly, Tex., Forest Service.
Ojibway, Mich., Forest Service.
Pagosa Springs, Colo., Forest Service.
Poplar Bluff, Mo., Forest Service.
Sly Park, Calif., Forest Service.
Vesuvius, Ohio, Forest Service.

Department of the Interior

30 Centers being operated at the present time by the USDI (BR–7, NPS–8, BLM–4, SFW–6, BIA–5).

20 Centers presently listed for closure.

10 Centers presently listed for retention.

Land ownership—Land ownership of the 20 Centers presently listed for closure is somewhat more complicated than for the USDA and is discussed below by Bureau and Centers.

Bureau of Reclamation

Centers and Landownership

Arbuckle, Okla., land owned by the City of Sulphur. Leased to BR at nominal cost.

Casper, Wyoming, old Air Force Base—now belongs to County. Leased to BR at nominal cost.

Toyon, Calif., BR land. Rehab of old BR work camp.

National Park Service

Acadia, Maine, NPS Land.
Catoctin, Maryland, NPS Land.
Cumberland Gap, Ky., NPS Land.
Tremont, Tenn., NPS Land.
Wellfleet, Mass., NPS Land.

Land Management

Castle Valley, Utah, BLM Land.
Kingham, Ariz., County land—leased to BLM at nominal cost.
Mountain Home, Idaho, BLM Land.
Tillamook, Oregon, old Naval Base. BLM has title on portion being used now by Job Corps.

Sport Fisheries and Wildlife

Crab Orchard, Ill., SFW Land.
Malheur, Oregon, SFW Land.
Ottawa, Ohio, State land—leased to SFW at no cost.
Tamarac, Minn., SFW Land.

Indian Affairs

Eight Canyon, N. M., land leased to BIA by Indian tribe. Reverts to tribe 90 days after Job Corps notifies tribe officially of no further Job Corps need. OEO may remove improvements or they will revert to tribe.

Kicking Horse, Mont., same as for Eight Canyon.

San Carlos, Ariz., same as for Eight Canyon.

Winslow, Ariz., old Radar site—use permit from GSA.

SENATE-RELATED CENTERS

Rio Grande—Site located at El Verde in the Luquillo Experimental Forest (Institute of Tropical Forestry, P.O. Box 577, Rio Pedras, Puerto Rico 00928) and made available to the Commonwealth Department of Education by the U.S. Department of Agriculture, Forest Service, under terms of a written cooperative agreement negotiated in December 1965. (Original 10-year Term Special Use Permit for 10 years commencing March 11, 1963).

Construction funded by OEO at a cost of less than $302,500.

Personal property is Government Property and disposition will be in accordance with terms of Grant Agreement B99–GS–4573. (This Center not listed for closure)

Vieques, Guayama, Juana Diaz and Arecibo are located on Commonwealth real estate and improvements were constructed from Commonwealth funds. Personal property is the same at these Centers as Rio Grande. (Arecibo not to be closed)

Koko Head—Three separate facilities: Koko Head Job Corps Civilian Conservation Center in Koko Head National Park. Indenture of Lease, December 1, 1965, with Supplemental Agreement No. 2, to License Agreement, RE–6450, November 30, 1965, between City and County of Honolulu, Oahu and the State of Hawaii.

Kilauea Job Corps Satellite Camp. Special Use Permit No. 14–10–0434–3003, issued by U.S. Department of Interior, Form 10–114, for Hawaii Volcanoes National Park, County of Hawaii, dated January 28, 1966, which expires December 31, 1970.

Kokee Job Corps Satellite Camp in Kokee State Park, Kauai County, Hawaii. Letter of Authorization by Jim Ferry, Chairman, Department of Land and Natural Resources, State of Hawaii, to Milton Fogelman, Contracting Officer, dated November 30, 1965.

Disposition of structures built from Federal funds to be determined by the Contracting Officer in accordance with the provisions of Contract OEO B99–4543.

Personal Property disposal would be determined by the Contracting Officer.

Oak Glen—Located in the San Bernardino National Forest on land which is on a 30 year use permit to the California State Division of Forestry.

Disposition of structures built since use of the site by Job Corps to be determined by the OEO Contracting Officer.

Title remains with the State for personal property (or its replacement in kind) that was included in initial inventory. Other personal property to be disposed of by OEO

Contracting Officer in accordance with terms of Contract OEO B99-4535.

Center and Contractor

St. Louis Job Corps Center for Women, Delta Educational Corporation, Box 2701, Uptown Station, Nashville, Tennessee 37219.

Clinton Job Corps Center for Women, General Learning Corporation, 3 East 54th Street, New York, New York 10022.

Huntington Job Corps Center for Women, Xerox Corporation, Education Division, 600 Madison Avenue, New York, New York 10022.

Omaha Job Corps Center for Women, Burroughs Corporation, Defense, Space & Special Systems, Paoli, Pennsylvania 19301.

Poland Springs Job Corps Center for Women, Ecoonmic Systems Corporation, Blake Building, 1025 Connecticut Avenue, N.W., Washington, D.C. 20036.

Moses Lake Job Corps Center for Women, Economic Systems Corporation, Blake Building, 1025 Connecticut Avenue, N.W., Washington, D.C. 20036.

Marquette Job Corps Center for Women, Northern Michigan University, Marquette, Michigan 49855.

ANNOUNCEMENT OF HEARING ON "USEFULNESS OF THE MODEL CITIES PROGRAM TO THE ELDERLY"

Mr. MOSS. Mr. President, at the request of Senator HARRISON A. WILLIAMS, chairman of the Senate Special Committee on Aging, I have conducted several committee hearings on "The Usefulness of the Model Cities Program to the Elderly." Witnesses in Washington, D.C.; Seattle, Wash.; Ogden, Utah; Syracuse, N.Y.; and Atlanta, Ga., have provided excellent testimony on proposals and programs to serve the elderly in model neighborhoods.

Today, I wish to announce that the final field hearing of this study will be conducted in Boston, Mass., at 10 a.m., July 11, in the Roxbury Neighborhood House, 36 Dearborn Street. We will hear from municipal officials, residents of the model neighborhood, and others.

ANNOUNCEMENT OF HEARING: PRIVACY, THE CENSUS, AND FEDERAL QUESTIONNAIRES

Mr. ERVIN. Mr. President, tomorrow morning, the Subcommittee on Constitutional Rights will continue its study of the census, privacy, and Federal questionnaires, with a hearing at 10 a.m. in room 2228 of the New Senate Office Building.

At that time we shall receive testimony from Mr. Lawrence Speiser, of the American Civil Liberties Union and Professor of Sociology Thomas Monohan of Villanova University.

The subcommittee has before it S. 1791, a proposal which I introduced for discussion purposes during these hearings.

This bill represents an attempt to set reasonable standards for the wholesale statistical data collecting conducted by the Census Bureau and other Federal agencies.

There are several major facets of the national inquisitions to which American citizens are subjected in the name of "Government's need-to-know," and complaints show that there is an urgent need for legislation on all facets. There is, first, the broad decennial census conducted by the Census Bureau under criminal penalties of jail and fine; there are the many other censuses to obtain information from various groups of people, also conducted periodically during the year by the Census Bureau under excessive penalties; there are extensive surveys of individuals for personal and other information which the Census Bureau conducts for many other Federal agencies. Most of these are voluntary but, for some reason, officials in these agencies are convinced that they cannot be honest with the citizen. They cannot inform the recipient of these questionnaires of his rights with regard to the form; they believe they cannot inform him of the specific reason his Government needs this information; they cannot inform him who needs it and what precisely will be done with it.

Out of S. 1791 and the testimony and views we have received, it is my hope that we may develop a workable, practical law which will protect the individual's rights and still allow Government to collect certain information it needs to govern.

Probably no issue in recent times has generated so much mail and so many complaints to the Subcommittee on Constitutional Rights and to Members of Congress. Many congressional offices have referred their constituents' complaints to us, or asked for advice based on our study, concerning how to explain these issues to their constituents.

There are, for instance, those scholars who use Government statistics and who fear any legislation will disrupt the flow of data to them; there are the local government officials who have been led to believe that their share of Federal funds will be affected; and there are representatives of minority groups who have received distorted reports of possible detrimental governmental action against their members if the criminal penalties are removed from these questionnaires.

If these people could read some of the letters which the people they represent have sent Congress, they would begin to realize the urgency of the problem. They would have some understanding of the impact on individuals, of the threats, the official intimidation and harrassment to provide personal information about themselves. They would realize that the brunt of these programs is falling on such groups as the poor, the sick, the disabled, the illiterate, and the elderly.

These "planners" seek to persuade Congress to ignore demands from the people that it protect the individual's right to privacy and his right to silence about himself in the fact of an arbitrary Government demand that he speak.

In response to these people, I have answered along the following lines:

Like thousands of other citizens, I do not object so much to the questions asked as to the fact that a person is threatened with jail and a fine for not answering. Scholars and experts in this field have told the subcommittee that no research has been conducted to show that people will not answer these forms voluntarily when the request is reasonable and is explained.

Although I have no experience with professional data gathering, I do profess to some understanding of the meaning of individual privacy and constitutional rights in our society. It was on the basis of this interest and thousands of complaints received by Congress, many of them from North Carolina, that I recently introduced S. 1791 and the subcommittee conducted hearings on Federal questionnaires, privacy, and the census.

If the decennial questionnaire were the only instance of coercion of the citizen to reveal personal data, there would not be such public concern. The truth of the matter is that the decennial census is only one of the many data collecting drives conducted by the Census Bureau under Federal penalties of jail and fine. In addition, on behalf of many other agencies, they daily obtain responses to long questionnaires sent to thousands of people and covering every conceivable subject. While these are voluntary, recipients are not so informed, a psychology which in many cases arouses the ire and the apprehension of the individual and defeats the purpose of the survey. The harassment by census officials to obtain responses to all of these Federal statistical questionnaires amounts to a violation of the citizen's right to silence about his personal life unless the Government's need and purpose is clear.

I believe Americans are a law-abiding people and that they will respond to a legitimate governmental request for statistical information. Currently, there are no effective controls over the number of questions a person is asked, or the subjects, or the methods of compelling compliance. At the same time, we are faced in this decade with a massive proliferation of data collecting programs, the development of sophisticated surveillance techniques, and the wide scale computerization of Government's files on the individual. All of these trends have developed too rapidly to allow for the appropriate consideration of the dignity and privacy of the individual, and of possible alternative techniques for attaining the goals of Government without deceiving or coercing the citizen.

Private citizens from all walks of life, including former Census employees, scholars, law professors, sociologists, psychologists, and countless others have urged Congress to act in this area of the law.

I would hope that those in the different professions who use Government data will be as aware of the human elements involved and as alert to the impact on the individual of their own professional zest for knowledge as they will be eager to demonstrate their own expertise with that knowledge. Future respect for the law and the Constitution rests on the understanding of this by all of those who bear responsibility for planning and managing our economy. They must realize that they neither manage alone nor plan alone, and that their tools and methods must be utilized within those boundaries set by the Constitution, the Bill of Rights, and those values of liberty, freedom, and dignity most cherished by civilized men.

Mr. President, in its hearings in April and May and throughout its investiga-

tion of this problem, the Constitutional Rights Subcommittee has had the benefit of expert advice, and I intend from time to time to place examples of this advice in the RECORD for the benefit of those interested in this subject.

I ask unanimous consent to have printed in the RECORD at this point the text of my remarks when the Constitutional Rights Subcommittee commenced its hearings on April 24, 1969.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR SAM J. ERVIN, JR.

The hearings we begin today concern individual privacy, census and other Federal questionnaires, and constitutional rights. The issues we shall consider are based on the realities of individual complaints to Congress about privacy-invading and burdensome questionnaires. These issues touch the problems of the future, when individual privacy and the right to be let alone will be even more meaningful than today, as our great urban society doubles in population, with all the attendant problems of governing. The issues also are bound to the moral, scientific, legal and political problems which are raised by the use of computer technology and the prospects of gigantic data banks.

But our hearings also look back to the constitutional guarantees which support the basic liberties of free men in a free society.

For some years this Subcommittee has investigated unwarranted government invasions of individual privacy of people who work for the federal government as well as many other citizens. We have received complaints of arbitrary prying into personal activities, beliefs and thoughts of applicants and employees, by means of questionnaires, oral interviews, lie detector machines, personality tests, and surveys. We have been concerned about various forms of economic coercion exerted against the individual to guide his outside activities and to obtain personal information from him on pain of losing his chance for employment or promotion. We were concerned not only about violation of their rights under the first amendment but the possible misuse of the information and the lack of confidentiality for such records. In response to these complaints, I introduced a bill with the sponsorship of the majority of this Subcommittee, and, indeed, a majority of the Senate. This was approved as S. 1035 in 1967 by a 79–4 vote but it died in the House. I have introduced it again as S. 782 and it is pending before the Subcommittee.

These hearings deal with these same issues of privacy, due process, and the right to speak and keep silent, as they relate to all Americans, in every walk of life.

Congress has received serious complaints of wholesale government interrogation of citizens about every facet of their lives, their daily activities, their attitudes and beliefs, how they spend their money, and why they behave as they do. Their answers are recorded and analyzed, tabulated and computerized.

This search for information is frequently in a good cause and is sometimes conducted in a reasonable, limited fashion. Yet all too often, Americans are told to disclose this information, not because they have applied for a privilege or benefit, but because they dwell in a society whose civil servants have become captives of the computer.

Our officials have learned that the easier it becomes to use computers to obtain and store information of all kinds about people, the easier it becomes to substitute surveys and "people-studies" for judgment and creative ingenuity in the administration of the laws.

With many of these questionnaires, the full weight of the Federal criminal and civil laws backs the government's demand for statistical information. The decennial census forms, which must be answered by all citizens every 10 years on pain of a $100 fine or imprisonment for 60 days grow longer and more complicated every ten years. In addition to these questions, millions of other people are selected at random in the decennial census to answer more mandatory questions about their household equipment, whether they own a television or radio, their marital history, different aspects of their income, and many other questions.

The Subcommittee has before it a bill, S. 1791, to further secure individual privacy and protect the constitutional right of citizens of the United States to ignore unwarranted governmental requests for personal information.

The first section of this measure makes it unlawful for a Federal official to require any citizen to disclose for statistical purposes any information concerning his personal or financial activities or his personal or real property or those of any member of his family unless that requirement is authorized by a provision of the Constitution and unless the individual is advised the disclosure is mandatory and by which act of Congress it is specifically authorized.

This section in effect deletes the penalties for not answering questions in the decennial census which have nothing to do with the purpose of the census.

The Constitution authorizes an enumeration of persons every ten years for purposes of apportionment and taxation.

Article I, section 2, provides that—

"Representatives and direct taxes shall be apportioned among the several States which may be included within this Union according to their respective numbers, which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three fifths of all other persons. The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years, in such manner as they shall by law direct."

In 1790 a person could be fined $20 for not answering six items. The inquiry called for the name of the head of the family, and the number of persons in each family who were free white males of 16 years and upward, free white males under 16 years; free white females; all other free persons; and slaves.

We have departed far from this constitutional guideline in the conduct of the decennial census. In part, this is due to our increasing reliance on the economist, the sociologist and all the other experts who gain a momentary hold on the programs of our bureaucracy. In their unrestrained zeal to study man and his environment, they must know everything there is to know about him.

But it is time we stopped fooling ourselves that what is going on in these information drives is constitutional under this Article I. It certainly is not under the Amendments in the Bill of Rights. If there is a need for a new definition of constitutional authority, the time to establish it is now, by specific statute directed to the problems of the 20th century.

The second section of S. 1791 deals with all other information surveys. It makes it illegal for Federal officials to *request* a citizen to disclose such personal information for statistical purposes unless the request is specifically authorized by Act of Congress and unless the individual is advised that such disclosure is voluntary and that he is not compelled to comply with such request.

While this bill may be considerably amended, the approach is one I favor. Certainly, a personal questionnaire should be required to meet some statutory standards for protecting the individual's rights.

Senator Thurmond has sponsored S. 1893, a bill somewhat similar to section 1 of S. 1791, to make all questions voluntary except 6 on the decennial form.

This is the proposal sponsored by Congressman Betts and over one hundred and thirty House members. I believe the Congressman and his colleagues working on this subject have performed a valuable service to the American people by highlighting these problems.

S. 1791, and other proposals in Congress, are designed to answer, to some extent, a question asked today by more and more Americans: When, if at all, should the force of the Federal criminal law or of the Federal civil laws be brought to bear when government demands information from its citizens? To what extent can or should government threaten or intimidate those it governs into disclosing the details of their personal lives and households? This is an issue basic to our constitutional system of justice.

What rights does a citizen possess who receives a government questionnaire? What duties does he owe his government to disclose the information?

Does he have a constitutional right to ignore a government statistical questionnaire which does not meet certain constitutional standards?

These are some of the questions we shall consider during these hearings and Professor Arthur S. Miller of the National Law Center, George Washington University, Professor Charles Fried of Harvard Law School and Professor Arthur A. Miller of Michigan Law School, will discuss these matters with a view to the legal philosophy involved, the uses of the federal sanctions for data collecting, and the significance of computers and the new technology for constitutional principles and for individual privacy.

From among the many hundreds who have written their views to the Subcommittee, I have selected a number whose experiences and views reflect those of the average citizen confronted with a personal questionnaire.

We shall hear Mr. William Rickenbacker, Chairman of the National Right to Privacy Committee, describe his prosecution by the Federal Government for not revealing information in a decennial census.

Now, this decennial inquiry would not be too bad, except that all through the year, the Census Bureau, acting under general statutes, sends out thousands of other questionnaires in surveys of many subjects and many separate categories of people. The repetitive nature of the questions is astonishing.

Many of these surveys also are conducted under the threat of imprisonment and jail for non-response. We shall hear Mr. Schliestett, owner of a business in North Carolina, describe a survey form sent him which carried threat of a $500 fine or 60 days in jail.

Farmers are especially bedeviled this way, and Mr. Van Tilburg, who owns a small farm in Ohio, will describe some of the pressures they face. I intend to place in the record hundreds of letters from farmers and farm organizations also testifying to this problem.

Some questionnaires are legally voluntary but the recipient is not told. He is left with the inference that the response is required, and the Subcommittee will hear Dr. Nicholas Smyth describe an example of such prying after he bought a house in the District of Columbia.

Another group of questionnaires are those dreamed up in the different departments and agencies and sent out by the agency or by the Census Bureau acting for the agency. These are usually voluntary but, again, those selected to respond are not told. Instead they

are given a time limit for replying, and are subjected to a round of certified follow-up letters, phone calls and personal interviews. We shall hear Mr. Corbett, a veteran, and Mr. Till, a Federal employee, describe their experiences with such practices.

It is clear, from the complaints which are coming to Congress, that Americans are tired of this legal coercion to surrender rights guaranteed in the Bill of Rights. Throughout the year, citizens are subjected to a daily bombardment of government demands for information of all kinds, from tax returns to employment forms. The power of government and the force of federal criminal laws should not be used to harass citizens with unnecessary surveys prompted by some official's vague hope that the information might in some way be helpful."

Somewhere a balance must be struck between the individual's desire to keep silent and the government's need for information. If it is proved necessary to invade certain rights, clearly it is the constitutional duty of Congress to establish precisely how and under what circumstances this may be done. To tolerate any longer this executive branch grab for power is a betrayal of a power which Congress holds in trust for the people.

In this era of student unrest, of dissatisfaction of many different groups, we should take note that the expressions of concern are widespread. Complaints of resentment and harassment in government's quest for data come from liberals and conservatives, from rich and poor alike; from the academic community, from businessmen, from those who ordinarily have no animosity toward government as such and who respect the criminal laws. I have received hundreds of such letters as this one from a Methodist minister, Reverend G. Robert McKenzie who writes:

"Frankly, I am deeply concerned—not because of the census, or because there are more than 120 questions to be answered; my concern arises over the requirement which states that one *must* answer all questions or be subject to fine or imprisonment. This is the tactic of a police state!

"Could you give me your observation on this matter. Furthermore, is there any possibility that the law should be changed so that in the event one declines to answer all questions, he would not face charges?

"I am tempted to make a test case of this invasion of privacy by refusing to answer some of the questions. I'm not sure, though, if my congregation would want their Pastor to be a federal convict!

"In conclusion, let me state that I do not consider myself to be a part of any "ultra" group either on the "left" or "right," nor do I consider myself to be a conservative—politically, economically, or theologically. I do believe that I belong to that large majority of "moderate" citizens who have allowed others to speak for them far too long. Our rights are very slowly but surely being eroded by well-meaning, but nevertheless misguided officials. I trust Congress will begin to erect a restraining wall with legislation to remove the mandatory requirement of the United States decennial census."

A lady in Statesville, North Carolina, wrote to me:

"I am a widow, live alone in a small apartment. I have two doors at the front, sometimes I go in through the door to the living-room, sometimes into the one leading to the kitchen *but* what difference is it which door I enter? Who could possibly care? Never in my life have I heard of such nonsense as to the personal questions that will be asked unless *someone* does something and now!

"Always I've respected the law and I never to my knowledge, violated any law of the land. I love America and I deeply resent any criticism of my country, but for the first time in my life (I'm over 60 years old) I have no intention answering such stupid questions and if need be will suffer the consequences. There will no doubt be marches and others protesting. This is the first time I've ever protested an issue but I feel very strongly against it.

"Now what are you doing about it? I want an answer."

An outstanding attorney in my state, Mr. J. Archie Cannon, was among those lawyers ordered to respond to a Census Bureau demand for a detailed report of the financial and legal activities of his law firm. Threatened by a $500 fine or imprisonment, he was told to supply for statistical purposes the percentage of his firm's receipts in twelve specialized fields; to report a breakdown in total receipts for the year, to report on his payroll and employment, and to reveal the percentage of total receipts from different classes of clients.

He completed the form, but protested it as "frivolous, a waste of time, invasion of privacy, and based on an act which is unconstitutional in that the Congress has delegated to an administrative agency the arbitrary power to pick at random certain citizens and order them to give this personal information against their will."

Even after I filed his questionnaire and his protest for him, he continued to receive harassing letters ordering him to comply. On the very day he received his third letter, Census Bureau officials firmly assured the Subcommittee that under the circumstances, such follow-up actions would not have occurred.

Many other attorneys shared his convictions and I am submitting their correspondence relating to this for the printed record of these hearings.

Another witness who, along with many others, was unable to be here today is Mr. Marshall I. Pickens of Charlotte, North Carolina, who recently retired and was immediately honored with Form No. 72-S68005 of the Department of Health, Education and Welfare. His experience is typical of many others. This survey questionnaire asks 72 detailed personal questions of people who become entitled to medicare and social security benefits.

The questions include these:

Do you feel you could be earning more money now, if you wanted to? (1) yes; (2) no; (3) don't know.

How much did you earn at (1) your last job, and (2) your longest job? $—— per (1) hour; (2) week; (3) month; (4) year.

Are you receiving, or do you expect to receive, a pension from a plan other than Social Security from (1) your last job, and (2) your longest job? (1) I am now receiving a pension from this plan of $—— per month; I started receiving it at age ——; (3) I will not receive a pension from this plan; (4) don't know.

Are you or your wife or husband receiving any of the following kinds of income and how much monthly? Any company or union pension; Social Security; Federal Government employees pension; state or local government employees pension; military retirement pension; veteran's pension or compensation; railroad retirement; workman's compensation; cash sickness; or temporary disability insurance; welfare or assistance payments; and unemployment compensation.

Are you receiving any of the following kinds of income? Include any income received by your wife or husband, and fill in yearly amount. Interest from savings, notes, and bonds; dividends from stock; net rental income, excluding maintenance cost, utilities, mortgage payments, property taxes, etc.; annuities purchased individually; regular contributions from relatives outside your home; and other income (from occasional work, etc.).

How much money does your wife or husband earn per year? $—— per year.

Please enter the full name and Social Security Number of your wife or husband. Name ——. Social Security No. ——. What is your telephone number?

After receiving two copies of the form, Mr. Pickens stated:

"I ignored two of these letters and a third came in yesterday by Certified Mail and I am sending it along to you to ask your opinion as to whether I should undertake to answer all these questions, many of them being private, personal and no one's business. I have appreciated your efforts in the Senate and in the Government to stop the Government's interference with the personal lives of people employed in the Federal Government and I think the same should apply with the citizen and taxpayer. It must have taken someone many weeks of work to figure out all these questions, and what will be done with them after the questionnaires have been returned will take many hours of conferring by many people. It is my opinion that this sort of thing ought to be stopped if possible. My question is, "Would you fill out and return this questionnaire if you received one from an agency of the Federal Government?"

He also received a telephone call from a Census official who wanted him to reply over the phone.

Many other citizens wrote members of Congress asking if they had to reply to the form and what would happen if they did or did not respond.

After two inquiries to the Secretary of the Department, we learned that the questionnaire is indeed voluntary and not legally mandatory. It is difficult to draw this conclusion since two follow-up certified letters are sent to nonrespondents and they are then contacted by telephone call or visit from a Census Bureau official.

The original documents are kept by the Census Bureau for 3 years at a Federal Records Center. The computer tapes with the information will be retained indefinitely by the Census Bureau and a copy of the final tapes kept indefinitely by the Social Security Administration.

It is disturbing, furthermore, that the rules of confidentiality which govern this survey are those of the Social Security Administration, rather than the Census Bureau. What is startling is that the questionnaires are not limited to social security recipients. We are informed that the Census Bureau is currently assisting in a large number of such studies of groups of citizens, conducted by the agencies of the Department of Health, Education, and Welfare.

The complaints and revelations concerning the medicare questionnaire suggest what is occurring throughout government. They illustrate why such legislation as S. 1791 is necessary. They demonstrate the urgent need for reforming the legal weapons which the Federal Government uses against citizens.

We are encouraged by a letter last week from Secretary of Commerce Stans that he would reduce the burden of the 1970 Census by reducing by 3 million the number of people who will be told to answer the long form in the census. He has also recognized the need for reviewing the role of the Census Bureau by promising a blue-ribbon commission to study the problem. Let us hope that when he appoints the commission, he places a time limit on that study, so that its existence does not become a substitute for action. I am encouraged, too, by newspaper reports that President Nixon is considering removal of the criminal penalties from the decennial census. It is to be hoped that he will also recognize the broader problem of the use of the penalty or the harassment of citizens in hundreds of other federal demands for data.

It is my firm belief that Americans are a law-abiding people and that the great majority will respond as good citizens to their

government's reasonable request for disclosure of information, when the need to know is made clear, and when its methods are fair and just.

Mr. ERVIN. Mr. President, I also ask unanimous consent to have printed in the RECORD a perspective and informative statement submitted by Prof. Arthur R. Miller of the University of Michigan Law School.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF ARTHUR R. MILLER, PROFESSOR OF LAW, UNIVERSITY OF MICHIGAN

I am honored by this Subcommittee's invitation to participate in these vital hearings on Privacy, Federal Questionnaires, and Constitutional Rights. But permit me to begin this statement with a disclaimer and an apology. Although I carry the title of professor of law, I do not consider myself an expert in the area of constitutional law. Rather, what little assistance I may be able to offer to this Subcommittee stems from my deep involvement during the past two years in the field of information technology and law. By this I mean the ways in which modern computer technology and the increased information orientation of our society will impact and challenge important aspects of our business, cultural, social, and private lives so as to require a reaction and perhaps a doctrinal adjustment by our legal system. My research and writing in this field have included a consideration of the implications of these phenomena for individual privacy in our country. In this connection, I have had the privilege of appearing before the Senate Subcommittee on Administrative Practice and Procedure during its investigation of computers and privacy and the Senate Subcommittee on Antitrust and Monopoly during its recent hearings on credit bureaus. Thus, in the hope that I have not misconceived my role, I will address myself primarily to some of the broader aspects of the federal government's information gathering activities. By way of apology, a rather painful and disabling foot injury last week has deprived me of the time necessary to prepare the caliber of statement that I would have liked to present.

I. THE CHANGING PATTERNS OF INFORMATIONAL PRIVACY

A. The general trend

Informational privacy has been relatively easy to protect in the past for a number of reasons: (1) large quantities of information about individuals have not been collected and therefore have not been available; (2) the available information generally has been maintained on a decentralized basis; (3) the available information has been relatively superficial in character and often has been allowed to atrophy or become archaic to the point of uselessness; (4) access to the available information has been difficult to secure; (5) movements of people in a highly mobile society are difficult to track; and (6) most people are unable to interpret and infer revealing information from the available data. But a casual perusal of the testimony elicited in earlier hearings by this Subcommittee as well as by other subcommittees in both houses of Congress and a consideration of the intrusive capabilities of the new surveillance devices and information technologies lead to the conclusion that these traditional safeguards on informational privacy no longer are reliable.

Perhaps the single factor of greatest importance in terms of the information privacy of this nation's citizens is the marked shift in information collection habits by almost all of the significant institutions in our society. Ever since the federal government's entry into the taxation and social welfare spheres, greater quantities of information have been sought from citizens and recorded. Brief reflection about the data acquisition implications of federal involvement in home financing, urban renewal, and public health as well as the activities of the Office of Economic Opportunity, the Job and Peace Corps, and the Department of Housing and Urban Development provides graphic evidence of this point. Moreover, in recent years access to governmental largesse—at all levels—has depended increasingly upon a willingness to divulge private information. This pattern of accelerated data collection has manifested itself in industry and academe as well as in the public sector.

As information recording processes have become cheaper and more efficient, this trend of increased information collection has intensified and been accompanied by a predilection toward centralization and collation of data. In something akin to Parkinson's Law, as capacity for information handling increases, there is a tendency toward more extensive collection, manipulation, and analysis of recorded data, which, in turn, motivates the further collection of data pertaining to a larger number of variables. The availability of electronic data storage and retrieval has accentuated this cycle in a number of contexts, some of which will be discussed below. Thus, it is reasonable to assume that one consequence of this heightened appetite for data and the increased capacity to handle it is that many governmental agencies will go beyond current levels of inquiry and begin to ask more complex, probing, and sensitive questions. Perhaps future interrogations will touch upon such subjects as associations with other people, location and activity at different points of time and space, medical history, and attitudes toward various institutions and persons.

B. The Federal Government's activities

(1) The Decennial Census

As intimated above, the federal government's contemporary and projected information practices clearly illustrate society's new orientation toward information collection. Perhaps the best example of this is the decennial census, which has evolved from the simple "enumeration" of the populace described in the Constitution to become a comprehensive survey seeking numerous items of data. As things now stand, in 1970 many citizens will be required to answer questions that touch upon a number of sensitive topics including aspects of the respondent's health, employment, finances, past activities, and even the characteristics of the bathrooms in his house. It should be noted that many of the questions on recent censuses have been included at the request of social planners from both governmental and nongovernmental institutions and industry groups desirous of procuring information that will aid in making marketing decisions.

Information for the census is extracted under threat of criminal penalties, and, on the few occasions when the propriety of census techniques has been questioned in the courts, the Bureau's broad discretion has been upheld. It generally is agreed that among federal agencies the Census Bureau has an unequaled—but not perfect—record for preserving the confidentiality of information collected through the census. In fact, the Census Bureau's enviable history frequently has been cited by advocates of a National Data Center as indicative of the type of security that can be achieved by a statistical organization.

Although the scope of the decennial census ranges far beyond its original constitutional purpose, Congress generally passively acquiesces in administrative determinations of what information should be collected by the Census Bureau. Of course, there is no doubt about the national government's power to proliferate the census process as a "necessary and proper" adjunct to the effective planning of numerous federal programs. But at least one result of the increasingly elephantine character of the census is highly undesirable. It is that middle and low level bureaucrats, who often are responding to pressures exerted by large industrial lobbies or other government administrators, are expanding the contours and the potential application of the criminal sanctions imposed for noncompliance with a census request through their power to determine what questions will be included in it. Although criminal prosecutions for nonresponse are rare, the in terrorem character of the possibility of such a prosecution must have a coercive effect on many Americans who find some of the census questions offensive to their sense of privacy. Is abdication to administrative claims of governmental efficiency the way a great nation formulates its criminal law or strikes a balance between individual privacy and the sovereign's information gathering activities?

To be sure, data collection and analysis as well as an efficient information flow are essential to the proper functioning of a government as large and complex as ours. To be sure, new methodologies in information storage, retrieval, and transfer should be taken advantage of in connection with the vast economic planning our government undertakes each year. But what price must we pay for efficiency? Is it really essential for the federal government to threaten citizens with the imposition of criminal sanctions in order to obtain detailed information about their income, means of transportation, employment, kitchens, bathrooms, or bedrooms? Is it clear that this information is so essential to the proper functioning of the federal government that we must threaten with criminal prosecution individual citizens who for one reason or another cherish their privacy or fear the intended or unintended dissemination of the responses they give?

Even if the value of each and every item of information sought in the questions proposed for the 1970 census is assumed, the application of criminal sanctions for a refusal to respond cannot be justified absent a clear and convincing showing (1) that an occasional failure to respond will so skew the census taking process as to impair the results of the study significantly and (2) that there is no reasonable alternative source for or method of procuring the information. On the basis of examining the transcripts of other hearings on the census and some additional reading, I do not believe that either of these conditions has been demonstrated.

If a substantial number of people decline to answer a particular census question, that would demonstrate a widely held belief that the query violates an individual's privacy. In that event, citizen reaction should be honored even if some loss of information results, although it is extremely unlikely that refusals to respond will be so high that a question's utility will be completely eviscerated. If a mere handful of citizens refuses to reply to a particular question, it is difficult to believe that the results received from the mass of the sampling group would not provide the information sought by the government. Other survey techniques would quickly demonstrate whether the refusals to disclose originate in a particular social or economic group and adjustments in evaluating the actual responses could be made accordingly. Moreover, cannot the Census Bureau and the other government agencies that employ census data secure much of the information sought by the proposed questions about housing from state and local agencies? Isn't much of what will be requested in 1970 repetitious of information already accumulated by other organizations? If the information collected through other sources does not precisely dovetail with that

which is sought by the 1970 census, might it not be possible to alter the information gathering procedures of the other sources or to employ limited supplementary surveys to satisfy the needs of all who request the information?

These and many other questions should be considered and investigated before the Congress acquiesces in the administrative convenience and necessity arguments of the Census Bureau and the members of the user community. Of course it is *easier* and *cheaper* to let the Census Bureau proceed according to its proposed plan. However, in our country *ease* and *cheapness* have never been adequate justifications for circumventing or compromising American liberties and freedoms. If they were, we would have adopted universal fingerprinting and internal passports for travel within the United States long ago. Yet we have rejected both of these forms of government intrusion as inconsistent with the philosophical fiber of our society. But I note with sadness the newspaper reports that although the number of citizens who will be subjected to the long-form census has been reduced from 15 to 12 million (which leads one to wonder how much more play there is in the allegedly immutable statistical joints of the census), the printing of the 1970 census has been ordered—it is "too late," we are told, for revision.

(ii) The Wide, Wide World of Governmental Questionnaires

The primary danger of contemporary governmental information activities does not lie with the proliferation of the decennial census. Rather, it inheres in the widescale practices of many governmental agencies conducting their own surveys, many of which are carried out under the aegis of the Census Bureau. I recently had occasion to see a list of surveys conducted by Census for other federal and state agencies and copies of some of the questionnaires that were used. The groups interrogated include old people, sick people, farm workers, optometrists, widows, veterans, and shark bite victims, to name but a few. In a period of approximately two years the Census Bureau appears to have conducted surveys on behalf of over twenty federal, state, and local governmental organizations. In many instances these surveys were taken weekly, monthly, or annually, presumably reaching different sample groups each time. Although it is difficult to determine how many respondents were involved, a figure of several million seems conservative.

A perusal of some of the questionnaires reveals them to be lengthy, repetitious, and, on occasion, highly intrusive. One endeavor, which is entitled "Longitudinal Retirement History Survey," conducted by the Census Bureau for the Department of Health, Education, and Welfare, is substantially longer than the 1970 census. It is being imposed on a sample group of recent retirees who are receiving social security benefits. The survey apparently is a response to a recommendation by the Advisory Council on Social Security that data be collected on people who come on the benefit rolls before reaching age sixty-five. In addition to numerous probing interrogatories about the respondent's finances and past employment, some of the inquiries include:

What have you been doing in the last four weeks to find work?

When you retire, do you expect to live here or somewhere else? Where?

Taking things all together, would you say you're very happy, pretty happy, or not too happy these days?

Do you have any artificial dentures?

Is there some kind of care or treatment that you have put off even though you may still need it? What is this care or treatment for?

Do you (or your spouse) see or telephone your parent(s) as often as once a week?

What is the total number of gifts that you . . . give to individuals per year . . .?

How many different newspapers do you receive and buy regularly?

About how often do you . . . go to a barber shop or beauty salon?

What were you doing most of last week?

Given the spectrum of these questionnaires and their content, it becomes evident that they represent a far greater potential threat than does the Census. This is not simply because particular questions are more probing or intrusive than those on the census but also because of their over-all impact on the individual respondent who, in his helpless isolation, can only speculate as to the uses to which the data will be put. In addition, the data produced by these questionnaires, which emerge without direct legislative approval and seemingly at the slightest suggestion that the data might be "valuable," do not enjoy the same level of protection as do the fruits of the decennial census. Once the collected data is transferred to the agency that requested the survey, the excellent privacy-protecting record of the Census Bureau and its strict confidentiality rules become irrelevant. The information and its use is then at the mercy of the agency that originated the survey. Parenthetically, it might also be noted that by employing their own surveys, federal agencies can procure the same information requested by the census and thereby circumvent the supposed confidentiality of the census. Nothing in the legislation following the Supreme Court's decision in the *St. Regis* case prevent this.

C. A word about the consent placebo

Aside from the decennial census, most governmental surveys are "voluntary" in character in the sense that Draconian criminal sanctions will not be imposed if the recipient refuses to respond. The notion of "consent" that underlies these "voluntary" surveys frequently obscures the psychological pressures and the need for some of the amenities of modern life that often force individuals to disclose personal data. Although much obviously depends on the circumstances, in many situations "consent" simply is an epithet for placing formal responsibility for invasions of privacy on the victim, when the duty should be imposed on the data-gatherer to refrain from employing coercion or from seeking the data in the first place.

Even a benign questionnaire sent out under the imprimatur of a federal agency and typically not marked "voluntary" has an inhibiting effect on most individuals or benefits from the natural, although erroneous, assumption that it is a "crime" not to respond to any inquiry by the sovereign. Who can measure the level of anxiety that a social security or medicare beneficiary or the holder of a veteran's pension may experience when he receives a questionnaire originating from HEW or the Defense Department, especially when strongly worded follow-up letters arrive shortly thereafter? Certainly, a concern over the continuation of his benefits would not be unnatural. And are we really certain that a citizen's assertion of his privacy will not nettle some administrator to the point of provoking a reprisal?

II. THE BROODING OMNIPRESENCE OF COMPUTER TECHNOLOGY

I have had occasion, both in the context of congressional hearings and in other public arenas, to suggest some of the deleterious effects extensive computerization of data may have on informational privacy unless some control is exercised over the technology and those who promote it. To recount that tale in full at this point would be unduly repetitious. It is sufficient to reiterate the notion that man's capacity to store, retrieve, transfer, and manipulate information is now limitless and the past constraints of space, time, and quantity are becoming irrelevant. Today, the capacity exists to transmit staggering quantities of data to any point on the globe in the most infinitesimal units of time. In short, computer technology represents a new communications medium for the transmission of information and it is not surprising that pressures have been generated for the establishment of interagency governmental networks, nongovernmental networks, and networks that tie together public and private data bases. As I have pointed out elsewhere, the debate over the National Data Center in large measure was a case of tilting at windmills since most federal agencies already have constituted themselves data centers and considerable authority for the interchange of information among the agencies actually exists.

But what are the ramifications of this technology in terms of governmental questionnaires and individual privacy? Privacy, as many commentators have noted, is a concept that is impossible to define or to fit into a coherent framework of legal doctrine. With greater frequency, however, lawyers and social scientists are expressing the view that the basic attribute of an effective right to privacy is the individual's ability to control the flow of information concerning or describing him—a capability that often is essential to the establishment of social relationships and the maintenance of personal freedom.

As a result of the heightened value being placed on information by contemporary institutions, a substantial portion of information that hitherto has been treated as private is now considered appropriate grist for the computer mill and fair game for the data collector. It may be a bit premature to conclude, as some have, that "information is becoming the basic building block of society" (Sarnoff, No Life Untouched, Saturday Review, July 23, 1966, at 21) or that "all forms of wealth result from the movement of information" (McLuhan, Understanding Media: The Extensions of Man 65 (paper ed. (1964)), but there does seem to be considerable truth in the assertion that electronic technology is making the world into a "global village" in which the domain of strictly private action is steadily being eroded.

In a computerized environment, the power to control the flow of data about oneself can easily be compromised. On the theoretical level, computer systems and other media that handle personal information are capable of inflicting harm on the data subject in two principal ways: (1) by disseminating evidence of present or past actions or associations to a wider audience than the subject consented to or anticipated (deprivation of access control), and (2) by introducing factual or contextual inaccuracies that create an erroneous impression of the subject's actual conduct or achievements in the minds of those to whom the information is exposed (deprivation of accuracy control). (Various aspects of these dangers are discussed at length in Miller Personal Privacy in the Computer Age: The Challenge of a New Technology in an Information Oriented Society, 67 Michigan Law Review 10XX (April 1969).)

And how do the government's information policies fit into the emerging threat to privacy presented by widescale computerization? In an age in which federal information acquisition and dissemination is at an all time high, in an age in which governmental questionnaires are cavalierly issued and electronically processed as if to satiate the appetite of some sorcerer's apprentice, in an age in which national data centers and monolithic information gathering and analyzing techniques are being proposed, the concept of citizen control over the flow of information relating to him is becoming a chimera. The number of people who inevitably will see an individual's answers to

questions on the census and other agency questionnaires coupled with the possibility that these responses can be computerized and analyzed on an associative basis with information collected by the Internal Revenue Service, the FBI, the Post Office, the Immigration and Naturalization Service, and others suggest that the valve on an individual's informational spigot is now in the custody of an indeterminate and unidentifiable number of administrators and computerniks. The ability of sophisticated governmental data centers to generate a comprehensive womb-to-tomb dossier on an individual and transmit it over a national computer network is one of the most frightening aspects of a marriage between increased data collection and the present cybernetic revolution.

III. THE IMPLICATIONS OF A DOSSIER SOCIETY

Since the right to privacy has been conceived in part to assure the individual's emotional integrity, it is appropriate to consider briefly the possible psychological impact on our citizenry of unchecked governmental information extraction and computerization. As the populace becomes increasingly aware that a substantial number of personal facts are being preserved on "the record," people may start to doubt whether they have any meaningful existence apart from the profile in the government's computerized files. In turn, individuals may begin to base their personal decisions, at least in part, on whether it will enhance their record image in the eyes of those who have control over important aspects of their lives:

The terms consequential behavior and acting for the record . . . [may be] used interchangeably. They involve not only the control of forethought to our behavior, but also mean that one should act so that things must appear on the record in a limited way. One puts to oneself not only the admonition that "I had better be careful: This may go on the record," but also the question as to how will it look and be interpreted by those who are not immediately involved in this activity and will judge it from its appearance to them. . . .

Thus, the technical demand for more personal information to be recorded and a conscious public concerned with keeping the record straight lie at the root of the new invasion of privacy. It is a deprivation of privacy that cannot be legislated against nor moralized against. It is a source of social control which necessitates new techniques and a pervading inquiry into our social, economic, and political actions and our motivations for them. It is an invasion which most people willingly accept, since they have not known other conditions and are happy to be publicly significant to someone. (Wagner, Records and the Invasion of Privacy, reprinted in the CONGRESSIONAL RECORD, vol. 111, pt. 8, pp. 10821–10823).

This psychosis also may give rise to a conception of the government as an unforgetting and unforgiving watchdog or information manager and this image is certain to be reinforced by the widescale, publicized use of computer technology. As one observer has remarked, "the possibility of the fresh start is becoming increasingly difficult. The Christian notion of redemption is incomprehensible to the computer." (House Hearings on the Computer and Invasion of Privacy 12 (statement of Vance Packard).)

It thus is not surprising that there appears to be reaction against computerized decision-making and other appearances of human abdication to the machine. Increasingly, the computer is becoming a convenient scapegoat for a number of man's ills and there is evidence that the frustrations generated by the computerized environment are provoking highly irrational responses on the part of disenchanted groups. People have written letters to the computers of commercial dating services, commenting on the dates that have been arranged for them; naked protesters have picketed IBM offices with signs stating that "Computers are Obscene"; and computer operators reportedly have ascribed human personalities to their machines. Personification of computers has carried over into the arts, as computers have emerged from the world of science fiction to become sinister protagonists or anthropomorphic figures in novels, plays, motion pictures, and poems. It also has been suggested that widescale computerization may give rise to an "underground" movement, reminiscent of the Luddites, to sabotage society's machines, perhaps by violating contemporary society's eleventh commandment: "Do not fold, spindle, or mutilate." In fact, one federal court has found it necessary to grant an injunction restraining a civil rights group from defacing an electric utility's punchcard bills as a means of protesting the company's hiring policies. (Potomac Elec. Power Co. v. Washington Chapter of C.O.R.E., 210 F Supp. 418 (D.D.C. 1962)) Student activists also have taken cognizance of the machine and have vented their anger on the computer and its trappings as symbols of the dehumanization of modern mass education.

Perhaps little attention should be paid to such aberrational and atavistic behavior. After all, one cannot dispute the fact that the new technology actually promotes a number of vital humanistic needs in our society, and ultimately may prove essential to the proper functioning and preservation of our representative form of government. (Shubik, Information, Rationality, and Free Democratic Society, Daedalus, Summer 1967, at 771, 777) Moreover, the ability to present a parade of horribles does not provide a basis for jettisoning the technological developments of the past three decades or ignoring the government's legitimate need to obtain information for rational planning. Nor does it advance the task of fashioning workable limits to preserve essential privacy values in a society that is increasingly scientifically and technologically oriented.

Nevertheless, the breadth of concern over the dehumanization of modern society and the animus directed at the information activities of the government and the computer cannot be ignored. The omnipresence of data collection activities and the computer cannot help but have a numbing effect on the congeries of values we subsume under the heading "personal privacy" and debilitate the citizen's conception of the government as a relatively benevolent or protective institution. The climate or atmosphere of suspicion engendered by an accumulation of invasions of privacy is of far greater concern than the direct harm caused by the particular incidents themselves. "Even quite reasonable surveillance practices which should be permissible in themselves, may in the aggregate form be the basis of a terribly oppressive society." (Josephson, Book Review, 15 University of California at Los Angeles Law Review, 1586, 1599 (1968).) This seems to be one of the lessons to be learned from the popular outcry concerning the National Data Center, some of the census questions, and the hearings on credit bureaus.

IV. THE NEED FOR JUDICIAL AND LEGISLATIVE SAFEGUARDS

The computer's impact on traditional relationships between individuals and organizations, the impending emergence of computer technology as a medium of communication with national dimensions, and the accelerating pace of federal information gathering suggest that judicial and congressional action to protect privacy values may be both appropriate and necessary. The common-law right of privacy does not seem to have the growth capacity for ameliorating problems of this magnitude, especially in light of the Supreme Court's decision in Time, Inc. v. Hill, 385 U.S. 374 (1967). Moreover, the availability of common-law redress against damaging governmental information disclosures has been further limited by the enactment of the Freedom of Information Act, which opens up vast quantities of data held by the government to public view.

More importantly, the existing common-law theories deal with the dissemination of previously acquired data, rather than the unrestrained governmental collection of information from individuals. To be effective, a regulatory scheme must reach the latter problem and this requires a different doctrinal basis than is offered by the right-to-privacy tort. Fortunately, the law books are not barren. In recent years the Supreme Court has recognized that the individual has the right to object to certain governmental attempts to extract information from him. Perhaps the most clearly developed of these notions is the citizen's right of associational privacy, which seeks to recognize the "vital relationship between the First Amendment freedom to associate and privacy in one's association." (NAACP v. Alabama, 357 U.S. 449, 462 (1958)) Thus, when the government attempts to gather data concerning an individual's association with a group dedicated to the advancement of certain beliefs in "political, economic, religious, or cultural matters" (Id. at 460), it must "convincingly show a substantial relation between the information sought and compelling state interest." (Gibson v. Florida Legislative Investigation Committee, 372 U.S. 539, 546 (1963)) However, the successful assertion of associational privacy appears to depend upon a showing that disclosure will result in a restraint on an individual's ability to exercise his freedom of association.

Closely related to the right of associational privacy is another judicially recognized individual interest—the right to possess ideas and beliefs free from governmental intrusion. As the Supreme Court recently stated in Schneider v. Smith, 390 U.S. 17 (1968), first amendment guarantees and the concept of associational privacy "create a preserve where the views of the individual are made inviolate. This is the philosophy of Jefferson that 'the opinions of men are not the object of civil government, nor under its jurisdiction . . .'" (Id. at 25)

Taken alone, the judicial recognition of privacy in one's associations and beliefs would provide only limited protection for the individual against governmental intrusiveness. But these cases seem to announce a more expansive principle, one that is part of a tradition basic to the nation's philosophical fabric—the conception of government as an institution of limited powers that is obliged to meet a heavy burden of justification when it undertakes a program or course of action that will inhibit the freedom of its citizens. As Justice Douglas remarked in his opinion for the Court in *Schneider:* "The purpose of the Constitution and Bill of Rights, unlike more recent models promoting a welfare state, was to take government off the backs of people." (Id. at 25)

It is axiomatic that the power conveyed by widescale governmental surveillance or information control can constrict individual freedom. Thus, pressures in that direction must be resisted. Supplications in terms of governmental economy or gains in administrative efficiency cannot justify every demand for greater power to extract, manipulate, store, and disseminate personal data. The Supreme Court appears to have recognized this in recent electronic eavesdropping cases and has resorted to general principles to protect a person's legitimate expectations concerning personal privacy. In doing so the Court has used the traditional constitutional restraints on search and seizure of tangible objects to restrict governmental acquisition of personal information. A comparable broadening of the first amendment guarantees that were applied in the asso-

ciation and belief cases also would be desirable.

But today's trend toward information collection and the almost exponential expansion of the ability to utilize information in variegated ways seems to be altering the citizen-government balance so drastically that total reliance on judicial manipulation of constitutional doctrine is unwise and congressional action is indicated. A legislative solution can take a number of different forms. One logical and effective method of protecting against abusive data collection is to prohibit governmental, and perhaps even non-governmental, organizations from collecting designated classes of data, or, at the least, prohibit them from resorting to sanctions or the threat of sanctions to coerce disclosure of the data. An example of this legislative approach is H.R. 20, introduced by Congressman Betts, which would eliminate the existing criminal penalties for failure to answer many of the questions asked by the Census Bureau. (I understand that Senator Thurmond recently introduced a comparable bill, but I have not yet obtained a copy of it."

Another, and significantly broader, approach is that taken in S. 1791, which was introduced by the Chairman of this Subcommittee. This bill has the desirable effect of restricting every federal agency's ability to collect data to those information items that fall within a specific provision in the Constitution and/or an act of Congress. It also requires the collecting agency to inform respondents when disclosure is being sought on a voluntary basis. In this fashion it would curtail the use of subtle forms of coercion and unjustified application of the consent motion. Despite some problems of language, which might unduly limit or render uncertain its scope of application, S. 1791 represents an extremely useful legislative restraint on administrative excesses.

In yet another effort, Congressman Koch has introduced a bill, to be added, in effect, to the Freedom of Information Act, that would require all agencies maintaining information on an individualized basis to give notice to an individual if information concerning him has been procured from a source other than the subject himself. The agency also would be obliged to exercise certain precautions in the handling of the information and refrain from disclosing personal data without obtaining permission from the individual. The cardinal virtue of this bill is that it enables the individual to participate in transactions affecting the information collected about him and gives him an opportunity to correct any errors. Of course, it does not deal with the problem of limiting direct interrogation of an individual by the government.

Although I must confess to a personal preference for legislation relating to informational privacy that approaches the subject on an overarching basis, perhaps following a comprehensive study of the problem and accompanied by the creation of an *independent* Governmental Information Review Board (the typical academician's approach), the present legislative activity is a healthy and welcome sign. Each of the three legislative proposals described above is meritorious and in many ways they are complimentary. Consequently, they deserve the most careful attention and favorable consideration by the Congress.

Consider Richard L. Tobin's comment in a Saturday Review editorial captioned "1984 Minus Sixteen and Counting": "we cannot assume . . . that privacy will survive simply because man has a psychological or social need for it." Although additional legislation may be necessary when the dimensions of the threat of the new technology becomes clearer, the current legislative proposals represent positive steps toward the correction of the present unhealthy trend and go a long way to avoid the trap of passivity.

V. CONCLUSION

Probably the most distinctive characteristic of classical utopian designs is the basic "humanitarian" bent on their value structures . . . And perhaps the most notable difference to be found between the classical system designers and their contemporary counterparts (system engineers, data processing specialists, computer manufacturers, and system designers) consists precisely in the fact that the humanitarian bent has disappeared. The dominant value orientation of the utopian renaissance can best be described as "efficiency" rather than "humanitarianism." (Boguslaw, The New Utopians—A Study of System Design and Social Change 202 (Paper ed. 1965)).

If the foregoing discussion seems somewhat alarmist in tone, that is so because it is necessary to counteract the fact that "progress is a comfortable disease" (e.e. cummings, Selected Poems 89 (1959)) and the all too often complacent attitude of citizens toward the management of our affairs by occasionally myopic administrators in both the government and the private sector. The very real benefits conferred by effective governmental planning resulting from proper data collection and the application of computer technology may oplate our awareness of the price that may be paid in terms of personal freedom. It thus seems necessary to sound a klaxon to arouse a greater awareness that information is precipitating a realignment in the patterns of societal power and is becoming increasingly important to decision making in practically every significant governmental and nongovernmental institution. As society becomes more and more information oriented, the central issue that emerges to challenge our legal system is how to contain the excesses and channel the benefits of this new form of power. If we seriously believe that the concept of personal privacy is fundamental to our democratic tradition of individual autonomy and if we desire to insure its preservation, then the expenditure of some verbal horsepower on its behalf seems justified. I greatly appreciate this Subcommittee's providing me with a forum for unleashing my share of the necessary energy.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. ERVIN. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Robert C. Wagner, of Ohio, to be U.S. marshal for the northern district of Ohio for the term of 4 years, vice R. Ben Hosler.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Monday, July 7, 1969, any representations or objections they may wish to present concerning the above nomination, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

THE AWARD OF AN HONORARY DOCTOR OF LAWS DEGREE TO SENATOR WINSTON PROUTY, BY THE UNIVERSITY OF VERMONT

Mr. DIRKSEN. Mr. President, I have on many occasions risen to pay tribute to the distinguished Senator from Vermont (Mr. PROUTY). On other occasions, I have asked that others' tributes to Vermont's junior Senator be included in the RECORD.

Today I ask unanimous consent that the citation for Senator WINSTON PROUTY given on May 18, 1969, by Dr. Robert B. Huber, head of the department of speech at the University of Vermont, upon awarding of an honorary doctor of laws degree to Senator PROUTY by the university, be included in the RECORD.

Dr. Huber's citation briefly and eloquently describes the essence of Vermont's distinguished junior Senator, a modest man of great resourcefulness, energy, and dedication.

In particular I note for my distinguished colleagues the last paragraph of this citation:

This man has not been one to seek headlines or curry favor from voters. He has been too busy serving his fellowmen in Washington.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CITATION FOR WINSTON L. PROUTY

(By Dr. Robert B. Huber, May 18, 1969)

Mr. President, I have the honor to present our United States Senator, the Honorable Winston L. Prouty, for the degree of Doctor of Laws, *honoris causa*.

Winston L. Prouty was born and grew up in Newport, Vermont. After completing his education at Lafayette College, he started his adult life as a businessman. A career in public life beckoned, and the succession of offices held reveal the growing stature of the man. First he was an alderman, then mayor of Newport; then on to the Vermont House of Representatives, being elevated to the speakership during his third term. The next step was to Congress, four terms in the House and since 1958 in the Senate. His excellent work on the Foreign and Veterans Affairs Committees of the House was recognized by his appointment to the two-man study mission to the Middle East and twice being appointed to serve on the United States National Commission for United Nations Educational, Scientific and Cultural Organization.

His growing knowledge and expertness as a legislator has brought an ever increasing load as his fellow senators turn repeatedly to him for greater and greater contributions. Called upon, at first to serve on four major committees, the expanding number of subcommittees reveal his worth as evaluated by his fellow senators—subcommittees on education, on labor, on health, on employment, manpower, and poverty, on surface transportation, on aviation, on Merchant Marine and Fisheries, on employment and retirement income, on housing for the elderly, on health for the elderly, on retirement and on health, education, and public welfare for the citizens of the District of Columbia.

Senator Wayne Morse has said: "The most significant education bills . . . would not have been approved except for the fine and very valuable work done by the Senator from Vermont." Logan Wilson, President of the American Council on Education has likened him to Justice Morrill. Senator Proxmire has called him one of the most imaginative men in Congress.

The contributions of Senator Prouty are many. Getting aid for handicapped children, providing funds for elementary and secondary schools, co-authoring the Juvenile Delinquency Prevention and Control Act, helping to provide financing for higher education, encouraging businessmen to train and hire the unemployed, getting increases for the aged under social security, and author-

ing the study of the ghettos of Washington, are but a few.

This man has not been one to seek headlines or curry favor from voters. He has been too busy serving his fellowmen in Washington.

MAN ON THE MOON

Mr. ANDERSON. Mr. President, in the June issue of Redbook magazine, the eminent cultural anthropologist, Dr. Margaret Mead, in an article titled "Man on the Moon," writes about the importance of the space program. She says:

Today the deeply important thing is that the same set of inventions that is opening the universe to exploration also has made our world one, a bounded unit within which all human beings share the same hazards and have access to the same hopes. This is why I think the moon landing is a momentous event.

Dr. Mead discusses the questions that are usually asked about the space program. Why go to the moon? Why spend all the money on a space program while we have so many problems to solve here on earth? Can we not put the money to much better use, and so forth? She answers this by saying:

These are the wrong questions to be asking, I think. They are evidence, it seems to me, that we are suffering from a failure of the imagination, a failure of nerve, that psychiatrists are beginning to recognize as future shock.

Dr. Mead compares this to the anxieties of people who live in strange places among strangers and who lose their ability to take in new experience and she says:

In somewhat the same way many people are shrinking from the future and from participation in the movement toward a new, expanded reality. And like homesick travelers abroad, they are focusing their anxieties on home.

Dr. Mead views man's landing on the moon as a turning point in human history and draws a parallel between this event and the great era of world exploration of 500 years ago. She points out that certainly no one can foresee the final results of this epical step in human history. But Dr. Mead points out that to slow down the program and wait, to turn our attention solely to the problems here at home, would be fatal to our future. As she sees it and says it:

This new exploration—this work at the edge of human knowledge—is what will keep us human. It will keep us from turning backward toward ways of thinking and acting that have separated men from their full humanity.

A little further on, Dr. Mead says:

Humanity lies in man's urge to explore the world. It lies in man's unique drive to understand the nature of the universe within which he lives.

Continuing her discussion of the relationship between the space program and humanity, Dr. Mead points out that throughout the history of man, each stage of discovery has made man more aware of his human potentiality and consequently we must put our knowledge to the test. She points out that human potentialities not exercised, wither, fester, become malignant and are dangerous, and that a society that does not move forward, begins to die. Dr. Mead states:

The exploration of space does not mean neglect of the tremendously difficult problems of our immediate environment. It will mean, I think, the development of a new context within which we can look for viable solutions.

In the final paragraphs of her article, Dr. Mead discusses why the United States and the Soviet Union are successful in their space programs. She points out that the lunar landing will be a triumph in its own right. But that more importantly, it will demonstrate the inescapable connection between man's pursuit of his destiny and his attainment of his own humanity. Dr. Mead closes her article with the statement:

Voyages to the moon—and beyond the moon—are one assurance of our ability to live on the earth.

Mr. President, Dr. Mead in her article eloquently shows the connection between the space program and humanity. I urge all of my colleagues to read this important article but particularly those who often argue against the space program.

I ask unanimous consent to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAN ON THE MOON

(By Margaret Mead)

The day a man steps onto the surface of the moon, human beings will be taking a decisive step out of the past into a new reality.

Long ago our ancestors lived on very small islands of the known, scattered on an unknown planet. The whole of a universe could be encompassed in a hilltop and a valley, the steady stars, the wandering Pleiades and the waxing and waning moon. Mountain walls, vast plains, dark forests and the fringing seas cut off little groups of men from knowledge of what lay beyond their own familiar patch of earth, and the arching sky was accessible to them only in fantasy.

Today the deeply important thing is that the same set of inventions that is opening the universe to exploration also has made our world one, a bounded unit within which all human beings share the same hazards and have access to the same hopes. This is why I think the moon landing is a momentous event.

But as we wait for the astronaut to take that first step onto a part of the solar system that is not our earth, it seems to me that our vision is faltering. We have followed each stage of this venture into space. Through the camera's eye we have already looked down at barren stretches of moonscape and we have seen our own world, a small, shining globe in space. But as the first climax approaches, wonder at the unknown and a sense of the magnificence of the achievement are dimmed and tarnished by doubt and the feeling on the part of many people that "all this is meaningless to me."

The same questions have been asked for a decade. Why go to the moon? Why spend all that money on a space program that will change no one's daily life and solve none of the problems of human misery on earth? Can't we put the same money to much better use here? Why not put the earth in order before we take off into space? Who cares whether we or the Russians win this "race"? With the danger of nuclear warfare and the menace of uncontrolled population growth—both the outcome of modern science—confronting us, why should anyone get excited about one more technological success, the landing of a man on the moon?

These are the wrong questions to be asking, I think. They are evidence, it seems to me, that we are suffering from a failure of the imagination, a failure of nerve, that psychiatrists are beginning to recognize as *future shock*. It is well known that people who go to live in a strange place among strangers whose language and manners are incomprehensible often suffer from culture shock, a state of mind in which, alienated and homesick, they temporarily lose their ability to take in new exeprience. In somewhat the same way many people are shrinking from the future and from participation in the movement toward a new, expanded reality. And like homesick travelers abroad, they are focusing their anxieties on home.

The reasons are not far to seek. We are at a turning point in human history. What is required of us is not merely a change in our conceptions, but also in our sense of scale. The only parallel to the situation with which we are confronted lies 500 years in our past, just before the great era of world exploration.

In the 1420s, Prince Henry—an extraordinary technologist whom we only vaguely remember as "Henry the Navigator," brother of the king of Portugal—gathered around him a great company of scholars, astronomers, map makers, pilots, instrument makers and craftsmen in Sagres, on a lonely promontory reaching out into the unexplored Atlantic. They created a new science of navigation and invented a new kind of ship, the lateen-rigged caravel, which could make headway against the winds and was designed for long sea voyages. Up to that time ships navigated from island to island or from point to point, close to shore; where this was impossible, few men sailed intentionally.

For 40 years Prince Henry sent ship after ship into the Atlantic and down the coast of Africa, hoping to solve the "impossible" problem of circling the continent. His were not the first craft to reach the nearer islands or to attempt the African voyage or even to rove the open Atlantic. But the men who sailed the caravels were the first to study and plot systematically the winds and currents off the African coast and, eventually, on the open seas from the North to the South Atlantic. And it was from seamen trained in Sagres, only a few years after Prince Henry's death, that Columbus learned his seamanship.

Prince Henry and his company of scientists and technicians formed one of the small clusters of men whose work began the transformation of the world. They solved no immediate problems. The Moors, against whom Henry fought as a young man, still were a threat to Mediterranean Europe when he died. The Portuguese inventions made feasible long voyages of discovery, but no one knew what lay ahead. And certainly no one could foresee that the greatest innovation was the new approach to problem solution, which combined theory and the deliberate creation of a technology to carry out practical experiments. What Prince Henry and others of his time were first attempting systematically made possible a world in which people could believe in and work toward progress.

The parallel, of course, is an imperfect one. Where it breaks down most seriously is in the number of people involved. In the 15th century only a handful of men were aware of the tremendous breakthrough in knowledge. Today in an intercommunicating world, millions of people enter into the debate and are part of the decision-making process that will determine how we shall deal with the knowledge, the anxieties and the hopes that are part of this contemporary expansion of reality. And it is extraordinarily difficult for vast numbers of people to move simultaneously toward change.

We could slow down and wait. We could turn our attention to the problems that going to the moon certainly will not solve. We could hope that, given time, more men would become aware of new possibilities. But I think this would be fatal to our future.

As I see it, this new exploration—this work at the edge of human knowledge—is what will keep us human. It will keep us from turning backward toward ways of thinking and acting that have separated men from their full humanity. For humanity is not to be found by going back to some Golden Age when communities were small and the people living in them knew and trusted (but also, in reality, often bitterly hated and despised) one another. Humanity is not to be found in any kind of romantic retreat, in any denial of present reality, in any decision to rest within the known.

Humanity lies in man's urge to explore the world. It lies in man's unique drive to understand the nature of the universe within which he lives. It lies in man's capacity to question the known and imagine the unknown.

Step by difficult step men expanded the world they knew to include the whole of the planet and all men living on it. In the 17th century, men's conceptions of the universe was transformed by the telescope, which brought the moon and the stars nearer, and by the microscope, through which the once-in-decipherable nature of matter was made intelligible. Once men could count only the smallest collections of objects, and until our own generation the organization of vast assemblages of facts was an infinitely laborious task. Today the use of computers allows men to think about organized complexity on a scale entirely new. And now, finally, we are moving out from the earth as living beings, in the persons of the astronauts, to experience space with all our capacities, our wonder and thirst for understanding. For the first time we are exercising in full reality what has been truly called man's cosmic sense.

Each stage of discovery has enlarged not only men's understanding of the world, but also their awareness of human potentialities. So I believe we cannot stop now on the threshold of new experience. We must put our knowledge to the test. Human potentialities, unexercised, can wither and fester, can become malignant and dangerous. A society that no longer moves forward does not merely stagnate; it begins to die.

The exploration of space does not mean neglect of the tremendously difficult problems of our immediate environment. It will mean, I think, the development of a new context within which we can look for viable solutions. Up to now, our ideas about what can be done have been either utopian or essentially parochial, while the problems themselves affect the well-being of human beings everywhere.

It is no accident that the Soviet Union and the United States, the two largest organized modern states, have built and launched the first successful space craft, while the governments of the 180 millions of people in the Common Market countries of western Europe have continued to bicker divisively and ineffectually over which stage of a shared rocket should be built by whom and have been unable to find ways of co-ordinating their efforts. Nor is it an accident that these two countries are moving ahead so fast in changing and raising the level of education—though in this we still, by far, lead the world.

In part the success of the Soviet Union and the United States has resulted from the fact that these two countries have—and have been willing to commit—the resources in money and men and organization necessary for so large-scale an enterprise. In part it is owing to their orientation to the future. Soviet and American men and women have no monopoly on talent. But each of us, as a country, has been able to attain the precise and magnificent large-scale co-ordination of effort necessary for building space craft and for becoming pioneers in the space age.

The very thing that has made the space program successful, but also in the eyes of many people boring, is awareness of the crucial importance of detail. The rehearsals, the repetitiveness, the careful steps, the determination on absolute precautions and the participation of the citizenry in something that might, but must not, go wrong—all these things also are essential to the success of an enterprise on a new, unprecedented scale.

No country, as yet, has fully recognized the fact that the scale of our major human problems is not local or national but regional or world-wide. No country has realized that we must simultaneously include both extremes—the individual and all men—in working toward social solutions. Individual human dignity can be assured only when all men everywhere are accorded and accord to others their full humanity. National solutions are inadequate, as they are based in past conceptions of human differences, uneconomic uses of resources and barriers to communication that no longer exist.

We have yet to discover how to co-ordinate effort to solve social problems on the scale that will be necessary. This will mean, as it has in the space program, work with small models, new kinds of simulations and trials and intensive learning before we move into large new systems of organization with planetary repercussions. No more than the 15th-century men who opened the seas to exploration can we see what lies ahead. But unlike the early explorers, we have learned how to direct our efforts.

The lunar landing will be a triumph in its own right. But at the same time nothing can demonstrate more cogently, I feel, that there is an intimate and inescapable connection between man's pursuit of his destiny and his attainment of his own humanity than the intricate technological co-ordination combined with individual human courage that characterizes both the American and the Soviet space programs. There is no reason for alienation from experience that will enhance our common humanity. Voyages to the moon—and beyond the moon—are one assurance of our ability to live on the earth.

AIR SERVICE BETWEEN HAWAII AND THE MAINLAND

Mr. INOUYE. Mr. President, as we are all painfully aware, the institution of new and sorely needed air service between the mainland and Hawaii has again been delayed. The inconvenience to the traveling public is enormous. The adverse economic impact upon the State of Hawaii is worsening with each day new service is postponed. The constant delay and postponement of a final decision in the transpacific case is conspicuously not in the public interest.

I testified at the Civil Aeronautics Board hearings in Hawaii on February 15, 1967, as to the pressing needs then for new and expanded Pacific air service. On February 7, 1969, I again publicly urged in this chamber that "the badly needed and overdue competitive service" be permitted to go into effect.

It has been over 6 months since the initial decision by the Civil Aeronautics Board. The public and my constituents in particular are entitled to know the cause of the most recent delay.

The President, on April 11, requested the Civil Aeronautics Board, the agency in which Congress has vested both the statutory responsibility for and the expertise to deal with the establishment of specific routes and selection of carriers, to recommend to him a South Pacific route serving midwest and east coast mainland points and to select a carrier to operate such a route. The CAB undertook this additional chore and expeditiously conducted an appropriate proceeding.

Press reports last week indicate that its recommendation has been submitted to the President. Unfortunately, the administration has not acted to date despite the fact we are in the height of the Hawaiian tourist season. Meanwhile, there are thousands of tourists who are unable to travel to Hawaii because there are no seats available from the carriers presently serving Hawaii.

In the interest of my State and the thousands of Americans whose summer vacation plans are being frustrated, I urge the President to reach a decision in this case quickly to minimize the inconvenience and economic damage that is occurring daily.

FINAL REPORT OF THE JOINT COMMISSION ON THE MENTAL HEALTH OF CHILDREN

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the Senator from Connecticut (Mr. RIBICOFF) regarding the final report of the Joint Commission on the Mental Health of Children.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FINAL REPORT OF THE JOINT COMMISSION ON THE MENTAL HEALTH OF CHILDREN

Mr. RIBICOFF. Mr. President, 3 years ago, the Congress established the Joint Commission on the Mental Health of Children.

The Commission was charged with assessing the care this nation provides for emotionally disturbed children.

It also was intructed to study our ability to diagnose and prevent emotional illness in children.

Today, the Commission is making its report to Congress, according to the provisions of the law establishing the Commission.

Its findings are shocking.

They disclose a pattern of neglect with regard to the emotionally disturbed child.

The Commission found that in the four decades since the 1930 White House Conference on Child Health and Protection, "the care of the emotionally disturbed child in this country has not improved—it has worsened considerably."

And the Commission concludes:

"It is an undeniable fact that there is not a single community in this country which provides an acceptable standard for its mentally ill children, running a spectrum from early therapeutic intervention to social restoration in the home, the school and in the community."

What are the facts behind this statement? Why did the Commission draw up this indictment?

According to its data, there were 1.4 million children under 18 who needed psychiatric care in 1966. But only one third—or 400,000 children—received care. Nearly one million did not.

Present data also indicates that there are 27,000 children under 18 in state and county mental hospitals, many of which lack people trained in child psychiatry and related disciplines. By next year, the number of children aged 10 to 14 hospitalized in these institutions will have doubled.

In fact, thousands of the elderly patients confined to the back wards of these institutions were first admitted as children, 30, 40 and 50 years ago.

One state told the Commission that one in every four children admitted to its mental hospitals "can anticipate being permanently hospitalized for the next 50 years."

Thus, the Clinical Committee of the Commission, after a two-year study, said the following about the hospitalization of emotionally disturbed children:

"The admission of teen-agers to the state hospitals has risen something like 150 percent in the last decade. . . . Instead of being helped, the vast majority are the worse for the experience."

What about these youngsters who escape what the Commission has called "the state institution treadmill?" Their story is one of expensive private, residential treatment centers or none at all. For every child admitted to a private facility 10 are turned away because of lack of space.

Eight states, according to the Commission, had no facilities, either public or private. Many states had no public units for children from low and middle income families.

Summing up, the Clinical Committee said:

"As of today, the treatment of the mentally ill child in America is uncertain, variable and inadequate. This is true on all levels, rich and poor, rural and urban . . . only a fraction of our young people get the help they need at the time they need it."

In addition to its concern for the sick child, the Commission also was concerned about the development of healthy children.

This is an important point.

We must have the facilities and skills to treat the emotionally disturbed child. But we also must develop and support those conditions that contribute to healthy growth.

This means we must use our common sense and good judgment.

For example, we know it is not healthy for children to live in poverty or to be the victims of discrimination, regardless of whether this contributes to or causes mental illness.

We know this because we would not permit our own children to grow up in such an environment.

If we would protect our own children from the effects of poverty and discrimination, then we have a responsibility to remove poverty and discrimination from the lives of other children.

And we should ask why a society permits such conditions to continue for so long.

In general terms, the report of the National Commission on the Mental Health of Children has presented the nation with two basic challenges.

One is the challenge of providing high quality, comprehensive, systematic care for children who are emotionally disturbed, retarded or handicapped.

The other is the challenge of undertaking major social reforms that will significantly improve the living conditions of millions of youngsters—reforms in housing, health, nutrition, employment, welfare and education.

Both require that we re-think our current programs for children and the assumptions that underly them.

The Commission has made many recommendations. They will stimulate considerable debate. This is as it should be.

The major recommendations of the Report is the establishment of 100 Child Development Councils throughout the nation during the next several years.

The Councils would act as advocates in behalf of children and seek to insure that proper care and services were available. They would not be responsible for providing care directly.

As I have said earlier, I will introduce legislation to implement this recommendation. But I would limit the initial scope of the program to five pilot projects—instead of 100—and conduct them in communities with proven potential in the field of mental health care for children.

It makes more sense to set up a small number of councils first, watch them closely, see what works and what fails, and then begin applying proven principles of mental health care on a more widespread basis.

In all this, we must avoid the temptation to impose our will upon the lives of others because we think we know what is best for them.

We should be zealous in our effort to permit both children and families to call upon their basic strengths and to find for themselves those living patterns that will give them the greatest satisfaction and happiness.

Whatever programs or institutions we devise must support this fundamental principle.

And finally, let us remember—particularly with regard to poverty—that programs for children are not in themselves a complete response. Concern about child development inevitably must lead to a concern about adult opportunity. Otherwise, what shall be the next step for the healthy child?

I welcome the report of the National Commission on the Mental Health of Children.

It is comprehensive and provocative.

I especially commend to everyone its charge that we become advocates—not advocates in behalf of any single program, profession, bureaucracy or theory—but advocates of healthy children and a healthy society.

A NEW CHAMPION OF THE CONSERVATIONISTS

Mr. DOLE. Mr. President, there has never been a time in the history of our Nation when there has been greater interest in preservation and development of publicly owned wildlife areas. The conservation movement has taken on new vigor and meaning in recent years.

In Secretary of the Interior, Walter J. Hickel, the Nation, and particularly the conservationists, have a true friend and champion. He is demonstrating with positive action that the benefits of recreation shall be made more accessible to all.

I ask unanimous consent that an editorial "Hickel Begins To Sound Like A Conservationist" appearing in the June 29, 1969, issue of the Kansas City Star which outlines some of Secretary Hickel's views in this regard be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HICKEL BEGINS TO SOUND LIKE A CONSERVATIONIST

Although it is far too early to label the secretary of the Interior, Walter J. Hickel, an ardent conservationist or a latter-day John Muir, he is beginning to emerge as a reasonable and practical man. Perhaps the new secretary is an adept student at on-the-job training. Or maybe his statements on parks and conservation, made while governor of Alaska, did not reflect his general thinking.

Either way, we will leave the speculation to others. However, in his first major policy statement as head of the vast Interior department, Secretary Hickel talked sense. Now if his stated views on recreation and parks are backed up with effective action, the doubts which surrounded his appointment should be quickly dispelled.

Hickel's policy guidelines contain many worth-while points. In general terms they add up to an extension of the programs put into effect by his predecessor, Stewart L. Udall, who developed into one of the strongest men ever to hold the interior post. Before Hickel took office it was feared that he might reverse many Udall decisions. If that had occurred, the future of the conservation movement in this country would have been placed in extreme jeopardy.

Why the doubts? As governor of the 49th state, he was a strong advocate of releasing federal lands for private development, including logging, mining and settlement. At one point, he declared that he was against conservation for conservation's sake, which was interpreted to mean he opposed the wilderness act and other federal programs to set aside huge areas of public lands in their natural state.

During the stormy testimony before the Senate Interior committee, which preceded his confirmation, the former governor clarified his position. His responsibilities and public trust, he said, would be much different in Washington from the obligations he had as chief executive of a wilderness state. The Senate committee bought that explanation and now Hickel has made his first important move to deliver on that national commitment.

Instead of endorsing a more relaxed use of public lands, Hickel re-emphasized the need to acquire more parks and playgrounds while their is still vacant space available.

"Time is of the essence in formulating an action program," he pointed out. "Opportunities are being lost daily to acquire such lands. Once lost, these opportunities can seldom be retrieved."

We could not agree more. This once vast, undeveloped continent is now the home of more than 200 million people. Before the end of the century, there probably will be 300 million Americans. The virgin countryside, which once stretched from ocean to ocean, is now dwindling at a rate of about 1 million acres a year, as forests and fields and hillsides give way to shopping centers, subdivisions and superhighways.

Hickel emphasized the need for more parks near the large urban areas where land is rapidly running out. Take Greater Kansas City as an example. Twenty years ago Lee's Summit, Lenexa and Liberty were sleepy communities out in the country. Today the metropolitan area has grown out beyond those once-small towns. The growth pattern here has been multiplied many times over along the Eastern seaboard, around Chicago and in California.

Two long-range guidelines carry particular appeal. Hickel called for an international parks and recreation plan that would encompass all of North America. His target date is 1972. Last year alone Americans made 35 million visits to Canada. It would be logical for the two nations to pool their resources and plans to work out a comprehensive blueprint for the future.

Hickel also complained that too many motor cars are "impairing the quality of the park experience." Before any new roads are built, he directed the National Park service to study the feasibility of using busses or even mass transit to move people inside the playgrounds.

On a holiday weekend, cars line up bumper to bumper along the Blue Ridge parkway. During the first three days of July, 1967, more than 20,000 vehicles passed through the gates of Yosemite. Many of the 69,586 park visitors in that hectic interval probably have a more vivid memory of the massive traffic jam that developed than of the natural splendor of the valley. As park attendance continues to soar, some alternative to the private motor car must be found, or the playgrounds will become little more than giant parking lots, connected by roads.

In passing, Secretary Hickel advanced many other sound ideas. If he is now able to translate these guidelines into effective

programs, what at first flush appeared to be an unfortunate appointment could prove to be an outstanding one.

ENVIRONMENTAL QUALITY

Mr. NELSON. Mr. President, a recent article in the Milwaukee Journal has a headline which describes a situation that until now has always seemed to be more a hope than a reality. The headline says: "Progress, Yes; Pollution, No." What follows that is a well-written report on the insistence of two States, Oregon and Washington, that a good environment and good business can and must be compatible. The article points out that even with strict pollution controls, officials in both States are confident they are getting their share of new industry. It can be done, and when the approaches of States like these are generally accepted by public officials and industries across the country, it will be.

I ask unanimous consent that this excellent article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROGRESS, YES; POLLUTION, NO

(By Paul E. Steiger)

Which do you prefer: The booming prosperity of rapid industrialization, or the exhilarating pleasures of a pollution free environment? The Pacific northwest is trying to have it both ways.

The states of Oregon and Washington—both on the threshold of economic diversification—are defying traditional rules of industrial recruiting. They're demanding that incoming companies take great care not to impair their region's natural beauty or soil its air and water. They are turning away companies that don't measure up.

Can these states attract new industry despite competition from areas less dedicated to resource protection? Gov. Daniel J. Evans of Washington, for one, insists they can.

"I'm confident we can enhance both our natural resources and our industrial base," he says.

BLOCK NEW PLANTS

In the northwest, of course, protecting the environment is no longer a matter of choice. "For a number of years, I've been classified as a 'bird watcher' by some irreverent souls in our state," says conservation minded Evans. "Well, there's no question that we bird watchers have become the majority here now."

In recent years, residents of Washington's Puget sound region blocked two huge new plants because the locations were close to residential areas.

In Oregon, the resource protection stance is, if anything, stiffer. In the last few years, the state has sharply beefed up its enforcement machinery.

"What we're projecting, I'm afraid, is inhospitality," says the state's governor, Tom McCall. He added that he would rather see Oregon lose a new plant than accept a decrease in "livability" for local residents.

PLANTS STILL COME IN

He contends, however, that ultimately the policy will enhance Oregon's attractiveness as other places go downhill.

Working against this fierce backdrop, just how well have industrial recruiters in these states been succeeding? Talks with numerous businessmen and government officials in the region suggest that the northwest is doing pretty well.

For one thing, the region's concern to protect its life style appears to be helping it draw more than its share of "white glove" industries like rare metals research and electronics. These industries usually generate little or no pollution.

THINK CONTROLS COMING

But these states are also attracting companies in pollution prone industries—for several reasons:

The cost of strict pollution control can be compensated for by the region's economic advantages.

The two states are using tax incentives and statewide planning to draw the interest of industrial development experts from across the country.

There's a growing conviction among businessmen around the country that stiff pollution control rules are coming everywhere.

There's no clear cut statistical evidence demonstrating the extent to which the northwest is succeeding.

While Washington, for example, has enjoyed close to the highest yearly increase in per capita personal income in the nation for the last few years, this could be attributed in part to unusual strength in the two industries that have long underpinned the state's economy—aerospace and wood products.

CONFIDENT OF SHARE

And while government officials in both states can revel in a handsome array of new companies or new plants that have come in, they can't be sure just how much the pollution issue may have held down the total.

Still, the officials in both states are confident they're getting their share of new industry.

To ease the burden of installing the strongest possible pollution control systems for incoming companies, the Pacific northwest states are relying heavily on tax incentives.

Washington, for example, allows companies to credit 2% a year of the cost of putting in new antipollution equipment against their business and occupation taxes, for up to 25 years. The equipment must be better than the minimum required by state law; and it must be installed by June 30, 1971.

Oregon has a similar law providing annual tax credits until 1977.

RED TAPE IS CUT

Another way these states are helping incoming firms is by having state industrial recruiters work closely with pollution control officials. Company representatives are put immediately in touch with officials who can cut through the red tape that sometimes surrounds resource protection regulations and tell them precisely which requirements are relevant to their planned facility.

To aid and decide what sort of industries should go where, the Washington department of commerce and economic development is inventorying possible plant sites throughout the state.

Meanwhile, a special task force is trying to project the demands for water in each of the river basins in the Puget sound region, where most of the state's population is centered, through the year 2020. Another group is studying future land needs for recreation.

PREPARE FOR ZONING

The purpose of such studies, of course, is to help develop some sort of statewide zoning plan which takes into account the urban, suburban and rural forces in a state and seeks to match projected demands against the region's resource base.

In Oregon, which is working on a 20 year master growth plan, the legislature this spring passed a bill setting up such a zoning plan.

The plan becomes fully effective by 1972. It sets tough controls on land use throughout the state. It organizes the state's 36 counties into 14 districts, and requires district wide planning to be co-ordinated through district planning councils.

CAMPUS DISORDERS

Mr. METCALF. Mr. President, one of the urgent issues before this Congress and this Nation is campus disorders. One of the most pressing needs regarding that issue is for accurate information about the disorders, their causes, the identity of those who participate, their grievances, and how the disorders are handled by the university administrators.

A call that we have heard across the country is that colleges have, so far, been soft on the demonstrators. At this point, I commend to the attention of my colleagues an article that appeared recently in the Los Angeles Times, written by Times reporters John Kendall and George Kannar, that shows that not all college administrators have been soft on demonstrators. It is an important point to remember should this body be called upon later to consider legislation affecting Federal aid to higher education.

Mr. President, I ask unanimous consent to enter into the RECORD a complete text of the article.

There being no objection, the article is ordered to be printed in the RECORD, as follows:

[From the Los Angeles Times, June 23, 1969]

DISCIPLINING ON CAMPUS TOUGHER THAN BELIEVED—COLLEGES HAVE BEEN FAR FROM SOFT IN DEALING WITH SOME DISSIDENT STUDENTS

(By John Kendall and George Kannar)

From the cradle of the student movement, UC Berkeley, to the nation's oldest university, Harvard, scores of campus disturbances this school year have prompted the question:

"Why don't they just throw the troublemakers out?"

The question implies an easy answer: get tough. The implication is that nothing is being done.

But the fact is, universities and colleges have disciplined scores, probably hundreds, with more than clucks of disapproval and slaps on the wrist. During the last school year, for example:

UC Berkeley dismissed 15, suspended 35, placed 160 on disciplinary probation in three disturbances and collected some $20,000 in fines for property damage. Those totals do not include possible action against 272 students involved in the "people's park" incident.

HARVARD TAKES ACTION

Harvard dismissed 3, "separated" 13 for periods up to two years, placed 20 on probation and warned 99 against future misconduct after 400 policemen were called to clear University Hall of protesters.

Stanford University suspended 14, placed 77 on probation and levied fines totaling $5,425 after demonstrators disrupted the Jan. 14 board of trustees meeting and occupied Encina Hall on May 1.

University of Chicago expelled 43 and suspended 81 for periods up to six quarters for a two-week building sit-in and an invasion of the Faculty Club. Police were never called.

Dartmouth obtained a court order to clear a seized building. When it was violated, 40 undergraduates were arrested by police. Thirty-six of them were sentenced to 30 days in jail. Campus disciplinary hearings were under way at the end of the school term.

FORTY-TWO SUSPENDED AT OCCIDENTAL

Occidental College suspended 42 students for the remainder of the spring term after they sat in the placement office to protest on-campus military recruiting.

San Francisco State College expelled 1,

suspended 27, placed 10 on probation and issued letters of reprimand to 97 students in a tumultuous period marked by repeated use of police on campus.

San Fernando Valley State College placed 46 students on disciplinary probation after the takeover of the upper floors of the Administration Building Nov. 4. The college has reserved the right to review the cases of 27 of the students waiting trial on felony charges.

Expulsion, dismissal or suspension may seem minor to angry citizens. But to a student who may lose his 2–S draft status or financial support, or who may fail to graduate, these are not small matters.

What's happening at UC Berkeley illustrates the effectiveness of university discipline, in the opinion of Chancellor Roger W. Heyns.

He told the Comstock Club in Sacramento recently that in the past two years "only 32" of more than 350 disciplined students have committed a second violation and five have committed a third.

Heyns said the impression that UC Berkeley ignores discipline and enforcement of rules among its students is a "myth" which survives outside the campus.

In the four years prior to 1969, the chancellor reported, more than 350 Cal students were disciplined for rules violations, not including what he termed "beer, sex and cheating" cases. (There have been only two of this traditional type at Berkeley since Jan. 1.)

Today political activity is the principal reason for rule-breaking, not panty raids, and just as the reasons have changed, so have the university's methods in dealing with violators.

Going—if not gone—are the days when the dean of students handled each discipline case like a parent, judging the student informally with a minimum of rules.

BECOME SPECIFIC

Lately, rules have proliferated along with statements of the rights and responsibilities of students. Instead of vague commands against misbehavior, many colleges and universities have become specific in spelling out offenses, punishment and procedures.

Last month, the Board of Trustees of the California state college system amended general rules which said any student may be placed on probation, suspended or expelled for:

A—Disorderly, unethical, vicious or immoral conduct.

B—Misuse, abuse, theft or destruction of state property.

New rules list cheating, forgery, misrepresentation, obstruction or disruption, physical abuse, theft, unauthorized entry, sale or possession of dangerous drugs, possession or use of explosives or deadly weapons, lewd or indecent behavior and soliciting others to do an unlawful act.

The new regulations define "deadly weapon" as "any instrument or weapon of the kind commonly known as a blackjack, slingshot, billy, sandclub, sandbag, metal knuckles, any dirk, dagger, switchblade knife, pistol, revolver, or any other firearm, any knife having a blade longer than five inches, any razor with an unguarded blade, and any metal pipe or bar used or intended to be used as a club."

As the rules become specific and as the number and types of offenses increase, the procedure for dealing with violators becomes more legalistic, taking on the appearance of an adversary proceeding—a trial.

Changes in the students themselves help foster the trend toward legalization.

Increasingly distrustful of what they think is secrecy and behind-the-scenes maneuvering, many students demand that everything must be conducted in the open. Many want the procedures written down so they know how to defend themselves against charges.

But "openness" itself has a positive value for some of them. At Yale University, for example, "open decision-making" is one of the most appealing revolutionary rallying cries. Opening the disciplinary procedures somehow seems to lead almost inevitably to regularizing them, and eventually making them more formal and legalistic.

At UC Berkeley, regulations issued more than a year ago guarantee due process for the accused student, including right of counsel at an impartial hearing, safeguards against self-incrimination and an adequate summary of the hearing.

To William Van Alstyne, general counsel of the American Assn. of University Professors, the system becomes "more judicious" as it becomes "more judicial."

But not everyone agrees that legalism is good. State College Chancellor Glenn S. Dumke doesn't.

PROCESS COLLAPSES

"There is . . . a very real danger that student discipline on university campuses is being jeopardized by the imposition of administrative injunctions, providing attorneys for the prosecution and for the defense, the use of legal rather than academic vocabularies, etc.," Dumke said in a recent speech.

"Not only can such judicial trappings provide a false impression of due process, but they can seriously slow down that process to a point where it simply becomes inoperative."

At San Francisco State College, one of Dumke's administrative headaches during this school year, the usual disciplinary process collapsed when the student body president refused to appoint student members to a student-faculty committee.

Emergency procedures were invoked by acting President S. I. Hayakawa. He appointed an associate as the coordinator for internal affairs, charged with gathering information about violations and conducting hearings before panels of volunteer faculty members.

"We've sort of staggered along as best we could under tremendous handicaps," says a college spokesman. "We have tried to make it a fair system although it has not been satisfactory."

This fall San Francisco State administrators plan to use the same emergency system, unless the Academic Senate approves a new one.

At UC Berkeley, a new judicial system was proposed by a student-faculty Study Commission on University Governance. In a report, issued last year, the group said:

"We, too, share the nostalgia for a community whose limited size and shared purpose permit it to dispense with rules and procedures. Reality compels the admission that such a community does not resemble the Berkeley of 1968."

The commission proposed that the central adjudicatory function of the university community should fall to a faculty-student Conduct Court, divided into a preliminary hearing division and trial division. The planners foresaw the occasional need for a campus review court.

They called for formation of a legal services board, an agency composed of law-trained faculty members and students. The board would prepare cases, supply advisors to students brought before the courts and assist the courts in resolving legal issues.

The commission's stated objective was to provide for a judiciary independent of executive or prosecution functions and to create judicial and rule-making machinery which is broadly representative of all campus interests.

RULES COORDINATOR

So far, nothing has been done about the recommendations.

With one exception, UC Berkeley's disciplinary machinery remained largely the same through the university's recent troubles. A difference is the appointment of a coordinator of rules and facilities, separate from Dean of Students Arleigh Williams' office, whose task is to initiate cases according to the time, place and manner of rules infractions.

Cases which Dean Williams thinks are serious enough are heard by the Committee on Student Conduct, composed of five faculty and four student members.

Williams admits that the volume of cases has had a "serious impact" on the university's disciplinary machinery, but he says the Committee on Student Conduct continues "to meet the calendar."

"I feel our system is fair and a very wise system," he says. "I think it has handled discipline in a very capable manner. It it not lenient, nor is it repressive. It is a system that is able to provide proper justice for persons accused of violating the rules."

Not so, says Charles Palmer, UC Berkeley's student body president this year.

"I think there are tremendous problems here," he says. "Many of the structures are irrelevant. Discipline often appears arbitrary and not terribly consistent. Lots of people are tried for what they couldn't be tried for in court. It has become a political thing. Some people are disciplined and some are not."

In Palmer's opinion, the system is not representative. He says it is run by faculty members appointed by the chancellor and by students who are "not our peers."

Palmer's view is strikingly different from that of Pat Shea, a member of the Council of Presidents at neighboring Stanford.

"I think Stanford has made tremendous steps in community government and community respect for its own laws," the political science major said.

Stanford's new president, Kenneth S. Pitzer, agrees.

At his recent inauguration, Pitzer said the university's new system is intact but "seriously overburdened." But, he said, "We are gaining, rather than losing in this area. I hope for further progress next year.

"We are moving forward in rebuilding the understanding and confidence among the constituencies at Stanford."

Stanford has attempted to involve the entire campus community in determining what constitutes a community disruption, then engage each element further in solving the problem and applying disciplinary measures.

To accomplish this, a Committee of 15 last year recommended a new legislative and judicial charter.

The charter, approved by faculty, students and administration members, places primary responsibility for enforcing campus rules in the Stanford Judicial Council, composed of four students and five faculty members.

Two other new groups were formed: a 65-member Academic Senate, small enough to discuss major topics, and a five-member Faculty Consultative Group for Campus Disruptions to provide a continuous link with the faculty during crises.

Then, last fall, acting President Robert J. Glaser promulgated a new policy on campus disruptions. Generally, it makes it a violation of university regulations for a faculty member, staff member or student to prevent or disrupt normal university functions or obstruct the legitimate movements of individuals on campus.

The policy was approved by the student legislature and Academic Senate.

Thus, by the end of 1968, Stanford faced the new year with a policy on disruption, a community-approved judicial process to enforce that policy and new means for student-faculty participation.

How well the new system worked is pointed out in a recent report by Gerald Gunther, a

nationally prominent professor of constitutional law at Stanford and a member of the university's Faculty Consultative Group.

NEW MACHINERY

Gunther recalled that in May, 1968, students occupied the Old Student Union building to gain amnesty for seven students disciplined for attempting to disrupt CIA recruiting. Subsequently, the Academic Council voted in favor of amnesty for students involved both in the original disruption and the sit-in.

Last month—a year later—when students occupied Encina Hall the new machinery began to work. Within an hour of the 1 a.m. occupation, the Dean of Students and 15 faculty members had entered the building to certify that a disruption existed and to ask demonstrators both to leave and to identify themselves. Identification was begun, and after consultation with the Faculty Consultative Group, a decision was made to call police.

At 7:30 a.m. more than 100 Santa Clara County sheriff's deputies arrived. As previously planned, faculty members entered the building with each arrest team.

Their purpose, according to Gunther, was to encourage students to leave, to prevent fear of police attack, to prevent misunderstanding afterward concerning what happened and "to give pause to those demonstrators who had hoped to follow the policy of radicalizing more students by provoking actual or apparent police brutality."

The sit-in protestors chose to leave Encina Hall voluntarily. Seventy-eight demonstrators were identified and placed on immediate temporary suspension and Stanford obtained a court order to restrain further disruptions.

The Judicial Council has recommended, and President Pitzer approved, suspension for 14 of the demonstrators and probation for 48 others. The suspensions are the first such mass penalty at Stanford in more than 20 years.

ACTION ENDORSED

The day after the Encina Hall sit-in the Academic Council virtually unanimously endorsed the action of Pitzer and the provost.

Gunther says it would be "utter foolishness" to imply that Stanford has arrived at permanent campus peace.

"But," he says, "the important thing to see is that the administrative methods used and the attitudes of the Stanford community have undergone fundamental and pervasive changes.

"While no one is happy with the resort to police force—least of all the president and provost—the contrast in community support with the earlier sit-in and with results of many other campuses is marked.

"The university has learned new and more effective procedures for dealing with disruptions and the university community, while far from united on the issue, has worked together in enforcing its policy."

Van Alstyne of the American Assn. of University Professors, who recently taught at Stanford, says he knows of no other institution that "has done as much as Stanford to make its internal processes work."

He estimates, however, that perhaps a hundred universities and colleges have revised or are revising their disciplinary procedures because the volume and gravity of student disruptions have disclosed the weakness and arbitrariness of their machinery.

One school, Cornell University in Ithaca, N.Y., found its traditional disciplinary procedure painfully inadequate this year. In fact, the issue at Cornell which prompted disruptive student action was the disciplinary system itself.

In April black students, armed with shotguns, occupied an administration building to protest alleged arbitrariness of Cornell's all-white disciplinary structure, which had just recommended punishment for five black students involved in an earlier incident.

James Perkins, Cornell's president, agreed to drop the charges if the students would leave the occupied building peacefully. They did, but two days later the faculty repudiated Perkins' compromise and continued proceedings against the five students.

Two days later, with the specter of armed violence hanging over the campus, and with a member of the Black Students Union declaring over national television that "Cornell University has just three hours to live," the faculty changed its mind and stopped proceedings against the students.

In the end, no one was punished for anything by the university, although a handful of white SDS members face civil trespassing charges.

Cornell has decided not to discipline its students until it has a comprehensive plan for revision of the disciplinary system. A special committee set up to study the problem is expected to release its report soon. Meanwhile, only routine "beer, sex and cheating" cases are being handled.

At Harvard, the Faculty of Arts and Science approved the university's recent penalties for seizure of University Hall by a 342 to 29 vote, and adopted a resolution which said:

"We recognize the need to formulate, in the near future, a document that will emerge from the widest discussion within and will reflect a wide consensus of all members of the Harvard Community.

"This statement shall apply equally to students, to officers of instruction and to officers of administration."

In an interim statement, the Faculty of Arts and Science listed activities regarded as incompatible with the purpose of the academic community. They included:

—Violence against any member or guest of the university community.

—Deliberate interference with academic freedom and freedom of speech (including not only disruptions of a class but also interference with the freedom of any speaker invited by any section of the university community to express his views).

—Theft or willful destruction of university property or of the property of members of the university.

The faculty members recommended appropriate discipline, including expulsion, dismissal, separation or requirements to withdraw.

Dartmouth has taken a similar approach during the past 18 months to establish college guidelines by community consensus.

If any campus communities are reluctant to deal with disciplinary problems, there are plenty of legislators from the state capitols to Washington, D.C., to prompt action.

Colorado has a new law providing penalties of up to $500 in fines and jail sentences up to a year, or both, for anyone interfering with the normal functioning of a college or university.

Ohio requires colleges and universities receiving state support funds to adopt regulations for the conduct of students, faculty members, staff members and visitors.

Between 80 and 100 proposals to deal with campus disturbances were introduced this session in the California Legislature.

Knowledgeable observers expect the proposals will be winnowed to two compromise bills—one dealing with changes in the penal code and one with the education code.

Perhaps the most striking provision in the penal code bill may be a proposal requiring a 10-day mandatory jail sentence for the second conviction of an unlawful act during a campus disturbance. A third conviction would bring a mandatory 90-day jail term.

TRIBUTE TO HUGH B. TERRY

Mr. DOMINICK. Mr. President, there are many persons in our country who perform a great service to the community in which they live, as well as to society in general. Hugh B. Terry is one of these persons. I have known Hugh Terry for over 20 years and words cannot express the contribution that he has made, and will continue to make, to his associates and community. Hugh Terry is a modest man. Not only does he avoid seeking the limelight, but he passes off his accomplishments as the results of his colleagues. He has done a great service for Denver and for the broadcasting industry. On June 22, he received some well deserved recognition in an article in the Rocky Mountain News.

I ask unanimous consent that the full text of that article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUGH B. TERRY INSPIRES SUPERLATIVES

(By Cecil Jones)

A prophet is most without honor in his own country, goes an old maxim, and perhaps too few people in Denver are aware that on the fifth floor of the new KLZ building are the offices of one of the most respected broadcasting executives in the world.

One reason why the name of Hugh B. Terry is not on everybody's lips is that when a radio or TV station consistently does a good job of entertaining and informing the public, people couldn't care less who's running the show.

But if you're making it your business to find out about the president and general manager of Times-Life Broadcast, Inc., of Denver (KLZ-AM-FM-TV), then you discover another reason why the name Terry is a byword with people like the chairman of the Federal Communications Commission (FCC) if not with Denver TV viewers.

Terry is a modest man who is reticent to talk about his own achievements. Almost infallibly he manages to steer conversation away from his life to any other topic that happens to be viable at the moment. This makes for fascinating dialogue, for Terry is a charming conversationalist, but it is a nightmare for a journalist trying to put the story of a man's life into order.

The facts begin to fall into place, however, when one reads Terry's biography (which he describes as "oververbose") and places a few phone calls to places like New York, Washington, D.C. and—last in line but first in the saga of Hugh Terry—Alexandria, Nebr. The story is a real embodiment of the Horatio Alger myth, beginning in a small town on the Great Plains and terminating, for the present, at least, in the futuristic new KLZ building at Speer Boulevard and Lincoln Street.

VIVIDLY RECALLS EPISODES

Hugh B. Terry was born almost 61 years ago in Alexandria, Nebr., the son of a druggist in a town whose population, according to the present mayor, still hovers "around 300." A wonderful repository of information about Terry's boyhood years is Gerald Joe, now the town grocer, who vividly recalls episodes that probably passed from Terry's memory long ago.

The Terrys were a comfortable, well-liked family—the kind of people, according to Joe, that "you can't say too much about." Hugh and his older brother Norman were handsome lads, good athletes and smart dressers who set the style for the other boys. The whole family was active in the Baptist Church in Alexandria.

Dan L. Terry was a member of the town council and a 33rd degree Mason, a soft-spoken man who nevertheless would tolerate no foolishness in his sons.

Mrs. Jennie Terry was a warm, friendly person whom Gerald Joe and all the kids called "Aunty Terry."

The Terry residence, a "large, nice house" now occupied by the town marshal, was one of three houses on a street just a block off Main Street. Gerald Joe lived across from the Terrys. The boys were separated by four years, Joe being the junior and Terry his "boyhood hero."

Among the experiences Joe loves to recall are the "barn plays," wild west fantasies performed in an old barn by the neighborhood kids to no audience at all, but written, directed and cast by Hugh B. Terry.

No one knew that Terry would some day command legions of people, but the young director showed unmistakable talent for getting kids to do things and be glad they were doing it. Indeed, by meshing remarks made by Terry's present staff at KLZ with Joe's testimony, one can see that at an early age Terry revealed the same ability to understand and manage people that has made him so successful at KLZ.

The middle phase of Terry's history, wherein if things had gone just a little bit differently he might well have been a top newspaper or advertising executive today, reads like a classic success story.

JOINED ADVERTISING FIRM

After graduating from the University of Missouri in 1930 with a B.A. in journalism and serving along the way as president of his class and of Sigma Mu fraternity, Terry joined an advertising firm in St. Louis. It was two years later, at the height of the depression, that a friend made a suggestion which completely altered the course of his life.

By that time Terry was married to the former Elizabeth Lardner of Omaha, who never finished her schooling at Stephens College in Columbia, Mo., because, as her husband puts it, "I pulled her out of there and married her." His salary was $67.50 a month—"not very much for a married man."

The suggestion was that Terry join the staff of a radio station. "The station needed a salesman and I needed a job," according to Terry, so with no training in salesmanship or broadcasting he struck out on an uncharted course that took him first to WKY in Oklahoma City, then, in 1936, to Colorado Springs as station manager of KVOR, and finally in 1941 to Denver, where he took over as manager of KLZ radio.

The rest is modern history.

In the modern phase of the life of Hugh B. Terry the focus shifts from the high school hero who threw the pass that brought laurels to his hometown to a broadcasting executive who pilots a communications empire that stretches all the way to San Diego, Calif.

If one enjoys thinking in symbols, the growth of that empire may be capsuled by imagining the cramped quarters at KLZ radio in the old Shirley Savoy hotel when Terry took over in comparison with the impressive octagonal structure in Colorado redstone that now stands on Speer Boulevard.

KLZ in 1941 was the property of the Oklahoma Publishing Co., the firm which originally hired Terry as a salesman in 1932. In April, 1949, the station was sold to Aladdin Radio and Television, Inc., in which Terry was part owner.

WAVE OF THE FUTURE

Television obviously was the wave of the future in the broadcasting industry. From 1948 to 1952 the FCC put a freeze on the licensing of TV channels. When the Commission decided to open hearings for new channels, Denver was felt to be the largest market not served by television, and its hearings were the first called.

Terry was chief witness for Aladdin at the FCC hearings in October, 1952. With characteristic modesty he shifts the credit for KLZ's success in Washington to his associates, calling it "a beautifully done case."

Wes Pullen, president of Time-Life Broadcasts, Inc., probably was more accurate when he said that Terry was so impressive at the hearings he was characterized as "Mr. Denver," and that it was largely due to his strenuous efforts that KLZ was granted a license to broadcast television.

KLZ received a permit to begin construction of TV studios on June 30, 1953. Remodeling of the old building, now razed, began the following day. On Nov. 1 of that year KLZ-TV went on the air.

Jan. 11, 1954, however, probably was the greatest watershed of Hugh Terry's life. On that day Terry suffered what he calls "a pip of a coronary," what West Pullen calls "a massive heart attack," and what might best be described as a pointblank confrontation with death.

Terry's razor-thin escape from eternity brought about a complete change in work habits and a new future for KLZ. Time-Life Broadcasts, with the help of Terry's old friend Wayne Coy, chairman of the FCC under President Truman and at that time television adviser to Time-Life, began negotiations to buy the station.

According to Terry, his thinking during the negotiations was something along the lines of "I don't know if I'll be around. If this is a good deal I'll get my estate in order." KLZ Radio-TV was sold to Time-Life in July, 1954.

HOW AFFILIATES ARE FEELING

Terry is now responsible for Time-Life's western division, which includes Denver, KOGO AM–FM–TV in San Diego, Calif., and KERO–TV in Bakersfield, Calif. KLZ is also an affiliate of CBS, and Dr. Frank Stanton, president of CBS and one of Terry's closest friends "uses Terry as a sounding board for how the affiliates are feeling," according to Pullen.

Under Terry's supervision KLZ–TV has won at least as many laurels as its manager, the most distinguished being an "Emmy" earned in 1967 for "Road to Nowhere," a superb 30-minute show filmed entirely in the Colorado state penitentiary in Canon City.

But that is history. What is most fascinating about the man is the living story going on in the KLZ building, a story which, as Wes Pullen says, "reflects Terry totally."

For Jim Bennett, news director since 1957, the attitude that permeate the KLZ studios was summed up on May 8 at the dedication of the new building on Speer Blvd.

During the ceremony Andrew Heiskell, chairman of the board of Time, Inc., parent company, delivered a tribute to "Hugh Terry and staff" ("and the only reason the staff is here, or good, is Terry," Bennett added).

Heiskell charged the station "1) to do the best damn job of informing that you can; 2) come as close as possible to telling the truth that you can; and 3) entertain, amuse, and be terribly responsible to your community."

To Bennett this charge capsuled a philosophy of broadcasting that Terry had laid down long ago for KLZ.

The facts bear out this conviction. The first point, the responsibility to "inform" the public, recalls a series of radio and television editorials Terry broadcast in December 1955, to protest a Colorado Supreme Court ban of cameras and microphones inside courtrooms. It also confirms a statement by Vincent Wasilewski, president of the National Association of Broadcasters, that "Terry is a leader who has always argued vehemently for broadcasting's rights to editorialize."

RELAXATION OF CANON

Terry took to the air because, in his words, "We got a little irritated with the treatment we were receiving in the courtroom. We were pretty blunt about it."

The hearings, which ended in February, 1956, resulted in the relaxation of the canon. Broadcasters applauded Terry's vigorous editorializing by awarding him the coveted Paul White Memorial Annual Award that year.

The second responsibility of the broadcaster, to "tell the truth," seems to be almost an obsession with Terry's staff. Ask any KLZ newsman, and he'll relate how he's constantly enjoined from the top to do a "good, fair, honest job of reporting."

Because of Terry's background in journalism he is very sympathetic toward news broadcasting, and it shows at KLZ. According to Jim Bennett, in 1953 the news operation at the station was "like an open bullpen," consisting of 30x15 room plus an office for the news director.

When Bennett became news director he made suggestions, and found Terry ready as always to listen. "In a slow, progressive manner" he added personnel, increased airtime, and by 1965 expanded his space up to 1,500 square feet.

But that was before 1969. Now, Bennett says, his "ultimate dream" is realized in the the new KLZ building, where the news facilities occupy the entire second floor.

Despite the fact that the newspaper and the TV news broadcast are both competing for the public eye, Terry sees the roles played by the two media in informing the public as complementary. TV coverage may be more immediate, more graphic, and may capture more human interest by filmed interviews. "But the newspaper," he feels, "will give details and an 'historical part' that television can't provide."

The third duty with which Heiskell charged Terry and his staff—"to be terribly responsible to your community"—is a commitment which Terry personally oversees.

GOING DIFFERENT DIRECTIONS

"Broadcasting is still an industry where a lot of horses are going different directions," Terry once remarked. But one undeviating course on which he has set KLZ is toward being sensitive and responsive to the needs of the public.

"If you're going to take something out of the community, you've got to put something in," Terry believes.

But why should broadcasting feel this commitment? Terry's reply is characteristic of his uncomplicated humanitarianism.

"Well, who else is going to do it? George?

"Or you can look at it selfishly. Think what we learn from the community. "I'm not a great protagonist for anything," he continues. "But the better we understand each other the better we can get along in this world."

Terry's personal commitment to forging a bond of understanding between the station and the public is visible in the masses of people who jam the glass-walled lobby of KLZ daily to be conducted on tours of the building by attractive girls in bright red and blue dresses.

In fact, it would not be uncommon for tourists being conducted through the carpeted hallways on the fifth floor of the KLZ building to see a robust, white-haired man in a dark suit disappear beyond a potrait of Henry R. Luce and into his office. Chances are they would remember his warm smile, but would never know the man was Hugh Terry.

One afternoon about 3 years ago some 15 Denver firemen could be found at KLZ sipping cool drinks and paying thoughtful visits to a table heavy with exotic nuts, exquisitely prepared hors d'oeuvres and shrimp cocktail.

In a way that has nothing to do with Hugh B. Terry, who was off relaxing with his wife Betty in a favorite vacation spot which he refused to disclose, but which one reliable source related to be Las Vegas.

But in another way the fireman's party has everything to do with Hugh Terry.

Jim Bennett had thought up the idea of expressing the station's appreciation to Denver firemen for the fine job they've been doing. He walked into Terry's office, proposed the idea, and was told, "Sure—go ahead."

INTELLECTUALLY CURIOUS

One is hard put to find a fitting conclusion to the story of such a remarkable man.

It could be said that Terry is a warmhearted, intellectually curious man who has traveled around the world, but who since his coronary 15 years ago prefers short, quiet trips with his wife, golf (handicap, 17), and his German shepherd "Samantha" (now called "Sam" since she's been spayed).

Or one could quote Dr. Frank Stanton, president of mammoth CBS and a close friend of Terry for 30 years. "I can only talk about Terry in superlatives," Dr. Stanton said, adding that the first thing he did on a recent trip to Colorado was to stop by to see Terry and tour the "magnificent" new KLZ building.

Indeed, as Wes Pullen of Time-Life Broadcasts made clear, were it not for his devotion to Denver and his friends here "Terry could have entered the national rat race and achieved even wider recognition than he has." When Terry sold KLZ in 1954 he insisted to Time-Life that he never be asked to leave Denver, in spite of the danger which high altitude poses to a man with a heart condition.

"I've had enticing opportunities," Terry has said, "but not enticing enough."

ADDITIONAL SUPPORT FOR S. 9 CRIMINAL INJURIES COMPENSATION ACT

Mr. YARBOROUGH. Mr. President, my bill, S. 9, to provide for compensation of victims of crime, is attracting more public notice and support. Last week, Newsweek magazine carried a lengthy article on this matter. Recently, I received a letter supporting my proposal from Mr. Daniel Lewis Carpenter, of Inglewood, Calif. It is encouraging to me to see this evidence of interest in this proposal.

I ask unanimous consent that the letter from Mr. Lewis Carpenter, dated June 17, 1969, be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INGLEWOOD, CALIF.,
June 17, 1969.

DEAR SIR: I am writing to inform you that I thoroughly approve of your bill, the "Federal Violent Crimes Compensation Commission".

I feel that it is about time something is done for the victim, as well as for the criminal. I feel that something should have been done for the victim first, instead of the criminal. I think it is more important to help the law-abiding taxpayer before the socially unwanted criminal.

One again I must tell you that I am proud to be an American when bills to help the right people are passed. I pledge my full support to your bill.

Sincerely,

DANIEL LEWIS CARPENTER.

LATVIAN INDEPENDENCE

Mr. KENNEDY. Mr. President, I ask unanimous consent that a statement by the Senator from Connecticut (Mr. DODD) be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LATVIAN INDEPENDENCE

Mr. DODD. Mr. President, among free men around the world, the fact that Latvia commemorates her 50th anniversary of independence strikes a responsive note.

True, Latvia today is a captive state, incorporated by force and duplicity into the Soviet Union. Latvia's plight, unfortunately, also befell her sister Baltic states, Lithuania and Estonia.

But there are men and women, throughout the civilized world today, who mark the anniversary of freedom that reigned without recent memory in states like Latvia. They also mourn the deliberate destruction of that independence by brutal marauders who sit astride the prostrate captive states in dominating occupation.

In the dismal, war-riddled European summer of 29 years ago, Soviet police and troops were deeply engrossed in a human tragedy, that of chopping up the small and free Baltic states.

While most of us here at home at the time were dumb-struck with the horror of the Nazi blitzkrieg that overran France, and the disaster of Dunkirk freshly engraved in our minds, a partner in totalitarianism plundered freely.

In a way it was out of sight but hardly out of mind. Cynically and ruthlessly, the Soviet Union ignored its own promises of noninterference in the Baltic states. While Hitler ravaged Central and Western Europe, Stalin rampaged up and down bordering, little nations.

Self-determination of peoples was ignored by totalitarianism then as it is today.

Tens of thousands of men, women and children were rudely rounded up and sent into the vastness of Soviet prison camps. Other thousands were arbitrarily executed. The agony of Latvia, as well as Lithuania and Estonia, went unrelieved.

Through the ensuing years, the predicament of Latvia and her sister states has become more somber to the world at large. Soviet hegemony is prosecuted in an ever-more vengeful manner.

We protest, which may sound like bootless cries. Yet, they prove a constant irritant to the totalitarian occupier that its conquest was a monstrous crime against humanity.

As history has shown, Mr. President, people liberate themselves. To help them, we must never shirk our responsibility in remembering what happened to small and helpless nations engaged in peaceful pursuits as were Latvia, Lithuania and Estonia.

A moving and chilling document of Latvia's contemporary history and her present-day status has been issued in the form of a manifesto by the New Farmers and Smallholders Party of the Democratic Republic of Latvia.

The manifesto is noteworthy reminder to all of us to recall the 50th anniversary of Latvian independence and her subjugation by an oppressor.

VIETNAM—A MEXICAN NEWSPAPER'S VIEW

Mr. DOMINICK. Mr. President, many of us, I am sure, have often had the discouraging impression that the news media of other countries seldom mention the United States except to criticize our actions, our intentions, or our policies.

It was indeed refreshing to me to read recently an article in El Sol de Mexico which illustrates that all foreign news stories are not anti-American.

I ask unanimous consent that the article entitled: "Will the United States Give Up in Vietnam?" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL THE UNITED STATES GIVE UP IN VIETNAM?

The most recent rumors that are being spread around the world are that the United States is trying to find some way to get out of Vietnam.

If they really went into that country when they shouldn't have, it is the most colossal historical blunder of those of recent times. If the communist threat didn't really exist, why were so many tens of thousands of young lives sacrificed?

Undoubtedly there exist many good, sound and powerful reasons for the United States having gone in to help a little country such as South Vietnam, in order to defend itself against a monstrous enemy like China with another immense ally such as Russia, who by turns were helping North Vietnam in its attempts to take control of the southern fraction of said peninsula.

From a necessary point of view, it was indispensable to bomb the sources of supply wherever they were, even though it be in North Vietnam, which now that this is too far away, such sources of supply have been moved to Cambodia.

Since the bombings of North Vietnam were suspended by former President Johnson in a measure of political weakness in the face of great and numerous pressures, the number of American dead in Vietnam has been increasing in an alarming way and the threat to the capital of Saigon is ever greater, with the suburbs being methodically and constantly besieged and bombed. One might say that it is almost ready to give up.

At the same time that the possibility of renewing the bombing attacks on North Vietnam are being "studied" (we will see how many Americans die while "some studies" continue to be made), also the possibility "is being studied" of bombing the bases of the Vietcong in Cambodia and the American military men in Vietnam, desperate in the face of the distressing situation, have already requested permission to attack these bases, but Washington waits. . . . What is it waiting for?, for more men to die? in order to then decide that it is better to get out of Vietnam and leave the country in the hands of the communists who will completely occupy it and wherein they will undoubtedly carry out the saddest, most violent and inhuman of reprisals, for we already know about the ferocity of the communists.

Once a ship's lieutenant, Norde Wilson, sent to the representative from the district of Ohio [sic] William E. Minshall, an impressive letter in which he requested as an aviation pilot that the pilots be given "just" a fighting chance of winning and surviving, since, at that time, the lack of bombs was being complained about, because airplanes were taking off carrying only one-sixth of their capacity and they were risking too much on almost useless mission, bombing little wooden bridges over unimportant streams, which were repaired during the nights.

The aviator complained that they were being sent on highly dangerous night flights over unknown and mountainous regions where, in addition to the natural perils, there existed that of flying at a low altitude in the darkness of night.

They were also ordered to respect the principal targets in the harbors where there were large munitions dumps which later on would kill their fellow Americans.

Then the aviator spoke of the tremendous waste of dropping very costly bombs on practically deserted places and of risking and losing costly equipment on missions without any importance.

Freedom has no price, how many lives can it cost and how many millions of lives has the freedom of one single nation cost? How much has the war in Vietnam cost in money, lives, sorrows, sufferings and sacrifices, to end up now with having to withdraw and

leave everything in the hands of the communists?

The latest American proposal appears naive because it states: "we will withdraw from South Vietnam if the communists of North Vietnam and their allies will withdraw." Why perchance wasn't this same condition put forth in the beginning of the war and not after so much fighting?

It is absolutely absurd and useless to expect that the communists, who availing themselves of the suspension in bombings have reinforced themselves and infiltrated in a greater number than ever and have laid siege to Saigon, the South Vietnamese capital, are going to leave "docilely" now.

There is no doubt that the bombings are very cruel, they don't respect the innocent and they cause a very great psychological impact on the whole world. Because of this Johnson saw himself obliged to suspend them. But perchance aren't the tremendous communist bombings, without risking planes and without loss of lives, on Saigon just as cruel or crueler than the American ones?

To prolong a war is perhaps more cruel than to intensify it to end it quickly, although this can never be known. At any rate, in case of need, emergency or war, the policy regarding an objective should be clear and decided, never wavering, weak or indecisive. Only the will to win carries success. And above all, there must exist the absolute conviction that one is doing good, in defense of a noble cause.

If the end result is to hand over the Vietnam peninsula to the communists, what a crime to do it after so much death, expense and destruction!

The worst part is that such a brave people as the South Vietnamese, who don't deserve such a sad fate, will be delivered into slavery or death.

The historical responsibility of a country has to prevail throughout time, and the commitments contracted must be fulfilled, more so if they have cost so much suffering to the country in question.

The American dead in Vietnam would rise from their graves if they could see the futility of their sacrifice and the people would damn forever those who having been able to prevent it, didn't want to do so.

CLASS I MILK BASE PLANS NEEDED BY DAIRY INDUSTRY

Mr. YARBOROUGH. Mr. President, my name has been added as a cosponsor of S. 745, an amendment to the Agricultural Marketing Agreement Act of 1937, to authorize establishment of class I milk base plans by dairy farmers under Federal milk marketing orders.

The proposed legislation, S. 745, is of real significance to dairying in Texas and elsewhere throughout the Nation. If enacted—as I believe it should be—it would enable milk producers to develop and operate more orderly systems of marketing and result in greater stabilization of dairy income.

In joining as a cosponsor of S. 745, I want to emphasize that it incorporates principles which I believe are sound. These include:

First. Based on the principle of self-help, the authority would enable milk producers to more effectively manage their own economic affairs.

Second. This is enabling legislation—and does not require mandatory action by milk producers to develop and operate class I base plans. However, it provides that authority will be available if they wish to do so. In many areas, dairy farmers are ready to go now with the development of base plans. Others plan to use them in the future.

Third. If adopted, the cost of developing and operating base plans would be borne by the dairy industry itself, with no cost to the Federal Government.

Enactment of this legislation would enable dairy farmers to engage in more realistic planning, production, and marketing of high-quality milk for consumers.

I am pleased to join Senator McGOVERN and others as a cosponsor of this legislation. I urge my distinguished colleagues to give it full and careful consideration.

EXTENSION OF THE VOTING RIGHTS ACT

Mr. MATHIAS. Mr. President, on January 31, I introduced S. 818, a short and simple bill to extend the Voting Rights Act of 1965 for 5 additional years, to 1975.

In regard to this legislation, I should like to call attention to editorials which appeared this weekend in the Baltimore Sun, the Washington Post and the New York Times.

I ask unanimous consent to have the three editorials printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Baltimore (Md.) Sun, June 29, 1969]

VOTING ACT

A simple and direct course of action with respect to the 1965 Voting Rights Act, which is to expire in August, 1970, would be to extend the law for another five years, to protect and reinforce the voting rights which Negroes in the South are claiming in increasing numbers. The law has been helpful in securing for Negroes the rights which they have been denied, in one way or another, by too many southern communities, and common sense would suggest that the law be renewed until there can be no question about a citizen's right to register and vote.

The Nixon Administration has chosen to avoid this simple course. After a long delay, Attorney General Mitchell has fuzzed over the President's intentions as to the voting rights of Southern Negroes by proposing that Congress replace the bill to extend the 1965 act with a comprehensive bill which, under the guise of a nation-wide application, would tend to weaken the present federal law with respect to the South. Special safeguards still are advisable in the South, according to civil rights workers who have watched the increase in the number of voting Negroes, and the Nixon Administration's recommendations to Congress can only be construed as a retreat from a successful program. Moreover, the retreat can be construed as an act of political expediency, a gesture to certain Southerners, which could lead the Republican party down a dead-end street.

Mr. Johnston reported from our Washington bureau that the Nixon Administration's bill would (1) ban literacy tests in all states through 1973, (2) ban all state residency requirements for presidential elections, (3) continue the federal authority to send voting examiners and observers to southern states but make it nationwide, (4) weaken the present federal authority to block local laws aimed at preventing Negroes from voting or running for office, and (5) establish a presidential commission to study voting discrimination and election fraud.

The flaw in the proposal is in the fourth point, although it also seems likely that consideration of a comprehensive bill of this nature would help to delay an extension of the basic law. Chairman Celler of the Judiciary Committee described the proposal as a delaying action. Mr. Celler could bring the matter into focus by pushing for an extension of the Voting Rights Act while considering the administration's other proposals. An unfair legal burden should not be placed upon southern states, but unfair voting practice in the South cannot be tolerated by the federal government.

[From the New York Times, June 28, 1969]

A VILLAIN VOTING LAW

The Administration's voting rights proposal unveiled by Attorney General Mitchell reminds us that laws, like men, can smile and smile and be a villain all the while. Genuinely good features can mask impossibly bad ones and extended debate can be a cover for evil intentions.

The 1965 voting rights law, a valuable measure offering meaningful protection to Negroes in the South, expires in its essential features next year. It prohibits literacy tests in those states and areas where fewer than 50 per cent of the eligible population go to the polls, on the presumption that such tests are instruments of an official policy to discourage Negro voting. These tests have, accordingly, been banned in seven Southern states, and in a few other areas. Since enactment of the present law, 800,000 Southern Negroes have been registered to vote who did not vote before.

Although the percentage of Americans going to the polls declined generally across the country in the 1968 balloting, it rose in the South and especially among Negroes. The increase in voter participation among eligible Negroes was from 44 per cent in 1964 to 51 per cent in 1968, a gain that has undoubtedly contributed to the success of some Negro candidates such as Charles Evers, newly elected Mayor of Fayette, Miss., and Howard Lee, Mayor of Chapel Hill, N.C.

Instead of urging simple extension of the present voting rights act, a course of action recommended by civil rights leaders, the Administration has sought to placate the South by proposing a flat ban on literacy tests everywhere in the country. This is a form of unacceptably rough justice—that because some men steal, all men must have their hands cut off. Because this proposal will arouse so much opposition and controversy, it is quite possible that it will result in no voting rights law at all.

Still other features of the Administration's measure would further undermine the present law's basic purposes. The states are now required to submit voting law changes to the Federal Government for prior approval. The new proposal would put the obligation on the Federal Government to keep up with all state voting law changes and to initiate suits against any discriminatory ones after they had been made.

The only positive feature of the Administration's proposal is one banning state residency requirements for voting in Presidential elections. President Johnson asked for this in 1967, pointing out that the mobility of modern Americans makes strict residency requirements undemocratic and anachronistic. "They serve only to create a new class of disfranchised Americans," he said.

The Census Bureau estimates that as many as 5.5-million Americans were denied the ballot in November by such regulations. Almost half the states now impose the absurd requirement on voters that they be residents a full year before they are eligible to cast their ballots for the Presidency.

The single beneficial change of removing this harsh limitation cannot mask the bill's bad features. The Administration's voting rights proposal ought to be shelved in favor of an extension of existing law. It is, on the whole, much like the Administration's

electoral reform proposal previously unveiled. What may appear appealingly liberal on its face may prove harshly reactionary in its impact.

[From the Washington (D.C.) Post, June 29, 1969]

MONKEY WRENCH

The operative, conspicuous and altogether damning fact about the Attorney General's statement on Thursday before a House Judiciary subcommittee is that it opposes extension of the Voting Rights Act of 1965. That act expires in August, 1970. There is no doubt whatever that, with Administration support, the act could be extended for five years. With Administration opposition, a simple extension bill may well be defeated. The extended hearings and bitter controversy to which Attorney General Mitchell's proposals will surely give rise may end by leaving the country without any Federal voting rights legislation at all.

There is much to be said for some of Mr. Mitchell's proposals. Unfortunately, there is also much to be said against them. For our part, we heartily agree with the Attorney General that "all adult citizens who are of sound mind and who have not been convicted of a felony should be free to and encouraged to participate in the electoral process." We would, therefore, support Federal legislation to ban literacy tests everywhere in the United States. But some states are going to resist such legislation.

We are no less heartily in favor of the ban suggested by Mr. Mitchell on state residency requirements for national elections. In this mobile Nation, such parochial and artificial restraints on the basic right of national citizenship should long ago have been abandoned. But the reform is likely to engender a lot of opposition. Similarly, there are substantial arguments to support the change recommended by the Attorney General in the mode of attacking state legislation which may operate to deprive minorities of voting opportunities. But the change is an extremely complex one calling for the most careful analysis and debate. Let Congress take up these proposed improvements at leisure and on their individual merits—and not when they can be used as devices for preventing the enactment of any voting rights legislation whatever.

The most cogent argument for continuance of the 1965 act was stated by Mr. Mitchell himself. "Since 1965," he testified, "more than 800,000 Negro voters have been registered in the seven states covered by the Act." And a few of them, he might have added, have been elected to public office. The Voting Rights Act of 1965 has given to black Americans the means to make themselves felt and heeded politically where they were previously ignored. And that, of course, is precisely why there is such bitter opposition to it among so many white Southerners.

The Attorney General can dress his proposals up as much as he likes in high-sounding phrases about putting voting rights on a national rather than a regional basis; but he is not going to fool any of the people who have fought the long hard battle to make voting a reality for Negroes in the South. He is not going to fool Clarence Mitchell of the NAACP who said with characteristic straight-forwardness that the Justice Department bill is "a sophisticated but nonetheless deadly way of thwarting the progress we have made." He is not going to fool Joseph L. Rauh, the seasoned counsel of the Civil Rights Leadership Conference, who called the Administration measure "a monkey wrench." He is not going to fool Rep. William M. McCulloch, ranking Republican on the House Judiciary Committee and a stalwart champion of civil rights who said he favors a simple extension of the present law.

These men have implored the Attorney General not to open the way now for prolonged, divisive debate and the ugly possibility of a Southern filibuster if the voting rights issue carries over into next year. The country is not going to be fooled, either. It knows that the Southern stratagem now embraced by the Administration poses two tragic dangers. One is the danger that if Negroes are deprived of a chance to advance their welfare through orderly political action, they will be pushed toward disorder and violence. The other is the danger that the country will find itself in default on a moral commitment it has undertaken in the name of democracy and justice.

MOISE TSHOMBE

Mr. McINTYRE. Mr. President, I ask unanimous consent to insert in the RECORD a statement by the senior Senator from Connecticut (Mr. DODD) dealing with the death of former Prime Minister Tshombe of the Congo.

There being no objection, the statement by Senator DODD was ordered to be printed in the RECORD, as follows:

THE MURDER OF MOISE TSHOMBE

Mr. DODD. Mr. President, the death of Moise Tshombe, former prime minister of the Congo, in an Algerian prison can only be characterized as cold-blooded political murder.

There are plenty of reasons for suspecting the official statement put out by the Algerian government that Tshombe died of natural causes in his sleep.

First of all, it is common knowledge that there were elements in the Algerian government who were disposed to cooperate with the plans of the Mobutu government to liquidate Tshombe.

Second, there is the highly suspicious fact that the news of Tshombe's death comes on the anniversary of Congolese independence. Joseph Mobutu, totalitarian ruler of the Congo, feared Tshombe so much that he conspired to have him kidnapped in mid-air in the expectation that he would be extradited to the Congo. Mobutu can now celebrate Independence Day free of any fear that Moise Tshombe will some day come back to threaten his one-man rule.

Finally, there is the further suspicious fact that the medical report on Tshombe's death was signed by ten Algerian doctors. The number of doctors by itself is suggestive of a panic reaction on the part of the Algerian authorities, designed to reassure a doubting world opinion.

According to this morning's news account, the Algerian government plans to conduct an autopsy. If they really wish to satisfy world opinion that Tshombe died of natural causes, I suggest that the Algerian authorities, out of simple decency, immediately release Tshombe's body to his family so that the autopsy can be performed by an independent group of European specialists.

But even if Tshombe did die in his sleep, as the Algerian government reports, I still say that he was murdered.

The prime responsibility for this murder lies with the Congolese government of Joseph Mobutu which planned and arranged the mid-air kidnapping of Tshombe on June 30, 1967, by a former French convict. On the day that the kidnapping took place, Mobutu, anticipating Tshombe's immediate extradition by the Algerian government, publicly gloated that Tshombe was "as good as dead." Tshombe was not extradited thanks to the fact that President Boumedienne overruled his own supreme court. But President Mobutu has now achieved the objective he sought through the kidnapping: Tshombe is dead.

Even if Tshombe did die of natural causes the Algerian government will not be able to escape its share of the responsibility for his death. It was not enough that President Boumedienne refused to extradite Tshombe to the Congo. Simple humanity and a respect for international law should both have dictated that Tshombe be released immediately. His detention for two years in a condition of total isolation was a grave violation of human rights which by itself merits the condemnation of civilized opinion.

Finally, a share of the responsibility for the tragic death of Moise Tshombe must be borne by those American officials whose blind and unreasoning hostility towards Tshombe led them to prefer a totalitarian dictatorship under Joseph Mobutu to the remarkably democratic and efficient government which Tshombe gave the Congo as prime minister.

I shall have more to say about this subject when Congress reconvenes after the July 4 recess.

Joseph Mobutu will no doubt rejoice over the death of Tshombe, as will the Communists and other extremists.

But his death will be mourned by the millions of his followers in the Congo, by the many moderate leaders of the new African nations, and by all those who value freedom throughout the world.

Moise Tshombe died a martyr to the cause of freedom.

He was, without question, one of the few great statesmen that black Africa has produced.

He was a natural leader of men, and as courageous as he was warmhearted and eloquent.

History will record that when the Congo teetered on the brink of a Communist takeover in the summer of 1964, it was Moise Tshombe, almost single-handedly, who saved the Congo by dint of his extraordinary courage and energy and leadership.

I count it a privilege to have known Tshombe as a friend, and I shall always treasure the recollection of the times I spent with him, in the Congo, in London, and in Brussels.

The people of the Congo will not forget Moise Tshombe. Nor will they reconcile themselves forever to the totalitarian tyranny of Joseph Mobutu. Mobutu has succeeded in liquidating Tshombe. But there will be more fighters for freedom and more Tshombes. And some day, I am certain, the people of the Congo will again be free.

HOUSE & HOME EDITIORIAL CRITICIZES OPERATION BREAKTHROUGH

Mr. PROXMIRE. Mr. President, under the Housing Act of 1968, the Department of Housing and Urban Development is required to build 1,000 units each of five prototypes of industrialized housing a year for 5 years—a total of 25,000 units—to determine if costs cannot be substantially lowered by mass production and industrialized methods. The funds are made available under existing HUD housing programs. No new money is needed.

As the author of this provision of the act, let me say why it was written in the way it was written.

First, there are virtually no good cost figures for industrialized housing. While everyone believes that costs can be cut dramatically through applying industrialized housing. While everyone believes that costs can be cut dramatically through applying industrial processes, the hard facts have really never been proved.

Second, in the past, HUD had never built more than one or two demonstra-

tion houses by industrialized methods. This, obviously, has proven nothing about cutting costs.

Third, builders and producers say that to get any good cost data as to whether and by how much costs can be cut through industrialized housing, a manufacturer would need to build at least 1,000 units a year to cover his initial outlay for machinery and equipment. Anything less than that would prove nothing.

Finally, the Douglas Commission urged such a project and it was passed in the Housing Act.

Now, however, Secretary Romney has organized "Operation Breakthrough" with a great deal of fanfare and public relations. But he is proposing to build only 30 to 40 units each of 12 to 20 prototypes a year. This, of course, will prove very little, especially as he proposes to build them in some eight regions of the country. It will prove almost nothing.

Housing producers, homebuilders, and housing experts all agree that volume is the key to prove whether real savings can be made.

One of the most knowledgeable men in the field is Richard O'Neill, the editor of House & Home magazine. Mr. O'Neill knows housing and housing products as do few men in the country. He is one of the leading experts on housing construction and housing programs. He was one of the most valuable members of the Douglas Commission and was the author of the detailed introduction and Summary to the Douglas Commission report.

In the July issue of House & Home magazine, he editorializes about "Operation Breakthrough," or as Mr. O'Neill's imaginary administrators call it, "Operation Breakdown."

I urge that the experts at HUD read this editorial. But I urge them further to carry out section 108 of the Housing Act of 1968 so that hard facts may replace fuzzy data in the area of industrialized housing.

In my judgment and that of former Senator Douglas, Mr. O'Neill, and most of the knowledgeable housing builders and producers, by combining the best products and practices in the existing state of the building art with mass production methods, we can significantly reduce costs. We need to get on with the job of carrying out section 108 and we need less talk about some magic new breakthrough.

I ask unanimous consent that the House & Home editorial by Mr. O'Neill be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FICTION—SCRAPS FROM AN IMAGINARY DIALOG AMONG SOME SAVANTS ON THE POTOMAC'S BANKS, OR HOW TO NEGATE A MANDATE

(By Richard W. O'Neill)

Now, men, how can we show people that we're really doing something about low-income housing without getting the Budget Bureau or the Council of Economic Advisors mad at us for increasing the federal budget more than a few million?

Well, how about announcing a big project about studying constraints on building more economical housing, like that last bunch in here did with their In-Cities contract?

Yeah, but you know that that In-Cities hoopla about studying constraints, which everybody knew about anyhow, was just a lot of jazz. Hell, Herbert Hoover, *before* he was President, when he was Secretary of Commerce, identified most of the constraints back in the 1920s—codes, zoning, lending, all that stuff.

Well, then, maybe we better phase out In-Cities. Just leave a little bit of it to preserve the old bureaucratic integrity in '70. Kill it in fiscal '71.

I guess you're right. That last bunch of desk jockies only liked projects on paper. We've got to move some dirt to show we're action guys. So let's do some applied research, not just a lot of reports, but let's do it without much cost.

Great. Now let's throw that around and see if it sticks to the wall. We can use Section 108 of the Housing Act of 1968. Not even the Democratic Congress can shoot us down on that.

You mean the Proxmire amendment. You know, it tells the Secretary to approve five 1,000-unit projects each year for five years. Boy, that's 25,000 units. What a gas!

Now wait. We can't spend that kind of money. The guys over at Treasury would kill us. Look, 108 was designed to test a number of new building systems with the economies of scale, like 1,000 units at a whack. We don't stand a chance of getting money for more than just a few, but we can project the economies of scale on paper.

I object. Section 108 was specifically designed for empirical experience, and mere theorizing is all prototypes have ever given us. And you don't have to ask for any money; you've already got it.

You mean the Treasury's got it. You might as well tell the guys.

Okay. There's about a half billion of special assistance that hasn't been used, and another half billion allocated for public housing in fiscal '70. Then there's another half billion that Johnson put into fiscal '71, but that Nixon wants to rescind, plus almost a half billion still in GNMA takeout authority, not to mention unused urban renewal and Model Cities money lying around.

Why, we're swimming in money! Let's see. Section 108 would call for only about $100 million in its first year. And doesn't the Act tell us to spend that money?

Yes, it does, but not on your Council-of-Economic-Advisors you don't, dummy. That money stays in the Treasury. We've got to fight inflation, too, you know. No sir, we'll have to go before the Congress and ask only for money for *research*. We're not going to use that other money for 108, even if the Act tells us to.

But Congress would love to come up with answers to housing the poor, and they want a show of housing volume to get re-elected. Furthermore, they decided last fall that money and not technology was the answer: for sure in the short term—and probably in the long term, too.

I agree. They won't take kindly to more small-scale research, and they won't like our trying to duck Section 108.

Nonsense. The Big Guy said housing has to fight inflation like everybody else, and we're going to do our part. We're not going to dip into our pot over at Treasury and add to the federal budget.

Well, then, let's prepare a project. Let's call it Project Breakdown, because it will produce a good breakdown of all the cost components in new building systems.

Good. We'll invite a lot of guys to make proposals to us, then we'll select sites for them and get everybody to cooperate. We'll get all the government agencies to work together, the labor unions to change their ways, the politicians to forget politics, community groups and building departments to work out new alliances and new rules for building.

Wait a minute! What new systems, what guys, what sites? Don't you know what Appropriations will say to a research pitch like that? And do you seriously believe all those different constituencies will lie down together and play patty-cake? Come on, chief!

He's right. You know what each of those groups acts like when they see that boodle coming down that old log-rolling road. They'll all be howling for theirs like a pack of wolves.

And then some smart guy on Appropriations is going to ask us sweetly, "Will you stockpile subsidized housing allocations so you can award them to your favorite prototype winners, in your favorite locale?" What about that?

The trouble with you guys is that you worry too much about details, and what lies ahead. We'll worry about the future when we get there. Let's get on with the job, team.

End of imaginary dialogue. No comment.

A BREAKTHROUGH

Mr. NELSON. Mr. President, a recent report by the Milwaukee Journal on efforts to control nutrient pollution, one of the worst problems in the degradation of our Nation's waters, brings heartening news on two counts.

First, for many years, the Milwaukee sewage treatment plant has been unusually successful in removing phosphorus from its effluent, and a study of the Milwaukee plant indicates there may be factors at work there which could be applied in plants nationwide to improve removal of this element. The increasing addition of phosphorus to our lakes and rivers is a root cause of one of the most devastating kinds of pollution—algae growth.

Second, the article reports that a major detergent user has changed to a nonphosphate base detergent. As one pollution control expert says in the article, elimination nationwide of phosphorus in detergents would be a giant step forward in restoring the quality of our waters—and the effects would be immediate.

It is time we took this step and the evidence is increasing rapidly that it is technically and economically feasible to do so.

I shall introduce legislation shortly which would actually require that phosphorous be eliminated from detergents, and that adequate, nonpolluting substitutes be used. Further, the legislation will provide for an intensive program of research to assure that it can and will be done.

The time is long past when we can afford to destroy the quality of our environment in the name of economics. The fact is, it is uneconomical to pollute the water, the air, or the land. More and more Americans are coming to realize this and insist that we put a stop to it.

I ask unanimous consent that this excellent and important article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROBERS HERE NEAR SOLUTION TO ALGAE POLLUTION PROBLEM

(By Alex P. Dobish)

A government financed research project going on quietly for 30 months at the Milwaukee sewerage commission could result

in a breakthrough in the nation's battle against one phase of water pollution—algae.

Officially, no results of the research can be released until 1970 without violating the terms of a contract for three federal grants totaling $225,000.

Unofficially, however, there is information available. Progress is discernible. Technicians in a special laboratory on the second floor of the sewage plant's "fine screen" building—where solid waste is separated from liquid sewage—are optimistic.

"We're awfully close to an answer," said Lawrence A. Ernest, who directs the commission's laboratories on Jones island.

And, he added, if there is co-operation by detergent manufacturers and housewives, algae and weeds could be starved to death on a massive scale.

The background of the research is this:

For years, the Milwaukee sewage treatment plant has had success in removing phosphorus—a key factor in algae growth. It has removed 80% or more—while many similar plants could get out only 30% or 40%.

A few years ago, interior department officials set 80% phosphorus removal as a standard although many scientists think the minimum should be higher.

The government then asked Milwaukee officials to explain how they removed 80%. The findings were to be a guide to other plants as part of the federal government's anti-pollution campaign.

DIDN'T KNOW ANSWER

Raymond Leary, the commission's chief engineer, was the first to admit that he didn't exactly know the answer. He hadn't given too much thought to the micro-organism ecology involved, he said.

"So, the government told us to determine what was actually happening," Leary said.

The research and development will supply those answers as well as recommend methods to attain 80% removal economically by other sewage treatment plants.

Phosphorous and algae are allies in eutrophication—the natural aging of lakes and rivers resulting in weed and algae growth until the waters are virtually stifled. Now, some bodies of water are growing old before their time because the balance of nature has been upset by additional nutrients causing overfertilization.

PHOSPHORUS IS CULPRIT

A major culprit is phosphorus, needed for water plant growth. In the last 20 years, phosphates in lakes and streams have doubled and tripled because of polyphosphates in household and industrial detergents, scientists agree.

"If we were able to eliminate phosphates in detergents, it would have an instantaneous effect . . . something which would be effective right across North America, maybe the world, within a year," according to P. H. Jones of the University of Toronto, a major figure in pollution control work.

Phosphates make water "wetter" and more uniform in cleaning potential, no matter where the water comes from. Once phosphates were limited because they roughened housewives' hands. The domestic automatic washer, however, eliminated the need to touch the water.

These phosphates are not pollutants in themselves but are extremely active fertilization agents on which water plants thrive, then die and stink and promote the birth of flies. Phosphates enter waterways as agricultural run-off, human and animal waste and in detergents.

EIGHT POUNDS REMOVED

In the early 1950s, the Milwaukee treatment plant took in from 3 to 5 pounds of phosphates in each million pounds of wet sewage, or 120,000 gallons. That figure has risen to 10 pounds. About 8 pounds is removed. Two pounds of phosphates dissolved in cleansed discharge is then turned into Lake Michigan.

The treatment plant releases an estimated 1,600 pounds of phosphates a day into the lake. An estimated 12 million pounds a year finds its way into state streams.

Scientist Ernest and his specially hired staff of four have taken 18,000 samples—one every hour for over a year—in their research.

Pollution surveys based on limited research annoy Ernest and his boss. Leary cited a widely used study based on three samples of Milwaukee river water and another on 14 samples.

BREWERY WASTE CHECKED

Studies have found that Milwaukee's brewery waste plays a big role in getting rid of phosphates. The conclusion was double-checked and verified during the current brewery strike when brewery waste was not being received at the treatment plant.

Increasing carbohydrates from the brewery waste grow a lot of bacteria, explained Clair N. Sawyer of Boston, who once taught at the University of Wisconsin and more recently at Massachusetts Institute of Technology. Sawyer, one of the nation's foremost experts on water nutrients, is familiar with the research at the sewerage commission.

"The more bacteria and the more sludge, the more enriched Milogranite fertilizer you can make from the solids," Sawyer said. Adding alum and ferric salts, careful control of bacteriological conditions, holding ponds and chemical precipitates help reduce phosphates, he said.

NEED RIGHT COMBINATION

The trick is changing from the theoretical to the practical to find the right combination to make the treatment financially and scientifically feasible. The Milwaukee report is expected to suggest modifications based on experience here.

Ernest, Leary and the professor believe that one of the keys to the solution would be to keep phosphates out of the detergent box in the first place. This point is expected to be raised by the Milwaukee researchers.

"The soapers (as he calls detergent makers) will never change," Sawyer said. Perhaps the threat of legislation might force them. As long as using phosphates is more profitable, they'll stay with them." He suggested a special tax on detergents.

SAYS PUBLIC PAYS

"The public has to pay the bill in the long run for the removal of the phosphates through sewage plants," he said.

For years, he pointed out, the detergent industry resisted marketing "soft" detergents which would break down easily in water.

Legislation, in which Wisconsin was a leader, forced a change away from "hard" detergents using alkyl benzene sulfonate. The sulfonate produced abundant foam clearly visible as contrasted to present day nutrients which enter lakes and streams silently and invisibly and do great damage.

The Soap and Detergent Association replies that extensive work has failed to develop an adequate substitute for sulfonate, but that its members are vigorously exploring the possibilities of a switch.

CHANGE UNQUESTIONED

That the change can be made is unquestioned by Milton Johnson, technical director of the A. O. Smith Corp., which uses 100,000 pounds of detergent a year.

His company, Johnson revealed for the first time, has changed to a nonphosphate base detergent from the Freemont Chemical Co., Minneapolis. A. O. Smith is the first major industry here to abandon the old type of detergent.

"The cost is less than before," Johnson said of the A. O. Smith switch. "We told the detergent people we wanted a phosphorous free detergent—and we got it."

Leary and Ernest were pleased with the A. O. Smith change. Although industrial detergents constitute about 10% of all detergent waste, 100,000 pounds of nonphosphate cleaning powder could be a sign of things to come, they feel.

WELLESLEY COMMENCEMENT

Mr. PERCY. Mr. President, last month the distinguished junior Senator from Massachusetts (Mr. BROOKE) delivered a commencement address at Wellesley College. It deservedly received much attention in the news because it deals so directly with the major issues of our times. The Senator, who previously served with distinction as the Attorney General of his Commonwealth, told the Wellesley graduates that what our country needs is "the best energies of all its citizens, especially its gifted young people, to remedy" the profound and pressing social problems of which Senator BROOKE is so acutely aware.

I commend this speech to my colleagues and ask unanimous consent that the Senator's speech be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROGRESS IN THE UPTIGHT SOCIETY: REAL PROBLEMS AND WRONG PROCEDURES

(By Senator EDWARD W. BROOKE)

It is a special pleasure for me to be with you today. I suppose that any politician is always pleased to couple someone else's memorable occasion with a few modest words of his own. It gives him hope that both may be remembered.

Wellesley has even more admirers than its girls have beaux, and I am pleased to be among this college's most enthusiastic boosters. But your commencement from this great school is not a moment to indulge in lavish praise of the fine education you have acquired here, though fine it is. Nor is it a time for extravagant rhetoric about the glorious future which awaits you, though glorious I hope it will be.

Rather I think you and I might better spend this time in a more sober assessment of the kind of society which is developing around us all. For the individual prospects of each of us are directly dependent on the outcome of the mounting social struggles now under way in this country. Most of us have come to see that personal insulation from the conflict and instability of our time is a dubious and unattainable luxury. It is as true today as it was at the time of the Declaration of Independence that "we must all hang together, or assuredly we shall all hang separately."

The social crises of this country have many dimensions; it would be futile to address all of them in a brief statement. Rather than deal with the more controversial issues, I hope you will permit me to offer some reflections on one of the safer and less inflammatory topics of the day, the protest movement in general, and the character and function of student protests in particular. Standing as I do somewhere between fading youth and advancing obsolescence, I hope it will be possible for me to speak both to your generation and to my own.

The waves of protests passing over the United States both mirror and create deep social tension. In some cases one finds it extremely difficult, if not totally impossible, to determine which protests are based on just grievances and which are merely ex-

ploiting issues for the sake of some ulterior purpose. It begins to appear that the process of protest has assumed a self-sustaining momentum, searching for political fodder on which to thrive. As the process continues, particular issues tend to get submerged in the larger confrontation, a contest of will and power which is justified initially as a means of correcting identified evils but which sometimes persists as an end in its own right.

The dynamics of protest are familiar. In the United States, more than any country I know, there has always been generous latitude for movements of this nature. And for good reason. Dissent and protest are essential ingredients in the democratic concoction. Without them an open society becomes a contradiction in terms, and representative government becomes as stagnant as despotism.

Yet there is a narrow but distinct line between productive dissent and counter-productive disruption. The distinction concerns both the methods and the purposes of protest activities. Much has already been said about the limits of dissent. When all is said and done, when abundant angels have danced on the heads of pins and countless philosophers have offered their exquisite rationalizations, I believe the overwhelming majority of Americans will stand firm on one principle: Coercive protest is wrong. And one reason it is wrong is because it is unnecessary.

So long as a society retains a capacity for non-violent political change, resort to violent political action is anathema. Only if most Americans were convinced that this country was no longer open to peaceful political evolution, to transformation of institutions and policies through the available channels of persuasion, would they consider revolutionary force permissible. That most Americans are not so convinced is evident in the growing vehemence of public attitudes on campus disorders and in the rising popular impatience with the efforts of academic administrators to deal fairly and considerately with student rebels.

The intensity of feeling on this matter is well conveyed by Al Capp in his comment on Harvard's reluctance to discipline those demonstrators who assaulted Robert McNamara some months ago. Apart from an apology to the visitor, the college dean declined to take action on the ground that the students who accosted Mr. McNamara were engaged in a purely political activity. "If depriving a man of his freedom to speak, if depriving him of his freedom to move, if . . . nearly depriving him of his life—if that's political activity," says Capp, "then . . . sticking up a gas station is a financial transaction." On this point I suspect that Mr. Capp is less the social critic than the authentic voice of the society he has so often satirized.

Whatever the romantics may say about violence in our national life, the use of force is repugnant to the spirit of American politics. Paradoxically, the introduction of coercion as an instrument of protest may serve only to legitimize the use of force to deal with the protesters. There has been a great deal of theorizing, especially in the cloisters of the New Left, about the technique of social polarization. Some self-proclaimed radicals have contended that by triggering the use of official force against themselves, they can win the sympathy of uncommitted groups and undermine support for existing authority. This is a description, albeit a pat one, of what may happen in some circumstances. But the insight is a superficial one, and the prescription a highly unreliable one.

The most celebrated applications of such a doctrine, as at Chicago last year, are Pyrrhic victories at best. Survey after survey makes clear that a frequent result of coercive protests is the isolation of the protesters and increasing public demand for the prompt and vigorous application of official force against them. Potential allies are more often alienated than enlisted by such activities, and their empathy for the professed goals of the protesters is destroyed by their outrage at the procedures employed.

In short it behooves the disciples of protest as politics to reconsider the alleged merits of coercive tactics. By now they should be able to see that, apart from being morally insupportable, such methods are politically ineffective.

But more than method is involved in measuring the propriety and utility of protest. Even if the techniques of dissent are impeccable in their respect for the rights of others, the substance of dissent needs to be examined closely. Protest without purpose is a perversion of democratic privilege. Much of the political instability in the country and on the campuses, it seems to me, stems from the fact that the process of protest to which I referred earlier has assumed a life of its own, considerably independent of specific issues and problems. This is not entirely surprising, since a number of individuals have gained a vested interest in protest as a profession. It is a novel establishment, to be sure, but there is good evidence that protest itself has become a kind of institution in recent years.

The consequences of this development are many and complex. As anyone familiar with human organization would expect, the institutionalization of protest tends to subordinate substance to style, to emphasize practice rather than purpose. The focus comes to be less and less on issues and more and more on the mechanics of protest. Social and political problems become vehicles to be ridden instead of barriers to be overcome. The issues are multiplied for the sake of expediency, but the mingling of the trivial with the substantial makes it difficult to distinguish between them.

This sort of progressive de-focussing serves to confuse, not to clarify, political debate. The dialogue grows louder, but less coherent. We hear talk of the "mood of protest" gripping the nation, a vague and generalized discontent with the state of the country and the world.

But widespread malaise creates only a context for social change; it does not generate a program for change. One cannot produce a constructive program for social action without sorting out the critical issues from the less critical and without making concrete plans to cope with the priority problems. To demand change without some reasonable notion of what specific kind of change is possible and desirable amounts to little more than primitive breast-beating.

Obviously, my remarks oversimplify the present situation. Many protests are focused and are directed toward well-identified goals, although that is no guarantee of their wisdom. What I am anxious to highlight here are the tendencies inherent in some current political action. In my judgment these tendencies, should they proceed unchallenged, point toward a serious and chronic corruption of the political process.

If this apprehension is correct, it is very important to point out these tendencies to the potential recruits of the protest movements. As we have seen in the colleges and universities, large numbers of these prospective recruits are youngsters from well-to-do or middle-class families, rather than those of more disadvantaged backgrounds. The Students for a Democratic Society and similar groups draw much active and latent support from what has been aptly termed the "lumpenbourgeosie," the middle-class masses.

I think it is indisputable that these and other members of your generation are, intellectually and otherwise, among the more well-equipped citizens in the history of the United States. It would be tragic if they adopted disaffection as a way of life. They must be shown that there are definite alternatives to perpetual protest as a means of linking ideals to actions.

Indeed we all need such alternatives, whatever our age or station in life. It is a common insight of psychology that human beings need a sense of efficacy, a feeling that their actions are effective and that they have a meaningful degree of control over their own lives. What is true for individuals in their personal lives is also true in the social realm, especially for activists. There is a craving to understand the pace and direction of change in society, and to be able to have some measure of influence in steering the course the nation will follow.

But the social analysis associated with some of the contemporary protest movements is a poor guide for individual or collective action. The ideology of the New Left, like that of the super-conservatism that flared briefly in the early nineteen-sixties, is but remotely connected to the realities of American society in our time. It is a curious hodge-podge of Marxist, or neo-Marxist, or pseudo-Marxist, or crypto-Maoist doctrines, fascinating to debate but irrelevant to enact.

This political potpourri mixes genuine social concern with some widely incorrect "lessons" of social history. Mark Twain once observed that "One should be careful to get out of an experience only the wisdom that is in it—and stop there lest we be like the cat that sits down on the hot stove lid. She will never sit down on a hot stove lid again—and that's well; but she will never sit down on a cold one either." Among many of our most sophisticated "cats," there is a strong temptation to over-interpret and over-generalize. Those who aspire to effective political activism would do well to resist that temptation.

If we are to devise sensible standards and functions for protest or any other form of political action, we shall first have to develop an accurate, balanced and comprehensive perspective on the immense social forces already at work in our society. It will hardly do for one to ignore, out of convenience or calculation, the facts which do not fit some pre-conceived ideology. I do not presume to claim that I have the scoop on the intricate eddies which move this nation. But there are a number of major trends which should be a factor in any projection of American social development.

Perhaps the most fundamental of these trends is the growing mobilization of this country's public and private resources to deal with our domestic problems. The philosophy of Dr. Pangloss, who proclaimed that "this is the best of all possible worlds," has never found much favor in the United States. But in recent years this country's citizens and institutions have become increasingly aroused to erase the blemishes on our body politic. In this respect the protest movements reflect and stimulate the healthy self-criticism taking place throughout the nation.

It is a very significant fact that America has identified more precisely than ever before the nature and magnitude of its acute social problems. Racial and social injustice is being seen in concrete terms, as a root cause of human misery and as a principal obstacle to the further development of this nation. Poverty, hunger, unemployment, inferior education, inadequate health care—these grave inequities are now being recognized for what they are, the responsibility of society as a whole as well as the individuals involved.

From this spreading perception has emerged a wholly different attitude toward government. Even after the Great Depression there was a lingering reluctance to have the government act vigorously to meet social needs. But the new awareness that sizable human problems still exist in this land of plenty has created an actual *demand* for government to act or to help others act to relieve them. While there is justified skepticism regarding the effectiveness of some programs, there is an equally justified in-

sistence that various programs must at least be tried.

We ought to realize that, largely because of these altered attitudes, the United States is now well into an unprecedented period of social and political experimentation. In the decades since the Second World War, the power and authority of government have been enlisted to combat racial discrimination in education, in employment, in voting, in housing and in other areas. New cabinet departments have been established to cope with critical domestic requirements: Health, Education and Welfare, Housing and Urban Development, Transportation. A host of other innovations have appeared: The Office of Economic Opportunity, with its community action agencies; the Model Cities Program; the Manpower Development and Training Administration; the Community Relations Service.

The mere catalogue of federal agencies scarcely indicates that adequate programs and funds are now in existence. But it does afford a vital comparison with the governmental organization of 1950 or even later, when there were virtually no agencies with major responsibilities for the problems we now see so vividly.

Has this proliferation of effort, and a parallel expansion of private activities, had any effect? The question is very debatable when one speaks of certain programs, but in the main and overall, I think the answer is a resounding "yea." We are a long way from the good society we seek, but not nearly so far as we would have been without the revolutionary changes which have marked private attitudes and public institutions. We now have a valuable degree of continuity in efforts to evaluate and cope with a broad spectrum of social problems. There remains a great need for experimentation and for improved use of our resources in these areas. Still greater is the need to expand the level of effort generally on these gigantic tasks of social reconstruction.

It would be sheer folly to assume that, simply because we have these new programs, things will automatically get better. Yet it would also be foolish to propound demands for social change in a vacuum, oblivious to the substantial changes already in progress.

But, one may ask, is this all an institutional facade behind which little is really accomplished? I think not.

If one takes what might be called the summary problem of our society, the persistence of poverty amid affluence, there has been measurable progress in these years. In 1959 some 22% of the nation's households were poor; by 1967 those below the poverty line totaled 13.3%. One can properly state, in viewing this trend that the bottle of poverty is still more than half full, but it is worth noting that it is less full than before.

Special services to the disadvantaged have also been expanding, but the key point is that the total number of poor is now sufficiently small to contemplate rapid and large-scale action to end poverty. The Council of Economic Advisors now estimates the poverty gap, the sum required to lift all Americans out of nominal poverty, is less than $10 billion a year. That figure is not vastly beyond the recent increases in Annual expenditures on domestic programs. For example, in the coming fiscal year, despite the tremendous budgetary competition, President Nixon is proposing to expand human resources funding by $5.5 billion, a 10% increase over 1969.

At the same time there is serious thought being given to many different aspects of the poverty problem. Attempts to end the deprivation of children are a paramount concern. The Administration is now committed to a $2.5 billion program to combat hunger—still inadequate but a solid step forward. Since most of the poor are employed full time, contrary to the popular impression that welfare rolls are carrying most of the poverty-striken, special emphasis is directed toward manpower training and upgrading of job skills.

In short, these and numerous other important initiatives reveal something other than a decadent society. They suggest a nation worried about its integrity, as it should be, and concerned about its people, as it must be. They suggest that this is a time for pitching in, not for opting out. They indicate the awakening of a very imperfect society, trying to be better than it is. And that, I submit, should give a measure of hope to us all.

My message today is a simple one. Lest it be misunderstood in the more complicated discussion of social trends and innovations, let me state it briefly.

This country has profound and pressing social problems on its agenda.

It needs the best energies of all its citizens, especially its gifted young people, to remedy these ills.

Let us not dissipate these energies on phony issues or misguided missions.

Let us not mistake the vigor of protest for the value of accomplishment.

Let us direct the zeal of every concerned American to the real problems.

Let us foresake false drama for true endeavor.

Let us, in short, recognize that ours is a precious community that demands and deserves the best that is in us.

FORCED LABOR CONVENTION IS CONSISTENT WITH OUR FIRST AMENDMENT

Mr. PROXMIRE. Mr. President, the Convention on the Abolition of Forced Labor was adopted by the International Labor Organization at Geneva on June 25, 1957. It was submitted to the U.S. Senate for ratification in 1963 where it has remained lodged ever since. In discussing this treaty, I refer to the testimony given by Mr. Arthur Goldberg in his appearance before a Human Rights Subcommittee of the Foreign Relations Committee on February 23, 1967:

One of the principal proponents of this convention was the American labor movement, and the reason the American labor movement was so interested in this convention at the ILO was a part of history we all know, the horror and the reaction by the United States and our people to forced labor camps and other totalitarian devices which we find to be completely inconsistent with those human rights which our Constitution provides, and this is why our labor people who participated as workers' delegates at the ILO Convention, took such a prominent part in urging the adoption of this revolution, and this is why they were assailed pretty vigorously in the press of many totalitarian countries.

We do not in our country subscribe to the use of any forced labor as that term is commonly understood. We have no forced labor camps. The only "forced labor" which might occur would be connected to punishment for a crime and as part of that punishment and, as I shall point out, this convention does not reach that type of punishment which is permissible for crimes which are validly designated as crimes under our Constitution, and we refer again to the 13th amendment as the basic source of this statement because, you remember, I read the amendment and it said not only slavery but involuntary servitude, except as punishment for a crime, is prohibited by our Constitution.

Opponents of ratification have claimed that passage of this treaty would result in a potential conflict as to just what is and what is not permissible to be uttered as public speeches. More specifically, questions and complications would allegedly arise as to how one would handle an individual who continued to espouse contrary ideological views. But there is absolutely nothing in this Forced Labor Convention which would in any way contravene with the decisions of our Supreme Court and the Smith Act. As Mr. Goldberg points out:

The decisions in both Dennis and Yates . . . make it very clear that, consistent with the first amendment, there cannot be and should not be, and nobody would urge, and Congress did not provide, that punishment should be criminally extracted for the holding or expressing of views, abstract views or political doctrines, however obnoxious the doctrine may be.

In fact, both of these decisions seem to indicate that what is forbidden was a conspiracy to support and teach views linked with a course of conduct; specifically, the advocacy of the violent overthrow of the Government of the United States. So as Mr. Goldberg says:

There is nothing in this convention which would in any way undermine any act of Congress. This Convention merely states in this respect what our first amendment states, you cannot be sent to jail for expressing views. There is no immunity in this convention and none would arise from this convention for those who advocate or attempt the violent overthrow of the Government.

Mr. President, I think we have delayed too long. This convention, along with several other treaties dealing with international human rights, have been laying fallow in committee for too long. I believe our constituents deserve to know why we have been afraid to act on them, why we have continued to sit quietly hoping for them to magically disappear overnight.

There is not a fellow Senator among us today who thinks that the United States should become a weaker nation or renege on its important and necessary commitments to the world. No one wants to be accused of being an isolationist. And yet, Mr. President, our glaring failure to ratify this convention sticks out for the world to take note of—for our enemies to exploit and use to their own advantage.

We have continually gone on record as being the Nation which champions the cause of the dispossessed and the persecuted. If we continue to be reluctant to act on these conventions before us, then our image must then be tinted with hypocrisy. Mr. President, I strongly request my colleagues to join with me in making the ratification of this Forced Labor Convention and the other human rights conventions before us, one of our most urgent and pressing matters of business.

GOVERNMENT SUBSIDIZATION OF THE OIL INDUSTRY

Mr. HART. Mr. President, the exact figures we get depend on just who is doing the calculating. But high or low, there is no argument that Government subsidization of our oil industry is costing this Nation billions of dollars annually. Some comes out of taxes—some directly from the pockets of consumers in the form of high gas prices. As an example of the magnitude of the under-

writing this industry is getting, a conservative estimate is that consumers are paying $4 to $5 billion a year in higher gas and oil prices simply because of the oil import program.

Many statistics relating to the cost of this program were laid out on the record of recent Senate Antitrust and Monopoly Subcommittee hearings. Some of these have been capsuled in a June 13, 1969, article in Time magazine, which I ask unanimous consent be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HART. Mr. President, the article also makes a point which is most significant in light of these high costs: that although the subsidies were intended to "protect national security" by preserving our domestic reserves, the theory has not worked.

By many indicia used, exploration and discovery of domestic oil is falling. In fact, the industry itself estimates that by 1985, 85 percent of the Nation's oil needs will have to come from reserves not yet discovered.

EXHIBIT 1

OIL: BATTLE OVER SPECIAL PRIVILEGE

In more ways than one, oil is power. It provides 75% of the U.S.'s energy, serves as the basis of some of its most fabled personal fortunes and influences its foreign and domestic policy. Now the Nixon Administration and the Congress are conducting some long-overdue reappraisals of the Government's policy toward the oil industry itself. The question increasingly asked in Washington is whether the industry should continue to enjoy its privileged position with regard to income taxes and import controls.

To find answers, President Nixon has appointed a task force that includes practically his entire Cabinet and ordered it to report to him this fall on oil policy. Two congressional committees are also scrutinizing the industry. The inquiry is likely to be more intense than in the past, since many of oil's longtime friends in high places have departed. Lyndon Johnson has retired; former House Speaker Sam Rayburn and Senator Robert Kerr are dead. Louisiana's Russell Long is left to defend the industry against such Senate reformers as Edward Kennedy, Edmund Muskie, Philip Hart and William Proxmire. Oilmen have mobilized their own forces in a desperate battle to protect their interests.

DWINDLING RESERVES

The prime target of the critics is the oil depletion allowance. It permits owners to deduct from their taxable income 27½% of the value that each well yields; moreover, the deduction can be taken as long as the well produces, even if the original cost of exploration and development has been returned many times over. The allowance was partially responsible for the fact that no taxes at all were paid by 155 U.S. citizens who earned more than $200,000 in 1967.

Oilmen argue that the special allowance is necessary to compensate them for the tremendous costs and risks involved in prospecting for oil, and to give them extra incentive to search for more of it. The search has been slowing lately. Since 1957, the number of new wells drilled in the U.S. has dropped 40%; domestic reserves have remained nearly constant but demand for oil has increased by as much as 29%. Two weeks ago, Michael A. Wright, chairman of Humble Oil, told Senator Hart's antitrust subcommittee that 87% of the nation's oil needs by 1985 will have to come from reserves that have not yet been discovered.

QUOTA SYSTEM

Even so, Congress has not been persuaded that exploration would be discouraged by a reduction in the depletion allowance. On Capitol Hill, the feeling is growing that the allowances, which cost the Government about $1 billion a year in lost taxes, are indefensible from the viewpoint of tax equity. Partly because of its tax privileges, the oil industry has fairly high profits. Oil companies earn an average of 11.2% on their invested capital, which is slightly above the norm for all U.S. industry; they also earn 10% on sales, which is about double the figure for other U.S. industry. Oilmen seem reconciled to seeing the allowance cut to 22½% or perhaps less, and the depreciation limited to fixed periods instead of the lifetime of the well.

Another target for congressional fire is the oil import-quota system, which helps keep domestic oil prices up by keeping foreign oil out. Middle Eastern oil costs about 4¢ a gallon compared with U.S. oil's 7¢; best estimates are that the quotas oblige U.S. customers to pay $4 billion to $5 billion a year in higher oil and gasoline prices. Imposed by the Eisenhower Administration in 1959 on the grounds of "national security," the quotas limit imports of crude to 21% of domestic production.

Like the depletion allowance, the quota system is also justified as a means of encouraging exploration for more domestic reserves. The quotas, according to the oilmen's argument, save the U.S. from becoming too dependent on the oil sheiks of the unstable Middle East. They would probably raise their royalties—and thus the price—if the U.S. needed substantially more oil.

On the other hand, the protectionist system forces the U.S. to use up its reserves at a time when much cheaper oil is readily available abroad. Senator Hart has, perhaps extravagantly, accused the oil companies of "playing Russian roulette with national security" by supporting import restriction while drawing down the domestic supply. Ted Kennedy scoffs that the industry maintains that "our reserves will be conserved if we consume them first." In view of such attacks; Congress is likely next year to increase the import qoutas.

HELP FROM THE NORTH

The whole debate has been intensified by the discovery of a huge pool of oil under the snows of Alaska's North Slope. The biggest new find in the U.S. since the East Texas strike of 1930, the North Slope promises to lessen U.S. dependence on oil from the Middle East. Walter Levy, internationally known oil consultant, estimates the find could run as high as 20 billion barrels, enough to increase U.S. reserves by two-thirds.

For their part, oilmen maintain that they would not have risked North Slope drilling without the depletion allowance, and claim that the allowance is necessary to spur further development. Despite the likelihood of a cut in the allowance, however, the managers of Atlantic-Richfield, British Petroleum and Jersey Standard believe that the find will be so profitable that they plan to invest $900 million in an 800-mile pipeline. It will bring the oil to the ice-free port of Valdez, Alaska. In order to expand its marketing of Alaskan oil, British Petroleum last week announced its intention of merging with Standard Oil of Ohio, whose stock promptly shot up 27½ points to close at 98½.

Humble Oil's executives, hoping to succeed where Explorer John Cabot failed, announced last week that they are fitting out the 115,000-ton tanker *Manhattan* as an icebreaker for a pioneering—and perilous—test run the long ice-choked Northwest Passage to the Arctic next month. Denver's King Resources Co., wagering that the *Manhattan* will make it, has drafted plans to build a deep-water port in Maine's Casco Bay. That port is even closer to the North Slope than Seattle is. No Alaskan oil is expected to be delivered to any of the "lower 48" states before 1972 at the earliest. But its existence may provide Congress with the reasons it needs to make some major changes in the oil industry's present privileges.

PRESIDENT NIXON'S UPCOMING TRIP TO RUMANIA

Mr. MONDALE. Mr. President, an editorial discussing President Nixon's proposed visit to Rumania appeared in this morning's New York Times. The editorial pointed out that the President could have "given greater substance to this visit if he had asked Congress to liberalize the export control law to allow an expansion of American trade with Communist countries."

An editorial which appeared in the New York Journal of Commerce 2 weeks ago discussed the administration's position in light of legislation being considered by the Banking and Currency Committee. In addition, the Minneapolis Tribune published an editorial in support of the effort within the Banking and Currency Committee to reform the Export Control Act.

I ask unanimous consent that the editorial entitled "The President's Travels" from the New York Times of Monday, June 30, 1969, the editorial entitled "Bait for a Political Deal?" from the New York Journal of Commerce for June 18, 1969, and the editorial entitled "Self-Defeating Trade Restrictions" from the Minneapolis Tribune for June 20, 1969, be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times, June 30, 1969]

THE PRESIDENT'S TRAVELS

President Nixon seems to place great store in brief visits to other countries for direct talks with their leaders. At this stage in what he calls a transition from an era of "confrontation" to one of negotiation with the Soviet bloc, he has accepted an invitation to Rumania in early August after earlier visits to five Asian countries.

Rumanians will undoubtedly be pleased at this first visit by an American President. If things go well, Mr. Nixon will arrive in Bucharest basking in the success of the Apollo 11 moon trip, having watched the splashdown in the Pacific. He will find it interesting, and perhaps highly useful, to talk with President Ceausescu, whose independence within the Soviet bloc has often infuriated the Kremlin.

There are hazards in fleeting summitry and in this particular mission, however, Mr. Nixon obviously picked Rumania for his first Presidential venture into eastern Europe because Mr. Ceausescu has defied Moscow on major questions, including the invasion of Czechoslovakia last year.

If Russia regards the Nixon visit as an attempt to widen fissures in the Soviet camp it may harden its attitude on arms control negotiations and other key East-West questions. Mr. Nixon may hope his visit will encourage greater independence from Moscow by the Warsaw Pact countries; but it could have the opposite effect of making any show of independence more perilous.

Nor should the President lose sight of the fact that he will, in a sense, be bestowing his blessing on a regime that, regardless of its defiance of Moscow, remains a brutal Communist dictatorship, more oppressive by far than the one in Hungary and even the restored hardlining Government of Czechoslovakia.

Mr. Nixon could have given greater substance to this visit if he had asked Congress

to liberalize the Export Control Law to allow an expansion of American trade with Communist countries. Instead, he appeased right-wing Republicans by calling for renewal of that restrictive relic of the cold war era.

Presidential visits can be useful exercises in good-will and diplomatic maneuver but they cannot be a substitute for policy.

[From the New York Journal of Commerce, June 18, 1969]

BAIT FOR A POLITICAL DEAL?

With less than two weeks to go before the Export Control Act is due to expire, a good many people are striking some curious postures on the manner in which it should be extended.

Senator Dirksen, writing in the current issue of Readers Digest, says this isn't the time to loosen controls on East-West trading because the dependence of the Communist states on western technology "represents a vulnerability that should be capitalized upon." If his premise had been halfway correct his conclusion might at least have had a point. But it wasn't. There is nothing in the act that denies Communist countries access to the most advanced technologies of Western Europe, as witness the fact that while Americans don't sell computers in Eastern Europe, Western European manufacturers do.

The Nixon Administration takes the attitude that any easing of East-West trade controls must be part of a package deal, partly political in nature, and that this is not the proper time for it. It has apparently forgotten the observation in Mr. Nixon's inaugural address that in U.S.-Communist relations "after a period of confrontation, we are entering on an era of negotiation." Apparently the beginning of that era is to be somewhat delayed, for what the administration now wants is a four-year extension of the Export Control Act in its present form through June 30, 1973. Did we say "somewhat delayed?" Delayed right into the next Presidential term.

To us this is all very disappointing because there are a number of proposals before Congress that would extend the act in a manner that would allow for greater flexibility in enforcing it.

One, sponsored by Senators Muskie, Mondale, Packwood and Harrison Williams, would control U.S. exports to Communist areas only in items having a "significant military applicability" rather than all those of "economic" importance. Another, introduced by Senator Magnuson and 23 of his colleagues, would give the President authority to grant most-favored-nation treatment to imports from those Communist states willing to provide basic protection for U.S. commercial interests in the treatment of patents, royalties and the like (Communist China, North Korea, North Vietnam, Cuba and East Germany would be barred from this treatment, however).

We find it hard to understand why the administration should not, at the very least, accept the Magnuson proposal. It is permissive in nature. It wouldn't bind the administration to give MFN treatment to any country not accorded it now. (Yugoslavia and Poland are the only Communist states currently getting this treatment. Imports from all other Communist states must pay the high levies established in the Tariff Act of 1930).

It is, of course, understandable that the administration doesn't want to negotiate on this matter now. What is less understandable is its feeling that Congress should not give it merely the authority to negotiate a more rational approach to East-West trading until four long years have passed.

A reason frequently given for making no change in the present restrictions is that this nation's trade with Communist states is too small to be worth bothering about.

Of course it's small, but the Export Control Act is one of the prime reasons why it is small. If one cannot say the same about trading between Eastern and Western Europe, isn't it just possible that one reason might be that Western Europe doesn't apply such severe curbs to this trade?

As matters stand, the United States Export Control Act spreads like a protective umbrella over the industries of Western Europe that can produce sophisticated equipment and market it in the Communist areas with virtually no fear of competition from American exporters. In most major respects, notwithstanding Senator Dirksen's imperfect comprehension of what is happening, Eastern Europe suffers little from the workings of this statute. The sufferers are the American exporters and the American balance of payments.

Finally, it is a little odd to hear a normalization of trade relations discussed as though it were something, like foreign aid, in the nature of a gift bestowed by a benign Washington on some hapless economic areas abroad. Or that a withdrawal of the punitive Smoot-Hawley tariff rates, which so burdened the more efficient potential American exporters in the 1930s, would amount to the same thing.

We have always been under the impression embodied in the Trade Agreements Act that the exchange of goods and services is not a one sided affair of benefit to one group of nations but a burden on others. It is not something we normally hold out as bait for a political deal, but an opportunity for economic progress at both ends of the exchange.

That, at least, is the way Washington looks at it where most of the world is concerned. Why does it suddenly take on the attributes of an act of charity when the discussion comes to Poland, Rumania, Czechoslovakia, Rhodesia or the Republic of South Africa? Shall we have to wait four more years to get an intelligible answer?

Perhaps during the next week or 10 days Congress will think better of it.

[From the Minneapolis (Minn.) Tribune, June 20, 1969]

SELF-DEFEATING TRADE RESTRICTIONS

An effort to change a 20-year-old policy of restricting American trade with Eastern European Communist countries is gaining in the Senate, where a committee is likely today to approve a bill liberalizing East-West trade regulations.

The bill, whose chief sponsors are Sens. Muskie and Mondale, is intended to replace the Export Control Act of 1949, which expires June 30. The new proposal would continue to prevent export of strategic and military items, while dropping the network of controls on goods judged of "economic" importance only. In addition, the bill would eliminate a requirement that half the wheat and feed grains sold Russia, and half the feed grains exported to most Eastern European countries, must be shipped on American vessels—a requirement which represents a serious obstacle to trade expansion.

The bill is in keeping with today's American foreign policy, which recognizes that Communist nations do not represent a monolithic bloc. It reflects the reality, conceded by the State Department in testimony, that withholding trade has "limited significance," at best, in influencing the policies of Eastern European nations. Many experts claim that increasing trade contacts could have a beneficial effect on the policies of these nations.

In addition, U.S. refusal to trade with Eastern Europe no longer means—as it once might have—that Communist nations are denied products. The result, instead, is to deny U.S. farmers and businesses access to an Eastern European market which is being tapped by other countries, or—as Mondale has observed—to drive the satellite nations toward greater economic dependence on Russia.

Unnecessarily broad restrictions on trade seem self-defeating at a time when this country is searching for ways to expand farm exports and to improve its balance of payments. The Muskie-Mondale bill, on the other hand, offers potential gains that are both economic—by benefitting American workers, manufacturers and farmers—and political—by encouraging constructive trends in relations between Eastern Europe and this country.

TAX REFORM

Mr. METCALF. Mr. President, by now each of us has received a complete set of the hearings on tax reform that were completed in the House on April 24. I find many of the statistics gathered during the course of those hearings rather startling.

For example, when we examine the tax brackets that people are actually in at the various income levels, we find that up to the $50,000 level an individual's tax bracket keeps moving up the scale just as we would expect it to do under a progressive tax. For income groups above $50,000 but under $100,000, the upward movement in effective rates begins to flatten. By the time we reach an examination of taxable returns of individuals with incomes above $100,000, we find that the central range of effective rate moves backward to produce the following result in the $1 million and over group.

Seventy-five percent of the people who have actual incomes of $1 million and over pay only an effective rate of between $0.20 to $0.30 of tax on the dollar. This may be compared with taxpayers in the group between $20,000 and $50,000 of actual income, where about three out of every five taxpayers pay at the same effective rate, yet the $1 million and over group per taxpayer makes over 50 times as much money a year.

Surely no one can disagree with the statement of former Assistant Secretary of the Treasury, Stanley S. Surrey, when he commented on these statistics during the course of his testimony last February, and I quote:

> The obvious departure from the ability to pay concept and from elementary standards of fairness is self-evident in these statistics. Whether a person is below the poverty line or whether he is in the group between $20,000 to $50,000, he is certainly warranted in feeling that the income tax is not working fairly.

Mr. President, I see no reason why we should have to wait any longer before we begin to discuss the causes of unfairness in our present tax laws. Since we have the benefit of almost 6,000 pages of hearings already held this year, there is no reason why we cannot get a headstart on our own deliberations.

WAYNE STATE UNIVERSITY PROFESSORS ENDORSE S. 1591, BILL TO ESTABLISH AMERICAN FOLKLIFE FOUNDATION

Mr. YARBOROUGH. Mr. President, I recently received a copy of a letter

which was sent to my distinguished colleagues from Michigan Senators HART and GRIFFIN. This letter, signed by four members of the faculty of Wayne State University in Detroit, Mich., endorses S. 1591, my bill to create an American Folklife Foundation. The letter indicates that the professors have a clear understanding of the need for the sort of body I hope the Congress will create.

Mr. President, I ask unanimous consent that the letter from the four professors at Wayne State University, dated June 2, 1969, together with their signatures, be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WAYNE STATE UNIVERSITY,
Detroit, Mich., June 2, 1969.

Hon. PHILIP A. HART,
U.S. Senate,
Washington, D.C.
Hon. ROBERT GRIFFIN,
U.S. Senate,
Washington, D.C.

DEAR SIRS: Recently our attention was called to the Senate bill S. 1591 proposed by the Honorable Ralph Yarborough and William Fulbright concerning the establishment of a national folklife program under the auspices of the Smithsonian Institution.

As faculty members of Wayne State University currently engaged in the teaching and study of folklore and folklife in the United States, we are urging you to give your full support to this bill.

In these troubled times when there is so much racial unrest, intercultural conflict, and economic and social inequity which divides American society, it is imperative that we know as much as possible about traditions, life-styles, and forces of habit which both unite and divide us from one another. Traditional attitudes, beliefs, customs, and stereotypes, for example, in a very large part determine how a group communicates within itself and how it interacts with the larger mainstream of American culture. The study of such material along with the saying, songs, legends, tales, and traditional manner of living in a given subculture of that group which frequently are unavailable to scholars and social scientists through more direct approaches.

The analysis of ghetto lore and life may enable social planners to more effectively bridge the gap between ethnic and racial groups in urban areas. The study of traditional southern mountain health practices may contribute to an understanding of the problems these people face when they encounter alien and seemingly impersonal medical facilities in large northern cities. In short, our point is that in addition to the study of American folklife and folklore as an important part of the national heritage, a knowledge of the traditions of the many regional, ethnic, and occupational groups in American society may be applied towards the solution of pressing social problems facing this country today.

Our only other concern is encouraging you to support this bill is that top qualified personnel be secured to administer the program which would result from its passage. The subjects of folklore, folksong, and folklife attract many amateurs as well as professionals, some of whose enthusiasm far outstrips their grasp of the subject matter. We feel that there is room for both amateurs and professionals in the proposed folklore and folklife foundation if the government will carefully scrutinize the qualifications of those individuals nominated for Board Director and/or other employment with the foundation.

Sincerely,

ELLEN J. STEKERT,
Associate Professor, Department of English.
RICHARD A. REUSS,
Assistant Professor, Department of Sociology and Anthropology.
JACK FRISCH,
Assistant Professor, Department of Sociology and Anthropolgy.
PAUL D. EDSON,
Assistant Professor, Department of Sociology and Anthropolgy.

HUNGER IN ILLINOIS

Mr. PERCY. Mr. President, last Friday, June 27, the Senate Select Committee on Nutrition and Human Needs traveled to East St. Louis for a 1-day hearing. During the day we had a number of witnesses before the committee testifying about the extent of hunger in the East St. Louis area, the effect malnutrition has on the health of individuals, and the programs which are now in operation in East St. Louis to bring food to the hungry.

The national director of Operation Breadbasket, an organization affiliated with the Southern Christian Leadership Conference, the Reverend Jesse L. Jackson, testified before the committee. He appeared at the conclusion of a statewide campaign against hunger which took him to all corners of the State of Illinois.

Reverend Jackson's statement was moving, dramatic, and challenging. In order that this statement might be shared with all my colleagues here in the House and Senate, I am asking unanimous consent that it be inserted in the RECORD at this point. I would like to point out that Reverend Jackson has made some strong statements in his testimony and I welcome any citizen from Illinois or elsewhere, who may wish to comment on the Reverend's statement or to challenge any part of it, to address their comments to me here in the Senate in Washington.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE REVEREND JESSE L. JACKSON, NATIONAL DIRECTOR, OPERATION BREADBASKET OF THE SOUTHERN CHRISTIAN LEADERSHIP CONFERENCE, JUNE 29, 1969

On behalf of the ministers of Operation Breadbasket of the Southern Christian Leadership Conference I come to testify at this hearing, in an endeavor to make an appeal concerning the greatest domestic crisis of this century. At this moment in our national history, the United States of America finds itself forced to face truths of awesome and appalling dimensions for our states, including this state, Illinois, and our nation are riven by great divisions.

There are divisions between young and old, (which we casually call "the Generation Gap"), divisions between hawks and doves over how we prosecute a war which persecutes a nation of poor people, a war which ironically and ominously is right now being diligently pursued while we persist in talking of peace at the conference tables of Paris. And so we are struck by the truth of the ancient saying that men yet cry out for "peace, peace, yet there is no peace."

There are divisions growing out of racial antagonisms which polarize the relationships between blacks and whites in this society. We sit today in this hearing in East St. Louis, one of the southernmost and most polarized communities of Illinois, a state which we like to refer to as the Land of Lincoln. Even as we sit comes again ringing across the years the timely and needed counsel of the Great Emancipator who said "a house divided against itself cannot stand." Lincoln, in a sense gave his life as did the founder of our organization, Dr. Martin Luther King, Jr., in order to bind up the wounds of racial cleavage in our national community.

There is a great division in America, today, between the rich and the poor, the "haves" and the "have-nots," the affluent and the poverty-stricken. Poverty itself is a form of oppression which threatens the essence of man's existence, for men will steal before they will starve. The Bible's Book of Proverbs warns us that if a man is given too much, he will deny the Lord, but also that if a man is given too little, he will steal and defame the name of the Lord. (Proverbs 30) It is understandable, then, that those who are malnourished, and who thus might be physically deformed or psychologically impaired by the crippling circumstances of poverty and hunger are in a state of destitution, desperation and despair. It is a fact of life that people finding themselves drowning in poverty, losing a grip on life in their will to live, resort to the survival ethic of "any means necessary," violence nowithstanding, in an effort to find a solution for their problems. We are reminded of such truth in vivid fashion by Victor Hugo's *Les Miserables*, and by another great son of Illinois, Adlai Stevenson, speaking in Kasson, Minnesota in 1952, telling us that "a hungry man is not a free man," reinforcing Proverbs' comment that a hungry man is limited in his choices and so will beg, borrow or steal before he will starve. Finally, in this vein is the ancient wisdom of Diogenes who when asked what was the proper time for supper, answered that "if you are a rich man whenever you please, and if you are a poor man, whenever, wherever, however you can." Thus, it is incumbent upon the leaders of both the poor in substance and the rich and affluent who are too often impoverished in compassion to see beyond the poor's predicament and hasten us toward the elimination of poverty which is the root cause of so much of the present and persisting American Dilemma.

In that connection SCLC's Operation Breadbasket is presently deeply involved in the second phase of the Poor People's Campaign in Illinois. We have just concluded our first caravan, a campaign against hunger which has moved into all the corners of the state. We started with what was a mountaintop experience for so many of us when by the thousands we were drawn to Springfield, to the seat of state government. We were a cavalcade flowing into the capitol to stand up against a proposed legislative cutback in welfare funding, a despicable cutback which would have cruelly deprived hundreds of thousands of men, women and little children of food to eat, of clothes to wear, of medicines to make them well.

On that occasion all of us, marching in stirring unity and magnificent concert, moved against the mountains of chilly unconcern. We scaled upwards to the intoxicating heights, to the pinnacle of legislative victor. It was a triumph not only for the poor people in Illinois, but as well one for the processes of democracy, a victory which must go down in the annals of law-making as one in which the people and the legislators, black and white alike, rose up together and acted in the highest of moral tradition, effecting the shelving of the welfare cutback bill.

Since that headying triumph our caravan has returned to the low places of poverty and

tragedy. We travelled along the dusty backroads, down into the infernal pits where raging poverty stalks, where the demons of hunger roar, where rampant racism and terror prevail. We came down from the mountainous peaks of wealth and affluence which rise so high in Illinois, a state which is the third wealthiest in the nation, a state which ranks above all others, is No. 1 in the land in agricultural and manufacturing exports. Down we came, descending into the valley and there coming upon the disturbing pockmarks of poverty and disparity.

On June 12 we launched out into the deeps of this journey. Just as Ezekiel of old was inspired to go down into the dark and dangerous valley and to dwell there among the despairing and hopeless masses, so we, too, took a trip to the darkest of abysses and dreadful recesses. There we found the sunlight of hope eclipsed, we found ourselves witness to never-ending nightmares of deprivation. We saw seething poverty and its damnable consequences, reminiscent of Dante's Hell. The first rung of hell's ladder that we descended into was Rockford.

Rockford is a picture of tragic disparity and gripping despair. Despite some 643 thriving industries in that city, nearly 14,000 families have incomes which keep them locked in the clutches of poverty, where the hyena-like pangs of hunger rip away nightly at the bellies of little white children. Rockford vividly depicts for all to see that one of the most salient and sobering truths about poverty and racism is that hunger knows no color line, that even though percentagewise there are more black children going hungry than white children, in terms of absolute numbers more white children than black to to bed hungry every night in Illinois and throughout America.

The next rung of descension on the ladder of hell and hunger in Illinois was that of Peoria. Peoria, with over 3100 bustling industrial units. Peoria, with its Caterpillar Tractor Company, turning over 1.7 billion dollars in sales, yet a city containing the second highest concentration of substandard housing in the state, Peoria, with the third largest number of low income families. Peoria, with the 6th highest rate of infant deaths in Illinois. Peoria, where the total unemployment rate reaches a staggering 29 percent in some sections of the city.

Next on our Dante-like descent into the economic infernos of Illinois was Decatur. Decatur, America's soybean capitol. Decatur, which processes over one-third of the state's grain in its graineries. Yet in this place ranking so high in the production of foodstuffs, we were confronted by an unemployment rate exceeding 8 percent, we found 4500 families making under $2500 a year, constituting nearly 12,000 starving people. What despair, what a differential, what a valley of disparity, and ironically where mountains of foodstuffs abound.

An even deeper valley of despair is East St. Louis, with its non-white unemployment rate a staggering 29 percent, with the largest percentage of adults with less than eight years of formal education, with the state's greatest percentage of unsound housing, a city with over 70 percent of its population being black and where stark racism and poverty provoke young men to frustration and crime, where lilywhite juries are jamming medieval dungeon-like jails with young black men, unconstitutionally tried by juries not of their peers.

Truly the deepest pit of poverty and despair into which we trekked was that of Cairo, little Egypt, itself, where modern day Pharaohs of racism reign, where the founding father of the midnight-riding Ku Klux Klan-like White Hats vigilante group is none other than the county's highest law enforcement officer, the notorious Peyton Berbling.

Cairo, where we found blacks victimized not only by gripping poverty, but under a state of military siege and penned in by murderous rifle, literally, walking through the valleys of the shadow of death.

Among the whites of Cairo there is a 10 percent unemployment rate while among the blacks the rate soars up to 35 percent. In a city of less than 9000 persons we found over 3700 hungry men, women and children. We found Cairo a dying city, one of the few communities in the nation where the death rate exceeds the birth rate. Like Ezekiel of old, we had truly come upon a Valley of Dry Bones and the question large-looming before our eyes and ringing in our ears was—Son of Men, Concerned People of Illinois—can these Dry Bones Live?

When we arrived in Cairo we found a city in crisis with armed whites on the military offensive, rampaging against the insecure, frightened and virtually defenseless black community. As a result of our findings and our caravan's presence, a caravan which included State Representative Corneal Davis representing the caucus of Black Legislators, some measure of peace and order came to Cairo. The State Police came down, investigators from the States Attorney General's Office arrived, the U.S. Civil Rights Commission revealed the results of their special investigation, the Lt. Governor came up with his findings.

Yet underneath the sordid and racist fruits were more deeply implanted roots. In the depressing light of the city's dying economy, the poor whites saw themselves threatened and armed themselves against the blacks. The poor whites futilely tried to secure themselves against additional economic dislocation, trying to secure what little was left of the economy. In their blind frustration, the poor whites thought that the solution to their problem was in rendering blacks dead rather than in securing food so that their starving little children might be fed. Yes, for too long instead of an adequate diet, the poor whites had been fed a menu of racism.

On the other hand, the blacks of Cairo found their very survival, their right to life threatened. In consequence they prepared to defend themselves. Thus, both groups sought the elimination of each other rather than seeing that the problem was more than one of racial pigmentation, more than just black skins versus pink skins, more than White Hats versus Black Berets. And, in fact, rather than eliminating the other race, what was needed was the elimination of hunger, the eradication of poverty.

Last night, as every night, two-thirds of the world went to bed hungry because of maldistribution, poor transportation, and, in some instances, the scourge of war and international crisis. Thus, it is understandable though not justifiable that this condition would exist in many parts of the world. In some instances, the lack of agrarian development and technology accounts for the problem. In many instances the topography and eroded and depleted soil is the reason. In other instances the land is over-populated, resulting in under production and consumption beyond the available supply. For instance a nation such as India can elicit a compassionate response to their hunger problem from those who understand the gravity of this cycle of under-production and over-consumption.

American, however, over-produces and under-consumes. We live in a land of surplus at one end, and starvation at the other end. The great problem is the corruption at the level of distribution which reinforces the gap between the over-fed and the underfed, between the greedy and the needy. I can understand that the effect of racism would allow white men to rationalize the starving of black men. White men can, at least, say that they never knew us or that the cataracts of racism blinded them and rendered us invisible since our relationship is one of historical estrangement anyway. But what is the rationale for white men starving their own people or permitting such starvation and suffering among poor whites who numerically outrank blacks in the absolute count of the impoverished? We hear the ancient warning that money is the root of evil. I ask men from the ruling class in America, is your urge for more clothes than you can wear, more cars than you can drive, more food than you can eat, is it that which causes you to forsake your own mother and blood brother? If this be the case, then the rest of the dilemmas of White America relative to the crisis of race relations is certainly cleared up. And America is nothing but a case study in cancerous, coldheartedness.

In this nation of 200 million people with a gross national product of over 900 billion dollars, we still have (conservatively) 40 million people listed as "poor," that is with incomes of less than $3000 a year for a family of four. This is validated by government research and categorized by hunger committees as malnourished due to insufficient commodities.

But fully 10 million of the 40 million who are included in that one-fifth of the nation listed as destitute are children with bloated stomachs and brain damage, who resort to eating red dirt, laundry starch, and lead paint. Physicians call this disease "pica" where hunger manifests itself in such abnormal ways.

It is understandable but not justifiable that this would be true in states that are not blessed with fertile soil or where the ecology does not provide the recources such rivers and lakes which attract manufacturing industries or firms. However, the state of Illinois cannot be judged with the state of Utah for our soil is fertile here in Illinois.

Moreover, as I indicated earlier Illinois is the number one agricultural export state in the nation, and the number one manufacturing export state in the nation. According to recent studies, Illinois is the third wealthiest state in the nation. The state possesses some 329 million dollars of earmarked monies in special funds, and a total of 861 million dollars in all earmarked funds. This is money that we choose not to spend or to make available to the general treasury funds. Among the programs where Illinois' inadequate commitment borders on the culpable is the food stamp program. Illinois serves 68,602 fewer people under food stamps than it did under the federal food commodities distribution program, a drop of 61 per cent. Half the counties in Illinois reach only 3 percent of the poor persons eligible to participate in food stamp distribution, that per cent served being the lowest—along with that of Nebraska—in the nation.

Our abuse of opportunities to feed the hungry and eliminate poverty in this state is most vividly expressed by the fact that we levy the same taxes for corporations as we do for individuals, thus compelling the poor to pay more. Illinois has the second highest sales tax in the nation, outranked only by the tax levied in Alabama. Moreover since 60% of the state revenues are from sales taxes, the poor bear the burden of providing the major share of state revenues. Illinois liks to compare itself with New York and California in citing its achievements; however if our corporation tax compared to that assessed by New York or California, the burden of the poor would be measurably lightened.

Some 150 million dollars comes into Illinois in subsidy payments to affluent farmers, according to Representative Paul Finley; these payments are made to farmers not to grow food or fiber. Yet the state has not chosen to match a six million dollar grant to conduct a school lunch program. As a result only 14,000 children in Cook County could receive free school lunches, when there are

actually some 200,000 poverty families with school-age children in that area. Again, according to this very committee, the Senate Select Committee on Nutrition and Human Needs, there are some 629,000 Illinois households, which amounts to some 2 million people, where hunger is a daily reality.

Families on welfare are forced to live on welfare budgets which guarantee that they will starve or steal. Reputable physicians state that a balanced diet for a family of four for three meals a day cost $7.00, using the National Research Council's minimum nutritional standards. The state of Illinois allots only $2.17 a day for a family of five. Such a ceiling by the Department of Public Aid deepens the hunger of its recipients.

In Illinois SCLC's Operation Breadbasket has drafted up and fought for a Human Subsidy Bill that proposes:

(1) That the Governor would consider the 629,000 Illinois households who are in poverty and hunger serious enough to declare hunger in this state a disaster. This would mean invoking the man-made disaster act.

(2) That this state recognizes earthquakes, fires, and floods as acts of nature or God, as acts of disaster, the state should also recognize erosion of soil, misuse or improper use of funds and the existence of massive hunger, as man-made disasters. In such man-made disasters, the state would employ all the necessary emergency apparatus, such as emergency food and medical supplies, to cope with the situation.

(3) That a percentage of income tax sufficient to eliminate hunger would be earmarked for that purpose. Among other things Illinois should establish a hunger tax. *To have a greater concern for soil eroding than man's eroding is an indictment upon the American value system.* It is radically inconsistent with the credo—government of the people, by the people, for the people. Such misdirected values would never be the people's choice.

(4) That the state initiate forthright drives to give people vocational training for jobs, and would conduct concerted attacks on those trade unions which lock black and poor out of the job market. (Such emergency job training was set up during World War II throughout the U.S.A.)

In light of the fact that this is a federal governmental hearing, points 5 and 6 of the bill, initially directed to the Governor, are here presented as applicable to the President.

(5) That the President would understand the irreparable psychological damage to the poor and disinherited created by the suggestion of his party leaders that the allotments to sustain the poor be reduced in this Congressional session. We are saying that in this session of the Congress where Mr. Nixon reigns as President that he must be forthright in his effort to subsidize the poor rather than to pauperize and embarrass the poor. If such is not done and the President remains silent, his silence will sanctify the cruelty and will be a betrayal of the poor. . . and, in fact, would be a declaration of war. . . upon the poor.

(6) That a school breakfast and lunch program be instituted in every school in the nation.

Men of justice cannot halt between two opinions when tens of thousands of lives are at stake. And it was indeed heartwarming and an action exemplifying justice when just yesterday in response to the presence of thousands of us from all over the state who had come together as part of SCLC's Operation Breadbasket's continuing campaign against hunger, the Illinois House of Representatives, in session in Springfield, resolved by an overwhelming majority to support our Human Sudsidy Bill and, in addition, to push for support of the bill's program in terms of federal legislation and funding.

We contend that the very attitude of the public toward the poor and toward welfare must be changed. Why cannot this change begin in the Land of Lincoln and extend to the entire land over which he was president and for which he gave his life. We maintain that those persons on welfare should not be seen as criminals or prisoners, nor as the results of an innate will not to work. Rather the poor must be seen as products or as results of advanced technology. It must be recognized that their years of blood, sweat, tears, cheap labor, and human sacrifice helped to usher in that advanced technology. These years represent an investment that should not be returned marked "Insufficient Funds."

As opposed to "welfare" we should use the term and develop the concept of human subsidy. The poor would then not be viewed as prisoners who have committed some wrong, but would be recognized as the very vanguard of the twentieth century. Let us strike the word "welfare" from the records, remove all reference to the Pauper's Act, and subsidize the poor just as we presently subsidize the rich.

In this way we would employ the understanding of authentic worship as expressed in Biblical writings of the prophet Micah, the sixth chapter, verses 6 through 8, namely, we will follow his admonition to do justice, to love mercy, and to walk humbly before God by walking honestly and acting decently before our fellow men.

Mr. PERCY. Mr. President, another statement that was presented to the committee by Dr. Albert Thomas, of Chicago, contained information concerning the medical aspect of the hunger problem which I believe should also be widely read and better understood. For these reasons, I ask unanimous consent that the statement prepared by Dr. Albert Thomas of Chicago be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF DR. ANDREW L. THOMAS

Chairman McGovern, honorable senators, ladies and gentlemen, I am Dr. Andrew L. Thomas, President of Cook County Physicians' Association headquartered in Chicago; Secretary, House of Delegates, National Medical Association; and a practicing internist in the city of Chicago. I welcome the opportunity to relate my experiences to this distinguished panel of senators who will, hopefully, gain sufficient information to move the appropriate forces in Washington to answer the critical need for at least 10 per cent of our population.

The existence of the Senate Select Committee on Hunger and Human Needs illustrates clearly that there must be a problem. The nature of the problem and its degree of severity are points to which I shall address myself. First let me commend this Committee for asking physicians to get directly involved in presenting testimony regarding the question of hunger.

The varying degrees of hunger, or more properly, malnutrition are determined by location. What happens in Mississippi differs from what happens in westside or southside Chicago, but the one common denominator is the absence of suitable nutrients for maintaining a state of sound health. However, I would like to focus mostly upon the problems as seen in our urban areas, Chicago being very typical.

My practice is located in the heart of the world's largest concentration of deprived people—the Robert Taylor-Ickes-Stateway Gardens Housing Development that runs in an unbroken line for twenty-two blocks along Chicago's State Street. I am involved with residents of that community at varying levels of activity. I have entered their homes, conversed with them, planned with them in various community projects, and lastly but now least, treated them as patients. They are mostly very good people yearning for the promise of democracy to be fulfilled. They have a great deal of despair that borders on absolute, irreversible hopelessness. They have dreamed and dreamed and dreamed, to the point where they now feel that their dreams are impossible dreams to fulfill. Their dreams are very simple. One of the most important dreams is that of securing dignity and being able to achieve the minimum level of subsistence that would be consistent with maintenance of good health. They have grown weary and they now are extremely impatient. I promised some of them that I would tell you that they see this Committee as the last viable hope that something will be done to liberate them so that they can become useful and productive citizens. I am here only because I, too, see this Committee under its distinguished Chairman and his fellow senators as men who are concerned and who will, hopefully, realize the extremely great responsibility you have of convincing your colleagues in Washington that hunger and other major deficiencies in American society must be corrected if democracy is to survive. Let us then look at some of the problems.

The problem of malnutrition is a problem of ill-health. When one considers the status of health among the underprivileged in the country, one must look at many consequences of malnutrition.

It is a cold, unadulterated fact that the infant mortality rate in the deprived areas of Chicago and other urban areas runs more than twice the national average. For example, in the Lawndale or westside area of Chicago, 46.4 infants die for every 1000 born alive while in the United States 23.7 infants die for each 1000 live births. Many scientific studies have shown that anemic mothers have a greater chance of having either a stillborn child or a mal-developed child who will most certainly be exposed to those kind of illnesses that will take his life before the age of two years. But if the mother is anemic because her nutrition is poor, it is quite clear that malnutrition is a leading cause of infant mortality.

In an unpublished study of various Chicago communities in 1968, the Chicago Board of Health nutritionists found that 41 per cent of nearly two thousand infants at an infant welfare station had iron-deficiency anemia while 46 per cent in a near northwest Latin American community had low hemoglobin levels. In a Chicago Board of Education study it was found that nearly one-third of all Chicago preschool children enrolled in Project Headstart had iron-deficiency anemia in the year 1965.

The bulk of iron consumed by the typical American who is not anemic comes from the eating of certain food substances, such as protein-rich, red meats. There is little hope that the typical impoverished person in our society will consume proper nutrients under current programs available to him. It is not surprising, therefore, that anemia is one of the most critical problems facing the urban dweller, be he Appalachian white, American Indian, Latin American or Afro-American! But there are other severe problems associated with malnutrition.

On any given day in the wards of the monstrous Cook County Hospital, one can find diseases such as Rickets—a condition medical texts describe as of historic interest only. Mental retardation and stunted physical growth and development will be found running rampant through deprived areas when the individual has managed to avoid death in his early years.

The high consumption of carbohydrates which, though cheap to purchase, insures the

bulk of the typical diet in the underprivileged areas, but is devastating to his health. A high carbohydrate diet is known to accelerate the tendency to obesity which, in the underprivileged areas, represents undereating rather than the overeating characteristic of the more affluent rich, fat, middle class individual. One can anticipate early onset of conditions such as Diabetes Mellitus, hardening of the arteries, heart disease, high blood pressure and other chronic, disabling conditions. Inadequate dietary intake also fails to help the body maintain the necessary defense mechanisms to ward off infectious diseases. Thus, TB rate per 100,000 in the Chicago area is astonishing. Chicago has 63 per 100,000, which represents one of the nation's highest. But in the near westside area where it is all black except for the absentee merchants, the rate is 220 per 100,000; while in Glencoe, Illinois, one of the more affluent suburbs, the rate is 3 per 100,000. To avoid Tuberculosis it is necessary to maintain a state of good nutrition and non-congested living arrangements. Neither option is open to the impoverished. The rats in the deprived areas even lead better lives than the humans! And, perhaps, when one of the rats who is a carrier of Bubonic Plague bites one of his victims and causes an epidemic of Bubonic Plague to strike across the urban and suburban areas of this country, then we might see a more responsive, affluent America dealing with the problems of the poor. But, we cannot wait for that type crisis to occur. Action must be taken now. I will not bore you with more and more statistics, but rather I think we can turn to some programs that may help to alleviate some of the conditions that exist.

Since everyone agrees that malnutrition has to do with illness, then it would seem most appropriate to look at the availability of forces for combating illness. First, many of the illnesses that occur in the malnourished are preventable. It would seem reasonable, therefore, that one should start from the beginning and try to prevent malnutrition. Thus, the initial efforts to alleviate the problem should be to eliminate the conditions that cause inadequate dietary consumption by the impoverished. To do this we must look at immediate and long-range goals. The long-range goals of any society should be to constantly improve upon the quality of life for all its citizens. This implies a commitment of public policy geared toward rehabilitating those who have been displaced by technological change to become productive and useful citizens. Here we talk about economics. I am no scholar on economics but feel that it is unnecessary for our economy to plan to have chronic unemployment or under-employment in order for us to survive as a nation when, in fact, it only insures our death as a nation. Every human being has a right to life, liberty and happiness. Thus, I believe we may be talking about re-defining work. Work in a society that I envision would include work by the welfare recipient. A mother who may have five children on ADC is subsidized by government. If she has no talent or cannot be trained to pursue the useful form of work, then she can be considered a working mother to many children. For example, she could be one of the mothers who could manage day-care centers with professional and technical assistance by the various agencies, both public and private, who are concerned with such problems. The significant thing is that her dignity would be preserved and she would be making a contribution to the advancement of American society by helping to train children to become useful and productive citizens of tomorrow. The development of such programs implies a total re-orientation of our thinking about caring for those in our society who cannot care for themselves. It requires discarding our welfare program, since it becomes clear that the patchwork needed for improving the welfare system in this country is such that it would prove very costly, while basic re-orientation to meaningful alternatives would be much more economical and more humanistic in outlook. The various proposals being discussed at varying levels of government such as the Finch, Moynihan plan and the Burns proposals, while going a step beyond our present welfare program; at best, can be considered stopgap measures. Such stopgap measures are important, but only if we hope to achieve in this country. My first recommendation, ultimately the total elimination of poverty therefore, is:

Appointment of a presidential commission, composed of representatives of all segments of American business, governmental and social life. This commission would be given a charge to look into every conceivable facet of our life as a nation to develop a plan to eliminate poverty in this country.

I mentioned from the outset that there is a crisis and obviously one meets the crisis with a crash program to achieve immediate goals. There is surplus food in this nation. Mr. Chairman, you wrote a distinguished record in the food for peace program of our late, great President John F. Kennedy. It seems to me that our task then would be to somehow get the surplus food to those who are starving. According to Dr. Arnold E. Schaeffer, Chief of the Nutrition Program in the Division of Chronic Disease Programs of the Health Services and Mental Health Administration, starvation does indeed exist. It would seem ridiculous that the federal government, having supported such studies, would not take the necessary action to get foodstuffs to those who are needy, regardless of the mechanism that is necessary. Some will call it socialism, but I am unconcerned because it seems to me our task is to preserve democracy and if it does not function we will have to think about its demise. There are many mechanisms that would be available for the distribution of food to the hungry. My only thought is that we do it consistent with preserving the human rights of every individual. The pattern would need to vary depending upon the community involved. Thus, in rural areas it would appear to me that a delivery system would be similar to the mail delivery system, except that trucks would go to the isolated area and deliver the required goods to the impoverished families. On the other hand, in the city it would be desirable to have distribution centers located in facilities which the people are accustomed to. For example, many churches have community centers and it would be most impressive to me that the neighbors of the poor would help their government get food to the less fortunate. One in the establishment of cooperatives where could also envision the government aiding foods would be initially provided by the surplus food program. But ultimately, one would be training impoverished people to self-help through being exposed to the mechanisms of storage and delivery of food substances in an atmosphere of jobs and freedom.

The beehive of activity implied by the preceding considerations would be reminiscent of our total national efforts in preparing and sustaining World War II. The difference would be we would be demonstrating as a nation that America, in fact, is the world's great hope in showing that man can reach a state of the good life where all can enjoy the fruits of human effort.

Then we have the situation where those who are most affected are not even responsible for themselves. That is, our school-age population, especially those in the early years. It is incredible that in most of our urban areas there are no school lunch programs. Breakfast is the most important meal and that meal which most children do not get at home in urban areas of our city. They do not get it at home because the families cannot afford for them to have it. And yet, we have to orient our thinking toward making sure that no child enters school hungry at the beginnning of his school day. Unquestionably, learning is impaired; and ultimately, such children end up becoming dropouts and therefore, we care for them under drastically different but certainly highly undesirable circumstances. Here we talk about breaking the cycle of poverty at one of the earliest stages of its development. I would, therefore, recommend:

The development of a school breakfast and lunch pogram, but emphasizing the school breakfast program for all children leaving it to the option of each parent whether his child should eat breakfast at the school. Mechanisms certainly can be devised which would make it unnecessary to create new structures for lunchrooms; but, rather, one can have a situation similar to what many hospitals have and have caterers prepare the food for the school.

Another highly vulnerable group is the pregnant mother. Iron intake is exceedingly important and easy to achieve through established resources. It is appropriate to insure that every pregnant mother has the means to achieve a satisfactory hemoglobin level, and therefore avoid anemia. That can be done through the physician's office. He can write a prescription very simply. The problem comes in very simply, making sure the means exist for purchasing the drug through the pharmacist. This will require making appropriate changes in the medicaid program to implement. There will be no need for drastic changes to achieve this goal. It means establishing the appropriate guidelines such that pharmacists in this country will not subsidize the government.

Finally, I believe the food stamp program needs to be abolished as we move toward implementing some of the suggestions made earlier. Additionally, however, I would believe any program having to do with the distribution of surplus foods and health problems in recognition of medical and health problems needs to be done by the Department of Health, Education and Welfare, rather than the Department of Agriculture. The reason is very simple: The Department of Agriculture has a conflict of interest in that it has programs geared toward curtailing the producing of foodstuffs and, therefore, cannot be held responsible for distributing food to the needy.

Mr. Chairman, the hour is late. The poor will not continue to wait and I would like to cite the feeling of a little 6-year-old boy in Chicago, writing in the Chicago Tribune on June 1, 1969, this poem:

"Black boy, black boy, walking down the street;
Black boy, black boy, had nothing to eat.
He said to himself, 'I have been starving all week;
I have no money to buy something to eat. I have to steal,
But—if I want to stay alive, I will have to.'

"Went into the store, slipped three cans of soup into my pocket—
Went out. Went to a broken down house, Took out my soup—my knife;
I opened it and ate it cold. I am the people . . . we sing,
Black boy, black boy, walking down the street;
Black boy, black boy, has something to eat."

Eliot speaks for a generation of the poor. They are hungry, will suffer chronic illness, become dropouts and stay in the vicious cycle of poverty, ignorance, disease and dependency. That is the truth of the matter. The consequences are more far-reaching: communicable disease knows no boundaries and will spread from poor to rich at will. The rapid rise of VD in the past decade is typical. But even more significantly, theft of a can of soup today, the toss of a firebomb tomorrow—not in the ghetto, but in the city and

in the suburbs. Not just black, but white and brown. In short, the economics of poverty is such that the poor are coming together. Improvement of nutrition is the first step in improving the health and welfare of all. Thank you.

ORDER FOR STAR PRINT OF S. 1993

Mr. CASE. Mr. President, I ask unanimous consent that S. 1993, a bill to promote public confidence in the integrity of Congress and the executive branch, be star printed with the same number, but reflecting the amendment to it, which I filed later, adding members of the Committee on the Judiciary as cosponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

LANDING NETS FOR THE UNEMPLOYED IN THE FIGHT AGAINST INFLATION

Mr. KENNEDY. Mr. President, yesterday on NBC's "Meet the Press," Prof. Walter Heller, a former Chairman of the Council of Economic Advisers and one of America's most distinguished economists, analyzed in detail a number of the basic considerations involved in the continuing debate over the Nation's current economic policy.

One of the most important parts of Professor Heller's interview was his call for immediate planning by the administration to alleviate the burden of rising unemployment likely to be produced as our current fiscal policy begins to bring inflation under control. As Professor Heller made clear, it is our poorest and most disadvantaged citizens who will be forced to bear the first and heaviest brunt of the fight against inflation. Professor Heller noted that some of the leading economic indicators, such as real output, investment in plant and equipment, and retail sales, were already beginning to show distinct signs of softening, and he predicted that the economy was now at the turning point in the effort to roll back inflation.

Therefore, Professor Heller said, since inflation may now be waning, any softening in the economy is likely to be reflected in the foreseeable future by an increase in unemployment. If we are to continue an effective battle against inflation, he said, we must begin now to take adequate steps to build "landing nets" for the unemployed. He suggested a variety of useful measures that should be prepared to reduce the potential impact of unemployment, and thereby avoid the enormous social and political consequences that would otherwise ensue across the Nation if there is a substantial increase in the level of unemployment. Among the possible approaches he suggested were—

Increases in unemployment compensation;

Improvements in public and private training programs, including government residual employment programs;

And, some form of income maintenance program to relieve the most serious burdens of unemployment.

I agree with Professor Heller that the administration should act now to insure that the young and unskilled, black and white, do not suffer disproportionately in the transition of an inflation-free economy. However wisely and gradually we go about ending inflation, there will inevitably be the risk of a substantial increase in unemployment, especially among the young and unskilled. To impose a disproportionate burden on particular groups is unfair. An increase in unemployment may be coming, but we can relieve its harsh impact by adopting adequate policies in advance.

If we do not act now, it is clear that the already disruptive tensions in our society are likely to increase. We need more generous programs now, before unemployment increases, not some time in the indefinite future. We need realistic programs to help those who will be unable to obtain their first job or keep their present job if the labor market becomes too slack.

Mr. President, I commend Professor Heller's thoughtful comments to the Members of Congress. Because of the importance of his remarks at this crucial juncture in our Nation's economic policy, I ask unanimous consent that the full text of his interview be printed in the RECORD.

There being no objection, the text of the interview was ordered to be printed in the RECORD, as follows:

MEET THE PRESS, JUNE 29, 1969

Guest: Dr. Walter W. Heller, former chairman, Council of Economic Advisers.

Panel: Edwin L. Dale, Jr., New York Times; Stanley Levey, Scripps-Howard Newspaper Alliance; Richard Janssen, Wall Street Journal; Paul Duke, NBC News.

Moderator: Lawrence E. Spivak.

Mr. SPIVAK. Our guest today on "Meet the Press" is Dr. Walter W. Heller, one of the nation's leading economists. Dr. Heller served as Chairman of the Council of Economic Advisers under President Kennedy and President Johnson. Now Professor of Economics at the University of Minnesota, he is often called the "Father of the New Economics."

We will have the first questions now from Paul Duke of NBC News.

Mr. DUKE. Dr. Heller, the fight over the income surtax reaches its climax in the House tomorrow and even if the bill is passed by the House, it may be defeated in the Senate. What do you see as the economic consequences if the tax is discontinued?

Dr. HELLER. Well, I think there are three consequences that you would have to look to. One, there would be a signal to people that we are now really dead serious about fighting inflation. Two, I think interest rates as a result would be tightened up still further by the Federal Reserve. Third, I think the Europeans would begin to wonder again about the dollar and let me add a fourth, which is a social factor: Namely, we would have less adequate financing of some of our desperately needed social problems.

Mr. DUKE. Do you agree with Treasury Secretary Kennedy that we may have runaway inflation if the tax is discontinued?

Dr. HELLER. Well, if you mean by runaway inflation the kind of things they had in Europe, let's say in Germany and so forth, not 10, 20, 30 per cent inflation. We have a prodigiously productive economic machine and this is not a country where we are going to have runaway inflation, but intolerable inflation if we don't do the job that needs doing, yes. Five, six, seven per cent would not be out of the question if we failed to take measures like extension of the surtax.

Mr. DUKE. Now, the fight against the surtax is being led by Democrats and the indication is an overwhelming number of Democrats in the House will vote against the bill. Do you regard these Democrats as acting irresponsibly?

Dr. HELLER. Well, what they are trying to do is make a point. They have been bypassed by the tax reform special several times. Tax reform was dropped from the 1964 bill. Tax reform was dropped from the 1968 program, and they want to see that tax reform is made part of the commitment before they vote for the surtax. They are not against the surtax as such.

Mr. DUKE. Well, in this particular fight do you regard any tax reform as more important than extending the surtax?

Dr. HELLER. I don't see why you have to make a choice. There is no reason that you can't combine the two commitments, extend the surtax, if necessary extend the withholding rates as they did for 30 days, and do it again, and meanwhile hammer out some commitments that mean meaningful tax reform so that you don't have a lot of people forced to pay the surtax while there are a lot of others who are allowed to escape scot-free. There is no necessary conflict between these two.

Mr. DUKE. In other words, you think the bill should be passed as it now is and then bring out a tax reform bill after that?

Dr. HELLER. Well, but I'd like to see the liberals succeed in getting a firm commitment from Richard Nixon and Wilbur Mills to put through that meaningful tax reform in the process of their voting for the surtax.

Mr. DALE. Dr. Heller, assuming passage or extension of the surcharge, how do you view the economic outlook for the rest of this year in terms of growth of the economy, unemployment and inflation?

Dr. HELLER. Well, I think we are at an important turning point in the economy in this sense: Behind the facade of inflation, of high interest rates and so forth, I think there is a distinct softening in the real advance of production and employment. We have already seen the rate of advance in real production drop from 6.5 per cent at the beginning of last year to about three per cent at the beginning of this year. I think it is even slower now.

Secondly, when you look at the plans of business for plant and equipment investment, those seem to be tailing off, the rate of increase is diminishing for the rest of the year and certainly consumption hasn't been all that healthy. Retail sales are about two per cent above what they were eight months ago. That isn't even as much as the price increases. So, I believe we will see a continued softening in real output in the economy. I believe that it is a 50–50 chance that by early 1970 there will be a zero increase in GNP and that means, on one hand, that unemployment is bound to go up and it means, on the other, that inflation will begin to ease but that will come—you know, don't hold your breath; that will come a little more slowly than the rise in unemployment.

Mr. DALE. Well, as you know, a very large number of the citizenry and, in particular, businessmen, are really quite skeptical about the inflation part of it in particular. They see the wages going up at this fantastic rate this year. Some of the construction wages are as high as 15 per cent settlements and others in the range of seven to eight, and they simply doubt that such mysterious things as a budget surplus and a tight money policy by the Federal Reserve will really have any effect in slowing the rate of price increase. What sort of a rate do you think we would get down to? It is 7 percent in the last three months.

Dr. HELLER. Yes, but the overall GNP deflator, which we economists use, is about

4.5 so let's say it is somewhere between 4.5 and 5.5 today. Some administration forecasts have been that we would be down below three per cent by the end of the year. We won't. I think we will be lucky if we are down below 4 per cent by the end of '69.

There is a lag in this. The real factors first take hold, then you get some easing in the monetary situation which I think we will get before the end of the year. Then you get some squeeze on profits, you get some unemployment, and then, gradually you get some easing in the inflationary situation.

I think we will be lucky if we find 3 per cent year over year price increase in 1970.

Mr. DALE. How about unemployment? How high do you think it will go?

Dr. HELLER. You will have to ask Bill Martin and Richard Nixon and Wilbur Mills and a few others. Don't ask me.

Mr. DALE. Assuming zero growth in the first half of next year.

Dr. HELLER. Well, zero growth would mean if it is just fleetingly zero growth and then begins to move up again, you would have to be ready for 4.3, 4.4, 4.5 per cent unemployment. And let's remember that 4.5 per cent unemployment as against 3.5 per cent today means 830,000 people unemployed a year from now let's say, who are employed today.

Mr. LEVEY. Dr. Heller, if you had been President Nixon's Chairman of the Council of Economic Advisors, which isn't a very likely possibility——

Dr. HELLER. Granted.

Mr. LEVEY. What advice would you have given him that the present Council has not given him, or the Treasury Department has not given him, about the fight on inflation?

Dr. HELLER. Well, let me say first of all that the Treasury, the Council, the Budget Director, Arthur Burns in the White House, George Schultz, is a very competent corps of economists; they know what they are doing. That does not, however, mean that they can't make some mistakes.

I would have, for example, counselled holding onto the surtax at the ten per cent level rather than dropping it to five per cent on January 1st. That is not inconsistent with a prediction of weakening in the economy because I think we need those funds to finance the programs that you need to build landing nets under the people who are thrown out of employment in the fight against inflation. The cannon fodder in the fight against inflation are the people at the bottom of the ladder and you have to protect them with government programs.

Secondly, I would have advocated suspension of the investment credit instead of repeal. I think we still need a strong growth program in this country and I don't think we ought to abandon it and, third, I surely wouldn't have declared open season on wage and price bargains in the private economy by saying, "No, no, we won't intervene. We will have nothing like guideposts, nothing like ground rules," and then side by side with that rattle the wage-price control skeleton and stimulate people to increase prices and wages. Within the overall framework of a tight fiscal policy and tight monetary policy, on which they are right, I think they have made these mistakes that I have just listed.

Mr. LEVEY. What are the dangers of overkill, what are the likelihoods that tight money and reduced credit and all the other stringent steps being applied to the economy now will result in putting the brakes on too fast and skidding into a recession?

Dr. HELLER. Well, as one who has been burned by a prediction of overkill, or at least overcool a year ago, I have to proceed with some caution in answering that question. There is always that danger. If the Federal Reserve determined to atone for past sins, like last summer when they, under the influence of economists like myself, I guess, loosened the monetary ties a little too much, if under the influence of those memories they loosen—they tighten too long, they overstay tightness, yes, we could fall into a recession. And in any event in the process of an effective fight against inflation, we have got to expect a rather uncomfortable period in between the soaring '60's and the heavenly '70's. There is going to be a period when we are having more unemployment than we want, when we are having more profit squeeze than we want and the question is how long will the Administration under Richard Nixon stand still for that?

Mr. JANSSEN. Dr. Heller, the Chairman of the Federal Reserve Board, William McChesney Martin, warned recently that before inflation is ended we will have pain and suffering. Do you agree, and for whom?

Dr. HELLER. Well, the pain and suffering is reflected in the comment I just made. The pain and suffering, interestingly enough, will sort of be at the opposite ends of the economic spectrum. On the one hand I think there will be pain and suffering in the squeeze of profit margins and aggregate profits from the first quarter of this year to the first quarter of next year profits might be down as much as ten pecent and then at the other end of the spectrum, and in terms of social and political tensions, much more serious is the fact that we do knock the fellows at the bottom of the ladder off first. It is sort of a "last in first out" phenomenon when there is unemployment.

Inflation is thought to hurt the poor most. Actually the ones who are poorest of all, who don't have jobs, are the ones who have been moving into jobs faster under the pressure of excess demand than the rest of the economy. All kinds of figures show that, that while the overall employment rate went down ten percent, the unemployment rate for people in the ghettos went down 20 percent. They are going to be knocked out of jobs first, and we have got to protect them.

Mr. JANSSEN. How much knocking out of jobs of those people can the nation afford socially and politically, with violence in mind?

Dr. HELLER. Well, precisely, what I am saying is you can't afford very much until you build in (a) a more generous unemployment compensation system; (b) an income maintenance system that will assure that both the people who have inadequate paying jobs as well as the ones that are knocked out of employment will have this landing net, this floor underneath them; (c) you have got to beef up both the private training programs, private, with some government subsidy, and the residual employment program of the federal government. Unless you do this, you are inviting social tensions in the fight against inflation that may become unbearable.

Mr. SPIVAK. Dr. Heller, in September of 1968 you seemed confident that the ten percent surtax and the budget cut would check inflation. Why do you think your prediction proved to be so wrong?

Dr. HELLER. Well, let me make clear first of all that the prediction wasn't that it would immediately check inflation. The prediction was that it would slow down the economy. Now it has slowed down the economy. I mentioned earlier, the economy slowed down from six and a half percent a year to less than three percent a year of real advance in production. Secondly, it slowed down consumption. Retail sales are virtually where they were when the tax was passed, the surtax was passed, whereas in the preceding six months they jumped up $2.5 billion. Now why we went wrong nevertheless in the speed of the slowdown, is really two things. One, during the Congressional argument on the surtax, inflation took much deeper hold, sank much deeper roots, I think, than we were aware of. And secondly, businessmen say "Well, with inflation coming up and with the general assurance of continued high employment and growth, we might just as well go ahead and invest, even though the immediate situation doesn't look so good." So both in plant and equipment investment and in housing, we went off on our forecasts.

Mr. DUKE. Dr. Heller, there are some economists who disagree with you. They believe that the economy is virtually out of control, that it has so much head wind that the normal tools for fighting inflation just aren't going to work, that what we need are wage and price controls. How do you stand on that?

Dr. HELLER. I stand dead set opposed to direct wage and price controls. That is giving up the game. That is throwing out the baby with the bath water. If we want a market system in this economy of ours, if we want the efficiency of that system, it is folly to put on direct wage and price controls unless the economy is in allout war, and then perhaps it wouldn't matter. But in this kind of circumstance what we need is fiscal and monetary restraint and I think we need some Presidential leadership that we are not getting, on setting some general ground rules for wage and price behavior.

I think the American businessman and labor leader is responsive to the White House and if the White House would say "This is the public interest," I think it would have some effect in curbing their excessive wage and price increases and I think it is high time that the Administration realized this.

Mr. DUKE. Does this mean that you would advocate restoration of some form of the old wage-price guidelines?

Dr. HELLER. You couldn't do it overnight. Paul McCrackin is quite right. The guideposts as such were dead. But I think some leadership, some definition of the public interest, some form of voluntary restraint, some form of ground rules worked out between business and labor and government—sort of an economic disarmament agreement, that, it seems to me, would be very healthy for this economy and it would not lead to direct controls. It would help prevent them.

Mr. DALE. When things begin to cool off, including at least some rise in unemployment, which you have foreseen and many others have foreseen, the government will then face a choice, either to begin re-inflating again and pumping up demand—particularly the Federal Reserve—or, alternatively, to continue restraint with a view to stopping this inflationary psychology that you really mentioned—the businessmen going ahead and investing because it would just cost more later; the belief that inflation is perpetual and the government will not permit any kind of a recession. Which choice do you think it should make?

Dr. HELLER. Well, which choice it should make depends on what provision it makes to protect the people whom it asks to bear the brunt of the fight against inflation and, in particular, I am talking about those, the most disadvantaged members of the community who are going to bear the brunt. For them it will mean pain; it will mean hardship unless the administration stops talking and starts acting on programs to provide these fallout shelters, these economic fallout shelters for those people. If they do, then they can press the fight against inflation more firmly and more persistently.

Mr. DALE. And for longer.

Dr. HELLER. For longer. That is, whether you use gradualism or whether you use sadism; either way, you can do more of it if you provide this fallout shelter, and this is where economic policy and social policy intertwine. You have to go beyond the new economics; the new economics isn't enough for the economy of the narrow band around full employment.

Mr. DALE. Well, much of the inflation psychology, as you know, has stemmed from the belief in business that the government now has the means to prevent there being any significant slowdown in the economy, certainly not any prolonged recession and that,

therefore, decisions are made on the basis that there is really no risk.

Don't you consider this a serious problem, that some uncertainty should be introduced?

Dr. HELLER. Well, I would put it this way: That, yes, as far as the intermediate period is concerned, but the idea we should abandon our commitment—and I don't suppose you are suggesting that—to full employment, which we know how to produce, or to rapid growth, which we know how to produce, that is wrong, but you have to have some period of uncomfortable transition before you get back on that flight path of full employment and rapid growth.

Mr. LEVEY. Dr. Heller, is it really proper to use the future tense when you talk about pain and suffering? According to some recent BLS figures and to a story in the Wall Street Journal, about fifty million American workers, in terms of buying power, are worse off than they were four years ago as a result of taxes and as a result of the increase in the high cost of living. For them the recession has already begun. Aren't they already bearing the brunt of these policies?

Dr. HELLER. They are on a treadmill and I want you to notice carefully that the formula I have suggested is designed to help them at the same time that you provide some protection for the main victims of the fight against inflation.

Subduing inflation and bringing down high interest rates helps that group that you are talking about that has this treadmill feeling because then they have to pay less, relatively, for groceries and pay less for borrowing money and so forth.

At the same time, you don't do it at the expense of the follow down below them at the bottom of the ladder because you provide a way of easing the pain for him and of easing the hardship, and this combination—that means extending the surtax, staying tight, being ready to finance these programs, beating inflation and at the same time providing this shelter for those who are hurt.

Mr. LEVEY. How much confidence do you have that in the event of a recession the Nixon Administration will be able to or willing to move quickly and decisively against it?

Dr. HELLER. Well, it seems to me that both political and economic factors suggest movement under those circumstances. However, you have to coordinate the Federal Reserve. You can't just talk about the Nixon Administration. The question is will the Federal Reserve recognize when it may be overstaying tightness.

My own feeling is, with Mr. Nixon remembering 1960 when perhaps the recession was "the" marginal factor that defeated him, and also having a competent corps of economists around him, my own feeling is that if there is a recession or a period of no growth in the GNP, that we will see a reasonably rapid response by the Administration.

Mr. SPIVAK. Gentlemen, we have less than four minutes.

Mr. JANSSEN. Dr. Heller, you are a bank director now, among other things. Who is to blame for our present high interest rates?

Dr. HELLER. What's to blame is primarily excess demand. I wish the banks hadn't gone up and our own little bank went up somewhat reluctantly, as some other banks did, but underneath it is the fact that we do have excess demand for goods and services and in the process have generated tremendous pressure on liquidity of banks and they felt impelled to charge these high rates. As I say, I wish they had held off.

Mr. JANSSEN. Well, early this year you wrote that interest rates may even come down a bit in the first half of this year and instead they did go up sharply. What happened?

Dr. HELLER. I'd rather remind you, by the way, that early this year I made a very good forecast of gross national product and price increases. What I said, essentially, was that while they might go down a bit, they were bound to stay on a high plateau. The real reason is the demand/supply relationship. We have enormous demands for money and will continue to and even when interest rates ease the rest of this year, as I expect them to, some time starting this summer they are going to come off a peak and stay on a high plateau because we have so many things to build, so many things to buy, and a growing unwillingness to put money into the bond market and into banks.

Mr. SPIVAK. Dr. Heller, there has been some talk, I believe in the Senate of a wartime excess profits tax on corporations. Are you in favor of such a tax?

Dr. HELLER. No, I am not.

Mr. SPIVAK. Why not?

Dr. HELLER. First, because it would be extremely difficult to single out the war profits.

Secondly, because actually overall profits are a little below what they were a couple of years ago, or only very slightly above, and, secondly, because an excess profits tax gets to be an absolute can of worms. By the time we got rid of the Korean excess profits tax, it was just riddled with holes and I just think it is a very inefficient device in spite of the emotional appeal.

Mr. DUKE. Dr. Heller, this period of the 1960s has been our longest period of prosperity in this country. Do you believe our economy has become depression-proof?

Dr. HELLER. Well, in an economy as huge and vast as ours, mistakes and surprises can occur, as President Johnson once put it, and I don't think we are recession-proof. We will have recession; we will have slowdowns, but I think they will be short and shallow. We do know how to maintain a fully employed, vigorously growing economy a great majority of the time.

Mr. DALE. Going back to the guideposts and their abandonment, are you suggesting that the rate of price increase this year is larger, significantly larger than it would otherwise have been if the President had adopted the Johnson policy of tackling specific price increases?

Dr. HELLER. Yes, I do. I don't know how you define "significantly," but when some investment advisors wrote their clients and said, "Boys, the lid is off; the Administration doesn't care where you raise wages and prices—at least it is not going to interfere if you do," then I say that must have been a material factor in the price boost we got in the last quarter.

Mr. LEVEY. Dr. Heller, in view of the highly complicated nature of the economy and the need for integration of all the policies that we have with respect to it, do you think the continued independent status of the Federal Reserve Board is a proper one?

Dr. HELLER. I happen to believe in the independence of the Fed within, but not of the Administration.

Mr. SPIVAK. On that note, we have to end. I am sorry to interrupt, but our time is up. Thank you, Dr. Heller, for being with us today on "Meet the Press."

USE OF GI BILL—DOING JUSTICE FOR VETERANS

Mr. YARBOROUGH. Mr. President, the Subcommittee on Veterans' Affairs of the Committee on Labor and Public Welfare, held hearings last week on bills to improve the education and training provisions of the GI bill.

The major bill before us is S. 338, which I have introduced and which would increase the allowances paid to veterans when they take advantage of the GI bill. Together with its amendment, S. 338 will raise these allowances for all forms of GI training, whether high school, college, or some form of vocational education.

That this measure should be passed is supported by the evidence of comparative use by veterans of the GI bill. Figures I introduced into the hearing record show that 50% of the eligible veterans used the education and training benefits after World War II; 42 percent used them after the Korean conflict.

But since the cold war GI bill was established for men entering the Armed Forces after January 31, 1955, only 20 percent of those eligible have made use of it.

For those separated after August 4, 1964—the Vietnam veterans—only 21 percent have made use of this opportunity to advance their education and skills.

One reason for this reduced use of the GI bill is the low allowances furnished the veteran while he goes to school. If we made the benefits comparable to those available to World War II and Korean veterans, I think many more returning servicemen would take advantage of it. My bill, S. 338, will do that.

A second reason for this tragic condition is the lack of information that servicemen get about their education opportunities when they are discharged from service. We heard some testimony on that, too, from witnesses before the subcommittee, who have set up in their service organizations, special sections to explain to returning servicemen what is available to them under the GI bill, and to encourage them to use the benefits under the bill.

President Nixon has expressed his shock over the low number of veterans using the cold war GI bill. He set up a special Cabinet committee to do something about it.

Yet his Veterans' Administrator asked the subcommittee not to act on the rate of benefits until the Cabinet committee has made some findings and come to some conclusion.

The low level of allowances does not need more time for more study. I see no need whatever for Congress to wait until October, as the Administrator suggested. That would mean just another year's delay before something is done to make the GI bill more effective and useful. It should be done before the fall term of school opens in September 1969.

I commend the subcommittee chairman, the Senator from California (Mr. CRANSTON) for his statement that he intends to proceed with S. 338. If the VA and the administration are not willing to exert leadership in using the GI bill for its full potential of enlarging the education and technical training of these young men, then Congress must do so.

We cannot let this unnecessary waste of the brains and skills of the Nation's young men continue.

I ask unanimous consent to have printed in the RECORD the figures on "Trainee Participation Under GI Bills," furnished me by the Veterans' Administration.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TRAINEE PARTICIPATION UNDER GI BILLS

	World War II	Korean conflict	Post-Korean[1] (April 1969)	Vietnam[2] (April 1969)
Eligible veterans	15,614,000	5,708,000	6,155,000	3,020,000
Total trained	7,800,000	2,391,000	1,232,000	621,000
Percent of eligibles	50	42	20	21
Farm trainees	690,000	95,000	355	100
Percent of trainees	8.8	4.0	(3)	(3)

[1] Includes Vietnam veterans and all persons who entered the Armed Forces after Jan. 31, 1955, and were separated prior to Aug. 5 1964.
[2] Includes all persons separated from the Armed Forces after Aug. 4, 1964.
[3] Less than 0.05 percent.

THE FINANCING OF POLITICAL CANDIDATES BY LABOR ORGANIZATIONS

Mr. CURTIS. Mr. President, it is against the law for labor organizations to finance political candidates and political parties. I rise to ask the question, "Why is this law so flagrantly disregarded?"

I would like to call attention to just one senatorial campaign in 1968. There may be an explanation showing that some of the contributions I am about to mention were within the letter of the law. These facts, however, do call for an investigation.

It appears that national unions gave John Gilligan in excess of $200,000 in his bid for the U.S. Senate seat won by Senator SAXBE. In the primary against then Senator Lausche, Gilligan received $58,950 from a committee set up to funnel funds into Ohio from the various unions around the country. This committee was called the Committee for Urban Interest. The Urban Interest Committee received funds from the following unions:

AFL–CIO, COPE	$15,950
American Federation of Musicians political fund	500
Building and Construction Trades Department, AFL–CIO	5,000
ILGWU	4,000
Laborer's Political League	5,500
Machinists Nonpartisan Political League	10,000
Marine Engineers Beneficial Association	5,000
Railway Clerks Political League	8,000
United Steel Workers Volunteer Political action fund	5,000
Total	58,950

AFL–CIO Committee on Political Education—COPE—gave a large amount of money to various Ohio State union operations—presumably for the Gilligan effort. Their contributions to this State were larger than to any other State in 1968:

Ohio Concerned Citizens Committee	$19,000
Ohio Labor Political Action Committee	10,000
Columbus-Franklin County AFL–CIO, COPE	$6,000
Ohio State AFL–CIO, COPE	29,000
Cincinnati AFL–CIO Labor Council, COPE	5,200
Total	69,200

They also gave $3,000 to the Ohio State AFL–CIO COPE earmarked for Congressman Vanik.

National Labor gave directly to the campaign as follows:

Action Committee for Rural Electrification	$500
Amalgamated Clothing Workers' Political Education Committee	1,000
Amalgamated Political Education Committee	4,000
Committee for Good Government (UAW)	5,000
Communications Workers of America	2,000
International Brotherhood of Electrical Workers	6,300
International Chemical Workers	2,438
ILGWU	1,500
Machinists Nonpartisan Political League	4,000
Marine Engineers Beneficial Association AFL–CIO Political Donations Committee	250
Oil, Chemical & Atomic Workers of America	400
Railway Clerks Political League	3,000
Railway Laborers Political League	3,800
Seafarers International Union (COPE)	10,000
Sheet Metal Worker's International Association Political Action League	1,000
Textile Workers Union of America	500
United Auto Workers COPE	27,000
United Rubber, Cork, Linoleum & Plastic Workers COPE	2,750
United Steel Workers volunteer political action fund	10,000
Total	90,538

Total union giving, $218,688.

Mr. President, I would like to read into the RECORD section 610 of the Federal Corrupt Practices Act, which is as follows:

It is unlawful for any national bank, or any corporation organized by authority of any law of Congress, to make a contribution or expenditure in connection with any election to any political office, or in connection with any primary election or political convention or caucus held to select candidates for any political office, or for any corporation whatever, or any labor organization to make a contribution or expenditure in connection with an election at which Presidential and Vice Presidential electors or a Senator or Representative in, or a Delegate or Resident Commissioner to Congress are to be voted for, or in connection with any primary election or political convention or caucus held to select candidates for any of the foregoing offices, or for any candidate, political committee, or other person to accept or receive any contribution prohibited by this section. Every corporation or labor organization which makes any contribution or expenditure in violation of this section shall be fined not more than $5,000; and every officer or director of any corporation, or officer of any labor organization, who consents to any contribution or expenditure by the corporation or labor organization, as the case may be, and any person who accepts or receives any contribution, in violation of this section, shall be fined not more than $1,000 or imprisoned not more than one year, or both; and if the violation was willful, shall be fined not more than $10,000 or imprisoned not more than two years, or both. For the purposes of this section 'labor organization' means any organization of any kind, or any agency or employee representation committee or plan, in which employees participate and which exists for the purpose, in whole or in part, of dealing with employers concerning grievances, labor disputes, wages, rates of pay, hours of employment, or conditions of work.

Mr. President, what has happened to the principle of equality before the law? Should not each one of the donors above listed be called upon to explain his particular transaction? Let us have the facts. The facts will protect the law abiding as well as expose any law violations that might exist.

Mr. President, I believe that a senatorial investigation is in order.

CONCLUSION OF MORNING BUSINESS

Mr. MANSFIELD. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

MESSAGE FROM THE HOUSE—ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the Speaker has affixed his signature to the enrolled bill (H.R. 4297) to amend the act of November 8, 1966, and it was signed by the President pro tempore.

DEPARTMENTS OF THE TREASURY AND POST OFFICE, THE EXECUTIVE OFFICE OF THE PRESIDENT, AND CERTAIN INDEPENDENT AGENCIES APPROPRIATION BILL, 1970

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate.

The PRESIDING OFFICER. Without objection, the Chair lays before the Senate the unfinished business, which the clerk will state.

The LEGISLATIVE CLERK. A bill (H.R. 11582) making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies, for the fiscal year ending June 30, 1970, and for other purposes.

The PRESIDING OFFICER. Without objection, the Senate will proceed to consider the bill. The Chair recognizes the Senator from Texas.

Mr. MANSFIELD. Mr. President, will the Senator yield, with the understanding that he may do so without losing his right to the floor?

Mr. YARBOROUGH. I yield.

Mr. MANSFIELD. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, The Committee on Appropriations has authorized me to present to the Senate its report on the pending bill, H.R. 11582, making appropriations for the Treasury and Post Office Departments, executive Office of the President, and certain independent agencies, for fiscal year 1970.

Senators will find on their desks printed copies of the bill and the committee report, together with copies of the hearings, and I will now present to the Senate a brief summary of what is contained in the bill in the way of increases and decreases.

The bill which is recommended to the Senate provides new budget obligational authority in the amount of $2,280,195,000. This amount consists of definite appropriations in the amount of $1,105,269,000 and indefinite appropriations in the amount of $1,174,926,000. The grand total of titles I, III, and IV—new budget obligational authority—and title II—authorizations out of the postal fund—is in the amount of $8,787,208,000. This amount is an increase of $7,863,000 over the House allowance, but it is $34,519,000 under the budget estimates for fiscal 1970, and $629,688,000 over 1969 appropriations made to date. Revised supplemental estimates for fiscal year 1969 amounting to approximately $211,130,584 are pending and to the extent these supplementals are ultimately granted, this latter comparison will be modified. In other words, when the supplemental bills are passed, the amount of the appropriations over the 1969 appropriations will be reduced to the extent that the supplemental bills build up the 1969 appropriations.

TITLE I—TREASURY DEPARTMENT

Appropriations totaling $1,077,299,000 are recommended by the committee for the regular annual requirements of the Treasury Department for fiscal year 1970. This is a decrease of $7,610,000 in the revised budget estimates and an increase of $1,959,000 compared with the House bill amount of $1,075,340,000. The amount recommended is $70,446,000 over 1969 appropriations to date in the amount of $1,006,853,000, excluding pending supplementals totaling $15,072,000. This is the only increase in the Treasury Department over the House bill.

In connection with this increase of $1,959,000 for the Bureau of Customs, the committee recommendation was based on assurances from both Government and industry witnesses that work on the new commercial airlines facilities at Kennedy International Airport is proceeding on schedule. They need more custom inspectors there. The new TWA terminal will be ready for operation on November 1, 1969, and will, at that time, require the additional personnel requested in the estimate. Similarly, the committee has been advised that the BOAC terminal will be ready by April 1, 1970, and will also require staffing as requested in the estimate. The need for the 213 additional positions, or 191 man-years, for the Bureau of Customs to be used for processing persons arriving in the United States is very widespread, covering almost every area of the country and practically every airport. The Senate will find these listed on page 7 of the Senate report. The table shows the number needed at the major airports and at other airports and military airports, and the number needed along the Mexican border. Forty-five of these positions are shown as needed along the Mexican border.

The need for additional positions along the Mexican border was testified to as being caused not by the old-fashioned method of smuggling to avoid tariff, but by the vast amounts of marihuana and narcotics being smuggled across the border from Mexico into the United States.

The testimony is to the effect that in decades past the smuggling of narcotics and heroin was from the seaports. It is now being done along the Mexican border, and with the shortage of personnel there, it is impossible to check it all.

It was testified that one brick of marihuana can be placed in the back end of an automobile and after they get across the border, they will drive all the way to Chicago or some other distribution point. That brick of marihuana will be worth more than $20,000 in the black market. With that kind of lure, the problem is insuperable with the present low number of personnel. This is a very modest increase over the House figure.

Living in a border State and having been on the border and talked with customs officials a number of times, I think the money is desperately needed.

People complain about waiting for 1 and 2 hours at the airports before customs officials can see their baggage. The customs officials say it is impossible now with the vast number of overseas traffic by air to do their work. They do not have the opportunity to ask questions or to take the time to examine baggage.

TITLE II—POST OFFICE DEPARTMENT

In connection with title II—Post Office Department—the total authorization out of the postal fund amounts to $7,681,939,000. This is a decrease of $26,303,000 in the budget estimates and a net increase of $5,904,000 compared with the House bill amount of $7,676,035,000. The amount recommended is $553,939,000 over the 1969 appropriations to date in the amount of $7,128,000,000, excluding pending supplementals now in conference between the House and the Senate totaling $195,571,000. If the pending supplementals are taken into account, the committee recommendation over 1969 would be in the amount of $358,368,000—not the larger amount given above.

For administration and regional operation, the committee recommends a total appropriation of $132,069,000. This amount is $13,069,000 over the 1969 appropriation, $4 million under the estimate, and $1 million under the House allowance. That sum is for operating the office of the Postmaster General and the regional offices. The budget estimate for 1970 provided for an increase of $17,069,000 over the $119 million provided for 1969. This increase would have provided an additional 981 man-years of employment over 1969, thus raising total employment in central administration in Washington and 15 regional offices to 9,481 man-years.

The House cut $3 million and 127 man-years from the estimate, thus allowing funding for 854 additional man-years of employment over the 8,500 already on board. The bill before the Senate, after taking into account the $1 million additional reduction recommended—the Senate voted an additional $1 million reduction—still provides the appropriation item "Administration and regional operation" with a total of $132,069,000, an increase of $13,069,000 over 1969. The committee feels that the amount recommended is ample to carry out the activities of administration and regional operation in view of the large increase allowed over 1969.

The committee feels that employment in the Office of the Executive Assistant to the Postmaster General for Congressional Relations should be kept at the calendar 1968 level and appropriate language has been included in the bill in this regard.

For research, development, and engineering, the committee recommends the full $51,338,000, the budget estimate. This amount is $16,338,000 over the 1969 appropriation excluding the pending supplemental and $5 million over the House allowance. The committee expects that the Department will pursue a much more vigorous and results-oriented approach to research with the funds allowed. Specifically, the $5 million the committee added will provide for the restoration of 100 employees denied by the House, thus raising employment to 907, the number requested, and will allow the Department to resume or continue action in the following areas which would be subject to some fiscal constraints should the restoration not take place. I shall enumerate the areas of research, because many complaints have been received over the years, especially in recent years, of inefficiency in the Post Office Department.

First, I may say that I have been an ex-officio member of the Committee on Appropriations since I became a member of the Committee on Post Office and Civil Service a number of years ago, and I have been a member of this subcommittee since I came to the Committee on Appropriations over 4 years ago.

Over the years, Congress has cut out a big share of the research money that the Post Office Department has asked for. I think that the failure to do enough research has been one of the main reasons why we have heard so many complaints against the Post Office Department.

The Senate committee has restored the full amount. The House cut $5 million. We have restored the full amount that the Post Office Department has asked for research. I think it is a modest amount. It is $5 million out of a total appropriation sought for the Post Office Department, an authorization of $7,681,939,000 out of the postal fund. Here is what the restorations for research would provide:

First, experimental tests of container systems and equipment between the New York and Chicago gateways, two great distribution points for mail in the United States.

Second, the development of a new maintainability and reliability program for postal equipment.

Third, the conduct of human factors

studies in support of equipment development efforts.

Fourth, the test and evaluation of new color-sensing techniques for application in automatic indicia detection and code reading equipment development.

Certain tag-type stamps were used starting in 1963. The stamps were tagged with fluorescent material. When the stamps passed through a scanner, the scanner detected the denominations of the stamps to determine whether sufficient postage had been paid.

It is now proposed to make a new color-sensing device to determine colors without the use of fluorescent materials. When this device is completed, it is expected that the machines will read the amounts of postage with a great saving of time and personnel.

Fifth, continued development of a computer control system for parcel and sack sorters which will allow for sorting parcels and sacks on the basis of ZIP code keyboard entry.

In the post offices at Houston and Fort Worth, Tex., I have seen the automated machinery moving, sorting, and arranging parcels according to destination and dispatching them to various terminals. I personally believe that when we permit this research and provide for its implementation, vast sums will be saved in the Post Office Department.

Sixth, design and test of high rate, automatic scanning, and code printing system for application to mail processing. In response to our question, we were told that they already had equipment which could read typewritten addresses.

Seventh, development of a feasibility model of a device to assist in loading and unloading vehicles.

Eighth, development of design concepts for a new device to sort parcels using operator keyboard and voice coding techniques.

Ninth, design of new equipment to allow expanded employment of handicapped personnel in postal operation.

Tenth, development of components for an experimental, continuous letter-mail processing system for single-pass sorting.

Eleventh, preparation of a design concept for new sorting devices for sacked mail for use in both large and small offices.

Twelfth, development of feasibility models of flat mail coding devices and an evaluation of techniques through which to extend the use of optical character reading equipment to flat mail.

For the Bureau of Operations, the committee has recommended a total of $6,143,615,000. This amount is $1,904,000 over the House allowance and $166,544,000 over the 1969 appropriation (including a pending supplemental and a $62 million transfer from transportation). The $1.9 million added by the committee has been earmarked specifically to provide for increased window service in large cities. This additional amount will provide 643,000 additional window hours and fund 225 additional man-years or 250 positions, over the 69,490 man-years provided for in the revised estimate. This additional increase of 2.6-percent window service over 1969 would be provided in the 1,156 larger post offices that come under the work measurement system and where most of the mail services are provided.

There have been widespread complaints about the restriction of window service on Saturdays. People have waited in line for long periods before they could buy money orders or register letters. It is known that many people having limited incomes, and who cannot maintain bank accounts, or pay the bank service charges, do their banking through the means of money orders and registered mail. The closing of windows has resulted in limited service to the public. This is a modest amount, we think, to enable an increase and the restoration of that service.

I come now to title III of the bill, the funds for the Executive Office of the President.

TITLE III—EXECUTIVE OFFICE OF THE PRESIDENT

Appropriations totaling $23,295,000 are recommended for the regular annual requirements of the items under title III—Executive Office of the President—for fiscal year 1970. The amount recommended is a decrease of $479,000 under the budget estimate; the same as contained in the House bill; and $4,549,000 over 1969. An increase of $1 million was allowed for special projects, White House office. This fund is used by the President for staff assistance on special problems which arise from time to time but cannot be considered the responsibility of any existing agency. In the past, that amount had been $1.5 million. The President is given great latitude in this area. It is not spelled out how he has to use that money.

The Bureau of the Budget was accorded an increase of $1,600,000 over 1969, including a small pending supplemental and a decrease of $434,000 under the budget. The increased funds over 1969 will provide for the employment of 52 additional personnel, of which 39 are to fill positions not filled in 1969 due to the personnel ceiling restriction and 13 new positions will implement the management information system program. Funds for 24 additional man-years of employment have been provided for the National Security Council.

TITLE IV—INDEPENDENT AGENCIES

Appropriations totaling $4,675,000 are recommended for the regular annual requirements of the four independent agencies under title IV of this bill for fiscal year 1970. This amount is the same as the House allowance and $127,000 under the estimate of $4,802,000. An increase of $457,000 was allowed the commission on obscenity and pornography to continue its investigations, and the availability of funds was extended to September 30, 1970.

Mr. President, this is a brief summary of what is contained in the bill. A more detailed explanation will be found in the committee report which is on the desks of the Senators.

Mr. President, there was a clerical error in one amendment of the bill.

I ask unanimous consent to modify the amendment on page 8, line 4, by inserting the word "not" after the word "of".

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the committee amendments to the pending bill, H.R. 11582, be considered and agreed to en bloc and that the bill as thus amended be regarded for the purpose of amendment, as original text, provided that no point of order shall be considered to have been waived by reason of agreement to the order.

The PRESIDING OFFICER. Is there objection? The Chair hears no objection, and it is so ordered.

The amendments agreed to en bloc are as follows:

On page 3, line 11, after "(22 U.S.C. 401);" strike out "$106,151,000" and insert "$108,110,000."

On page 6, line 12, after the word "missions," insert "as provided by law".

On page 8, at the beginning of line 2, strike out "$133,069,000." and insert "$132,069,000".

On page 8, line 2, after the amendment just above stated insert a colon and *"Provided,* That not more than $220,000 of this sum shall be available for the payment of salaries and expenses of not more than twenty (20) employees in or under the Office of the Executive Assistant to the Postmaster General for Congressional relations."

On page 8, line 11, after the figure "3109," strike out "$46,338,000," and insert "$51,338,000,".

On page 8, at the beginning of line 23, strike out "$6,141,711,000" and insert "$6,143,615,000".

On page 9, line 7, after the word "operations" insert a colon and *"Provided further,* That of the amount appropriated by this Act for postal operations, $1,904,000 shall be for achieving a 2.6 percent increase in window service at large post offices."

Mr. YARBOROUGH. Mr. President, I offer an amendment of H.R. 11582 to continue three-a-day deliveries of mail in the business districts of major metropolitan areas and preserve the expeditious delivery of special delivery letters. I ask unanimous consent that the amendment be printed at this point in the RECORD. Copies of my amendment together with an explanation thereof, are on the desks of the Senators.

Postmaster General Blount has recently announced that he plans to reduce three-a-day business delivery to two-a-day, plans to cut special delivery service in half by reducing the number of delivery runs and plans to increase special delivery rates by 50 percent from 30 cents a letter to 45 cents a letter. The adoption of my amendment will prevent this drastic cut in our mail service.

Mr. President, ours is a consumer economy. Business mail moves our Nation. To indicate that three-a-day delivery service in business areas, by someone's reasoning, does not pay for itself and therefore should be cut simply does not make sense. It would be like the mayor of New York deciding that because the subway system was running a so-called deficit that he should therefore cut the number of train runs. Of course, by doing such a thing he would be making a difficult situation worse. Carried to its logical conclusion, such bookkeeper thinking related to subway service would paralyze the city, and such bookkeeper thinking would ultimately wreck the postal service.

Government is a service, not a profit-making corporation. That is why the Post Office Department exists as a Government institution—to promote the com-

merce and general welfare of all the people of our Nation.

The Postmaster General's proposed reduction of special delivery service is particularly distressing. Why, his proposal, while costing 50 percent more, would provide a mere "Dr. Pepper" type three-times-a-day service, with one midnight run to top off the day. Special delivery is a needed middle-ground communication service occupying as it does a role between routine mail and expensive telegraphic or special messenger service. It should be available to the public. It should be continued and improved upon, not weakened.

Our Post Office Department is a great public service institution. It could, as most institutions could, stand some improvement. I support such improvements in the form of capital investment, and more research and development funds. But we should beware of those who would "improve" the Post Office Department by killing it. The solution for inadequate service is not more inadequate service.

I urge the retention of these two needed public services by the adoption of my amendment, which will assure three deliveries a day of business mail, and continued special delivery mail deliveries at the present level without decrease of the special deliveries.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

On page 9, line 10, before the period insert a comma and the following: "$3,145,000 shall be for continuing three deliveries each business day in business areas, and $4,169,000 shall be for continuing expeditious delivery of special delivery letters."

Mr. YARBOROUGH. Mr. President, the purpose of the amendment is as follows: The matters in the amendment were in the bill as it came from the Subcommittee on Post Office and Treasury of the Committee on Appropriations. They were not retained in the bill by the full committee. I reoffer the amendment adopted by the subcommittee.

The purpose of my amendment to H.R. 11582 is to maintain present levels of postal service by specifying the amount of operational funds to be used for, first, multiple-trip business deliveries, and second, special delivery. The amendment does not increase the amount of the Post Office budget as reported from the Committee on Appropriations but would prevent proposed diminished service in the following two areas:

First. Multiple-trip deliveries a day—business deliveries: The initial budget of $98.867 million for business deliveries was reduced to $95.722 million, a reduction of $3.145 million. This reduction will reduce multiple-trip deliveries to business establishments from three trips a day to two trips. The following table shows the number of affected deliveries:

	Deliveries (per day)	Routes
Fiscal year 1969	5,235,000	7,404
Fiscal year 1970 (original estimate)	5,350,000	7,567
Revised 1970 estimate	5,176,000	7,321

This means a reduction in 174,000 business deliveries a day to the American business world, and a cutting out of 246 business routes of delivery.

Second. Special delivery services: The initial budget estimate for this activity was $63.116 million and this was decreased to $58.947 million—a budget reduction of $4.169 million.

Presently, special deliveries are made within 2 hours of receipt of special delivery mail. If funds in the amount of $4.169 million are not provided, as in my amendment, special delivery service will be restricted to four trips a day, from 7 a.m. to 11 p.m. Thus patrons who pay for special delivery and expect expeditious service will not be assured of this service.

This amendment would continue expeditious special delivery mail to be delivered within 2 hours at the very latest, from receipt by specifying $4.169 million in the operational budget for this purpose.

Mr. President, Postmaster Blount recently announced that he plans to reduce three deliveries a day to two deliveries a day and to cut special delivery service in half by reducing the number of special delivery runs and raising rates by 50 percent.

We feel that raising the price of special delivery stamps by 50 percent and cutting special delivery service would be a blow to special delivery and would practically obliterate it.

Mr. President, unless we adopt this amendment, the Postmaster General in his letter indicated it would mean that the business houses of America, which receive two deliveries in the morning and one delivery in the afternoon, would receive only two deliveries. We have a consumer-oriented economy based on vast consumer consumption. It seemed to us that this cutout of afternoon deliveries would be an impediment to the business community and would cripple the service they get. This is not money savings. We think it would be a major blow to the business community.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield.

Mr. WILLIAMS of Delaware. I understood the Senator to say he offered this proposal in committee; but, if so, why is it not in the bill? Do I understand the Committee on Appropriations rejected the amendment?

Mr. YARBOROUGH. No. The subcommittee adopted the amendment, and the full committee rejected it. The full committee took it out. I am offering it here again.

Mr. WILLIAMS of Delaware. Do I understand the full committee rejected the amendment?

Mr. BOGGS. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield.

Mr. BOGGS. Perhaps I can at least try to answer my colleague's question, which is a good one.

There is a difference between this amendment and the amendment which the full committee rejected. The amendment in the full committee was to increase the amount of the appropriation by nearly $800 million. Is that correct?

Mr. YARBOROUGH. Not $800 million.

Mr. BOGGS. $8 million. Therefore, the committee rejected the amendment to increase the appropriation. I think it was a very close vote.

This amendment would not increase the overall appropriation, but by limitation and earmarking provide that out of the amount appropriated these services shall be continued. That is the difference between the two proposals.

Mr. WILLIAMS of Delaware. Do I understand there was enough in the bill appropriated but not necessarily needed that can make up this $8 million? It has to come from somewhere.

Mr. BOGGS. It would come out of the total appropriation.

Mr. WILLIAMS of Delaware. If it is to come out of the total appropriation and the Senator from Texas feels it will not be necessary to replenish that total we must proceed on the premise that the bill reported by the committee had some $8 million of watered surplus in it.

Mr. YARBOROUGH. I do not think there was any watered surplus in the bill.

Mr. WILLIAMS of Delaware. Then from where does it come? It has to come from somewhere. I am one of those skeptics who feels we do not get something for nothing. Where does the money come from if not out of the overall total?

Mr. YARBOROUGH. The overall total for the Operations item is $6,143,615,000. In offering this proposal it was felt that the Postmaster General could allocate at least $7.3 million out of $6,143,615,000 without having crippling effects.

As the able Senator from New Jersey knows——

Mr. BOGGS. Delaware.

Mr. YARBOROUGH. I am promoting the Senator to a larger constituency. Of course, Delaware is one of the original States of the Union and was one of the first to urge adoption of the Constitution. I pay tribute to Delaware as a great State. It may not be the largest in size or population but it certainly is in terms of leadership.

This amount is larger, of course, than the amount appropriated for fiscal 1969 by $423,615,000, because of the great growth of our people and the great growth of the mail—over 80 billion pieces of mail a year being processed. That is more mail than the rest of the world sends and receives. Our mail has gone faster during the past 3 years than all the mail sent and received in France each year. Therefore, with this great increase, the Postmaster General is requesting an increase of 387 man-years in the Central Post Office Headquarters in addition to the 1,866 there now. He feels that with this increase in managerial level personnel, certainly they can manage to find the money. We feel that this mail is crucial for the American business community which means, of course, the prosperity of the country.

Mr. WILLIAMS of Delaware. I am merely trying to establish what the sentiment of the Senator in charge of the bill is. Does he believe there is enough excess money in this appropriation bill that they can deduct this $8 million without disrupting service?

Mr. YARBOROUGH. No. I do not believe that. I do not believe there is any water in the budget of the Post Office Department. I think there is in the Defense Department bill, but not in the appropriations for HEW, or Post Office, or any of the other service departments of the Government. They have squeezed out all the water, as well as half the milk and the cream, too. But the Postmaster General believes that if we can get this extra management, ways can be found to get the $7.3 million without seriously crippling other parts. I do not know where or how, because I am not the executive handling the spending. We are putting the Postmaster General on his managerial mettle—and he is reputed to have great managerial mettle—he has certainly shown it in his private enterprises—and we know that he will do so, without impeding others. I do not believe the Budget Bureau left any water in here that is domestic.

Mr. WILLIAMS of Delaware. I do not question that, but the way I understand the amendment it specifically requires the expenditure of an extra $8 million. It is certainly going to result in some increase. Another point, as I understand it, the amendment, substantially as it is presently before us, was offered in committee and was rejected. It appears to me that this is legislation on an appropriation bill.

Mr. President, I make a point of order on the amendment.

The PRESIDING OFFICER. The Chair will sustain the point of order. Obviously it is legislation on the appropriation.

Mr. YARBOROUGH. Mr. President, on behalf of myself and Senators BURDICK, COOPER, INOUYE, HARTKE, MONDALE, RANDOLPH, PELL, KENNEDY, and METCALF, I send to the desk another amendment and ask that it be stated.

The assistant legislative clerk read as follows:

On page 9, line 10, after the word "offices," insert a comma and "for business deliveries in business areas, $3,145,000; and for expeditious delivery of special delivery letters $4,169,000."

Mr. WILLIAMS of Delaware. Mr. President, I want to look at that amendment, but as I understand it this is a direct increase in the appropriation. This does not earmark it as to how it should be spent, but it is an extra $8 million; is that correct?

Mr. YARBOROUGH. There is going to be a statement I shall make as to what it will be spent for. This puts it in the same line in the bill——

Mr. WILLIAMS of Delaware. Does it provide the extra $8 million?

Mr. YARBOROUGH. It does provide, under the conditions of the able Senator from Delaware, for the service and achieves the result that we are seeking to achieve.

Mr. WILLIAMS of Delaware. But it does represent an $8 million over the increase already in the bill; is that not correct?

Mr. YARBOROUGH. No, it does not represent an increase, but it does represent what the Senator was talking about before, some use out of the $6,143,615,000 for Operations. It represents the obligation to use it to maintain it and to insure deliveries to the business communities of America, and to keep up special delivery at its present rate.

Mr. WILLIAMS of Delaware. I shall look at the amendment in a moment, but I would like to ask the Senator a question on another proposal: On page 3, I notice there is an item of $1,770,000 for more equipment for mint facilities. Is this the Philadelphia Mint?

Mr. YARBOROUGH. Yes.

Mr. WILLIAMS of Delaware. As I understand it, Congress authorized construction of that mint about 3 years ago. It was supposed to have been completed last year. What was the original cost of that mint supposed to be?

Mr. YARBOROUGH. That will be found, Senator, on the side slips and page 761 of the Senate hearings.

Mr. WILLIAMS of Delaware. I do not have them. What is the answer?

Mr. YARBOROUGH. On page 72. Public Law 89–81 amended, Public Law 88–102, to increase authorized limitations for construction of mint facilities from $30 million to $45 million. Public Law 89–309, approved October 31, 1965, provided for supplemental appropriations for $21,200,000 for fiscal year 1966 for completion of the new Philadelphia Mint in addition to an appropriation made in fiscal 1965.

Mr. WILLIAMS of Delaware. That is correct, but I understand that the appropriation of $16.5 million approved in 1965 was for construction of the mint. The question I am asking is, What was the amount of the original contract of the mint? What was it supposed to cost? It was a fixed-price contract, as I understand it. What was the original contract? I should like to have the answer for the RECORD.

Mr. YARBOROUGH. Public Law 88–102, approved August 20, 1963, authorized appropriations of not more than $30 million, during fiscal years 1964 through 1973. In fiscal year 1965 $16,500,000 was approved for construction and equipping of a new mint. This was within the $30 million authorized and that was to run over a period of 9 years before being finished.

Mr. WILLIAMS of Delaware. I beg the Senator's pardon, but the contract provided for the completion of the mint prior to that time. What was the amount of the original contract for the construction of the Philadelphia Mint, and was it not to have been completed last year?

Mr. SCOTT. Mr. President, will the Senator from Texas yield to me so that I may answer the Senator from Delaware?

Mr. YARBOROUGH. I am happy to yield to the Senator from Pennsylvania. I do not have that contract figure before me, let me say to the Senator from Delaware. I do not have it before me, but it is referred to in the report.

Mr. SCOTT. The amount budgeted was $1,770,000 for the purchase of one coin roller, assay, and melting equipment and spare parts, as originally planned, but for which funds became short and consequently because of protracted delays and consequent increase in prices—no employee compensation was involved in this appropriation. I may add that the new superintendent of the mint will be sworn in tomorrow at the unfinished mint in the assay office. The mint is planned to be dedicated on the 14th of August. It is virtually completed except for the equipment involved, as I understand it. I do not have the contract before me. But it is nearly finished.

Mr. WILLIAMS of Delaware. That does not answer the question. The point I am making is, what was the original contract for the construction of the mint and how much have we spent on it up to this point?

Mr. SCOTT. The report says on page 73, when we requested $37,700,000 to be appropriated for the new mint, that this amount would cover all requirements to place the mint in operation. However, continuous, costly, and protracted delays have dragged out its completion and prices have greatly increased and we have no alternative but to request the additional funds. The statement warns that funds will be requested in subsequent fiscal years to purchase additional equipment items required to bring the new mint into full operational capacity, and when the two coin rollers are in full operation, we should have eliminated many of the problems with pennies with which we have been plagued during the past several years.

They also have to install, during fiscal 1970, something called a cladding line, which will be installed in the new Philadelphia Mint to produce clad strips for 10-cent and 25-cent coins.

Of course, the enormous increase in the demand for small coinage, plus the change to cladding of coins, plus the possibility that we may someday have a clad dollar, with the mixed alloys involved—and I have introduced a bill to have on that dollar the portrait of Eisenhower and to develop an Eisenhower dollar—we are going to have to have some dollars. The Treasury, as we know, is sitting on millions of silver dollars. The Treasury has not accepted the proposal of selling them to collectors, because the idea of the Government's making a profit on something is so horrendous. Apparently the idea that we could make a profit on the silver dollars, and pay much of the cost that we are talking about, shocks the entire Government.

Mr. WILLIAMS of Delaware. All this is very interesting, but it still does not answer my question. All I would like to know is how the appropriations for the construction cost of the mint have compared with the original contract. That is all I am trying to find out.

I am not debating the merits of the mint. If the committee does not have that information available it can be readily obtained. I thought the committee had it.

What was the amount of the contract awarded for the construction? It was a competitive bid, as I remember. I would like to know how much overrun if any there has been added to the original cost.

Mr. YARBOROUGH. Mr. President, I do not have the contract that the executive officers of the Government made

with the contractor, nor how that amount is broken down as between equipment and the building itself. Of course, what we are asking for this year, as the able Senator from Pennsylvania has pointed out, is set out on page 73 of the memo and page 761 of the Senate hearings. They need a new coin roller. I have been through the old mint. I know something of the problems of trying to produce enough pennies and of the demand for coins as a result of the new vending machines. The coins have had to be cladded, and the silver has had to be taken out, and great production problems have been confronted as a result of the conversion from silver to clad coinage. Now the clad dollar is in the offing also. These changes have been made in the mint. The amount set out in the appropriation is shown in the side slips. It is also shown on page 761 of the hearings, a copy of which the Senator has before him, showing what the moneys are for. I can read the pages for the Senator.

Mr. WILLIAMS of Delaware. I do not question what the particular item is for. I am merely referring to the committee report regarding the total cost, which reads on page 8:

> An appropriation of $16,500,000 was approved for fiscal year 1965 for the construction of the new mint in the city of Philadelphia.

Then comes the following sentence:

> For fiscal year 1966, a supplemental appropriation of $21,200,000 was provided for the completion of the new mint.

This is a total of $37,700,000. What was the amount of the original contract? Was it for half of that amount?

Mr. YARBOROUGH. Our committee did not require the Bureau of the Mint to bring the contracts before the committee. The Bureau of the Mint estimate came from the Treasury Department. We did not require those officials to bring, for examination or investigation by the committee, the contracts under which the building proceeded.

Mr. WILLIAMS of Delaware. I appreciate that, but recognizing the intelligence and curiosity of the Senator's committee, I cannot conceive of the committee's appropriating $38 million without knowing how much went for construction and how much went for equipment. That is all I am asking. What is the breakdown? How much have we spent and for what? Surely the Senator's committee, with its staff, would have the information.

Mr. YARBOROUGH. Every request asked for by the executive officers is broken down in the side slips and Senate hearings. The question asked by the Senator is as to what the contracts were in the first place for construction and how much was appropriated. What has been appropriated over the past years is broken down. There is an appropriation for the mint. One relates to a coin roller, assay and melting equipment and spare parts, which are short. There is a specific appropriation for that kind of machinery. Cladding machinery is needed to produce coins. Machinery is needed to strip subsidiary coins of silver when those coins are no longer usable but have silver. We need stripping machines to strip the silver out of those coins and save that silver for future use; $1,770,000 is requested for that machinery. The House allowed that amount. Our committee recommends it. But we did not go back over the past years, having had no complaint about the contract before our committee.

Mr. WILLIAMS of Delaware. I may or may not complain about it. What has the cost been?

Mr. YARBOROUGH. We did not go back to ask when the contract was let. Under existing law, the contract authorized construction to be started in 1964 and completed in 1973. There is a great need for this facility, with the growth of vending machines, and the consequent elimination of clerks. The need for coins has been exploding. Every time we see a new line of vending machines, it means the Treasury must produce millions of additional coins. It was much easier to make the old coins, when we did not have the mixture of white hot metal, than it is now with the new coins.

Mr. SCOTT. Mr. President, if the Senator will yield, I would like to add another reason for the increased burden on the mint. I do not know whether the Senator has done what I have done, but over this weekend I have been looking in cash registers in small grocery stores and supermarkets, and I have yet to see a 50-cent piece or Kennedy half dollar. They are being retained by people by the millions. As a result, all businesses, in changing dollars, have to begin with quarters. We have to continue manufacturing more and more half dollars until the people realize that they are numerous enough for everybody's purposes.

Mr. YARBOROUGH. There is great speculation in coins. People must be made to realize that they will not increase in value. I personally think the collecting has about reached the point of no return.

Mr. SCOTT. The same thing happened in 1893 with the Columbian Exposition. People collected the half dollars and quarters. They retained their same value for about 50 years. So if a collector wants to wait 50 years, he can make something.

Mr. YARBOROUGH. For 1970 the coinage program calls for the manufacture of 7,570,000,000 coins. That is an increase of 34.01 percent over 1969. These coins go into new machines.

What the Senator from Delaware is asking is not involved in the new appropriation. What he is asking is to go back to look into the contracts over these past years. I have objection to that. If he had made his wish known in committee, we would have had the officials bring the contract. But that is not part of the appropriation here, and I do not think we should delay action on the bill and getting it to conference, because it is customary to have the Treasury-Post Office appropriation bill passed by July 4th.

Mr. WILLIAMS of Delaware. This has been a most interesting discussion, but the Senator from Texas still has not given the answer. I simply asked the question.

Mr. YARBOROUGH. No; I did not look into the old contracts. I became chairman of the committee in January. I did not go back to redo the work of the committee in the past years when I became chairman of the committee.

Mr. WILLIAMS of Delaware. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Texas has the floor. Does the Senator yield for that purpose?

Mr. YARBOROUGH. I yield for that purpose, without relinquishing my right to the floor.

The PRESIDING OFFICER. The clerk will call the role.

The assistant legislative clerk proceeded to call the roll.

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. ALLEN in the chair). Without objection, it is so ordered.

Mr. WILLIAMS of Delaware. Mr. President, in my colloquy with the Senator from Texas I asked for the amount of the original contract of the mint in Philadelphia as well as information on just how much has been paid thus far on either the original contract or any possible overruns. I realize that this is not a part of the committee report, I shall not press the Senator from Texas to answer the question at this time; but would he get the information for the RECORD later?

My reason for mentioning this item is that I have just found the amount of the original contract. It was in two parts. The substructure contract of the Philadelphia Mint was awarded to cost $2,805,770. The second contract was for the superstructure and was awarded July 1, 1966.

This contract for the superstructure in the amount of $12,682,000 was awarded by GSA on July 1, 1966. It provided for a completion date of January 1, 1968. That was 18 months ago. That would bring the total cost of the mint to $15,487,770. The superstructure was supposed to have been completed by January 1, 1968. This is June 30, 1969. There has been a delay of 18 months. The contract provides heavy penalties for late completion, and what I want to know is, how much in penalties have been collected from the contractor?

What prompts this question here is that the committee report recites that Congress has appropriated thus far a total of $37,700,000 for the Philadelphia Mint. The bill provides $1,770,000 more bringing the total to $39,470,000 appropriated. I realize that a part of the $39,470,000 is, as is provided in this item today, for equipment to be placed in the mint. Equipment was not a part of the original contract and should not be charged to it; but what is the amount of each?

I am wondering whether the committee will obtain and furnish to the Senate at a later date, the total amount that has been spent toward the completion of the original contract or on any change orders that may have been agreed upon in subsequent periods. I do not wish to delay

the bill and therefore ask that the committee obtain the information from the Department and give it to us at a later date.

Also, I should like to have an answer to the question of whether any penalties were collected from the contractor because of the 18-month delay in completing the construction.

Would the chairman of the committee be willing to get that information, or try to get it, and furnish it to the Senate at a later date?

Mr. YARBOROUGH. Certainly, I shall request the Bureau of the Budget or the Treasury Department to furnish this information. Any Senator is entitled to information about costs to the Government or the taxpayers.

I was chairman of the subcommittee which held hearings on the bill. Our voluminous hearings run almost to 1,178 pages. We always request any information that any Senator asks us to obtain. Had we known of the desire of the Senator from Delaware at the time we were holding hearings, we would have requested the information he seeks.

I have the honor to be chairman of the Subcommittee on Treasury, Post Office, and Executive Office Appropriations. The distinguished Senator from Delaware (Mr. BOGGS) is the ranking member of the subcommittee. Neither of us refused any requests from any Senator who sought information.

Mr. WILLIAMS of Delaware. I am sure the Senator from Texas would have obtained the information if it had been requested earlier. I did not ask the committee to get it at the time of the hearings because I did not know that more money was requested for this project, which was supposed to have been completed 18 months ago. The original contract did provide for the completion of the project by January 1, 1968. The building is still not complete today, 18 months later. As the Senator from Texas stated earlier, the Government was very much in need of the facility, so the earlier it is completed the better it will be for all concerned.

I think it is proper to ask how many change orders have been made and what the cost of them will be to the taxpayers. I also want to know the extent to which the Government has collected or plans to levy penalties upon the contractor for not having completed the building on schedule.

Mr. YARBOROUGH. We will submit the Senator's requests to the Department. We may not get a response before the Fourth of July recess, but we may get it by the 7th or 8th of July.

Mr. WILLIAMS of Delaware. That will be all right. With that understanding I shall not delay the passage of the bill now.

All of us have been concerned with overruns in contracts awarded by the Department of Defense. However, I am equally concerned about overruns for the construction of Post Office and Treasury facilities.

I realize it is of the utmost importance that the Philadelphia Mint be completed on time. At the time the contracts were awarded, I recall that we were told that by extending the life of the contracts and providing the contractors a longer period in which to build we could have obtained lower prices and gotten lower bids.

However, we were told at that time that it was of such great importance that it be completed at an early date that they accepted a higher bid in order to get the early completion date. Now, we are 18 months past delivery date, and still it is not completed.

Why was it not completed on schedule? Is the Department collecting penalties from the contractor as provided under the contract? If they are not assessing these penalties an explanation should be made as to why they are not.

The contract for this mint was a fixed-price contract. The taxpayers have the right to expect that the building will be delivered at the stated price.

With the assurance of the committee that they will get this information for the Senate I withdraw my request for a quorum at this time.

Mr. YARBOROUGH. I have no personal knowledge of this matter but it is stated in the hearings record that strikes or continuous and costly contractor delays have dragged this out. We shall ask the department having jurisdiction to submit the information which has been requested to Congress.

Mr. WILLIAMS of Delaware. In looking over the Treasury letter regarding this contract I do not see any clauses affecting strikes. It seems to me the contract was clear. It was a fixed-price bid which was accepted and agreed upon for completion of the building by a certain date. The contractor has a responsibility to live up to his obligations, and I want to know what the Department is doing to hold him to his contract.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Texas.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time.

Mr. BYRD of Virginia. Mr. President, in looking over the Senate hearings on this bill I am particularly interested in page 940. I note that the total national debt, subject to limitation on May 1, 1969, was $366,277,187,554. One year earlier, on May 1, 1968, the amount outstanding subject to limitation was $355,697,465,654.23.

Mr. President, according to testimony, the interest on the national debt in 1968 for fiscal year 1968 was $14.5 billion. The interest on the national debt for the fiscal year 1969 was $16.5 billion. It is estimated that the interest on the national debt for the fiscal year 1970, which begins tomorrow, will be $17.5 billion.

Mr. President, these figures show that during the 2-year period 1968 to 1970, the interest on the national debt increased from $14.5 billion to $17.5 billion. In other words, in that short period of time, in that 2-year period, there was an increase in the interest paid on the national debt of 20 percent.

I think it is worth noting, and I think the taxpayers would want to know that, leaving out the trust funds, but referring only to total general fund spending, total Federal spending for fiscal year 1969 will be, in round figures, $150 billion. Of that, $150 billion, the sum of $16.5 billion is for the interest on the debt. One can readily see that for every dollar being spent by the Federal Government, leaving out trust funds, more than 10 cents goes to pay the interest on the national debt.

Tomorrow begins fiscal year 1970. Fiscal year 1970 begins tomorrow. The President has advocated, and the House of Representatives even now is voting whether or not to continue the 10-percent surtax on all citizens of our Nation, a 10-percent surtax tax on incomes between now and December 31, and a 5-percent surtax between December 31 and June 30 next year.

Now, if that is done, that will bring in an additional $7.6 billion. That surtax on all the people of our country, that surtax of 10 percent in the next 6 months and 5 percent for the following 6 months, will bring in $7.6 billion. Yet, the interest on the national debt during that period of time will be $17.5 billion. I think it is important that the people of the United States realize that the more we bind up these great debts, the more the Government goes into debt, and the more the Government issues more and more bonds, the taxpayers are paying more and more interest.

Maybe no one else is startled, but I am startled by the fact that interest costs to the Government have gone up 20 percent in 2 years. The figures can be found on page 940 of the printed hearings before the Committee on Appropriations for the Treasury, Post Office, and Executive Office Appropriations, 91st Congress, 1st session, fiscal year 1970.

As this bill goes to final passage I cite again the interest on the national debt. For the fiscal year 1968 the interest cost to the Federal Government was $14.5 billion.

For the fiscal year 1969, the cost to the Federal Government in interest charges was $16½ billion. For the fiscal year 1970, the proposed budget estimates for interest payments on the national debt are $17½ billion.

I repeat, Mr. President, during the 2-year period, 1968–1970, the interest costs to the Government have gone up 20 percent, or $3 billion.

Mr. YARBOROUGH. I thank the distinguished Senator from Virginia for his comments. As he knows, these were all discussed during the hearings.

BUREAU OF CUSTOMS FUNDS FOR WAR ON NARCOTICS

Mr. GOODELL. One of the most serious domestic problems facing this Nation today is that of drug abuse. Each day more and more people are becoming victims of narcotics, and many of them are resorting to criminal activities to finance their habits. The Bureau of Narcotics and Dangerous Drugs has estimated that

there has been an 800-percent increase in drug-related crimes since 1964. There can be little doubt that the increasing addiction rates and increasing crime rates are directly related to the available supply of narcotics coming into the United States from abroad.

Arresting a few junkies and small pushers on the streets will not reduce the spiraling supply of narcotics. We must vigorously crack down on organized crime, which last year alone imported into the United States about 20 tons of illegal narcotics. If we are to have a meaningful Federal effort to halt the tragic cycle of addiction and crime, we must reduce the supply of narcotics illegally entering this Nation. Every day we delay, we reap a bitter harvest of crime, fear, wasted lives, and human suffering.

The Appropriations Committees of the House and Senate have indicated their support of this aspect of President Nixon's program against organized crime by supporting his full budget request of an additional $500,000 for 50 more special agents of the Customs Bureau. As I have emphasized for some time, there is a tremendous need for more Federal efforts in this area. In the past, despite recommendations of three manpower surveys and two Presidential Commissions, there have not been a sufficient number of investigative agents in the Bureau trained specifically to halt the supply of illegal drugs. At last we are moving from rhetoric to action, but we must do more.

I am also pleased that the Senate Appropriations Committee has supported the Bureau of Customs' full request for 213 additional positions in connection with the processing of persons. The House had reduced this request by $1,959,000. These positions will be needed for the new facilities at J.F.K. International Airport. The work on these facilities is proceeding on schedule and therefore will require the full staffing requested by the Bureau.

Obviously, one of the most effective ways to reduce the supply of narcotics passing through our customs inspection system is through vigorous examinations of persons, cargo, and packages. This can be better accomplished by providing the Bureau of Customs with more personnel for these duties. I therefore urge that the full appropriation, as passed by the Senate, be approved in the conference committee.

The Bureau of Customs must have adequate manpower to do its job. Because its success is so closely tied to the greatest fight which must be waged against the menace of narcotics in this country, it deserves our full support.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall the bill pass?

The bill (H.R. 11582) was passed.

Mr. YARBOROUGH. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House of Representatives on the disagreeing votes thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. YARBOROUGH, Mr. BYRD of West Virginia, Mr. MONTOYA, Mr. BOGGS, Mr. ALLOTT, Mr. MCGEE, Mr. RANDOLPH, and Mr. FONG the conferees on the part of the Senate.

Mr. MANSFIELD. Mr. President, with the passage of this funding measure the Senate has witnessed once again the thorough competency displayed, as always, by the chairman of the Treasury, Post Office, and Executive Office Subcommittee of the Senate Appropriations Committee, the distinguished senior Senator from Texas (Mr. YARBOROUGH). His expert handling of the bill demonstrated once again a keen awareness of its importance and a splendid appreciation for all of its facets. His ability to lead it through the Senate in such an expeditious and efficient manner speaks abundantly for the legislative ability and skill of Senator YARBOROUGH.

He was ably assisted in the task by the ranking minority member of the subcommittee, the distinguished Senator from Delaware (Mr. BOGGS). The Senate is indebted to them both for their cooperative efforts in disposing of the bill today.

It should be noted that the thoughtful views of the senior Senator from Delaware (Mr. WILLIAMS) added a great deal to the meaningful discussion.

Finally, I wish to commend the Senate as a whole for its cooperation for joining so courteously to obtain final action today and for succeeding with full regard for the views of every Senator.

PADRE ISLAND NATIONAL SEASHORE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 251, H.R. 11069.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. H.R. 11069, to authorize the appropriation of funds for Padre Island National Seashore in the State of Texas, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. WILLIAMS of Delaware. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. YARBOROUGH. Mr. President, one of the most beautiful sections of my home State is Padre Island which lies off the gulf coast from Corpus Christi to Brownsville. This island is spotted with beaches, dunes, and sea grass, and provides recreational opportunities for people from all over the Nation.

One of the proudest achievements of my legislative career is helping to have this island designated a National Seashore and thus preserved in its natural state for our posterity.

There is pending before the Senate, a bill, H.R. 11069, to authorize the appropriation of $4,129,829, plus interest to cover the final claims against the Federal Government for land taken from private citizens for this seashore. This bill is similar to my bill, S. 2212 for the same purpose. This seems to be a small price to pay for land which will provide recreation, relaxation, pleasure to so many Americans. I hope that we can enact H.R. 11069 with all due speed.

Mr. President, this is a House bill to appropriate moneys to complete the purchase of lands and interest in lands in Padre Island National Seashore, which total $4,129,829, plus interest provided by law. This is an order by the United States under a judgment against the United States in civil action 66B U.S. District Court for the Southern District of Texas, for the acquisition of land and interest in land for the Padre Island National Seashore. This was a seashore act passed in 1962 for the Padre Island National Seashore of Padre Island, Tex. As the bill was passed, it provided for a national seashore 81 miles in length. With recession of the land it led to this bill. The national seashore is 74 miles in length. The purpose of the bill is to pay off the judgment to complete acquisition with the payment of the judgment in addition to the judgment for which moneys previously have been authorized, which will complete the acquisition of land for the Padre Island National Seashore.

The greatest volume of acreage was that from Texas which ceded its lands—the submerged lands on the beach which belonged to the State. It ceded all that acreage to the Federal Government without cost to the Federal Government. The cost has been to the Federal Government because of privately owned lands which were acquired only by condemnation proceedings. The greater portion of the land was acquired in the northern 89,000 acres of the park. Payment for that was authorized in Public Law 90–594 which authorized appropriation of $6,810,380 plus interest to satisfy the judgment which had fully matured. Since the time for appeal from this judgment had not run, action was deferred on the judgment for the southern 11,000 acres of the island. In September 1968, while Congress was reviewing the proposed authorization to increase the court reviewed verdict, the court ordered an award which reduced the southern part from $9,924,387.80 to $7,332,750, leaving a deficiency of $5,729,829.

At the same time, litigants, the National Park Service, and the former landowners, entered into an agreement. They negotiated an agreement by which the National Park Service receded certain acreage to the private owners whose land was being condemned. The National Park Service and the private owners entered into a compromise agreement in the Federal court in December of 1968, under the terms of which title to part of the land, 1,628 acres, was revested in the former owners. The court judgment was reduced, to $4,829, plus interest. In addition, the landowners agreed to waive all interest through December 31, 1968, on the compromise judgment. Of course the interest is running now and the need for the law is to authorize the payment so that the payment can be entered and the 6-percent-interest cost cutoff.

It has been unanimously reported by the Committee on Interior and Insular Affairs.

Mr. President, I move passage of the bill.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Texas yield?

Mr. YARBOROUGH. I yield.

Mr. WILLIAMS of Delaware. Would the Senator tell us how much has been appropriated heretofore on this for the acquisition of Padre Island. It is about $16 million, as I understand it.

Mr. YARBOROUGH. This will bring it to something over $15 million, including this bill.

Mr. WILLIAMS of Delaware. $15 million?

Mr. YARBOROUGH. $15 million, including this bill.

Mr. WILLIAMS of Delaware. When the plan for this park was first presented in an authorization to Congress, if I remember correctly, its cost was not to exceed $5 million.

Mr. YARBOROUGH. That was the estimated cost at that time.

Mr. WILLIAMS of Delaware. Five million dollars was the maximum amount of the authority that was approved by Congress for the acquisition of the land that was outlined in the so-called Padre Island.

Mr. YARBOROUGH. That is correct. In 1958 when the bill was first introduced—1957—1958—and 1962 when it passed, it was still——

Mr. WILLIAMS of Delaware. We have already appropriated, as I understand it, in excess of $12 million, and here is a request for another $4,129,000 which will bring it up to around $16 million that we will have paid for an original $5 million project. In addition, the Government has reverted to the landowners 1,628 acres which was not acquired but what was a part of the original plan. Certainly as the result of the Government's expenditures the value of that 1,628 acres is being increased substantially far beyond what it was before. Who makes this windfall at the expense of the taxpayers?

Someone is ending up with a nice, profitable investment with the 1,628 acres. Not only that but the taxpayers will have spent, with approval of this bill, over three times as much as the entire project was supposed to have cost; or over, is that not correct?

Mr. YARBOROUGH. That is correct. The landowners fought this bitterly. Of course, the price of the land has gone up very high. We defeated them and got the bill through and now they are profiting by it. That happens in the case of many national parks around the country where people fight them at first; but once we get them, I do not know of any park in the country that anyone wishes to disestablish. People come in to live and work in the adjacent area. It helps all the country around there. People get this great windfall, very often, from it. I would not destroy a national park because someone was fighting it. Their lands are undoubtedly worth more to them than to have a national park there. But there is a national park there now, and the price has gone up, and the 1,628 acres have been ceded, which is small compared to the 100,000 acres of uplands which the Federal Government has in the seashore. That 100,000 acres itself is less than the land that the State of Texas gave in the tidelands and the flats of Laguna on Padre Island, which are owned by the State of Texas under Spanish grants in front of this strip.

We were able to get, through the Legislature of the State of Texas, a large amount of land given to the Federal Government.

Mr. WILLIAMS of Delaware. As I understand it, here was a project that was presented to the Congress on the premise that this land could be acquired at a cost of not to exceed $5 million.

Mr. YARBOROUGH. It was on the premise of its value of the land then. It took 4½ years to pass this measure. It was bitterly fought.

Mr. WILLIAMS of Delaware. Why did they not come back and tell the Congress that it was going to cost four times as much as what they planned? Who reaps this windfall by keeping these 1,628 acres? In addition to keeping the 1,600 acres, they will get $5.7 million for what portion they do sell to the Government. What they are selling to the Government to turn into a national park likewise increases the value of the land which they will keep. This one small group ends up with far more than what the cost was supposed to have been for the whole project.

Mr. YARBOROUGH. That is true.

Mr. WILLIAMS of Delaware. Many Members of Congress, including myself, have repeatedly criticized the Defense Department for consistent overruns in the costs of the Defense contracts, but I am wondering if this is not where the Defense Department got its lesson, because this project is a congressional overrun. Congress was promised that all the land would not cost over $5 million. We have already spent $12,500,000. Now we are asked to spend another $4,118,000 to complete the purchase. Millions more will still be needed to put the park into operation. Yet some favored group will keep 1,628 acres in the middle of this park. What a windfall. Who is this favored group? It would be better to defeat the bill. I do not see any reason why the taxpayers of the country should pay five times what the Government itself said the land was worth when the bill was originally passed. Nor do I approve of this built-in windfall for some favored group. Who are they?

Mr. YARBOROUGH. I point out that this matter has been adjudicated in court. The matter was tried before a court and jury, and this was the judgment of the court. I do not think we are at liberty to pay what we would like to pay. I regret to see these people get this money, when they fought me so and were against the project. It was a bitter fight. They campaigned all through the State against the establishment of the national seashore. Now they get the most benefit from it. However, they owned the land, and we have a free enterprise system in this country. Some people bought land later, which can be done. That happens in the case of any national park, or when a dam is constructed, or when a road is built. We cannot keep people from going into those areas and buying land. I hold no brief for those people. My brief is for the park.

The most heavily visited national park in the country is Shenandoah National Park, in Virginia. The national park authorities estimate that after the project is completed, on a busy weekend we may find over 100,000 going over only one of the bridges to Padre Island, and it may become the most visited national park in America. It still would be a steal, in my opinion, to get it this cheaply.

Mr. WILLIAMS of Delaware. Based on the price we are asked to pay there must be a gold mine there.

Mr. YARBOROUGH. When the bill was introduced, $5 million was all the land was worth, but the price went up. I ask the Senator where he can buy land along the seashore today for what it sold in 1958 or 1962. The price of seashore land is skyrocketing all over the country. I am glad it did not cost $93,000 an acre. Is that not what is being paid in Ocean City, Md.?

Mr. WILLIAMS of Delaware. This bill was first sold to the Congress on the basis that its total cost would not be over $5 million. Here it is costing four or five times that amount. If Congress approves this bill it represents a congressional overrun. How can Congress with a straight face criticize the Defense Department for its overruns? I have been very critical of the Defense Department, but we should live by our own rules.

The Senator from Ohio, Mr. Lausche, and I tried to stop this years ago when the first overrun in cost developed. Here we are with another $4 million, and this will not end it. The Senator said that tourists would be going over the bridge by the hundreds and thousands to visit this park, but I am wondering if they will not be doing that because they think there is a gold mine there, based on its cost to the Government. Texas is one of our great States, the second largest in the Union. But with all due respect to the great State of Texas, I wonder if this is not a large overrun in cost even for Texas.

The only way we can stop these overruns is for Congress to say, "We are just not going to pay for these overcharges. If Texas does not want to have a national park there we can establish a park somewhere else."

I am getting a little impatient with the hijacking on the part of people who first want a park and then after getting it approved come along and want the Government to pay five times as much as the original asking price.

I am going to vote against this bill. I think it is about time to stop the continual overruns by the various agencies of the Government. They put a price on projects, and then they come back a little later and say, "We need a few more million dollars." There is only one way to stop it, and that is to defeat the bill.

Mr. YARBOROUGH. I point out that this is a judgment of the court, and the Government must pay it. I also point out that there are 100,000 acres of upland there, and the total cost to the Government is running about $15 million. That is about $150 an acre.

Mr. WILLIAMS of Delaware. They realize that the Government will spend another $35 or $40 million to improve it.

Certainly that makes the land worth more money. Who reaps the windfall on this large payment, and who are in the group that gets to keep the 1,628 acres in the middle of the national park?

The price tag should be put on these projects when measures are introduced. I am getting a little impatient about agencies putting on a small price tag and then eventually multiplying the price by four times when we get ready to pay for it.

But Congress itself must accept the blame, too. The agency cannot get the extra money without congressional approval.

I repeat, let Senators not criticize the Defense Department for its overruns on defense contracts if we are going to have a congressional overrun of 400 percent. Personally, I am not going to support this bill.

Mr. YARBOROUGH. Mr. President, I yield the floor and request that the bill be voted on.

The PRESIDING OFFICER. If there be no amendments to be proposed, the question is on the third reading of the bill.

The bill (H.R. 11069) was ordered to a third reading, and was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DIRKSEN (when his name was called). Mr. President, on this vote I have a pair with the distinguished Senator from Texas (Mr. TOWER.) If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." Therefore, I withhold my vote.

The rollcall was concluded.

Mr. KENNEDY. I announce that the Senator from Tennessee (Mr. GORE), the Senator from Washington (Mr. JACKSON), and the Senator from Washington (Mr. MAGNUSON) are absent on official business.

I also announce that the Senator from Nevada (Mr. BIBLE), the Senator from North Dakota (Mr. BURDICK), the Senator from West Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Mississippi (Mr. EASTLAND), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Minnesota (Mr. MCCARTHY), the Senator from New Mexico (Mr. MONTOYA), the Senator from Maine (Mr. MUSKIE), the Senator from Rhode Island (Mr. PELL), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Georgia (Mr. RUSSELL), the Senator from Alabama (Mr. SPARKMAN), the Senator from Virginia (Mr. SPONG), and the Senator from Missouri (Mr. SYMINGTON) are necessarily absent.

I further announce that, if present and voting, the Senator from Nevada (Mr. BIBLE), the Senator from North Dakota (Mr. BURDICK), the Senator from Alaska (Mr. GRAVEL), and the Senator from Washington (Mr. JACKSON) would each vote "yea."

Mr. DIRKSEN. I announce that the Senator from Vermont (Mr. AIKEN) and the Senator from Colorado (Mr. ALLOTT) are absent on official business.

The Senator from Oklahoma (Mr. BELLMON), the Senator from Massachusetts (Mr. BROOKE), the Senator from Hawaii (Mr. FONG), the Senators from New York (Mr. GOODELL and Mr. JAVITS), the Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from Wyoming (Mr. HANSEN), the Senator from Nebraska (Mr. HRUSKA), the Senator from Iowa (Mr. MILLER), the Senator from California (Mr. MURPHY), the Senator from Ohio (Mr. SAXBE), the Senator from Alaska (Mr. STEVENS), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Kentucky (Mr. COOK) and the Senator from North Dakota (Mr. YOUNG) are detained on official business.

If present and voting, the Senator from Massachusetts (Mr. BROOKE), the Senator from Iowa (Mr. MILLER), the Senator from California (Mr. MURPHY), and the Senator from Alaska (Mr. STEVENS) would each vote "yea."

The positions of the Senator from Illinois (Mr. DIRKSEN) and the Senator from Texas (Mr. TOWER) have been previously announced.

The result was announced—yeas 57, nays 4, not voting 38, as follows:

[No. 51 Leg.]

Goldwater	Montoya	

So the bill (H.R. 11069) was passed.

Mr. YARBOROUGH. Mr. President, I move that the vote by which the bill was passed be reconsidered.

Mr. PASTORE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the RECORD a letter dated May 13, 1969, from Secretary of the Interior Walter J. Hickel to Vice President SPIRO THEODORE AGNEW.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., May 13, 1969.

Hon. SPIRO THEODORE AGNEW,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed is a draft of a proposed bill to authorize the appropriation of funds for Padre Island National Seashore in the State of Texas and for other purposes.

We recommend that the bill be referred to the appropriate committee for consideration, and we recommend that it be enacted.

The bill would authorize the appropriation of such sums as are necessary to satisfy final judgments against the United States in the last remaining condemnation proceeding which was brought to acquire property for the Padre Island National Seashore in Texas. Two proceedings were brought, numbers 65–C–54 and 66–B–1, both of which have resulted in final awards to the property owners in excess of the amounts deposited in court by the United States as estimated fair market value of the properties. With respect to number 65–C–54, the 90th Congress enacted Public Law 90–594, which authorized the appropriation of $6,810,380, plus interest, to satisfy the deficiency in that case. Enactment of the enclosed bill would authorize the appropriation of $4,129,829, plus interest, to satisfy the deficiency in proceeding number 66–B–1.

This department, in its letter to the Congress of June 4, 1968, recommended the enactment of a draft bill which would authorize appropriations sufficient to satisfy the awards in both proceedings. However, the authority with respect to proceeding number 66–B–1 was deleted by the House Committee on Interior and Insular Affairs (see House Report No. 1856, 90th Congress, second sess., to accompany H.R. 17787), and this deletion was concurred in by the Senate Committee on Interior and Insular Affairs (see Senate Resolution No. 1598, 90th Congress, second sess.). The deletion was made on the ground that a final judgment in proceeding number 66–B–1 had not been rendered, appeals filed by the Government and the former landowners with respect to tracts 14 and 16 not then having been disposed of.

Final judgments with regard to the four tracts involved in proceeding number 66–B–1 have now been rendered. The following table shows the sums involved:

Tract	Deposit	Final award	Deficiency	Judgment date
14 and 16	$1,581,321	$5,700,000	$4,118,679	Dec. 18, 1968
15	7,200	11,000	3,800	May 14, 1968
17	14,400	21,750	7,350	Jan. 8, 1968
Total	1,602,921	5,732,750	4,129,829	

With regard to tracts 14 and 16, at trial the jury awarded the former landowners $9,891,637.80. On motion of the Government, the court ordered a remitter in the amount of $2,591,637.80, which would have reduced the award to $7,300,000. Pending final action on the remitter, however, the former landowners offered to accept a total figure of $5,-

700,000, provided the Government agreed to revestment of title to tract 16 and a portion of tract 14 in the former owners. These lands totaled 1,628.05 acres, and were deemed not now essential to the management and development of the seashore. The Government therefore joined the former landowners in a stipulation providing for revestment of the 1,628.05 acres and an award of $5,700,000, which was approved by the court.

Under the stipulation mentioned above, interest on the deficiency with regard to tracts 14 and 16 ($4,118,679) commenced to run on January 1, 1969. Under similar stipulations covering tracts 15 and 17 interest on the deficiency on tract 15 ($3,800) will commence on May 14, 1969, and interest on the deficiency on tract 17 ($7,350) commenced January 9, 1969. Interest will accumulate against the Government at the rate of 6 percent from the above dates on the deficiencies until they are paid. The funds authorized in this draft legislation will be sufficient to complete land acquisition for this national seashore under the current plans of the Department.

The Bureau of the Budget has advised that there is no objection to the submission of this proposed legislation from the standpoint of the administration's program.

Sincerely yours,

WALTER J. HICKEL,
Secretary of the Interior.

THE DWIGHT D. EISENHOWER DAM

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 264, S. 1613.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 1613) to designate the dam commonly referred to as the Glen Canyon Dam as the Dwight D. Eisenhower Dam.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. BENNETT. Mr. President, it is with deep pleasure that I speak in support of S. 1613, which I introduced and which has been favorably reported unanimously by the Committee on Interior and Insular Affairs. I am sure I speak also for the other 62 cosponsors of the bill. The bill would re-name the dam hitherto commonly referred to as the Glen Canyon Dam, as the Dwight D. Eisenhower Dam.

Eisenhower Dam will be a fitting memorial to the late President Eisenhower, whose vision and personal efforts were largely responsible for the realization of the Upper Colorado River project.

The Eisenhower Dam will stand as a tribute not only to General Eisenhower's faith in the Upper Colorado River project, but also to his greatness as President, military leader, and world statesman.

Eisenhower Dam conveys to those who honor the late President the simplicity amidst complexity and great strength that is needed within the framework of a leading world power. President Eisenhower himself said:

> The strength of America is the strength of our society, the strength of natural resources, and the strength of our power to defend ourselves.

In the state of the Union address in 1955, three basic solutions were given by President Eisenhower for economic development:

> At the foundation of our economic growth are the raw materials and energy produced from our minerals and fuels, lands and forests, and water resources. We must first develop, wisely use, and conserve basic resources from generation to generation; second follow the historic pattern of developing these resources primarily by private citizens; and third treat resource development as a partnership—a partnership of private citizens combined with both state and local governments.

In keeping with these three principles, the President then urged Congress to approve the development of the Upper Colorado River Basin to conserve and assure better use of precious water essential to the future of the West.

A fitting memorial must capsulize the endeavors of a lifetime. In the field of reclamation alone, President Eisenhower authorized 50 new projects. At the completion of these projects there will be, in President Eisenhower's words, "a storage capacity of nearly 43 million acre-feet—an increase of 50 percent over the Bureau of Reclamation capacity in 1953 when this project began."

It was his personal prestige behind congressional authorization and appropriation for this four-State project which made possible a dream that had persisted for decades—the taming of the Colorado, one of the longest, wildest, and most savage rivers in the Nation.

This idea for honoring one of the world's most admired men originated with my good friend and former senatorial colleague from Utah, Arthur V. Watkins. Senator Watkins and myself were privileged to attend the ceremonies at the White House when President Eisenhower signed the legislation authorizing the construction of the project in 1956.

The changing of the name would not slight the memory of some "Mr. Glen," as the dam's nomenclature was derived from the descriptive word "glen," which is of Celtic origin, meaning "narrow valley."

Glen Canyon Dam is a multipurpose development to regulate the river, create power, prevent floods, and make water available for use on land in municipalities. The 710-foot-high concrete structure, finished in 1963, will eventually create a reservoir extending 186 miles up the Colorado River and 71 miles up the San Juan. This four-State development stands as a fitting monument to the President who felt the strength of the Nation lay in the utilization of natural resources.

While speaking in Portland, Oreg., in 1956, President Eisenhower labeled Glen Canyon Dam "a monumental testimony to our Government's awareness of Federal responsibility." Is it not fitting that we attribute this testimony to President Eisenhower?

Let me again say that the name change from Glen Canyon Dam to Eisenhower Dam would be a fitting memorial to General Eisenhower's long and distinguished career as President, military leader, and world statesman. It would also be a lasting testimonial to his faith in the development of the Upper Colorado River Basin.

I wish to thank each of the 62 other Senators who joined with me in sponsoring this worthwhile tribute to the former President. I wish also to extend special thanks to the distinguished chairman of the Committee on Interior and Insular Affairs (Mr. JACKSON) and the distinguished ranking minority member of the committee, the Senator from Colorado (Mr. ALLOTT), who saw to it that the bill was promptly considered and favorably reported.

I urge the Senate to approve the bill unanimously.

Mr. PEARSON. Mr. President, will the Senator from Utah yield?

Mr. BENNETT. I am happy to yield.

Mr. PEARSON. I wish to associate myself with the remarks and comments made by the distinguished Senator from Utah and to express my appreciation for his leadership and that of the distinguished Senator from Washington (Mr. JACKSON) in support of this measure.

Mr. BENNETT. I thank the Senator from Kansas.

I yield the floor.

Mr. MOSS. Mr. President. I speak in behalf of S. 1613, which I had the honor to support in the Committee on Interior and Insular Affairs, and which it was my privilege to report favorably to the Senate on behalf of the committee.

The bill would designate the dam commonly referred to as Glen Canyon Dam as the Dwight D. Eisenhower Dam.

It is wholly appropriate that this dam be renamed for this great American. President Eisenhower was in the White House when Congress enacted the Upper Colorado River Storage Act in 1956, and it was he who signed it into law. The Glen Canyon Dam, powerplant, and reservoir are the largest storage and power features of the Colorado River storage project. The dam itself spans the Colorado River near its exit from the Upper Basin, as if in the spout of a great funnel, where it can control all of the water in the funnel's own course—the Colorado's own flow as well as of its tributaries which feed into it upstream from the dam.

The reservoir behind the dam has been named for John Wesley Powell, the pioneer explorer, geologist, ethnologist, and geographer whose monumental trip 100 years ago down the Green and Colorado Rivers in Wyoming, Utah, and Colorado we are celebrating this year. In fact, I have just returned from Utah, where I participated in a number of events of the Powell centennial.

The name of Glen Canyon Dam may not do justice to the great structure which rises 530 feet above the river bed, and into which more than 5 million cubic yards of concrete were poured. Because Glen Canyon Reservoir does not do justice to the vast manmade lake behind the dam, the lake which has been named for John Wesley Powell.

But the name Eisenhower Dam will commemorate the life and service to his country of a man who was the Commanding General of Allied Forces in World War II, was the 34th President of the United States, and who is widely revered in America. It will be properly named if it is called the Eisenhower Dam.

At the time of the introduction of the

bill which is now before the Senate, I stated in a letter to my senior colleague from Utah (Mr. BENNETT) that I would be glad to support him in the introduction of the bill and in the support of it both in committee and on the floor of the Senate. I am very glad to have done so. It is altogether fitting, proper, and appropriate that the dam be renamed the Dwight D. Eisenhower Dam. I therefore join my colleague from Utah (Mr. BENNETT) in recommending the passage of the bill today.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 1613) was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 1613

A bill to designate the dam commonly referred to as the Glen Canyon Dam as the Dwight D. Eisenhower Dam

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in recognition of the outstanding service rendered by Dwight D. Eisenhower as President, General of the Army, and world leader, the dam commonly referred to as the Glen Canyon Dam, located on the Colorado River in Arizona, is hereby designated as the Dwight D. Eisenhower Dam.

SEC. 2. Any law, regulation, document, or record of the United States in which such dam is designated or referred to shall be held to refer to such dam under and by the name of the Dwight D. Eisenhower Dam.

AUTHORIZATION OF APPROPRIATIONS FOR PROCUREMENT OF VESSELS AND AIRCRAFT AND CONSTRUCTION OF SHORE AND OFFSHORE ESTABLISHMENTS FOR THE COAST GUARD

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 262, H.R. 4153.

The PRESIDING OFFICER (Mr. HUGHES in the chair). The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (H.R. 4153) to authorize appropriations for procurement of vessels and aircraft and construction of shore and offshore establishments for the Coast Guard.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Commerce, with an amendment, on page 1, at the beginning of line 9, strike out "(13)" and insert "(1)".

The PRESIDING OFFICER. The bill is open to further amendment. If there be no amendment to be proposed, the question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed, and the bill to be read a third time.

The bill (H.R. 4153 was read the third time and passed.

TOY SAFETY ACT OF 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 227, S. 1689.

The PRESIDING OFFICER. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 1689) to amend the Federal Hazardous Substances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Commerce, with amendments, on page 2, line 2, after the word "of" strike out "subparagraph" and insert "clause"; in the same line after "(iii)" strike out "or (iv)"; in line 6, after "U.S.C." strike out "1151(2)" and insert "1261"; in the same line strike out "(A)"; in line 9, after the word "Secretary", insert "in accordance with section 553, title 5, United States Code,"; in line 14, after the word "because" strike out "of the presence of" and insert "it presents"; in line 15, after the word "hazards" strike out the comma and "or (iv) may cause substantial personal injury or substantial illness by, during or as a result of foreseeable use of the toy or article, even if unintended by the manufacturer, where such injury or illness is attributable to electrical, mechanical, or thermal aspects of the design, processing, or assembly of that toy or article."; at the beginning of line 25, strike out "the term 'electrical hazard' means a condition or circumstance such that substantial personal injury or substantial illness from electric shock or electrocution may be caused during or as a proximate result of any customary or reasonably foreseeable use." and insert "an article may be determined to present an 'electrical hazard' if, in normal use or when subjected to reasonably foreseeable damage or abuse, its design or manufacture may cause personal injury or illness by electric shock resulting from current leakage, inadequate insulation, accessibility of live parts, or other conditions.".

On page 3, at the beginning of line 13, strike out "the term 'mechanical hazard' means a condition or circumstance such that substantial personal injury or substantial illness may be caused during or as a proximate result of any customary or reasonably foreseeable use because of sharp surfaces or protrusions, fragmentation, explosion, strangulation, suffocation, asphyxiation, or other mechanical means." and insert "an article may be determined to present a 'mechanical hazard' if in normal use or when subjected to reasonable foreseeable damage or abuse, its design or manufacture presents an unreasonable risk of personal injury or illness by strangulation, suffocation, asphyxiation, fragmentation, explosion, puncture, or other mechanical means.".

On page 4, line 2, after the semicolon strike out "the term 'thermal hazard' means a condition or circumstance such that substantial personal injury or substantial illness may be caused during or as a proximate result of any customary or reasonably foreseeable use of articles: (1) which contain heated surfaces; or (2) which if ignited burn so intensely that (A) extremely high temperatures are reached, or (B) they cannot be readily extinguished by means ordinarily at hand."; and insert "an article may be determined to present a 'thermal hazard' if it has surfaces or parts normally touched, hand-held, or grasped which exceed a temperature of 113° Fahrenheit (or 140° Fahrenheit in the case of surfaces other than metal), or if it has surfaces or parts exceeding 140° Fahrenheit (in normal use or when subject to reasonably foreseeable damage or abuse) which may be touched accidentally, causing personal injury or illness. However, articles which have parts or surfaces exceeding a temperature of 140° Fahrenheit which may be touched accidentally and are not normally touched, handheld, or grasped shall not be found to present a 'thermal hazard' if the following three conditions are met: (i) the article requires such surfaces or parts in order to perform the normal function or purpose of the article; and (ii) the article bears labeling giving directions and warnings for safe use, and (iii) because of such labeling and warnings or other factors the article is likely to be used only by children who will comprehend the warning and use the toy safely. Temperature tests shall be made at an ambient (room) temperature of 77° Fahrenheit (25° C.).".

On page 5, after line 4, strike out:

EFFECTIVE DATE

SEC. 3. The amendments made by section 2 of this Act shall become effective sixty days after the date of enactment of this Act.

And, in lieu thereof, insert:

SEC. 3. (a) Subparagraph 1(A) of section 2(f) of such Act (15 U.S.C. 1261(f)(1)(A)) is amended by inserting "or combustible" after "flammable".

(b) Section 2(1) of such Act (15 U.S.C. 1261(l) is amended (1) by striking out "and" before "the term 'flammable' "; (2) by inserting the following before the semicolon: ", and the term 'combustible' shall apply to any substance which has a flash point above eighty degrees Fahrenheit to and including one hundred fifty degrees as determined by the Tagliabue Open Cup Tester;" (3) by inserting "or combustibility" after "flammability"; and (4) by inserting " 'combustible'," after " 'flammable',".

(c) Section 2(p)(1)(E) of such Act (15 U.S.C. 1261(p)(1)(E))) is amended by inserting " 'Combustible,' " after " 'Flammable,'".

After line 23, insert a new section, as follows:

SEC. 4. Section 2(q) of such Act (15 U.S.C. 1261(q)) is amended by adding at the end thereof the following:

"(3) If any substance or article is determined to be a banned hazardous substance after the sale of such substance or article by a manufacturer or a distributor to a distributor or a dealer and prior to the sale of such substance or article by such dealer or distributor, the distributor shall immediately repurchase such substance or article at the price paid by such dealer, plus the transportation charges involved, and the manufacturer shall immediately repurchase from the distributor (or from the dealer if there is no

distributor) such substance or article unsold or repurchased at the price paid, plus all transportation charges involved."

And on page 6, after line 11, insert a new section, as follows:

EFFECTIVE DATE

SEC. 5. This Act shall become effective sixty days after the date of its enactment.

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Toy Safety Act of 1969".

SEC. 2. (a) Section 2(f)(1) of the Federal Hazardous Substances Act (15 U.S.C. 1261 (f)(1)) is amended by adding at the end thereof the following new clause:

"(D) Any toy or other article intended for use by children which the Secretary finds pursuant to the provisions of section 2(q)(1) of this Act meets the requirements of clause (A) (iii) or (iv) of such section."

(b) The matter preceding the semicolon in clause (A) of section 2(q)(1) of the Federal Hazardous Substances Act (15 U.S.C. 1261(q)(1)(A)) is amended to read as follows: "(A) any toy, or other article intended for use by children, which, pursuant to a determination made by the Secretary in accordance with section 553, title 5, United States Code, (i) is a hazardous substance, or (ii) bears or contains a hazardous substance in such manner as to be susceptible of access by a child to whom such toy or other article is entrusted, or (iii) is otherwise hazardous because it presents electrical, mechanical, or thermal hazards.

(c) Section 2 of such Act is amended by adding at the end thereof the following:

"(r) The term 'electrical' means of or pertaining to the flow of an electrical charge or to electrons in motion; an article may be determined to present an 'electrical hazard' if, in normal use or when subjected to reasonably foreseeable damage or abuse, its design or manufacture may cause personal injury or illness by electric shock resulting from current leakage, inadequate insulation, accessibility of live parts, or other conditions.

"(s) The term 'mechanical' means of or pertaining to the design, construction or structure of a substance; an article may be determined to present a 'mechanical hazard' if in normal use or when subjected to reasonable foreseeable damage or abuse, its design or manufacture presents an unreasonable risk of personal injury or illness by strangulation, suffocation, asphyxiation, fragmentation, explosion, pucture, or other mechanical means.

"(t) The term 'thermal' means of or pertaining to the transfer or manifestation of heat energy; an article may be determined to present a 'thermal hazard' if it has surfaces or parts normally touched, hand-held or grasped which exceed a temperature of 113° Fahrenheit (or 140° Fahrenheit in the case of surfaces other than metal), or if it has surfaces or parts exceeding 140° Fahrenheit (in normal use or when subjected to reasonably foreseeable damage or abuse) which may be touched accidentally, causing personal injury or illness. However, articles which have parts or surfaces exceeding a temperature of 140° Fahrenheit which may be touched accidentally and are not normally touched, hand-held, or grasped shall not be found to present a 'thermal hazard' if the following three conditions are met: (i) the article requires such surfaces or parts in order to perform the normal function or purpose of the article; and (ii) the article bears labeling giving directions and warnings for safe use, and (iii) because of such labeling and warnings or other factors the article is likely to be used only by children who will comprehend the warning and use the toy safely. Temperature tests shall be made at an ambient (room) temperature of 77° Fahrenheit (25° C.)."

SEC. 3. (a) Subparagraph 1(A) of section 2(f) of such Act (15 U.S.C. 1261(f)(1)(A)) is amended by inserting "or combustible" after "flammable".

(b) Section 2(l) of such Act (15 U.S.C. 1261(l) is amended (1) by striking out "and" before "the term 'flammable' "; (2) by inserting the following before the semicolon: ", and the term 'combustible' shall apply to any substance which has a flash point above eighty degrees Fahrenheit to and including one hundred fifty degrees as determined by the Tagliabue Open Cup Tester;" (3) by inserting "or combustibility" after "flammability"; and (4) by inserting " 'combustible'," after " 'flammable',".

(c) Section 2(p)(1)(E) of such Act (15 U.S.C. 1261 (p)(1)(E)) is amended by inserting " 'Combustible,' " after " 'Flammable' ".

SEC. 4. Section 2(q) of such Act (15 U.S.C. 1261(q)) is amended by adding at the end thereof the following:

"(3) If any substance or article is determined to be a banned hazardous substance after the sale of such substance or article by a manufacturer or a distributor to a distributor or a dealer and prior to the sale of such substance or article by such dealer or distributor, the distributor shall immediately repurchase such substance or article at the price paid by such dealer, plus the transportation charges involved, and the manufacturer shall immediately repurchase from the distributor (or from the dealer if there is no distributor) such substance or article unsold or repurchased at the price paid, plus all transportation charges involved."

EFFECTIVE DATE

SEC. 5. This Act shall become effective sixty days after the date of its enactment.

Mr. MOSS. Mr. President, I urge this body to act favorably on (S. 1689) the Toy Safety Act of 1969. The purpose of this bill is to amend the Federal Hazardous Substances Act so that the Secretary of Health, Education, and Welfare, in order to protect children from serious injury and illness, may ban from the marketplace toys and other articles intended for use by children which present electrical, mechanical, and thermal hazards.

Such dangerous toys and other articles are in the marketplace at this moment. The harmless looking rolypoly doll, when dropped, breaks apart and exposes a series of menacing horizontal spikes that can impale the young, innocent child. The darts of a certain toy blowgun can easily be inhaled by the young child who confuses the mouthpiece and muzzle. The list of these dangerous toys is long. The National Commission on Product Safety, which advocated toy safety legislation in its interim report to Congress, has clearly documented the need for this legislation.

The Toy Manufacturers of America testified in favor of toy safety legislation. The present bill, as passed from committee, is supported by the industry. Toy safety legislation is absolutely necessary. We must act now to protect the young people of our Nation from needless personal injury and illness. We must enact into law the Toy Safety Act of 1969.

Mr. PROUTY. Mr. President, I am pleased to support the Toy Safety Act of 1969, S. 1689, as amended. I was a cosponsor of this bill with the distinguished Senator from Utah (Mr. Moss) because I was particularly concerned about the number of young people who are injured while playing with toys which are intended to create no harm.

As our society has grown in affluence and technology, parents find that the marketplace contains literally thousands of toys designed to provide enjoyment and education for their children. With such a wide selection of toys available, it becomes extremely difficult for the parent to carefully analyze all the characteristics of a particular toy. As a matter of fact, even the parent who spends hours carefully analyzing all of the characteristics of a particular toy may find that his efforts at protecting his child from harm are thwarted simply because children generally have the praiseworthy habit of sharing their toys with others.

There is nothing new concerning the problem of unsafe toys. I suspect that there were many children injured when the only toys available were those handmade at home. In those days it could accurately be stated that if a child was injured, the parent had no one to blame but himself. As a matter of fact, this reasoning continued long after toys were readily available in the marketplace. Just a few short years ago a merchant could escape all liability for the harm done by an unsafe toy simply by stating that it was the buyer, not the seller, who was at fault. As a matter of fact, this doctrine of caveat emptor was not even dented in this country until the 20th century.

The question as to who should bear the cost of an injury because of a defective product has traditionally been left to the courts to decide. The courts, until recent years, have been reluctant to place the responsibility for the damage from a defective product on anyone but the buyer. Over the years elaborate rules have grown up concerning who should bear the cost. For example, at one time a merchant who sold a painted ladder was not liable to the purchaser if the ladder broke because of defective workmanship. However, that same merchant would be liable for a ladder with the same defect if it was unpainted.

Slowly but surely there evolved in this country the warranty doctrine whereby the mere sale of goods was held to imply that the seller warrants his product to be reasonably fit for the purpose intended. However, due to the contractual nature of sales, recovery under implied warrants was available only to persons in privity of contract with the party against whom recovery was sought. This privity requirement created few hardships to consumers until the advent of the modern wholesaler-retailer method of distribution which eliminated the privity between the consumer and the manufacturer.

In other words, the only way that the consumer can get a manufacturer to pay for the damages done through the use of the manufacturer's defective product was to prove that the manufacturer had been negligent in the making of his products. This was virtually an impossible task. Could you imagine, for example, the difficulty that the individual consumer would have in proving that some-

where along the assembly line of a giant manufacturer an employee had failed to tighten a necessary screw or bolt.

After thousands of injuries had occurred to children and adults alike, courts began to offer some relief to the consumer bedeviled by this complex society. That relief consisted of imposing strict liability upon the manufacturer but the relief came only in bits and pieces. Even as late as 1967 the relief was not complete. William L. Prosser, writing in the University of Minnesota Law Review, states:

> The public interest in human safety requires the maximum possible protection for the user of the product, and those best able to afford it are the suppliers of the chattel.

But Mr. Prosser also points out that courts in at least 10 States have not accepted the doctrine of strict liability on manufacturers for defective products but, certainly, there is a definite trend toward holding the manufacturer liable for injury caused by defective products.

Mr. President, while I am not a lawyer, I mention this trend in product liability because I believe it has direct bearing on two aspects of the bill before us today. First, I believe it reminds us that even the imposition of strict liability provides only after the fact compensation for injury because of defective products. Therefore, it is incumbent upon us as legislators to do what we can to see that defective products are eliminated to the maximum extent feasible. Second, it raises a very real question as to who should bear the cost for the losses incurred by the removal of those defective products which happen to get into the stream of commerce before they are detected.

Mr. President, I, for one, believe that the American toy manufacturers deserve congratulations for their efforts to promote child safety through the production of safe toys. However, I think that most American manufacturers would agree that standards for safety would enable them to produce safe toys with even a greater degree of consistency. This bill gives the Secretary of Health, Education and Welfare the authority to establish standards to insure that toy manufacturers will take safety into consideration from the design stage through the production stage.

It is also clear to me, Mr. President, that it is better to pass legislation which will clearly establish safety standards rather than to rely on the impetus created by after-the-fact court litigation. Arnold Elkind, chairman of the National Commission on Product Safety, probably most clearly stated the necessity for this legislation when he said:

> When your intelligence tells you that something will create an injury and it seems conceptually clear that an injury will occur, it is primitive to wait until a number of people have lost their lives, or sacrificed their limbs before we attempt to prevent those accidents.

This, Mr. President, brings me to the second aspect of the bill before us today. When I sponsored this bill with Senator Moss, I was motivated by my concern to see definite guidelines established so as to insure the safest possible toys for the children of this country. During the course of the hearings it became clear to me that the bill as originally written contained one serious defect. That defect became apparent when we considered what would happen if an unsafe toy somehow got into the stream of commerce and had to be recalled. Both the bill as originally written and the amended version provide that should an unsafe toy get to the marketplace, it can be seized by the Government so as to protect innocent consumers from the hazard which it poses.

In the original bill, however, the monetary loss from such a seizure would have fallen upon the party who had the product at the time of seizure. In other words, if an unsafe toy happened to be on the store shelf at the time the defect was discovered, the local retail merchant would have suffered the economic loss unless the wholesaler or manufacturer had voluntarily agreed to compensate him for the loss.

Mr. President, I, personally, felt that this was an inequity in the original bill. Therefore, I proposed an amendment to the bill which presently is contained in section 4. That amendment places the liability for economic loss, because of the recall of an unsafe toy, upon the manufacturer of the toy. I believe this amendment will not only benefit local retail stores but will also benefit American toy manufacturers. In the unlikely event that an unsafe toy sometime in the future gets into the stream of commerce, the retail store will know that the American manufacturer is bound by law to return the retailer's purchase price for the particular toy which is on sale. However, this law has no extraterritorial effect, so a retail store which purchases a foreign toy takes a risk that if the toy is found unsafe, he may have to suffer the economic loss.

I hope, Mr. President, that the Congress will promptly enact this legislation. I believe that where a child's safety is at stake, we cannot afford to wait until a later date or to wait until the effects of court litigation bring about safer toys.

The PRESIDING OFFICER. Without objection, the amendments are considered and agreed to en bloc.

The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and the third reading of the bill.

The bill (S. 1689) was ordered to be engrossed for a third reading, was read the third time, and passed.

DEPARTMENT OF AGRICULTURE AND RELATED AGENCIES APPROPRIATIONS, 1970

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 269, H.R. 11612. There will be no action taken on the bill today. It will be the pending business tomorrow, and debate will start then.

The PRESIDING OFFICER. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (H.R. 11612) making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

PRESIDENT NIXON COMMENDED FOR HANDLING OF VIETNAM SITUATION

Mr. CURTIS. Mr. President, I rise to commend President Nixon on his handling of foreign affairs and particularly his handling of the Vietnam situation during the little more than 5 months that he has been head of our Government.

President Nixon has adhered to the irrefutable plan that a weak nation cannot negotiate successfully. At the same time, he has gone all the way diplomatically to make the negotiations which were instigated much more than a year ago successful. He has maintained a flexible posture and has been willing to negotiate under any circumstances that might arise.

The American people have confidence in President Nixon's dedication to the task of keeping America strong militarily. The American people are grateful for President Nixon's ability to talk with and obtain the cooperation of President Thieu of South Vietnam. The American people are grateful for the Nixon program of "bring them back alive," which is becoming a reality. American boys are to be returned from Vietnam alive and not in caskets.

Mr. President, for the good of America we need a national unity in support of the President of the United States. Awesome responsibilities are fixed by the Constitution upon the President of the United States in the conduct of foreign affairs. The President, and the President alone, must make the final decision in reference to matters that involve not only the future of the United States but of the free world.

I think that it would be totally wrong for the President or any of his supporters to appeal for partisan unity. When the United States faces a troubled—and in part a hostile—world, there is no place for partisanship. National unity, on the other hand, is not only a necessity but it is a matter of enlightened self-interest. I am firmly convinced that the war in Vietnam can be shortened and future wars are more likely to be prevented if the United States stands before the world united.

I do not suggest that we abolish criticism. I do not suggest that we cease to ask questions. I do not suggest that ideas concerning the war that appear to be meritorious be placed under a bushel. I do suggest that restraint is a virtue. I do suggest that there is a time and place for everything and by the same token there is a wrong time and place for everything.

Personally, I feel that if an elected official of this Government has strong convictions as to how the war ought to be fought, he should seek a conference with the President of the United States and the Joint Chiefs of Staff and give to

them the benefit of his expert opinion. Personally, I doubt the wisdom of public utterances that can have no other effect than to discourage those who must bear the brunt of our war in Vietnam and encourage those forces that are meting out death to American boys on the field of battle.

Mr. President, I judge no one. What I have said constitutes a declaration of my own beliefs so that the world may know where I stand.

In unity and in strength the cause of peace will be advanced. In discord and division, like protests and demonstrations, the cause of peace is thwarted. Mr. President, we should always be patient. We should always be mindful of history. The war in Vietnam did not begin on January 20. We must look at the whole picture and with reason formulate our hopes for the future.

Mr. President, I ask unanimous consent to have printed in the RECORD a brief chronology of the war in Vietnam which has been prepared at my request from 1961 through 1968, inclusive.

There being no objection, the chronology was ordered to be printed in the RECORD, as follows:

VIETNAM: A BRIEF CHRONOLOGY

YEAR 1961

January 29: Radio Hanoi recognizes NLF as official government of South Vietnam.

March 10: NLF announces launching of guerrilla campaign against Government of South Vietnam.

April 3: U.S.-South Vietnamese treaty of amity and assistance signed.

May 5: President Kennedy at news conference announces use of American forces in Vietnam "under consideration."

May 11: Vice President Johnson flies to Vietnam.

May 13: Johnson announces U.S. military assistance will be increased.

June 4: JFK-Khrushchev meet in Vienna; Khrushchev chides JFK on Bay of Pigs; James Reston of N.Y. Times reported later that after that meeting Kennedy decided on using U.S. troops in Vietnam.

August 2: Kennedy: "U.S. will do all it can" to help S. Vietnam.

October 1: Adm. Felt, U.S. Commander, Pacific, says use of U.S. troops in combat not in immediate plans.

October 29: First U.S. soldier wounded in battle with the enemy.

(NOTE.—Prior to October 29 an American officer had been wounded in a sabotage raid in Saigon by enemy terrorists who blew up a billet. However, this was not in action in the field against the enemy.)

November 16: After meeting of National Security Council Kennedy announces increased U.S. forces for Vietnam. (Discussing this meeting later, Asst. Secy. St. Robert Manning said Kennedy advised them it might mean commitment of as many as 300,000 U.S. troops to Vietnam, but decision to send 15,000 was made anyway.)

December 14: Kennedy pledges increased U.S. aid.

December 27: First U.S. soldier killed in action by enemy.

December 31: U.S. troop strength at year's end had increased from 660 in 1960 to 3,164.

YEAR 1962

February 7: Two U.S. Air Force support companies arrive Saigon, bring troop strength to 4,000.

February 8: Reorganization of U.S. effort in Vietnam announced, making it a military command with Four-Star General Harkins in command.

May 15: U.S. orders troops to Thailand.

July 6: McNamara makes his first "I am encouraged" statement about "progress" in Vietnam.

September 12: U.S. Gen. Taylor, Chairman Joint Chiefs, visits U.S. military base in central highlands.

December 31: U.S. troop strength at year's end up to 9,865.

December 31: U.S. casualties: 42 dead.

YEAR 1963

April 14: U.S. Under Secretary of State Averell Harriman (in a television interview) says that President Kennedy has decided that the United States must not become involved in the continuing conflict in Laos. He says that there are no plans to commit U.S. troops, and military supplies will only be sent if requested by the Lao Government.

April 22: U.S. Secretary of State Dean Rusk calls the situation in South Vietnam "difficult and dangerous," and says that the United States "cannot promise or expect a quick victory" and that its role is "limited and supporting."

June 11: Buddhist monk (Thich Quang Duc) commits suicide by burning himself to death with gasoline in front of the Cambodian legation. Further aggravates religious crisis involving South Vietnamese Buddhists.

June 27: President Kennedy announces (in Ireland while on a European tour) the appointment of Henry Cabot Lodge as the next American Ambassador to South Vietnam, effective September 1963, to succeed Frederick Nolting.

July 11: U.S. Ambassador Nolting returns to South Vietnam after consultations in Washington and issues a statement assuring continued U.S. support to President Diem and warning that "unity of purpose and purpose in action" must not be weakened by "internal dissension."

September 2: Times of Vietnam charges that U.S. Central Intelligence Agency agents had planned a coup d'etat for August 28 to overthrow President Diem. On the same day, U.S. President Kennedy declares (in a television interview with CBS Correspondent Walter Cronkite) that the United States is prepared to continue to assist South Vietnam "but I don't think that the war can be won unless the people support the effort and, in my opinion, in the last 2 months, the Government has gotten out of touch with the people."

October 2: Secretary of Defense Robert S. McNamara and Maxwell D. Taylor, Chairman of the Joint Chiefs of Staff, say the United States will continue its "policy of working with the people and Government of South Vietnam to deny this country to communism and to suppress the externally stimulated and supported insurgency of the Vietcong as promptly as possible. Effective performance in this undertaking is the central object of our policy in South Vietnam."

November 1: Military coup (organized by the key generals of the armed forces) against the Diem regime. Rebels lay seige to the presidential palace in Saigon which is captured by the following morning. President Diem and his brother, Ngo Dinh Nhu escape from the palace, but a few hours later are taken by the rebels, and while being transported in an armored carrier to rebel headquarters they are assassinated. A proclamation broadcast by the leaders of the coup (a council of generals, headed by Maj. Gen. Duong Van Minh) declares that they have "no political ambitions" and that the fight against the Communists must be carried on to a successful conclusion.

November 2: Military leaders in South Vietnam set up a provisional Government headed by former Vice President Nguyen Ngoc Tho (a Buddhist) as Premier. The Constitution is suspended and the National Assembly dissolved. Buddhists, students, and other political prisoners arrested by the former regime are released.

November 9: United States announces resumption of its commodity-import aid to South Vietnam, suspended in August.

November 15: U.S. military spokesman in Saigon reports that 1,000 U.S. servicemen will be withdrawn from South Vietnam, beginning December 3. (They never were.)

November 22: President John F. Kennedy is assassinated in Dallas, Tex. His successor, Lyndon B. Johnson, affirms on November 24 the U.S. intention to continue its military and economic support of South Vietnam's struggle against the Communist Vietcong.

December 31: Troop strength: 16,500; Americans killed: 78.

YEAR 1964

January 27: U.S. Secretary of Defense McNamara in a statement to House Armed Services Committee states that the situation in South Vietnam "continues grave," but that "the survival of an independent Government in South Vietnam is so important to the security of southeast Asia and to the free world that I can conceive of no alternative other than to take all necessary measures with our capability to prevent a Communist victory." France establishes diplomatic relations with Communist China.

April 13–15: SEATO Ministerial Council communique declares the defeat of Vietcong is "essential" to the security of southeast Asia and SEATO to fulfill its treaty obligations.

April 25: General Westmoreland to replace General Harkins in Saigon.

May 12: Secretary Rusk asks NATO members to give greater support to South Vietnam.

May 22: Secretary Rusk stating the choices in Vietnam, says: "A third choice would be to expand the war. This can be the result if the Communists persist in their course of aggression."

August 2: U.S.S. Maddox is attacked in international waters off the coast of North Vietnam by North Vietnamese torpedo boats.

August 4: Destroyer C. Turner Joy and destroyer Maddox are attacked by North Vietnamese PT boats.

August 4: President Johnson orders U.S. "air action" against "gunboats and certain supporting facilities in *North Vietnam*."

August 5: President Johnson's message to Congress; joint resolution is introduced "To promote the maintenance of international peace and security in southeast Asia."

August 5: United States sends reinforcement to Tonkin Bay area.

August 6: Cambodia charges "Americans in uniform joined South Vietnamese in firing into Cambodia."

August 7: U.S. Congress approves southeast Asia resolution (Senate vote, 88–2; House vote, 416–0).

August 11: President Johnson signs southeast Asia resolution into law (Public Law 88–408).

September 18: U.S. Defense Department reports destroyers in Tonkin Gulf fire on and presumably hit four or five hostile targets.

December 31: Troop strength: 23,000; Casualties: 147.

YEAR 1965

February 6: Russian Premier Kosygin arrives in Hanoi.

February 7: U.S. planes strike targets in North Vietnam. U.S. dependents evacuated from South Vietnam.

February 8: South Vietnamese Air Force planes accompany U.S. air mission into North Vietnam. President Johnson indicates that further developments depend on Communist response. Indian Foreign Minister requests a new Geneva conference.

February 8: Premier Kosygin announced Soviet willingness to aid North Vietnam if she is invaded.

February 25: North Vietnamese officials state negotiations would be considered if American troops were withdrawn.

February 27: State Department issues white paper detailing charges of aggression on the part of North Vietnam.

February 28: United States and South Vietnamese officials declare that President Johnson has decided to open continuous limited air strikes against North Vietnam in order to bring about a negotiated settlement.

March 6: Two U.S. Marine battalions sent to South Vietnam for limited duty.

March 25: In a public statement President Johnson held out to North Vietnam the prospect of economic aid if peace is secured.

April 2: United States announces intention of sending several thousand more troops to South Vietnam.

April 7: President Johnson, in a speech at Johns Hopkins University stresses our willingness to negotiate, and suggests a $1 billion aid program for southeast Asia.

May 4: President Johnson requests $700 million supplemental appropriation for Department of Defense for Vietnam effort.

May 13: United States halts bombing missions on North Vietnam.

May 19: United States resumes air attacks on North Vietnamese targets.

June 7: U.S. military authorities disclose that number of American military personnel in South Vietnam has passed 50,000 mark. (Army, 21,500; Marine Corps, 16,500; Air Force, 9,500; and Navy, 3,500).

June 8: State Department spokesman says that U.S. military command in South Vietnam has been authorized to send American troops into combat alongside Vietnamese forces if such "combat support" is requested by South Vietnam. (1st American killed in action in Dec. 1961)

June 16: Secretary McNamara announces new troop movements to Vietnam which will bring total there to over 70,000.

June 25: President Johnson in an address at ceremonies in San Francisco commemorating the 20th anniversary of the signing of the U.N. Charter declares that "bilateral diplomacy" for a peaceful settlement has "yielded no results." He adds, "I now call upon this gathering of the nations of the world to use all their influence, individually and collectively, to bring to the table those who seem determined to make war. We will support your efforts as we will support effective action by any agent or agency of these United Nations."

June 28: American troops participate in their first major attack of the Vietnamese war.

July 10: President Johnson declares in a press conference that in Vietnam, "we committed our power and our honor. . . ."

July 12–18: The United States begins a large-scale buildup of its forces in South Vietnam.

July 15: A "voluntary censorship" of news is requested of journalists by the U.S. Military Assistance Command, Vietnam.

July 28: In a press conference, President Johnson states: "We must not let this [the unconventional nature of the fighting] mask the central fact that this is really war."

August 19: The Defense Department reports that 561 Americans had been killed, 3,024 wounded, and 44 missing in Vietnam between January 1, 1961, and August 16, 1965.

October 23: U.S. military authorities in Saigon reported that U.S. forces in South Vietnam have reached a total of 148,300 men: 89,000 Army, 8,000 Navy, 37,000 Marine Corps, 14,000 Air Force, and 300 Coast Guard.

November 11: Defense Secretary McNamara announces that the administration "believes it will be necessary to add further to the strength of U.S. combat forces in Vietnam."

November 15: Correspondent Eric Sevareid reports in a Look magazine article that the United States rejected a Hanoi proposal in 1964 that United States and North Vietnamese representatives meet in Rangoon, Burma, to discuss a possible means of ending the Vietnam war. State Department spokesman Robert J. McCloskey states that "on the basis of the total evidence available to us, we did not believe at any time that North Vietnam was prepared for serious talks."

November 18: A Defense Department casualty report states that 108 U.S. soldiers were slain in the week ending November 15, a weekly record total, bringing to 1,095 the number of Americans slain since January 1, 1961.

November 29: Defense Secretary McNamara states in a press conference that the Vietcong's "expressed determination to carry on the conflict * * * can lead to only one conclusion—that it will be a long war."

December 15: U.S. Air Force planes bomb and destroy a North Vietnamese thermal power plant at Uongbi in the first American air raid on a major North Vietnamese industrial target.

December 24–25: A 1-day Christmas truce is agreed to by the United States and the Vietcong. The United States also suspends air strikes as part of the short cease-fire.

December 31: Troop strength: 181,000; casualties: 1,369 dead.

YEAR 1966

January 31: President Johnson announces in a broadcast speech the resumption of U.S. air strikes against North Vietnam. At the same time he instructs U.S. Ambassador Arthur Goldberg formally to request the U.N. Security Council to intervene in the crisis to seek an international conference to end the war and establish a permanent peace in southeast Asia.

February 4: Defense Secretary McNamara refuses on the grounds of security to testify publicly before the Senate Foreign Relations Committee. His position is publicly endorsed by President Johnson.

February 6: President Johnson and other U.S. officials arrive in Honolulu for discussions with Premier Ky and other Saigon representatives concerning the Vietnamese war. In his remarks at airport ceremonies President Johnson declares that those who "counsel retreat" from the war "belong to a group that has always been blind to experience and deaf to hope."

February 7: Retired Lt. Gen. James Gavin appears before the Senate Foreign Relations Committee to present his views on the Vietnam conflict.

February 8: President Johnson states his determination, at the conclusion of the 3-day Honolulu conference, to fight the battle against aggression as well as the battle for social construction in Vietnam.

February 11: President Johnson in a news conference disavows any desire to escalate the war. However, he adds that "additional troops" will be sent as militarily required.

March 5: Gen. Maxwell Taylor proposes the mining of Haiphong harbor.

March 11: Vice President Humphrey bars any settlement of the Vietnam war that would give the Vietcong a role in a coalition government not earned in free elections.

April 12: B–52's from the U.S. Strategic Air Command base in Guam bomb North Vietnam for the first time. The press reports a Pentagon decision to use B–52's regularly in bombing the north.

April 22: Pauline Frederick, NBC reporter, quotes a Soviet informant as stating that North Vietnam would be willing to enter into peace negotiations, if the United States would halt the bombing of the north.

May 2: Secretary McNamara predicts an increase in U.S. troop strength in order to offset rising North Vietnamese infiltration.

May 22: Harold Brown, Secretary of the Air Force, states that President Johnson has decided against expanding the list of bombing targets in North Vietnam to include industrial and port installations, and fuel storage facilities.

June 18: President Johnson, at a news conference, declares that the United States would persist in using "the ground, naval, and air strength required to achieve our objective" and warns that: "I must observe that this does not mean that we shall not increase our forces or our operations."

June 26: Secretary Rusk, in Canberra, Australia, states that he sees no prospects for an early peace in Vietnam.

June 29: American planes conduct the first of continuing attacks on oil installations in the areas of Hanoi and Haiphong.

June 30: Speaking in Omaha and Des Moines, President Johnson warns that attacks on military targets in North Vietnam "will continue to impose a growing burden and a high price on those who wage war against the freedom of their neighbors," and calls for unconditional peace talks, saying "there need only be a room and a table and people willing to talk respectfully."

July 30: B–52 bombers initiate the first of series of attacks on growing North Vietnamese troop concentrations in and around the demilitarized zone.

August 3: A House Appropriations Subcommittee makes public testimony of May 11 by Secretary Rusk in which he said that the United States observes a no-bombing buffer zone along North Vietnam's border with Red China.

September 5: President Johnson says that a U.S. troop withdrawal from South Vietnam is dependent upon a pull-out of Communist forces.

September 22: Ambassador Goldberg states that the United States will halt the bombing of North Vietnam when it receives assurances, privately or otherwise, that Hanoi will respond by a reduction of its war effort. The United States will then be prepared to participate in a mutual withdrawal of military forces under international supervision.

October 16: President Johnson leaves on a 17-day trip that will include the Manila Conference.

October 24: The Manila Conference opens. Premier Ky tells the Conference that South Vietnam will press a program of political-economic reform.

October 26: President Johnson pays a surprise visit to Camranh Bay, South Vietnam, and pledges full support to U.S. forces.

November 5: Secretary McNamara states that the number of U.S. troops in Vietnam will continue to grow in 1967 but at a lower rate than the increase in 1966.

November 12: Hanson Baldwin, New York Times military writer, asserts that Pentagon military experts have estimated that 600,000 to 750,000 U.S. troops are needed in South Vietnam to achieve the objectives of defeating the Communists and pacifying the country.

YEAR 1967

January 8: U.S. predicts "sensational" military gains in 1967 and that open peace negotiations would probably never take place.

January 13: Gen. Earle Wheeler, Chairman of the Joint Chiefs of Staff, says the United States will not bomb Mig bases in North Vietnam.

January 20: Senator John Stennis calls for an intensification of the U.S. bombing of North Vietnam to include industrial and power installations and jet airfields. He also predicts that over 500,000 American troops will be needed in South Vietnam by the end of 1967.

January 23: In his annual posture statement before the Senate Armed Services Committee and Defense Appropriations Subcommittee, Secretary McNamara lists enemy strength in South Vietnam at 275,000 men including 45,000 North Vietnamese regulars. The Secretary claims that U.S. strategy is limiting the buildup of Communist forces in the South, because they are losing as many men as they can recruit.

January 25: The Associated Press reports an order by the Johnson administration

barring American planes from venturing within 5 miles of the center of Hanoi.

January 26: U.S. officials acknowledge previous reports of secret negotiations with the National Liberation Front but claim that these dealt only with American prisoners held by the Vietcong.

February 9: Secretary Rusk tells newsmen that the United States will not cease bombing North Vietnam until Hanoi shows a willingness to reduce its military effort in the south. He accuses Hanoi of trying to secure a halt in the air raids without any limitations on its own military activities.

February 14: The United States bombs North Vietnam after a pause of nearly 6 days. President Johnson cites Hanoi's "major resupply efforts" during the break as justification for this action.

February 15: Secretary McNamara tells newsmen that the northern bombing has been effective but that the major military objectives of the war must be achieved in South Vietnam.

February 24: Secretary McNamara states at a news conference that the United States might bomb new targets in North Vietnam.

February 27: U.S. planes begin to drop mines in North Vietnam's rivers.

March 21: North Vietnam's Foreign Ministry discloses that President Johnson and Ho Chi Minh exchanged letters in February. Ho rejected the President's call for peace talks unless the United States halted the bombing and all other acts of war against North Vietnam.

March 27: A Senate Armed Services subcommittee issues a report charging that restrictions on U.S. pilots bombing North Vietnam have resulted in increased American casualties in the air war. The report proposes a relaxation of these limitations.

April 20: U.S. planes bomb two powerplants inside Haiphong for the first time. The United States and allies participating in the Vietnam war hold a strategy conference in Washington.

April 24: U.S. planes attack two North Vietnamese MIG bases, marking the first strike against such installations.

April 28: In a speech before Congress, Gen. William Westmoreland predicts that U.S. forces will "prevail in Vietnam over the Communist aggressor." He also asserts that "in evaluating the enemy strategy, it is evident to me that he believes our Achilles heel is our resolve."

May 3: At a news conference, President Johnson states that he has no "imminent" plans to substantially increase U.S. fighting strength in Vietnam.

May 5: U.S. Marines capture the third and final peak of Hill 881 after days of bitter fighting.

June 22: According to Department of Defense figures, total U.S. troop strength in South Vietnam is 463,000 as of June 17.

July 11: At a Saigon press conference before his return to Washington, Secretary McNamara states that the United States will continue to "provide the troops which our commanders consider necessary" but that "what is necessary depends on the extent to which we are using the resources we have available to us."

August 3: President Johnson announces that he has authorized the raising of the maximum limit of U.S. personnel in South Vietnam to 525,000.

YEAR 1968

January 2: The allied New Year's truce ends and the United States resumes the bombing of North Vietnam.

January 6: President Thieu states that Saigon and Hanoi should be the principal parties to any peace negotiations.

January 7: Assistant Secretary of State William Bundy states that peace talks on Vietnam might "lead away from peace" if the Communists used a cessation of the U.S. bombing of North Vietnam to pour men and supplies into the south.

January 15: Speaking to a group of Vietnamese newspaper editors, President Thieu declares that South Vietnam "should have the central role in any development relating to the events in Vietnam" and that "peace efforts should be made by the Saigon Government." Secretary Rusk states in Washington that there could be no decisions on negotiations "without full consultation with" the Saigon Government and that the future of South Vietnam could not be decided without the "full participation" of the South Vietnamese Government.

January 16: Mai Van Bo, North Vietnam's chief diplomat representative in Paris, tells newsmen that, before peace talks could be held, the United States must stop the bombing and "other acts of war" against North Vietnam without exception of any reciprocal action by Hanoi.

January 17: North Vietnamese officials in Paris reportedly tell a French journalist that peace talks will begin as soon as the United States halted the bombing and other acts of war against North Vietnam. They also say that the door was open to discussions on any subject, including the U.S. view that Hanoi not take advantage of a cessation of the bombing, but declare that there could be no question of a reciprocal deescalation by Hanoi in exchange for a bombing halt.

January 19: Cambodia charges that United States and South Vietnamese forces intruded 200 yards into its territory on January 18, killing three Cambodians.

January 21: A commentary in North Vietnam's official newspaper, Nhan Dan, describes President Johnson's "San Antonio formula" as a "habitual trick" with "very insolent conditions." It states that the United States has no right to ask for reciprocity in return for a cessation of the bombing of North Vietnam.

January 22: The State Department acknowledges that a combined United States-South Vietnamese patrol had entered Cambodian territory on January 18 in the heat of battle with a Vietcong unit that had fled into that country.

January 25: Testifying before the Senate Armed Services Committee, Clark Clifford, the President's nominee for Secretary of Defense, states that he would "assume" that North Vietnam would "continue to transport the normal amount of goods, munitions, men to South Vietnam" if the United States halted the northern bombing.

January 29: The Allies cancel their 36-hour Tet truce in South Vietnam's five northernmost provinces and state that the United States will continue bombing North Vietnam south of Vinh, a city about 125 miles north of the demilitarized zone. U.S. sources cite the Communist buildup around Khesanh as the reason for the cancellation.

January 30: The New York Times reports that the United States had informed North Vietnam that it would stop the bombing of the north if Hanoi did not increase infiltration of men and supplies beyond the level maintained while the bombing proceeded.

January 30–31: The Communists launch simultaneous attacks on major South Vietnamese cities, including Saigon (January 31), where they temporarily invade the grounds of the U.S. Embassy. President Thieu announces a total cancellation of the 36-hour Allied Tet truce.

January 31: President Thieu declares martial law throughout South Vietnam as the Communists continue their attacks on Allied bases and major cities.

February 1: Secretary McNamara presents his final posture statement to the Congress. He warns that the combat strength of North Vietnamese forces in South Vietnam "may increase sharply in the next few months" and states that North Vietnam's manpower reserves are adequate to meet current demands and that Hanoi can support a higher level of military mobilization. He declares that ultimate success in South Vietnam depends on the ability of the Saigon government to reestablish its authority over its territory so that peaceful reconstruction can be undertaken. He states that the bombing of North Vietnam had left few strategically important targets unstruck but expresses the opinion that the air attacks could not pinch off the flow of military supplies into the south.

February 1: General Westmoreland predicts that the Communists will follow up their attacks on South Vietnamese cities and Allied bases with their biggest offensive of the war in the country's two northernmost provinces.

February 2: President Johnson tells newsmen that the Communists had failed to achieve their stated goal of sparking a general uprising in South Vietnam's cities. He also states that he has no evidence to indicate a connection between the Pueblo incident and the Communist Tet offensive but that practically every expert whom he had consulted thought a connection did exist.

February 7: North Vietnam reportedly uses tanks for the first time in the Vietnam war in an attack upon the U.S. Special Forces camp at Langvei, 5 miles west of Khesanh near the Laotian border. The camp falls on February 8.

February 10: Secretary Rusk tells the National Association of Secondary School Principals that the Vietnam war may be entering "the climatic period."

February 13: The Pentagon announces that the United States will airlift 10,500 additional troops to Vietnam in compliance with General Westmoreland's request.

February 14: Secretary Rusk announces that all U.S. attempts to launch peace talks "have resulted in rejection."

February 16: President Johnson at an unscheduled news conference states that it is in the Nation's interest to have General Westmoreland as commander in Vietnam at this critical stage. He also says that the Joint Chiefs of Staff had made no recommendations for the use of nuclear weapons in Vietnam and that Hanoi is not any more ready to negotiate than it was 3 years previously.

February 18: The Communists shell more than 30 bases and outposts across South Vietnam.

February 20: Secretary McNamara testifies before the Senate Foreign Relations Committee on the 1964 Gulf of Tonkin incident. He denies any element of provocation on the part of the United States and insists that Washington had conclusive proof of North Vietnamese attacks on two U.S. destroyers before ordering air strikes against North Vietnam. Senators Fulbright and Morse dispute McNamara's testimony, charging that the Defense Department had withheld certain information. that U.S. naval activity on the Gulf of Tonkin might have provoked North Vietnam's actions in the incident and that the incident did not justify the subsequent American bombing.

February 24: South Vietnamese forces recapture the palace grounds of the citadel at Hue after 25 days of fierce fighting.

February 25: General Westmoreland states that additional U.S. troops "will probably be required" in Vietnam.

February 27: A South Vietnamese Army unit reports sighting Communists armored vehicles within 50 miles of Saigon.

March 4: According to Defense Department figures total U.S. troop strength in South Vietnam as of February 24, 1968, was 495,000. U.S. combat deaths stood at 18,799 (Jan. 1, 1961–Feb. 24, 1968) and wounded totaled 115,114, and 983 U.S. servicemen were missing and 238 were listed as captured.

March 10: The New York Times and Wash-

ington Post report that the Johnson Administration is considering raising U.S. Troop strength in Vietnam by as much as 206,000. White House Press Secretary Christian states on March 9 that the President has received no specific requests from American commanders concerning the sending of additional U.S. forces.

March 11-12: Secretary Rusk testifies before the Senate Foreign Relations Committee. He admits that the Communist Tet offensive has set back the Allied effort.

March 22: President Johnson announces that he will nominate Gen. William Westmoreland to replace retiring Army Chief of Staff, Gen. Harold K. Johnson, in July 1968.

March 31: President Johnson announces that he has ordered U.S. aircraft and naval vessels "to make no attacks on North Vietnam except in the area north of the demilitarized zone where the continuing enemy buildup directly threatens allied forward positions and where the movements of their troops and supplies are clearly related to that threat." He states that the area covered by the bombing pause includes 90 percent of North Vietnam's population. He asserts that a complete bombing halt could come "if our restraint is matched by restraint in Hanoi." He calls on North Vietnam to respond positively to the bombing halt by agreeing to peace talks and states: "We assume that during those talks Hanoi would not take advantage of our restraint."

April 2: Administration officials state that under the terms of the President's partial bombing halt, air attacks are still authorized from the 17th to the 20th parallel.

April 3: The U.S. command in Saigon announces that 20,000 Allied troops are advancing on the U.S. marine base at Khesanh to lift the 75-day siege of that fortress. The operation, which began in secret on April 1, reaches Khesanh on April 6.
